11. Meantime Rome had been drawn into Hellenistic affairs. As a police measure she had suppressed Illyrian piracy in the Adriatic and established a small protectorate in Illyricum (First Illyrian War, 229-228, Second 219; see TEUTA, DEMETRIUS 6). Then she had successfully faced Hannibal's ally, Philip V of Macedonia, in the First Macedonian War (214-205; see PUNIC WARS). Thereafter, when Philip launched a career of conquest in the eastern Mediterranean, Rhodes and Pergamum appealed for help to Rome. Actuated partly by a desire for future security against a possible threat from Philip's fleet or his ally Antiochus III of Syria, partly perhaps from philhellenic sentiments, the Romans somewhat reluctantly entered upon the Second Macedonian War (200-196), which terminated in the victory of Flamininus at Cynoscephalae. Macedonia was forced to surrender her conquests but survived as an independent State, while Rome proclaimed freedom for Greece; no territory was annexed, and by 194 all Roman troops had evacuated Greece. Rome was next involved with Antiochus, with whom Hannibal had sought refuge. When he invaded Greece he was defeated at Thermopylae by the Romans, who then for the first time crossed to Asia and again defeated him at Magnesia (189). By the treaty of Apamea Antiochus was forced back into Syria, while most of the Seleucid kingdom in Asia Minor was given to Pergamum and Rhodes; Rome annexed no territory. Macedonia remained quiet until the accession of Perseus, who challenged Rome, only to meet defeat at the hands of Aemilius Paullus at Pydna in 168 (Third Macedonian War, 172-167). Macedonia was divided into four republics, but after further disorders caused by Andrius was at length annexed as a Roman province (147). The Achaean League was suppressed, and Corinth was destroyed by Mummius (146), not probably from motives of commercial jealousy but as an example to Greece that Roman patience was at an end. For half a century Rome had allowed Greece to enjoy or abuse her freedom: Rome's final intervention brought peace, if not prosperity. Meantime Rome had overawed the Hellenistic kingdoms of Bithynia, Galatia (see MANLIUS ULPIUS), Pergamum, and Rhodes, and had interfered in the politics of Egypt (see POMPILIUS 1) and Syria. In 133 Attalus of Pergamum bequeathed his kingdom to Rome, and it was formed into the province of Asia.

12. Meanwhile in the west Rome's attempt to administer and protect her provinces of Spain (acquired in 206 and organized in 197) led her into a long series of conflicts with the native tribes of the interior, especially Celtiberians and Lusitanians, which only ended with the destruction of Numantia by Scipio Aemilianus in 133

(see NUMANTIA, SPAIN, VIRIATHUS, etc.). Finally, after campaigns against Ligurians, Allobroges, and Arverni (125-121), southern Gaul was formed into the province of Gallia Transalpina or Narbonensis.

13. During this period of the establishing of an overseas empire, and more particularly in the latter part of it, economic and social life in Rome and Italy underwent profound changes. In many parts capitalist farming replaced peasant husbandry; with the acquisition of an empire there was a greater field for industry and commerce, which had little interest for the Roman nobility or influence on Roman policy, but enhanced the importance of the rich business men (see EQUUS); slavery increased, both on the land and in the household; women gained greater freedom; life became more luxurious for the privileged classes, and public games increased; the city, adorned with new public buildings, assumed a fresh appearance. From the First Punic War, when Roman soldiers had fought in Grecian Sicily, the floodgates of Hellenism were open. Many nobles, as the Scipios and Flaminii, were ardent philhellenes, while the earliest Roman historians actually wrote in Greek; Cato's attempt to stem the tide was merely temporary. Fresh contacts were made with Greece in the Macedonian Wars, Greek philosophers lectured in Rome (155), while the group of intellectuals known as the Scipionic Circle attempted to reconcile the best aspects of Greek and Roman life. In all spheres, art and architecture, literature and religion, Greek influences prevailed. But despite these profound changes the governing class, drawn from a small number of families, retained many of its old virtues and its general control of public affairs.

IV. THE FALL OF THE REPUBLIC (133-31 B.C.)

14. Rome next had to grapple with many problems of which the solution became urgent. Of imperial problems that of safeguarding the frontiers was the least clamant. More pressing were the consequences of provincial administration, since the institutions of a city-state were ill-adapted to governing an empire, and the attempts made to modify them were not sufficiently fundamental. The standard of provincial administration fell. Some governors plundered their provinces for private gain, others were corrupted by desire for power. The army began to look rather to its commanders than to the State for the rewards of service, and when led by men of ambition formed a new and dangerous element in Roman life. Rome also faced grave domestic issues, and a struggle developed between *optimates* and *populares*. Difficulties which might have been settled by compromise were rendered more acute by the rise of ambitious personalities who sought to exploit political power for their own ends. Further, Rome's selfish policy towards her Italian allies, who had helped to win the empire but were deprived of many of its spoils, led to increasing discontent and ultimately to open war. Finally, there were urgent economic problems. The growth of *latifundia*, the promotion of pasturage at the expense of cereal production, and the system of land-tenure had all combined to drive the small farmer from the countryside to unemployment in the towns. There was pressing need to re-establish a small peasantry on the land and to rid the cities of idle hands.

15. Public attention was focused on many of these problems by the careers of Tiberius and Gaius Gracchus, who as tribunes representative of the sovereign authority of the Roman People challenged the senatorial monopoly of government. Their efforts, and the subsequent agrarian legislation, partially solved the economic problems, while Gaius championed the demands of the allies for Roman franchise and made the *Equites* a political force and a Third Estate. Their attempts at reform were followed by a conservative reaction and by the war with Jugurtha (112-106). This was conducted

by the Senate with such corruption and indolence that at length the People and *Equites* demanded energetic action, which was given by Marius in whom the People found a military leader.

16. Unrest in Sicily found expression in two Slave Wars (135-132, 103-101). German tribes were on the move, defeating Roman armies (114, 113), and finally wiped out two consular armies at Arausio (105). In this hour of national crisis Marius held repeated consulships (103-101), and thanks to his military reforms saved his country by defeating the Teutones near Aquae Sextiae (102) and the Cimbri near Vercellae (101). But a new danger was at hand: Marius at the head of a professional army, which had been raised partly from proletarians by voluntary enlistment and owed more to its leader than to the State, might threaten the Senate in the name of the People. But Marius was clumsy in politics: his temporary alliance with the leaders of the popular party, Saturninus and Glaucia (103-100), was followed by his own eclipse and a brief conservative reaction (99-91) which nearly proved fatal to Rome. The attempted reforms of Drusus (91) and his plan to enfranchise the Italians failed, while his assassination precipitated the revolt of the allies in the Social or Marsian War (91-87), the result of the Senate's selfish policy. Some of the allies fought to win Roman citizenship, others as the Samnites to destroy Roman predominance in Italy. By fighting and by political concessions (see under CAESAR (2), STRABO (1), PLAUTIUS (1)) the Romans gained victory by conceding the main issue at stake. Italy was now united, and all south of the Po received Roman citizenship.

17. A contention between Marius and Sulla for the command against Mithridates of Pontus led to Sulla's march on Rome at the head of Roman legions (88) and the inauguration of a period of civil war and bloodshed. Thereafter Sulla left for Greece, where he defeated the Pontic army at Chaeronea (86) and settled the East. He returned in 83 to overthrow in civil war the government which Cinna had established in his absence. By 82, after a proscription of his political opponents, he attained a quasi-monarchical position as dictator and attempted to re-establish the authority of the Senate over against the powers of the tribunate and the influence of army commanders by a series of measures which did not long survive his voluntary retirement in 79. Pompey, after defeating Sertorius, who had held Spain against the senatorial government from 80 to 72, enjoyed a joint-consulship in 70 with Crassus, who had suppressed a slave-revolt led by Spartacus in Italy. Backed by their armies these two ambitious leaders, both former lieutenants of Sulla, swept away much of Sulla's legislation. The tribunate once again became a dangerous weapon which might assert the wishes of the Roman People, now mainly the unruly populace of the capital and unrepresentative of Italy as a whole, and those of their unscrupulous and ambitious leaders. Through the tribunate Pompey was given in 67 an overriding command against the pirates, whom he swept out of the Mediterranean, and then against Mithridates, whose renewed aggression had been checked by Lucullus. Though Lucullus had invaded Pontus and defeated Tigranes of Armenia, he had been forced to retire, and thus it was reserved for Pompey to end the Mithridatic wars and to resettle the East (64-2), where he reorganized the client-kingdoms, established Syria as a Roman province (64), and promoted urbanization throughout Asia Minor. Other recent provincial changes affected Cisalpine Gaul, Bithynia, Cilicia, Crete, and Cyrene.

18. While Pompey was in the East, Crassus and Caesar intrigued in Rome against his return, using a tribune Rullus to further their ends. Catiline led a revolutionary scheme of broken men, which was unmasked by the consul Cicero (63), who began to hope for a *concordia ordinum*, a reconciliation of all moderate

elements in the State. But the Senate foolishly withstood the demands of Pompey, who on his return from the East had loyally retired into private life, and also those of Caesar, who in 60 returned from a command in Spain. Pompey and Caesar together with Crassus were thus forced into an unofficial coalition, known as the First Triumvirate (60). In 59 Caesar as consul gained a prolonged command for himself in Gaul, which he added as a new province to the Empire, thus advancing the frontiers to the Rhine and the English Channel (58-50: see GALLIC WARS). Meantime, in a period of increasing electoral corruption and public disorder, fostered by gang-leaders as Clodius and Milo and resulting in the temporary exile of Cicero (58-7), the Triumvirate appeared to be breaking up, but was reaffirmed at a conference held at Luca (56). While Caesar made his name and won a devoted army in Gaul, Pompey controlled events in Rome and administered his Spanish province through *legati*. The death of Crassus at Carrhae (53) during a disastrous expedition against Parthia emphasized the rivalry of Pompey and Caesar, who gradually drifted into open conflict, with Pompey somewhat reluctantly supporting the senatorial cause. Caesar defeated the Pompeian army in Spain at Ilerda (49) and Pompey himself at Pharsalus (48); he won further victories in Asia at Zela (47), in Africa at Thapsus, where Cato's suicide exemplified the collapse of the Republican cause (46), and in Spain at Munda (45). Whether or not Caesar intended finally to end the Republic, as dictator he introduced the principle of personal autocracy into the constitution. His beneficial legislative reforms and his plans for safeguarding the Empire by military expeditions against Dacia and Parthia were cut short by his assassination by a group of short-sighted Republican conspirators, led by Cassius and Brutus (44).

19. Instead of a restoration of peace and the Republic another round of civil war followed. At first Octavian, Caesar's heir and avenger, supported by Cicero and the Republican party, struggled against Antony, who had been Caesar's helper. After the battle of Mutina (43) the three Caesarian leaders, Antony, Octavian, and Lepidus, formed an official coalition, the Second Triumvirate. The triumvirs defeated the forces of the Republicans led by Brutus and Cassius at Philippi (42). Gradually Octavian strengthened his hold on Italy and the western provinces, eliminating Sextus Pompeius and Lepidus. Meanwhile Antony had gone to the East, where he met Cleopatra, launched a disastrous expedition against Parthia, and finally became suspect of sacrificing Roman interests to Cleopatra. Thus the scene was set for a final clash between the Roman forces of the East and West which culminated in Antony's defeat by Octavian at Actium (31) and his death at Alexandria (30). The Roman world was reunited under the sole leadership of Octavian and peace was restored when he settled the East and annexed Egypt.

20. Despite civil wars, misgovernment, political corruption, the ambitions of the rival dynasts (*principes viri*), and the collapse of the Republican constitution, the Roman world still offered a foundation on which a new system could be constructed. Further, the political unification of Italy was reflected in the greater unity of Italian civilization. The whole of this period and especially the Ciceronian age witnessed a steady advance of oratory, art, and letters. If Cicero was the dominant literary figure, there were also Lucretius, Catullus, Varro, and Sallust. Political instability had not undermined all the productive activities of man.

V. AUGUSTUS AND THE JULIO-CLAUDIAN EMPERORS (31 B.C.-A.D. 68)

21. Within the framework of the Republic, which had collapsed through the attacks of military dictators and

the lack of an adequate civil service, Augustus, as Octavian was then called, created a new system which endured. His own position as *princeps* (q.v.) made him in fact a disguised constitutional monarch—'auctoritate omnibus praestiti'—with control over legislation, criminal jurisdiction, the army, and to a large extent finance and provincial administration. He shared his functions with the Senate, but his power was undivided. The army was reformed and was made the protector instead of a potential destroyer of the State; the frontiers were secured; the provinces were administered with greater care. To secure an adequate supply of civil servants the senatorial and equestrian orders were reorganized; the new executive included boards of *curatores* and *prae-fecti*, especially the prefect of the newly formed Praetorian Guard, and a *consilium principis*. By new buildings (see, e.g., ARA PACIS, FORUM AUGUSTI), by care for the water- and food-supplies (see ANNONA), by creating cohorts of *vigiles* to prevent fire and urban cohorts as a police force, Augustus made Rome a worthy capital of the Empire. By renovating the State religion and by less successful legislation designed to encourage marriage and the restoration of morality Augustus hoped to create a new Roman People, the worthy exponents of that civilization which it was the great achievement of the Empire to spread to the provinces of the West. The Greco-Roman civilization of the Mediterranean now became one, but the centre of gravity of the Empire was fixed in Italy and the West. True, the pendulum was to swing gradually eastwards during the next 300 years, and the Augustan empire was radically modified in constitution and finally overrun by the barbarians, but not before it had done its great work of romanizing western Europe. Therein lies to a great measure the debt which the world owes to Augustus and his victory at Actium. Nor could Augustus have accomplished his task alone. He owed much to friends like Agrippa and Maecenas and not a little to writers such as Virgil, Horace, and Livy, who made this the Golden Age of Latin literature.

22. Though it was as peace-maker after the long series of civil wars that Augustus derived much of his popularity, he yet added much to the Empire, but for reasons of security rather than from desire for conquest. In the East ambitious plans were abandoned, an agreement was reached with Parthia, and Galatia was made a province (25 B.C.), as was Judaea in A.D. 6. Spain was finally pacified and, like Gaul, was reorganized. Local self-government was encouraged, the growth of towns fostered, and many colonies were founded. In the north Augustus advanced the frontier to the Danube and by the creation of a chain of provinces (Raetia, Noricum, Pannonia, and Moesia) protected the Balkans from invasion by the wild tribes of central Europe. His plan to advance beyond the Rhine to the Elbe was finally abandoned after the defeat of Varus, and the Rhine-Danube formed the frontier. The fostering of provincial *concilia* and the growth of the imperial cult increasingly gave a sense of unity to the Empire. With the frontiers thus secure and a stable central government the Mediterranean world enjoyed a new era of industrial advance and widespread commerce.

23. Not the least difficult problem which faced Augustus was the succession. His efforts to secure it in the direct line of the Julian house were thwarted by the deaths of Marcellus, Gaius Caesar, and Lucius Caesar. At length he made Tiberius co-regent and at his death the empire was handed on without a hitch. The prestige of his name and the methods which he had displayed determined to a large measure the decisions of his successors.

24. The reign of Tiberius (A.D. 14-37) saw the political advancement of the Senate at the expense of the People, but nevertheless the senatorial administration increasingly depended on the will of the *princeps*.

The career of Sejanus demonstrated the potential power of the Praetorian Prefect and Guard. Though the reign was marked by the growth of delation and ended in a Terror, the provincial administration was good. Tiberius followed the precept of Augustus not to extend the Empire beyond its existing boundaries, except that Cappadocia was made a province. The interlude of the extravagant reign of Gaius (37-41) emphasized the autocratic tendencies latent in the Principate. Claudius' reign (41-54) was notable for his development of the imperial civil service, in which freedmen were given greater influence, for a more liberal extension of Roman franchise, and for an energetic foreign policy which replaced client kingdoms by provinces, and added the two Mauretaniae (42), Britain (43), Lycia (43), and Thrace (46) to the Empire. Nero's reign (54-68) might open well under the guidance of Seneca and Burrus, but his reconciliation with the Senate did not last and he gradually scandalized the aristocracy. Disorder followed in the provinces. In the East Nero adopted a more aggressive policy towards Armenia. This resulted in a clash with Parthia and the defeat of Pactus at Rhandaia (62), although the Armenian problem was settled thanks to Corbulo's display of Roman might. A revolt in Britain was led by Boudicca (61); rebellion spread through Judaea (66-70), while Vindex revolted in Gaul and Galba in Spain. Stoics, aristocrats, army chiefs, and private individuals opposed and hated Nero at home. Thus the Julio-Claudian dynasty collapsed amid rebellion and civil war, but the constructive work of Augustus and Claudius survived the disaster.

VI. THE FLAVIANS AND ANTONINES (A.D. 69-192)

25. The 'Year of the Four Emperors' (69) and the period of renewed civil war is important for its revelation that an emperor could be made elsewhere than at Rome, by the wishes of the armies in the provinces, who recognized, however, that their nominees were still pretenders until approved by the Senate. Galba from Spain was accepted by the Praetorian Guard and Senate, but in 69 the Praetorians acclaimed Otho and killed Galba. The Rhine armies, however, proclaimed Vitellius, on whose behalf Caecina and Valens defeated Otho's forces at Bedriacum. After Otho's suicide Vitellius was accepted as emperor, but meantime the eastern legions had declared for Vespasian, whose claim was soon accepted on the Danube. Vespasian's cause was led from Pannonia by Antonius Primus, who defeated the Vitellians and captured Rome. In 70 peace was re-established, Jerusalem was stormed, the rising of Civilis on the Rhine and the attempt of Classicus to create an Imperium Galliarum were thwarted. From the confusion there had emerged a second Augustus, a *restitutor orbis*, who restored peace, founded a new dynasty, and resumed the task of government.

26. It was the great achievement of Vespasian (69-79) to restore confidence and prosperity, to prevent the character of the Principate changing from civilian to military, and to minimize the risk of renewed civil war by founding the Flavian dynasty and securing the succession of his sons Titus (79-81) and Domitian (81-96). Under the Flavians there was a marked and increasing advance towards absolute monarchy, brought about by the example set by Vespasian of reviving the censorship and holding numerous consulates, and by Domitian's acceptance of semi-divine honours, even though such measures may have been taken primarily to enhance the prestige of the upstart dynasty. The Senate, which by the admission of more provincials became more representative of the Empire, was neglected by Vespasian and slighted by Domitian, who relied more on the *consilium principis*. Wise in the choice of their executive, the Flavians made increasing use of *Equites* in place of freedmen. By a prudent economy Vespasian restored

the State finances, which withstood Titus' prodigality and Domitian's heavy expenditure. In foreign policy the Flavians aimed at strengthening the existing frontiers, particularly by a valuable consolidation of the Rhine and Danube *limites*, although the rising power of Dacia was given only a taste of Roman might, and an advance was made into Scotland. In general the provinces enjoyed a period of uneventful prosperity, resting on the restored tranquillity of the central government. The Flavians had little to fear from Caecina and Antonius Saturninus, but the obstructive opposition of Stoic and Cynic philosophers (see, e.g., HELVIDIUS PRISCUS) was irritating, while after 88 discontented senatorial opposition led to the renewal of delation and charges of *maiestas* and to the Reign of Terror in which Domitian the tyrant perished.

27. The reigns of the 'Five Good Emperors', Nerva (96-8), Trajan (98-117), Hadrian (117-38), Antoninus Pius (138-61), M. Aurelius (161-80), culminated in the Indian Summer of the Antonines, that era which Gibbon regarded as the happiest known to man. During this period the Principate underwent considerable modification. Nerva was chosen as the 'best citizen' by the Senate, not by the legions, but he found the armies, especially the Praetorian Guard, difficult to control and compromised by adopting a soldier, Trajan, and making him co-regent. The next three rulers, none of whom had a son to succeed him, followed Nerva's example of adopting as son and successor a man of tried ability, thus averting further crises at their own deaths. Trajan by his tolerance won from a grateful Senate the title of *Optimus Princeps*. Hadrian, by his versatility, by his measures for the defence of the Empire and his care for its well-being, and above all by his personal activity in the provinces, won the respect of soldiers and civilians alike and peacefully handed over the reins of government to the senator Antoninus Pius, under whose beneficent influence the Empire entered upon one of the most secure periods of its history, although local self-government gradually weakened under the far-reaching paternalism of the central government. With the accession of M. Aurelius Stoicism was enthroned, and the philosopher manfully shouldered the responsibilities thrust upon him. But an era was passing. The joint rule of M. Aurelius and L. Verus (161-9) foreshadowed the division of imperial power. Further, through danger on the frontiers and a devastating plague the Empire was threatened with the loss of its margin of security and prosperity. When M. Aurelius, by promoting his son Commodus (180-93) to the throne, reverted to the dynastic principle of succession in place of the 'choice of the best', it was an ill day for the Empire. The moral basis of the Principate, emphasized by the recent emperors, was weakened by the misrule and corruption of Commodus. Gradually, with the swelling tide of Eastern religious ideas and with the victory of the military over the civilian conception of the Principate, the way was paved for the Dominate.

28. From Nerva to M. Aurelius the emperors maintained good relations with the Senate, which by the admission of more provincials became yet more representative of the Empire. But if it regained some of its former prestige, it recovered little of its power, although Tacitus might praise Nerva for reconciling *libertas* and *principatus*. From Hadrian's time the administrative civil service, now drawn nearly exclusively from the senatorial and equestrian orders, was organized on a larger and more rigid scale. Honorific titles marked grades of equestrian officials, whose military and civil careers were sharply distinguished. Under Hadrian also there were important changes in the Roman legal system, and here the *consilium principis* played a leading part. The *Comitia* had died a natural death and its legislative functions were superseded by imperial 'constitutions', which were marked by a spirit of humanity and equity. By careful economy and a modest court the emperors

were able to be liberal in public expenditure, establishing various *alimenta* and *congiaria*, endowing education and planning public works, although under M. Aurelius the *fiscus* began to feel the strain.

29. Throughout the provinces urbanization reached its widest extent. Under ruling aristocracies of public-spirited men, who often spent lavishly to endow and maintain their own cities, the municipalities flourished as never before, although occasionally the Roman government was forced to limit their liberties in order to maintain public order or to support their finances, which sometimes became inadequate under the strain of compulsory contributions imposed on the local magistrates and senators (see LITURGY, CURATOR). The care which the emperors exercised in the provinces is well illustrated by the correspondence between Trajan and Pliny or by Hadrian's thorough tours of inspection. Trajan and his three successors, who were all of Spanish or Gallic origin, were naturally liberal in granting Roman franchise.

30. There were few extensions of the Empire except under the warrior prince Trajan, who after two wars (101-2, 105-6) defeated Decebalus and annexed Dacia, which was quickly romanized. In the East Trajan annexed Nabataean Arabia in Transjordan and advanced over the Euphrates to wrest from Parthian control the new provinces of Armenia, Mesopotamia, and Assyria. By abandoning his predecessor's eastern conquests Hadrian reached a settlement with Parthia, which was temporarily upset under M. Aurelius. Thus in general Rome still held the line of the Euphrates, but the frontier was strengthened and straightened. Widespread Jewish revolts in 116 were quickly suppressed, while the establishment of a Roman colony in Jerusalem by Hadrian led to a second war in Palestine (131-4) and the ejection of all Jews from Jerusalem, although Hadrian's severe terms were modified by Antoninus. In Britain various attempts were made to secure the frontier: a Roman disaster led to the evacuation of Scotland and the construction of Hadrian's Wall (122-7); another extension of Roman influence into Scotland was followed by the establishment of the Antonine Wall (142-3). A greater crisis arose when Germanic tribes, the Marcomanni and Quadi, invaded the Danubian provinces and even raided north Italy. By resolute action M. Aurelius repelled the danger and planned to avert its repetition by advancing the frontier to the Carpathians and mountains of Bohemia, but after his death Commodus abandoned the plan. On the Rhine-Danube frontier precautions were taken, such as the rebuilding in stone of earth forts in Upper Germany and Raetia under Hadrian and the construction of an advance line under the Antonines. Administrative changes included the establishment of Upper and Lower Germany as separate provinces under Hadrian, the division of Pannonia into two provinces under Trajan and of Dacia under Hadrian.

31. Although the Roman army which secured the frontiers was as yet unconquerable, it was undergoing many changes. With Hadrian's system of local recruiting it became less mobile and predominantly provincial. Only the Praetorian Guard retained a Latin tradition; the provincial soldiers, although good fighters, had only a slight acquaintance with Roman political ideas or Graeco-Roman culture, while as a result of the gradual separation of military from civil careers the higher officers, who were still mainly of Italian stock, had little experience of civil government.

32. In the latter part of this period the Roman Empire attained its highest economic development with the peace that reigned throughout Mediterranean lands and the extension of the road-system. In agriculture and industry the provinces began to outrun Italy. Commerce extended beyond the bounds of Empire to Scandinavia, overland to China, and through the Indian Ocean to the

East. Industry and commerce promoted the growth of cities, while other new towns grew out of the military *canabae*. New buildings at Rome, as the Colosseum, Trajan's Forum, and the Pantheon, found their counterparts in the fora, theatres, amphitheatres, baths, aqueducts, and bridges which now adorned the chief provincial cities. Roman sculpture kept pace with architecture, and imperial ideals often conformed to the artistic traditions of the provinces. Schools and libraries exemplified State interest in education. Literature entered upon its Silver Age with the work of Martial and Juvenal, of Tacitus, Suetonius, and Quintilian, while there was a revival of Greek literature. Christian apologists developed a new branch of literature, and Roman jurisprudence reached its maturity. In every sphere, and especially in the religious, provincial influences spread, and the western stamp which Augustus had set upon the Empire gradually became less clear-cut. Christianity had taken root in Italy, Africa, and Gaul, and was developing that organization which was successfully to challenge the imperial régime. Rome had imposed no uniformity of culture, but had allowed the provincials to retain their varied customs and institutions. The predominantly Latin culture of the West was complementary to the Hellenism of the East. But despite diversity there was a real feeling of unity, and all looked to the emperor as to a universal Providence by whose unremitting care the *pax Romana* was preserved. True, some problems, such as the social evils of slavery and the pauperization of urban populations or the possibility of a wise policy of decentralization and provincial representation, were not taken in hand. True, the culture of the Empire meant less to the masses in the provinces than to the middle and upper classes for whose benefit the Empire chiefly existed, while there were many foreshadowings of unhealthy changes to come. Nevertheless, the barriers between Rome and the provinces had fallen, and in an age of general serenity and good will, when men had become more humane, the stability of the Empire may well have seemed assured and the 'Aeternitas Populi Romani' more than a pious hope or an empty dream.

VII. COLLAPSE AND RECOVERY (A.D. 193-330)

33. The death of Commodus ushered in a new period of civil war. The attempt of Pertinax to co-operate with the Senate failed through the renewed influence of the Praetorian Guard, which auctioned the Empire to Didius Julianus. Again, as in A.D. 69, provincial armies put forward their candidates for the throne, Clodius Albinus in Britain, Pescennius Niger in Syria, and Septimius Severus in Pannonia. Severus seized Rome, struck down his rivals, and established a new dynasty. His reign (193-211) was marked by the development of the power of the equestrian order, the reconstitution of the Praetorian Guard and the increased power of its prefect, and by the creation of the *res privata*, but above all by its military aspect: the civilian constitution of the Empire which Augustus had conceived was set aside. Abandoning all pretence of co-operation with the Senate, Severus openly showed that his authority rested on the support of the army. His restoration of order in northern Britain was followed by the evacuation of Scotland. In general the frontier fortifications were consolidated and the provinces were well administered, some being divided into two. His son Caracalla (M. Aurelius Antoninus, 211-17) developed the military tendencies of the father, and by his edict of 212 abolished all distinction between Italians and provincials, so that the Empire became a commonwealth of equal members. But Alamanni and Goths were ominously threatening the Danube frontier. After Macrinus' brief reign (217-18), Elagabalus (218-22) gave Rome an unwelcome insight into Eastern cult, Oriental pomp, and personal corruption. Alexander

Severus (221-35), guided by Julia Mamaea, attempted a *rapprochement* with the Senate and gave Rome a few years of comparative peace and tranquillity. But again the military element triumphed over the civil, and Alexander's murder was followed by half a century of military anarchy which nearly led to the final collapse of the Empire.

34. Emperors followed one another thick and fast: the Thracian peasant Maximinus (235-8), Gordian I, II, Pupienus, Balbinus (238), Gordian III (238-44), the Arabian Philip (244-9), the Illyrian Decius (249-51), Trebonianus Gallus (251-3), the Moor Aemilianus (253), and Valerian (253-60). While the armies played the game of emperor-making, the security and unity of the Empire were nearly destroyed. In the East the Parthian dynasty of the Arsacids was superseded by the aggressive Sassanidae who overran Syria (256), captured Valerian (259), and invaded Asia Minor. They were checked with the help of the caravan city of Palmyra, which under Zenobia now proceeded to challenge Roman supremacy in the East. In the West a pretender, Postumus, established an independent *imperium Galliarum*, which included Spain and Britain. Franks threatened the Lower Rhine, Saxon pirates ventured into the English Channel, Goths raided the Balkans and the Aegean, Alamanni crossed the Rhine and ravaged north Italy as far as Ravenna. With the Empire thus cracking and being rent asunder under his feet Valerian's son and successor Gallienus (253-68) had also to face a swarm of pretenders and rivals, the so-called Thirty Tyrants (q.v.). To his honour he brought the Empire through the crisis without complete disaster and laid the foundations of recovery. The tide was turned by his successors, the Illyrian emperors, Claudius Gothicus (268-70), who repelled the Gothic peril, and Aurelian (270-5), who, though evacuating Dacia, destroyed Palmyra (273), recovered Gaul, and justly earned the title of *Restitutor Orbis*. The great wall which he constructed around Rome was a bulwark of defence but also a symbol of the vanishing *pax Romana*. But still the army could not agree to a durable government and elevated a succession of emperors, many Illyrian, who had to fight rivals and barbarians alike: Tacitus (275-6), who defeated some Goths in Asia Minor, Florianus (276), Probus (276-82), who secured the Rhine and Danube frontiers and disposed of the rival Bonosus, Carus (282-3), who invaded Mesopotamia, Carinus (283-5), and Numerianus (283-4). Out of this welter of short-lived emperors emerged Diocletian, who held power for twenty years (284-305) and then voluntarily laid it aside.

35. In order to secure the protection of the Empire and an unchallenged succession Diocletian divided the Empire and imperial power. As joint Augustus with Maximian he established two junior Caesars, Galerius and Constantius, who should ultimately succeed. But when he insisted on retiring, fresh civil wars followed, in which Constantine by his defeat of Maxentius at the Milvian Bridge gained the Western Empire (312). In the East Licinius won supremacy by defeating Maximinus (313), but was defeated by Constantine in 314 and finally in 324, so that the Empire, West and East, was once more united under a resolute ruler. But the centre of gravity was shifting eastwards. The barbarian invasions had left emperors little time to spend in Rome, and Diocletian had set up his court at Nicomedia in Bithynia. Finally, by 330, Constantine had established at Byzantium a new capital, East Rome or Constantinople.

36. The Principate was dead; the military had triumphed over the civil aspect. Further, the basis of imperial authority had collapsed and a new sanction must be found. Eastern ideas of the king as the viceregent of heavenly authority were introduced. Thus Aurelian brought back to Rome the Persian worship of the Unconquered Sun, and Diocletian regarded himself as

Jovius the earthly representative of Jupiter. The climax came when Constantine took Christianity into partnership with the Empire. The long period of persecution (q.v.) was ended and the struggle, which had gradually assumed the form of State against Church rather than Christian against pagan, was resolved with Constantine reigning as the earthly representative of the Christians' God; thus the way was prepared for a reconciliation between the Christian Church and the culture of the ancient world. Further, the outward form of imperial authority changed no less than its basis, which was legally autocratic after 282, when Carus dispensed with the theory that his power derived from the Senate. In title *dominus* replaced *princeps*. Aurelian (*dominus et deus*) introduced the pomp of Oriental absolutism, while Diocletian and Constantine elaborated a court ceremonial in which the 'sacred' person of the emperor, arrayed in diadem, purple and gold, demanded prostration on the part of those admitted to audience. The *consilium principis* became a *sacrum consistorium*. The old Republican magistracies either died out or were divested of all executive authority. The Senate survived with undimmed prestige, but its authority was reduced to that of a local town council. Under Diocletian military were separated from civilian offices, and under Constantine the senatorial and equestrian orders united. Provincial administration was profoundly modified: the number of provinces rose to 70 and ultimately to 116, the Empire was grouped into prefectures and dioceses, and the officials (*praesides*, *vicarii*, *praefecti praetorio*, etc.) accordingly increased. Municipal patriotism and self-government declined, owing to impoverishment, financial pressure, and the growth of bureaucracy, so that under Constantine the *curiales* became a hereditary caste and the attempt to avoid office and its crushing responsibilities was checked by State action. Thanks to the military reforms of Diocletian and Constantine with frontier forces (*limitanei*) and mobile reserves (*comitatenses*), the Roman army, although profoundly changed, still guarded the frontiers and kept the barbarians at arm's length.

37. The mid-third century witnessed an economic as well as a political collapse. Rising costs of government led to depreciation of the coinage and the extension of a system of requisitions and compulsory labour. The monetary system was undermined and was partially replaced by payments in kind, although the improvement of the coinage under Diocletian and Constantine led to a slow revival of confidence and a gradual restoration of a money economy. A new taxation system (*annona*) was developed by Diocletian to remedy the injustices of the arbitrary requisitions which had become more common during the preceding upheavals, while he also extended the system of compulsory corporate responsibility for the collection of taxes and for the performance of other services. Gradually various industrial and commercial guilds were converted into hereditary castes in an attempt to maintain the economic life of the Empire, which had declined seriously in the third century as a result of civil wars and barbarian invasions, increasing difficulties of communication, and above all the general sense of insecurity and lack of confidence. Not all parts of the Empire declined as rapidly as did some, but industry, especially in the west, suffered severely and the total cultivated area and the size of the towns gradually diminished. Finally, through the growth of *latifundia*, some landed gentry in their fortified villas could live securely and at ease in a manner which foreshadowed medieval feudalism, but the tenants (*coloni*) on the large estates had gradually to surrender their liberty of movement and sank to a state of serfdom which received legal recognition under Constantine.

38. Social life declined in the towns and flourished rather among the country aristocracy. The State educational

institutions were not neglected, and letters received some encouragement. After the third-century collapse both Latin and Greek literature enjoyed a mild revival, while Christian literature showed real vigour. Sculpture declined, but architecture maintained a technically high level, and the way was paved for the transition to 'late classical' art. Neoplatonism and Mithraism strove with Christianity for the allegiance of men, while in the country-side paganism still flourished. But the future lay with Christianity, and when Constantine, a Roman emperor, presided at the Council of Christian bishops at Nicaea in 325 an era in man's history was ended and the threshold of the Middle Ages was revealed.

39. Diocletian and Constantine had buttressed up the Empire, but the latter's unerring insight in founding a new Christian capital in *partibus Orientis* could not secure the unity of the whole. After his death and renewed civil war the Empire was temporarily reunited under Constantius and Julian, whose reign witnessed a reaction of paganism against Christianity, and again under Theodosius I (395), whose sons, theoretically joint rulers of a single empire, were in practice monarchs of East and West. In the East the Byzantine Empire survived until the Mohammedan capture of Constantinople in 1453. If its culture became predominantly Greek, it at any rate produced two of the greatest monuments of Roman law in the codes of Theodosius II and Justinian. East Rome was in fact the direct continuation of the Roman Empire, and to its resolute resistance to the storms of barbarism the modern world owes much of the preservation of the legacy of the ancient world. The West, separated from the East, could not long survive the storm of Germanic invasions. Picts, Scots, and Saxons overran Britain, which the Romans evacuated, Gaul was conquered by Franks and Burgundians, Spain by Suebi and Vandals, who, passing to north Africa (429), cut the Mediterranean in two. In 410 the Goth Alaric sacked Rome, and although the threat from Attila the Hun was averted (452) Rome was again raided and plundered by the Vandal Gaeseric in 455. When the German Odoacer deposed Romulus Augustulus in 476 the rule of Rome in the West was ended, but the survival of Roman law and the Latin tongue, the Roman Church, and the Holy Roman Empire continued to demonstrate the indestructibility of the Roman tradition.

ROME (TOPOGRAPHY). The Tiber valley at Rome is a deep trough, from $\frac{1}{2}$ to $1\frac{1}{2}$ miles wide, cut into the soft tufa floor of the river's lower basin. The edges of the trough are formed by steep weathered cliffs, scarred and even isolated by tributary streams. Thus were formed the famous hills of Rome, the Capitol, Palatine, and Aventine being cut off from the main hinterland, the Caelian, Oppian, Esquiline, Viminal, and Quirinal as flat-topped spurs. On the valley floor itself the river meanders in an S-shaped curve, the northern or upper twist containing the flat and mephitic Campus Martius and skirting the Vatican plain, the southern curve skirting the Capitol, *Forum Boarium*, and Aventine, and enclosing *Transtiberim*, a smaller plain at the foot of the Janiculum ridge. Just below the middle of the S-curve the river runs shallow and divides at Tiber island, traditionally erected by man upon a natural basis. The ford so made has no fellow between Rome and the sea, or for many miles upstream. Thus, while hills and spurs provided the natural strongholds beloved by primitive communities, traffic across the heavily populated Latian plain concentrated at the Tiber ford, the key to Rome's predominance.

2. Archaeology attests widespread primitive settlements on the Esquiline and Quirinal (qq.v.), associated with grave-goods going back to the ninth century B.C. Elsewhere space was more restricted: the Palatine or Capitoline cemeteries crowded the edges of the marshy valley of the *Forum Romanum* (q.v.), where burials cease by the sixth century B.C., attesting the synoecism brought about by the kings and coincident with the draining of the valley by the *cloaca maxima* (q.v.) and the creation of the *forum* market-place. The Wall of Servius (q.v.) on the Viminal, and cliffs elsewhere, made Rome a great promontory fortress comparable with Veii or Ardea, while the *pons sublicius* supplanted the ford. Regal ambition made a sacred acropolis of the Capitol, royal acres of the Campus Martius, a religious centre of the Aventine, with temple of Diana and *armilustrum*, and a *circus* (q.v.) of the Velabrum. The Republic kept the monuments, made of the Campus Martius a training-ground, and gradually concentrated civic activities in the Forum (q.v.). The Palatine became a residential centre. Markets lined the Tiber bank, near the bridge and in touch with river-traffic, or clustered behind the Forum, whence State buildings gradually ousted them. The city became crowded, especially in the valleys which formed the irregular arterial routes, and as early as the third century B.C. tenement houses, which were to become a feature of the capital, attest the overcrowding and squalor which beset the narrow thoroughfares, such as the *Vicus Tuscus*, *Vicus Iugarius*, or *Subura*. Civic pride and family ambition early endowed innumerable temples. The city wall was erected c. 378 B.C., enclosing the *Quattuor Regiones* (q.v.); aqueducts (q.v.) came later, in 312, 272, and 144 B.C.; quays, new Tiber bridges, *basilicae*, and porticoes later still, as in the great outburst of building activity in 184-176 B.C. Sulla was the first of the great dictators or *principes* to systematize large areas, linking the Forum and Capitol as an architectural unit by means of the *Tabularium* (q.v.). Pompey set a new fashion in theatres and porticoes, by the famous group of buildings centred upon his theatre and

Hecatosylon; while of Julius Cæsar's grandiose schemes, including Tiber diversion (Cic. *Att.* 13. 33), only the *Forum Iulium* (q.v.) remains, though such buildings as the *basilica Iulia* and the *Sæpta* (q.v.) were finished by Augustus.

3. Thus the monumental centres of the City had been determined by the Republic upon a basis inherited from the kings. Their surviving outward form, however, owes far more to the emperors, whose rebuildings or additions transformed or eclipsed the older monuments. Augustus built a new *Forum Augustum* (q.v.), novel in form and dedication, a modest palace on the Palatine, associated with the temple of Apollo, and three new aqueducts (q.v.), while many new monuments in the Campus (q.v.), including the *Mausoleum*, were erected by him or by his *virii triumphales*. It may be claimed that in the Campus he and Agrippa rivalled Pompey. Studied attention was paid to the archaic cult buildings of the *Forum Romanum*, in harmony with the religious revival, while the city was divided into fourteen new *regiones* (q.v.). The contributions of Tiberius, the *Castra Praetoria* on the outskirts of the Viminal and the enlarged *Domus Augustana* on the Palatine (q.v.), are curiously significant of his policy; while the freak building-schemes of Gaius reflect that disregard of public feeling which cost him his life. The only lasting building of Gaius, the *Circus* (q.v.) in *Transtiberim*, was to fix through the martyrs the centre of Christianity. The effect of all these building-schemes was to drive the residential quarters off the Palatine to the villas and parks of the Quirinal, Pincian, and Aventine. To supply these higher sites, Claudius built two sumptuous aqueducts. Nero's parkland palace (s.v. *DOMUS AUREA*) attests his Hellenistic tastes, as do his *Colossus* and monumental *Via Sacra* (q.v.), the sole street in Rome comparable with the great colonnaded streets of the Roman East or the newer Imperial cities of the West. His Baths and Gymnasium are more to Roman taste. The Flavians spent much energy in Romanizing the creations of the *τύραννος*, the *Colosseum* (q.v.), *Forum Vespasianum* (q.v.), and Baths of Titus taking their place. Nerva's *Forum Transitorium* is a curious essay in the monumental approach, linking *Forum Romanum* and *Subura*. Trajan's *Thermae* finally blotted out the *Domus Aurea*, while his monumental *Forum* (q.v.) and market represent the impact of the Syrian Apollodorus upon Roman taste—'in Tiberim defluxit Orontes!' The *Aqua Traiana* (s.v. *AQUEDUCTS*) was the first good water-supply in *Transtiberim*. Hadrian replaced the vestibule of the *Domus Aurea* by the temple of Venus and Rome, erected a new *Mausoleum* and the *pons Aelius*, and rebuilt the *Pantheon* and Baths of Agrippa in the Campus.

4. Then followed a pause in building activities: the Antonines could afford to live upon the prestige of their predecessors, adding only triumphal monuments and temples of the *Divi*. Later building-schemes, apart from repairs, take the form of isolated monumental buildings, chiefly of utility. Aurelian's *Templum Solis* is the one notable religious building. The typical creations are the great *Thermae*. But the policy of the Severi is illustrated by their vast extension of the Imperial palace on the Palatine (q.v.), with ornamental façade (see *SEPTIZONIUM*) on Via Appia, and the *Castra Equitum Singularium* on the Caclian. It is significant for the overcrowding in the City, as well as for the urgent need of cleanliness, that the sites for the great Baths had to be sought on the fringe, Caracalla picking the low ground outside Porta Capena, Diocletian selecting the Viminal, Constantine choosing the Quirinal. Great fires offered the only chance of rebuilding in the older regions: thus, the *Thermae Alexandrinae* were an enlargement of Nero's Baths in the Campus, while the fire of Carinus in 284 created space for the *basilica* of Maxentius, the noblest experiment in vaulting in the ancient world. The city

had now reached the climax of its development, and it is significant that Aurelian had again ringed it with a defensive wall (see *WALL OF AURELIAN*). Further changes belong to the medieval topography.

A. R.

ROMULUS and REMUS, mythical founders of Rome. Their legend, though probably as old as the late fourth century B.C. in one form or another (the Ogulnii dedicated a statue of the she-wolf with the twins in 296 B.C., Livy 10, 23, 12; see further J. Carcopino, *La Louve du Capitole*), cannot be very old nor contain any popular element, unless it be the almost universal one of the exposed children who rise to a great position. The name of Romulus means simply 'Roman', cf. the two forms *Sicanus* and *Siculus*; Remus (who in the Latin tradition replaces the Rhomus of most Greek authors), if not a back-formation from local place-names such as Remurinus ager, Remona (Festus, pp. 344. 25 and 345. 10 Lindsay), is possibly formed from *Roma* by false analogy with such doublets as *Κέκρυπα*, *Coreyra*, where the *o* is short. The part played by a god in begetting children is against all provably native Italian tradition; the entire story moves on purely Greek lines, and the idea of having an eponym whose name explains that of a city is itself Greek. However, there is no doubt that the legend was shaped by someone well acquainted with Roman topography and having a not inconsiderable knowledge of Roman religion and custom; contrast the older stories preserved, e.g., in Festus, p. 326. 28 ff.

In its normal form (Livy 1. 3. 10 ff.; Dion. Hal. *Ant. Rom.* 1. 76. 1 ff.; Plutarch, *Romulus*, 3 ff.; more in Carter, Roscher's *Lexikon*, iv. 174. 14 ff., which article is an excellent summary of the whole matter, with relevant literature) the story runs thus. Numitor, king of Alba Longa, had a younger brother Amulius who deposed him. To prevent the rise of avengers he made Numitor's daughter, Rhea Silvia, a Vestal Virgin (q.v.). But she was violated by Mars himself, and bore twins. Amulius, who had imprisoned her, ordered the infants to be thrown into the Tiber. The river was in flood, and the receptacle in which they had been placed drifted ashore near the Ficus Ruminalis. There a she-wolf (Plutarch, *Rom.* 4, adds a woodpecker, both being sacred to Mars) tended and suckled them, until they were found by Faustulus, the royal herdsman (probably a by-form of Faunus, q.v.). He and his wife Acca Larentia (q.v.) brought them up as their own; they increased mightily in strength and boldness, and became leaders of the young men in daring exploits. In one of these Remus was captured and brought before Numitor; Romulus came to the rescue, the relationship was made known, they rose together against Amulius, killed him, and made Numitor king again. The twins then founded a city of their own on the site of Rome, beginning with a settlement on the Palatine; Romulus walled it, and he or his lieutenant Celer killed Remus for leaping over the walls. He opened an asylum on the Capitol for all fugitives, and got wives for them by stealing women from the Sabines, whom he invited to a festival. After a successful reign of some forty years he mysteriously vanished in a storm at Goat's Marsh and became the god Quirinus, q.v., one of the most obvious Greek touches in the whole story.

RORARI, see *VELITES*.

ROSALIA or **ROSARIA** (generally neut. plur., occasionally fem. sing., plur. *Rosaliae*). The Romans were extravagantly fond of roses and used them especially on all manner of festal occasions, at banquets both official (e.g. *Act. Arval.*, p. ccv, 13 Henzen) and private (e.g. Martial 9. 93. 5). It is therefore not remarkable that a feast of roses was a common event, although it never became a fixed public festival, except locally. The best-known occasions of this sort were commemorations of the dead, also called *dies rosationis*, when presumably the members of the family met at the grave and decked it with roses. Violets were also used, hence *uiolatio*, *dies uiolares* or *uiolae* (see A. de-Marchi, *Culto privato di Roma antica*, i (1896), 201). But quite apart from this, feasts of roses are recorded in a number of documents, none earlier than Domitian, at Capua on 5 May, at Rome on 23 May ('maecellus rosa [sic] sumat', Philocalus) and 21 May, at Pergamum on 24-6 May, and at various places in northern Italy and central Europe on dates ranging from about 1 June to the middle of July; in other words, at the time of year when roses were to be had abundantly. There is no reason to suppose that all these developed out of the cult of the dead; rather is the reverse true, that the honours done in this manner to the dead were a particular case of inviting them to a feast or other entertainment at which the survivors were also present, or simply a development of the custom, common in antiquity as now, of decking graves with flowers, cf. Nilsson, *Rosenfest*, 136.

An interesting instance is the *Rosaliae signorum* in the calendar of Dura-Europos which has the entry *pridie kal. Iunias ob rosalias signorum supplicatio*. It seems probable that on that occasion the standards (q.v.) were garlanded with roses. See A. S. Hoey in *Harv. Theol. Rev.* xxx (1937), 15 ff.

M. P. Nilsson in *PW*, s.v. 'Rosalia' (full refs. to authorities); 'Das Rosenfest', in *Beiträge zur Religionswissenschaft* ii (1914-15; publ. 1915), 134 ff. H. J. R.

ROSCIUS (1), **SEXTUS**, born in Ameria (Umbria), was accused of parricide in 80 B.C. by C. Erucius at the instigation of Chrysogonus, who had placed the father's name on the proscription list in order to confiscate the property. Defended by Cicero, he was acquitted. The political significance of the trial, possibly a protest against Sulla's tyranny, is doubtful.

Von der Mühl, *PW* i A. 1117; J. Carcopino, *Sylla* (1931), 147; E. Ciaceri, *Cicerone* i (1926), 22; J. Humbert, *Les Plaidoyers écrits de Cicéron* (1925), 100. A. M.

ROSCIUS (2) **OTHO**, **LUCIUS**, a tribune in 67 B.C., opposed the *Lex Gabinia*. He carried a *Lex Roscia*, which restored to the men of equestrian rank and census a special place in the theatres. This unpopular law was defended by Cicero in 63.

ROSCIUS (3) **GALLUS**, **QUINTUS**, from Solonium by Lanuvium (*Cic. Nat. D.* 1. 79; *Div.* 1. 79), the famous actor, was of free birth, being brother-in-law to Quinctius (*Quinct.* 77). Sulla made him a knight. Handsome in person (*Arch.* 17), he had a squint (*Nat. D.* 1. 79) and wore a mask (*De Or.* 3. 221). Time moderated his natural vivacity (*ibid.* 1. 254; *Leg.* 1. 11); supreme in comedy, he also played tragic parts (*De Or.* 3. 102). His name became typical for a consummate artist (*Brut.* 295; *De Or.* 1. 130, 258), his popularity being prodigious (*Arch.* 17). His earnings were enormous (*Plin. HN* 7. 128; *Cic. Q. Rosc.* 23). He was on intimate relations with Catulus (*Nat. D.* 1. 79), Sulla (*Plut. Sulla* 36), and Cicero, to whom he gave his first important brief (*Quinct.* 77), 81 B.C., and who later defended him in a private suit. Cicero mentions his death as recent in 62 B.C. (*Arch.* 17). G. C. R.

ROSTRA. The earliest *rostra*, or speaker's platform, at Rome lay on the south side of the augurally constituted *comitium*; it existed in 338 B.C. when it was adorned with the prows (*rostra*) of ships captured from Antium, later with statues and a sundial. This platform is long, with a straight front, associated with the second level of the Comitium. When rebuilt, probably by Sulla (*JRS* xii (1922), 21-5), it had a curved front. On planning the *Curia Iulia* (q.v.) Caesar projected new *rostra* at the north end of the Forum, the core of these being contained within the curved steps built there by Augustus for his large rectangular platform of 42 B.C. The Augustan *rostra* were called the *rostra vetera* in contrast with the front of the podium of the Temple of Divus Julius (29 B.C.) also treated as *rostra* (*Frontin. Ag.* 129; *Dio Cass.* 56. 34) with ships' prows from Actium. A rough northward extension of the Augustan *rostra* of about A.D. 470 commemorates a naval victory over Vandals (*Röm. Mitt.* x. 59). I. A. R.

ROXANE (the name may be connected with the hill-state of Roshan), daughter of the Bactrian baron Oxyartes, was married in 327 to Alexander, who hoped thus to reconcile the great barons of the north-eastern marches. Beyond the story that after Alexander's death she murdered his other wife Barsine (Stateira), little is heard of her; her son Alexander IV was born after Alexander's death, and she and the boy became pawns in the wars of the Successors till Cassander murdered them both. In Greek and Bactrian legend, however, she became a daughter of Darius III and ancestress, through her (supposed) daughter Apama, of the Seleucid and Euthydemid dynasties.

Berve, *Alexanderreich* ii. 346.

W. W. T.

RUBELLIUS, see **BLANDUS**.

RUBICO (commonly called **Rubicon**), a red-coloured but not certainly identified stream that flowed into the Adriatic, marking the boundary between Italy and Cisalpine Gaul. In 49 B.C. Julius Caesar, after some hesitation, precipitated Civil War by crossing it.

Plut. Caes. 32; *Lucan* 1. 213 f.; *Suet. Jul.* 31; *Appian BCir.* 2. 35; *II. Philipp* in *PW*, s.v. E. T. S.

RUBRENUS LAPPA, a tragedy-writer to whose *Atreus* Juvenal refers (7. 72-3).

RUFINUS (5th c. A.D.), grammarian (not identical with the translator of Eusebius). His *Commentarium in metra Terentiana* and his *De compositione et de metris oratorum* are extant (ed. Keil, *Gramm. Lat.* vi. 554-65; 565-78).

Cf. Teuffel, § 445. 5; Schanz-Hosius, § 1104.

RUFIVS FESTUS, *magister memoriae* under Valens, perhaps the Festus of Tridentum who was *magister memoriae* between A.D. 365 and 372 and proconsul of Asia, wrote a *Breviarium rerum gestarum populi Romani* from the origins to the accession of Valens. The first part described the conquest of the Roman provinces, the second the Eastern Wars from Sulla, especially the Parthian Wars. Dedicated to Valens, it appeared after the Gothic peace (A.D. 369), at the height of the Persian War. It represents ultimately the epitomized Livian tradition and a compendious Imperial history.

Ed. W. Förster (1874); C. Wagener (1886).

A. H. McD.

RUFUS (1), **PUBLIVS SULPICIUS**, a great orator and statesman, c. 98 B.C. impeached the democrat Norbanus *de maiestate* for his action in 104; he remained an Optimatus till his tribunate (88). He had been intimate with L. Crassus and the younger Drusus, whose reforms he supported. In 88, changing sides, he passed by force a series of laws, including the transference of Sulla's intended eastern command to Marius; the recall of those

exiled by the Varian Commission of 91; and the distribution of the new citizens throughout the tribes. When Sulla marched on Rome Sulpicius Rufus was killed and his laws were declared to be invalid. Cinna later restored his distribution of the voters. His career marks the return, after Drusus' effort to associate the Senate with reform, to 'normal politics'. M. H.

RUFUS (2), SERVIUS SULPICIUS, prosecuted Murena (q.v.) when defeated by him in the consular elections for 62 B.C. He reappeared as a moderate, both as consul in 51, and in 49 when he attended Caesar's Senate; and though he retired to Samos after Pharsalus, he governed Achaëa for Caesar in 46. He died on the embassy to Antony in January 43, and was honoured with a public funeral and a statue on the Rostra. The Ninth Philippic is Cicero's eulogy on him, a man of peace and great sanctity of character, chiefly famous as a jurisconsult. He wrote to Cicero two celebrated letters—a description of the murder of M. Marcellus (q.v.) and a consolation for Tullia's death (*Fam.* 4. 5. 12). G. E. F. C.

RUFUS (3), MARCUS EGNATIUS, won popularity as aedile (probably 21 B.C.) by organizing a private fire-brigade, was elected praetor for the following year, and presented himself (probably illegally) as a candidate for the consulship in 19 (one of the places having been left vacant for Augustus or declined by him). His candidature was rejected by the consul in office and rioting ensued. Rufus then plotted to assassinate Augustus on his return from the East, but was detected and executed.

Velleius 2. 91 and 92; Dio Cassius 53. 24. Stuart Jones, *CAH* x, p. 134, n. 4, and p. 145. G. W. R.

RUFUS (4), CURTIUS, of obscure origin and alleged by some to be the son of a gladiator, entered the Senate and won the praetorship, not without encouragement from Tiberius, who remarked 'Curtius Rufus uidetur mihi ex se natus'. The year of his consulate is unknown. Legate of Upper Germany in A.D. 47, he employed his troops with digging for silver in the territory of the Mattiaci and was rewarded with the *ornamenta triumphalia*. Later he was proconsul of Africa, thus fulfilling a prediction made to him in his humble beginnings. R. S.

RUFUS (5), QUINTUS CURTIUS, rhetorician and historian, writing under Claudius (10. 9. 4: *caliganti*, cf. Caligula; or under Vespasian: J. Stroux, *Philol.* 1929, 233), published a history of Alexander the Great in ten books. Our text begins at bk. 3 (333 B.C.) and has gaps between bks. 5 and 6 and in bk. 10. The tradition is partly panegyric, from Clitarchus, but partly unfavourable and also 'contaminated' with the tradition of Ptolemy and Aristobulus. His aim was dramatic, in the Peripatetic fashion, and rhetorical; we find few technicalities, but emotional presentation, vivid detail, and the introduction of speeches. The style is classic, on the model of Livy, but with contemporary usage in sentence structure and vocabulary.

Editions: J. Mürtzell (1841), with commentary; E. Hedicke (1867; 2nd ed. 1908, ed. minor 1931); Th. Vogel (1881); P. H. Darnsté (1897). S. Dosson, *Étude sur Q. Curce* (1887); E. Schwartz, *PW* iv. 1870; W. Kroll, *Studien zum Verständnis der röm. Lit.* (1924), 331; F. Helmreich, *Die Reden bei Curtius* (1927). Cf. on sources Schanz-Hosius, *Gesch. röm. Lit.* ii. 601. A. H. McD.

RUFUS (6), LUCIUS VERGINIUS, consul in A.D. 63, was afterwards legate of Upper Germany. In 68 he was prepared to make a deal with Vindex (q.v.), but, being compelled by his own soldiers to fight, he crushed the rebel. He refused to be hailed as emperor and recognized Galba, who, still suspicious, replaced him in Germany. Consul II under Otho, he again refused the sovereignty after Otho's death. He became an example of loyalty to the State, and Nerva chose him as his colleague in the consulate (97). He died that year or a

little later. His panegyric was pronounced by Tacitus, and his memory was celebrated by Pliny the Younger, whose tutor he had been (*Ep.* 2. 1). His epitaph is preserved (Pliny, *Ep.* 9. 9):

Hic situs est Rufus, pulso qui Vindice quondam
Imperium adseruit non sibi sed patriae.

PIR, V 284; E. Ritterling, *Fasti des römischen Deutschland unter dem Prinzipat* (1932), 18. A. M.

RUFUS (7), CLUVIUS, the Imperial historian, consul before A.D. 41. Nero's herald in the theatre, he became Galba's governor of Hispania Tarraconensis in 68. He first supported Otho, but later declared for Vitellius, defending Spain against Luceius Albinus, and was witness, with Silius Italicus, at the truce between Vitellius and the Vespasians. His *historiae* may have begun with Gaius (Joseph. *Ag.* 19. 1. 13 (91)) and ended with Otho (Plut. *Otho* 3); but in any event its main part covered the reign of Nero. Tacitus (*Ann.* 13. 20; 14. 2) may have followed him in the second part of the *Annals*.

H. Peter, *HRRel.* ii (1906), pp. clxv and 114; Ph. Fabia, *Les Sources de Tacite* (1893), 171, 376. A. H. McD.

RUFUS (8) of Ephesus, physician under Trajan (A.D. 98–117), probably studied in Alexandria; he knew Egypt well, visited Caria and Cos, and practised in Ephesus, at that time a famous medical centre.

Of numerous writings, mostly on dietetics and pathology, these are preserved: *Π. ὀνομασίας τῶν κατ' ἀνθρώπων μορίων. Ἱατρικὰ ἐρωτήματα. Π. τῶν ἐν νεφροῖς καὶ κύστει παθῶν. Π. σατυριασμοῦ καὶ γονορροίας. Π. τῶν κατ' ἀρθρα νοσημάτων* (Latin, *De podagra*).

Rufus was a dogmatist, though of no special creed, a man of great experience and independent mind; in commenting on Hippocrates he did not refrain from criticizing the master. Anatomy he held necessary for sound medical practice. Opposed to general theories, he mostly studied single diseases. He also renounced the usual prognosis and preferred to ask the patient about the history and symptoms of his case. His books, written in a lively and personal style, bear out the judgement of Galen that the objective critic finds nothing missing in Rufus' writings. His influence was greater in the Orient than in the Occident. See ANATOMY AND PHYSIOLOGY, para. 11.

TEXTS: Opera, Ch. Daremberg and E. Ruelle (1879); not genuine, 'ὀνομασιῶν τῶν κατ' ἀνθρώπων α. Π. ἀνατομῆς τῶν τοῦ ἀνθρώπου μορίων. Π. ὁσίων. Σύνοψις π. σφυγμῶν. De podagra', H. Morland, *Symbolae Osloenses* (1933).

MODERN LITERATURE: J. Ilberg, *Abh. Sachs. Akad.* (1930), list of writings, also from Arabic, *ibid.*, p. 47; cf. M. Wellmann, *Hermes* (1912); for Ephesus, J. Keil, *JÖAI* (1905; 1926). H. Gossen, *PW* i A. 1207. L. E.

RUFUS, see also POMPEIUS (2), POMPONIUS (2), RUTILIUS, SALVIDIENUS, SUILLIUS, VARIUS, VIBIUS (2).

RULER-CULT. I. GREEK. The essential characteristic of Greek ruler-worship is the rendering, as to a god or hero, of honour—*τιμή*—to individuals deemed superior to other men because of their achievements, position, or power. This tendency lies deeply rooted in the Greek mind and is not to be derived from similar practices in the ancient East.

In the aristocratic society of the Archaic Age, as in the classical *polis* of the fifth century, no man could reach a position of such generally acknowledged pre-eminence as to cause the granting of divine honours to be thought appropriate: the only approximation to deification is the posthumous heroization of oecists (see CITY-FOUNDERS). Only in the period of disintegration after Aegospotami and through the rise of individualism do we find divine honours given to living men, all persons of admitted superiority, usually due to their political or military achievements.

Ruler-cult in a developed form first appears during

the reign of Alexander the Great and is directly inspired by his conquests, personality, and, in particular, by his absolute and undisputed power. Alexander's attempt to force the Greeks and Macedonians in his entourage to adopt the Persian custom of prostration before the king—*προσκύνησις* (in itself not implying worship)—was an isolated and unsuccessful experiment without consequence. Much more important is his salutation as the son of Zeus by the priest of Zeus Ammon at Siwa in 331. Though the priest was merely employing the traditional salutation due to any Pharaoh, the prestige which the oracle of Ammon enjoyed throughout the Greek world had a decisive effect, not only on the Greeks, but also on the romantic imagination of the young king himself. It is probably the progressive development of these emotions which caused Alexander in 324, together with his order for the restoration of political exiles, to demand and receive formal recognition of his divinity from the Greek *poleis*. Alexander also secured heroic honours for his dead intimate Hephaestion, and it seems clear that his motives were primarily personal rather than political; that is, the desire that his career and personality should receive definite and official recognition from the Greeks.

Alexander demanded honours: they were *voluntarily* granted by the Greeks to his successors and their descendants, and thus the two generations after his death saw the rise of all the characteristic phenomena of Greek ruler-worship. These fall into five categories:

1. Dedications to rulers by individuals are necessarily difficult to interpret; the motives range from sincere devotion to the most interested flattery.

2. Like any occist, a king was worshipped by cities which he had himself founded—but as a god, not a hero.

3. Rulers were sometimes honoured by having their statues placed in an already existing temple. The king was thought to share the temple with the god (as *σύνναος θεός*) and thus to partake in the honours rendered to the deity and, on occasion, in the deity's qualities.

4. The most characteristic method of deification was for a Greek *polis*, by legislative enactment, to enrol a king among its official divinities with his own cult and priest. This was a tactful way of honouring a suzerain and could also be an appropriate expression of thanks for the benefactions of a foreign ruler.

5. The Greek monarchies of the east in time created their own official cults. The dynastic cult of the Ptolemies at Alexandria (founded 285–284) in its developed form by the end of the third century consisted of a priest of Alexander, of each pair of deceased rulers, and of the reigning king and queen. In 280 Antiochus I deified his dead father Seleucus and dedicated to him a temple and precinct at Seleucia in Pieria; it was probably also Antiochus I who established the imperial ruler-cult of the Seleucid Empire with high priests of the living king and his divine ancestors (*προγόνων*) in each province of the empire. In the later dynastic cult of the Attalids the kings were deified only after death.

Greek ruler-worship is essentially political and is free from any truly religious emotion (there is no known instance of any prayer addressed to a king). It reached full development only in an age when the effective political powers were supra-national imperial States. Its prevalence in the Hellenistic period is primarily caused by the fact that it was the only possible method for the expression of loyalty to such States.

Nock, *Harv. Stud.* xli (1932), 1 ff.; U. Wilcken, 'Zur Entstehung des hellenistischen Königs-kultes', *Sitz. Ber.* 1935, 295 ff. C. F. E.

II. ROMAN. Hero-cult was not indigenous to Italy. The primitive Romans sacrificed to the ghosts of the dead (*Manes* q.v.) and conceived of a semi-independent spirit (*genius* q.v.) attached to living persons. But the myth

of a deified founder, Romulus (q.v.), was only invented in or after the fourth century B.C. under Greek influence. From the time of Marcellus' conquest of Syracuse (212 B.C.), Roman officials received divine honours from Greek cities; notable instances are possibly Scipio Africanus (c. 200) and certainly the 'liberator' Flamininus (c. 191). At Rome such honours are met with only at the beginning of the first century B.C., and then exceptionally, as those offered privately to Marius (101) and popularly to the demagogue Gracchianus (86). Under Stoic influence the idea that worthy individuals might become divine after death appeared in Cicero's *Somnium Scipionis* (c. 51) and in the shrine which he planned for his daughter Tullia (d. 45). Caesar as dictator (45–44) received divine honours, probably by his own wish and perhaps with a reminiscence of Alexander. After his assassination the triumphs, supported by popular agitation, secured from the Senate his deification (42).

Imperial emperor-worship falls into two aspects, the worship of the living ruler, including his identification with gods, and the apotheosis of the dead one, and into three types, provincial, municipal, and private. In Egypt Augustus succeeded to the religious position of the Ptolemies. Elsewhere the Greeks continued for him the Hellenistic concept of the divine ruler. And at Rome his titles included *Divi filius* and *Augustus*, which gave him a divine aura if not actual divinity. Officially, however, Augustus was usually joined with the goddess *Roma*. He particularly encouraged the cults maintained by the provincial assemblies (*κοινά*), e.g. for Asia at Pergamum (29 B.C.) and for Galatia at Ancyra. At Rome the poets constantly spoke of him as divine or divinely inspired. In c. 12–7 B.C. he joined his *genius* with the *Lares compitales* for the official cults of the 265 wards (*vici*) of the city. Throughout Italy, individuals, groups, and towns spontaneously offered worship to him or to his *genius*. In the western provinces Augustus established altars (not temples) to himself, probably in conjunction with *Roma*, and assemblies (*concilia*) for Gaul at Lyons (12–10 B.C.), for Germany at Cologne (c. 10 B.C.), and perhaps elsewhere. Municipal (e.g. at Narbo) and private worship seems, however, to have been less common in the West than in the East. After his death his cult as *divus Augustus* was formally instituted on the Palatine, and cities and provinces (e.g. Tarraco) throughout the Empire dedicated temples to him as *divus Augustus*.

Though his 'constitutional' successors, when consulted, deprecated worship of themselves, the Greeks continued to accord it. Of the 'absolutist' emperors, Gaius and Domitian required worship, but Nero and Commodus probably welcomed rather than demanded divine honours. The Senate rewarded deceased emperors who had pleased it with apotheosis. During the third century the spread of oriental cults was associated with the view that the emperor was especially under divine protection rather than himself a god, and when Constantine adopted Christianity (A.D. 311) this became the official doctrine. It was perpetuated in the theory of the divine right of kings (*rex Dei gratia*).

Emperor-worship was not merely a device to lend dignity and superhuman authority to the ruler or to secure the loyalty of subjects; it represented a spontaneous expression of gratitude to one who had saved and benefited his subjects by establishing peace and prosperity, an expression couched in terms of Hellenistic flattery and supported by the prevalent Stoicism. The practice was perhaps at first more widespread in the East than in the West, more sincere in private than in official (municipal or provincial) cult, and more spontaneous under Augustus than under his successors. In general, it probably contributed little or nothing to fill the religious needs of the population of the Empire. However, it acquired increasing political significance. In the towns of Italy the colleges of *seviri* or *Augustales* in charge of

the imperial cult afforded an outlet for the ambition of freedmen, to whom public offices were closed. Augustus' hope that the provincial assemblies might become intermediaries between the cities and the emperor proved vain, but the provincial and municipal priesthoods and the presence of the provincial temple in a city were much sought-after honours. Emperor-worship enhanced the position of the ruler by contributing to court ceremonial and insignia. Either the ruler or his *genius* (in Greek, his "Tyche") might be invoked with the gods to confirm oaths, a practice to be distinguished from oaths of loyalty to the emperor. Offenders against the emperor's divinity laid themselves open to the charge of treason (*crimen laesae maiestatis*). Though Pliny's detection of Christians by their refusal to sacrifice before the statues of the gods and Trajan (Bithynia c. A.D. 112) may not represent a general test, this test or that of refusal to confirm an oath by invoking the emperor had become regular in Tertullian's day (c. A.D. 200). Decius demanded sacrifice to the gods, together with offerings in honour of (not to) himself and an oath by his *genius* as evidence of loyalty from everyone, not merely Christians; cf. the Egyptian certificates (*libelli*) of A.D. 250. Finally, in the 4th century, emperor-worship, with its formality and its voluntary participation, yielded to the new, vital State church, the Christian, conformity to which became a compulsory political obligation.

RULLIANUS, see **FABIUS** (3).

RULLUS, **PUBLIUS SERVILIUS**, tribune in 63 B.C., introduced a comprehensive agrarian measure at the instigation of Caesar and Crassus. His ostensible aim was the redistribution of land in Italy and the provinces, and to this end a board of commissioners was to be established with far-reaching powers. In many respects he anticipated the later legislation of Caesar; but Cicero, divining that the real purpose of the bill was to strengthen the position of Caesar and Crassus at Pompey's expense, attacked the proposals so vigorously in the Senate and the assembly that they were withdrawn.

See Cicero, *Leg. Agr.* (of four speeches two survive in whole and one in part); E. G. Hardy, *Some Problems of Roman History* (1924). J. M. C.

RUMINA, an obscure goddess, who, if her name be not Etruscan (Schulze, *Latin. Eigennamen*, 580 f.), is to be connected with *ruma* (breast) and taken to be a *numen* of suckling. She had a shrine near the Lupercal, where milk, not wine, was offered, Varro, *Rust.* 2. 11. 5; Wissowa, *RK* 242. H. J. R.

RUPILIUS, **PUBLIUS**, a close friend of Scipio Aemilianus, brought the Slave War in Sicily to an end in 131 B.C.; with a senatorial commission he drew up a

charter for the province (*Lex Rupilia*). As consul in 132, with his colleague Popillius, he vigorously prosecuted Tiberius Gracchus' adherents; and like him went into exile in 123. M. H.

RUTILIUS (1) **RUFUS**, **PUBLIUS** (cos. 105 B.C.), was a friend of Scipio Aemilianus, under whom he served at Numantia, and of the Mucii Scaevolae. A professed Stoic, and an Optimatus in politics, he was responsible in some measure for the military reforms for which Marius is usually given the credit. He served with Metellus in Africa (109-107 B.C.) and was left in command when Metellus refused to meet his successor Marius. As consul in 105, after the defeat of his colleague Mallius in Gaul, Rutilius raised and trained the army which Marius later commanded against the Cimbri; he improved military swordsmanship by introducing the gladiators' methods. In 100 he took part in the resistance to Saturninus. His condemnation *de repetundis* (92) by the equestrian jury after his *legatio* under Q. Scaevola in Asia (94) led directly to the breach between *Optimates* and *Equites*, which the younger Drusus vainly tried to heal. He retired to the province he was alleged to have plundered; Cicero met him at Smyrna in 78. Later historians found his memoirs a valuable source. An eminent soldier, jurist, and orator, Rutilius combined Greek culture with the old Roman virtues. M. H.

RUTILIUS (2) **LUPUS**, **PUBLIUS** (early 1st c. A.D.), rhetorician, abridged in Latin a work on figures of speech by Gorgias, who taught at Athens in the first century B.C. (Quint. *Inst.* 9. 2. 102).

RUTILIUS (3) **GALLICUS**, **GAIVS** (cos. suff. c. A.D. 70, cos. II c. 90), from Augusta Taurinorum. Apart from the poem, with valuable details of his career, which Statius composed to celebrate Rutilius' recovery from an illness (*Silv.* 1. 4), the only evidence about this eminent senator comes from inscriptions. *ILS* 9499 contains his *cursus* down to the consulate (*inter alia* he had been legate of Galatia for nine years, partly under Cn. Domitius Corbulo). He was governor of Lower Germany in 78 (*ILS* 9052), when he defeated the Bructeri and captured the priestess Velea (Statius, *Silv.* 1. 4. 89 f.; Tac. *Germ.* 8). By the year 89 he had been appointed *praefectus urbi*, in which post he may have died. R. S.

RUTILIUS, see also **NAMATIUS**.

RUTUPIAE, modern *Richborough* (Kent), situated originally on an island of the now silted Thanet channel; a pair of ditches were very probably the defences of a Claudian landing-party (A.D. 43) and the site was used as a stores base for the conquest. *C.* 80-90 a deeply founded structure (trophy+sea-mark?) was built. Rutupiae was the principal landing-place from the Continent, so that in authors 'Rutupinus' = British. *C.* 250 the trophy, itself in ruins, but perhaps replaced by an equally strange cruciform structure, was surrounded by ditches, which were soon replaced by the stone Saxon shore-fort of c. 6 acres (Carausius? c. 290 or a little earlier). Quantities of late coins prove a long, perhaps post-Roman occupation.

J. P. Bushe-Fox, *First, Second, and Third Reports of Excavations, 1926-32*. Summaries of later results in *JRS.* General Summary, *Victoria County History, Kent* iii. 24-41. Coins: F. S. Salisbury, *Numismatic Chronicle* vii. 108-20; *Antiquaries Journal* vii. 268-81. C. E. S.

S

SAALBURG, a site on the Upper German *limes* which commanded a pass across the Taunus mountains. Under Domitian, who advanced the frontier to the outer slopes of the range, a small earth fort was constructed here. Shortly after 116 the *Cohors Ractorum Civium Romanorum* was brought from Wiesbaden and a fort built for it. The fort was rebuilt in 213 after a raid by the Alamanni, but was abandoned in 259-60. The successive forts and the adjoining civil settlement have been excavated, and the walls and main buildings of the cohort fort reconstructed.

SABAZIUS (Σαβαΐος, in Anatolia frequently Σαο(υ)ά-ζιος), a Thraco-Phrygian god, regarded by the Greeks now as purely foreign, again as identical with Dionysus. Wherever his place of origin, Phrygia and Lydia were the chief centres of his cult; the Attalid cult of S. at Pergamum (C. Michel, *Recueil d'Inscriptions grecques* (1897-1927), 46, 142-141 B.C.) was a foundation of the Cappadocian princess, Stratonice. Private associations worshipping S. existed at Athens from the late fifth century, and Demosthenes (xviii. 259-60) derides his purificatory rites, but evidence for the cult is scanty till Imperial times. S. was identified with the *Kύριος Σαβαώθ* of the Septuagint (cf. Val. Max. 1. 3. 2), and once called Theos Hypsistos (q.v.), and certain Jewish eschatological concepts are associated with him in the Vincentian frescoes at Rome (Dessau, *ILS* 3961). His chief attribute is the snake, important also in his mysteries. In art, S. appears either in Phrygian costume or, since he was frequently called *Zeús S.*, with the thunderbolt and eagle of Zeus. Noteworthy are the votive hands, making the 'benedictio Latina' and adorned with numerous cult symbols. See also ANATOLIAN DEITIES and MACEDONIAN CULTS.

See especially Eisele in Roscher, *Lex. s.v.*, and F. Cumont, *GRAdad*, *Inscr.* 1906.

SABELLI, the name given collectively to those Italian peoples who spoke Oscan (q.v.). They expanded from their original habitat (reputedly Sabine Amiternum) by proclaiming Sacred Springs: all men born within a certain year were dedicated to a god; his sacred animal guided them, armed, to fresh lands, where they usually imposed their language and coalesced with the pre-Sabellian population. Thus originated Marrucini, Marsi, Paeligni, Vestini, Apuli, Samnites, Hirpini, Frentani, Campani, Lucani, Brutii (Cato fr. 50 P.; Dion. Hal. 1. 16; Festus p. 93, 150, 235, 425, 519 L.; Livy 22. 10). These migrations were still continuing in the fifth century B.C. and later: Sabelli conquered Campania c. 450-420, Lucania c. 420-390; Brutii appeared c. 356. But the Sabelli were more expansive than cohesive. The Samnites, whom ancient writers regard as Sabelli pre-eminently (see E. A. Sonnenschein, *GR* 1897, 339), had no feeling of political unity with their ancestors the Sabines, nor the Frentani with theirs, the Samnites.

Old Sabellic is the description inaccurately applied to some untranslated inscriptions from Picenum, including the oldest non-Etruscan inscriptions from Italy. The two dialects in question may be Illyrian (J. Whatmough, *Prat-Italic Dialects* ii (1933), 207). E. T. S.

SABINA, VINTA, daughter of L. Vibius Sabinus and Matidia the Elder (child of Trajan's sister Marciana) and thus Trajan's grand-niece, married Hadrian (q.v.), A.D. 100, through Plotina's favour. Report described the marriage as unsuccessful, but, although Septicius Clarus

and Suetonius (q.v. 2) were dismissed, there is little evidence for this view. Sabina remained faithful; she received the honour of coinage with the title 'Augusta' in 128 (Hadrian now 'Pater Patriae'), accompanied Hadrian in Egypt (130), and was consecrated by him after her death (136 or 137), with a special coinage. Groundless scandal subsequently ascribed her death to Hadrian's poisoning, or to compulsory suicide.

C. H. V. S.

SABINI dwelt north-east of Rome principally in villages, politically disunited, often unwalled, and usually perched on Apennine hill-tops (Strabo 5. 228, 250). Their origin is unknown; ancient writers, observing their bravery and simple morality, thought them Lacedaemonians (Dion. Hal. 2. 49). They probably spoke Oscan (see SABELLI; cf. Varro, *Ling.* 7. 28), and were famous for their superstitious practices and strong religious feelings (Festus p. 434 L.; Cic. *Div.* 2. 80); many Roman religious institutions reputedly derived from them. Although the Rape of the Sabine Women is fiction, stories connecting Sabines with primitive Rome are not entirely untrustworthy. Peculiarities of the Latin language, duplicated usages in certain Roman religious practices, the double nature of the Roman burial customs, traditions concerning the Quirinal, Esquiline, and Numa Pompilius imply a Sabine element in the Roman population, the result not of Sabine conquest but of amalgamation or gradual infiltration (e.g. the Claudii: Livy 2. 16). Livy and Dionysius record numerous wars against Sabines from regal times until 449 B.C., embellishing them with accounts of the legendary Titus Tatius and victorious Valerius (figments doubtless of Valerius Antias' imagination); probably these were operations against sporadic Sabine bands. In 449 Rome won a resounding victory (Livy 3. 38 f.). Silence envelops the Sabines thereafter until 290, when M'. Curius Dentatus for some unrecorded reason suddenly conquered them (Livy, *Epit.* 11), confiscated some of their territory (T. Frank, *Klio* 1911, 367), and sold some Sabines into slavery, the remainder becoming *civessine suffragio* (Vell. Pat. 1. 14). However, the fertile *Ager Sabinus* (nowadays *Sabina*; but its exact ancient limits are unknown) remained Sabine: personal names ending in *-edius* were common there (A. Schulten, *Klio* 1903, 235); *octoviri*, the annual magisterial board (prototype of the quattuorviral constitution of Roman *municipia*?), still administered Sabine towns. Becoming full citizens in 268 (Cic. *Balb.* 13), the Sabines were rapidly romanized and ceased to be a separate nation. Chief towns: Reate, Amiternum, Nursia, and, before 449, Cures, Nomentum, and Fidenae.

SABINIAN SCHOOL, see SABINUS (2).

SABINUS (1), Ovid's friend, who composed imaginary replies to Ovid's letters from heroines (*Heroides*) and modelled a work on the *Fasti*.

SABINUS (2), MASURIUS, a Roman jurist of the first half of the first century A.D. Descended from a poor family, he lived on the contributions of his disciples; in his fiftieth year he obtained equestrian rank and was the first of this rank to receive the *ius respondendi*.

Sabinus was famous for a standard work, an exposition of the *ius civile* in three books, which served posterity as a model for systematic treatises on private law, entitled *Ex Sabino* or *Ad Sabinum* (as following the system and disposition of Sabinus' work). Other works: *Ad edictum praetoris urbani*; *De furtis*; *Responsa*, and some writings not of a juridical character.

Most of the jurists of the Imperial period up to the time of Salvius Julianus and Gaius were adherents of one or other of two jurists' schools (*scholae, sectae*). The one was called *Sabiniani* after Sabinus or *Cassiani* after his disciple Cassius, the other *Proculiani* after its leader Proculus. The antagonism of the two Schools was derived from the predecessors of these jurists, G. Ateius Capito (q.v.), teacher of Sabinus, and M. Antistius Labeo (q.v.). The individual contrast between these two jurists of the age of Augustus has nothing to do with the opposition of the Schools. Similarly, the contrast between the last great representatives of the Schools, Celsus (q.v. 3) and Julianus (q.v.), offers no clue to the real nature of this opposition. There is a long series of doctrines on which the opinions of the two Schools are divided, but the intrinsic bases of the antagonism cannot be ascertained. It was neither the contrast between *ius strictum* and *ius aequum*, nor that between the ancient national *ius civile* and the *ius gentium*, nor differences in philosophical doctrines or in the method of exposition, although the Sabinians had a predilection for systematic description and the Proculians rather for casuistic. The most considerable representatives of the Sabinians were, besides the founder, the jurists Cassius, Javolenus, Aburnius Valens, Julianus, and Gaius; chiefs of the other school were Proculus, the two Nervae (father and son), Pegasus, the two Celsus (father and son), and Neratius (qq.v.).

O. Lenel, *Sabinus-System* (1892); G. Baviera, *Le due scuole dei giur. rom.* (1898); B. Kübler, s.v. 'Rechtsschulen', in *PW* i A. 381 ff., an exhaustive exposition of the opposing school doctrines; S. Di Marzo, 'Cassiani e Sabiniani', *Riv. ital. per le scienze giurid.*, 1910; V. Arangio-Ruiz, *Storia del dir. rom.* (1937), 265 ff. A. B.

SABINUS (3), FLAVIUS (*cos. suff. anno incerto*), born c. A.D. 8, the elder brother of the Emperor Vespasian. He was legate of Moesia for seven years (c. 49-56) and *praefectus urbi* for twelve years (*Tac. Hist.* 3, 75, where some suspect the text) under Nero and Otho, though not continuously. When the Flavian forces approached Rome in Dec. 69, he all but completed negotiations for the abdication of Vitellius, when he was set upon by auxiliary troops of the German armies and killed with his friends after a siege on the Capitol, where he had taken refuge. 'Innocentiam iustitiamque eius non argueres; sermonis nimius erat' (*Tac. Hist.* 3, 75). R. S.

SABINUS (4), TITUS FLAVIUS, son of (3) above, escaped from the burning of the Capitol in A.D. 69, was consul in 82 with Domitian, was married to Julia (Titus' daughter, then Domitian's mistress), and was killed by Domitian before the end of 84. His disgrace perhaps involved the banishment of Dio of Prusa.

Stein, *PW* vi. 2614.

A. M.

SABINUS, see also CALVISIUS, NYMPHIDIUS.

SACADAS, musician and poet, of Argos (Paus. 9, 30, 2), won three Pythian victories with the flute, composed tunes and elegiac poems set to tunes (Plut. *De mus.* 8), connected with the second establishment of music at Sparta in the first half of the seventh century B.C. Nothing of his work survives. See MUSIC, § 10. C. M. B.

SACAEA (Σάκαια, Strabo 11, 8, 4-5, p. 512; Σακέα, MSS. of Athenaeus, 639 c; τῶν Σακῶν ἐορτή, Dio Chrys. *Orat.* 4, 66), a Babylonian festival, perhaps of New Year (S. H. Hooke, *Orig. of Early Semitic Ritual* (1938), 59), kept up by the Persians. It was a time of general licence,

feasting, and disguising (Strabo), when slaves ruled their masters (Berosus in Athenaeus) and a criminal was given all royal rights for the five days the feast lasted and then put to death (Dio).

See Frazer, *GB*, index s.v.

H. J. R.

SACERDOS, MARIUS PLOTIUS (3rd c. A.D.), grammarian and metricalian. The first book of his *Artes grammaticae* (ed. Keil, *Gramm. Lat.* vi. 427-546) deals with the parts of speech and *vitia orationis* (but the introduction is lost); the second with nouns, verbs, and constructions; the third with metres. The three books seem not to have been published as a single work and the second is in essentials identical with the spurious *Ars catholica Probi* (cf. Keil, iv. 3-43). This work is the oldest Latin grammatical treatise extant in anything like its entirety.

Cf. Teuffel, § 394; Schanz-Hosius, §§ 604-5.

SACRA VIA, see VIA SACRA.

SACRAMENTUM (LEGAL) signified in the oldest Roman civil proceedings the sum of money deposited in *iure* by both the litigants as a stake. The party whose claim was disproved in the hearing before the judge forfeited his deposit to the *aerarium*. The opposite assertions of the parties concerning the right claimed by the plaintiff formed a kind of wager, in accordance with which the judge had to settle in his sentence which party's *sacramentum* was *iustum*; thus the matter in dispute was indirectly decided. The amount of the *sacramentum*, 50 or 500 asses, depended on the value of the object under litigation: the larger sum was the money deposited as a stake in cases above 1,000 asses. *Sacramentum* was a sort of penalty for the loser of the process, but he forfeited it to the State, and not to his adversary. In its origins *sacramentum* was probably an oath (the soldiers' oath bore the same name), but as early as the times of the XII Tables it was merely a sum of money. Later *sacramentum* was not deposited but guaranteed by security (*praedes*). From the *sacramentum* the principal *legis actio* took its name: *legis actio sacramento* (*per sacramentum*). The proceedings are described by Gaius 4, 13 ff.

For bibliography see LAW AND PROCEDURE, ROMAN, 11.

A. B.

SACRAMENTUM (MILITARY). In the pre-Marian period, when a new legion was levied, an oath of loyalty to the standards was administered by the tribunes to the soldiers. The formula was repeated by one soldier on behalf of his comrades, who repeated in unison 'idem in me'. This *sacramentum*, violation of which rendered the offender *sacer*, was binding for the duration of the campaign. After Marius it was extended to cover the whole period of service and thus became synonymous with *stipendium* (q.v.). In the Principate the army took an oath to the *princeps* as sole *imperator*. This was renewed on the anniversary of his accession and on 1 January annually.

H. M. D. Parker, *The Roman Legions* (1928).

H. M. D. P.

SACRED BAND (ἱερὸς λόχος), the picked corps of Thebans formed by Gorgidas (378 B.C.). It consisted of 300 men who were traditionally grouped as pairs of lovers. To Pelopidas was due the idea of keeping the band together and so fostering their *esprit de corps*. They fought under him at Tegyra (375) and on the attacking wing at Lcuetra (371), and were said to have remained undefeated till their heroic annihilation at Chaeronea (338). Their exact equipment is not recorded, but evidently they were shock troops and were largely responsible for the military supremacy of Thebes. A similar corps was formed by the Carthaginians, perhaps in imitation of the Thebans.

Plutarch, *Pelopidas* 14 ff.; Ath. 13, 561 c; Polyaeus 2, 5, 1.

SACRED SPRINGS, see SPRINGS, SACRED.

SACRED STONES, *see* STONES, SACRED.

SACRED WARS, the name of the wars declared by the Delphic Amphictiony against one or more of its members on the ground of sacrilege against Apollo.

The *First Sacred War* arose from a dispute between the Delphians and Cirrha about Cirrha's right to levy tolls on pilgrims. Solon is said to have urged Athens to join in the war, and Cirrha was annihilated c. 590 B.C. by the forces of Thessaly, Sicyon, and Athens. Delphi was declared independent, and Thessaly organized the Amphictiony to her interest.

The *Second Sacred War* was precipitated by a Phocian seizure of Delphi. The Spartans restored the Sanctuary to the Delphians. But soon afterwards the Athenians, led by Pericles, reinstated Phocis (448). We do not know when Delphi was again liberated; its independence was affirmed in the peace of Nicias (Thuc. i. 112; 5. 18).

The *Third Sacred War* involved most of Greece and ended in the intervention of Philip II of Macedon. During the Theban Hegemony Thebes had controlled the Amphictiony, and in spring 356 B.C. passed through its council a threat of war, unless Phocian separatist leaders paid the fines imposed on them for cultivating the Crisaean plain (between Delphi and Cirrha), which was sacred to Apollo. The separatists, led by Philomelus, seized Delphi and repelled Boeotian and Locrian attacks. The Sacred War was finally begun in autumn 355, when the Thebans obtained an open declaration of hostilities from the Amphictiony. Philomelus, with passive allies in Sparta, Athens, Achaea, and others, raised mercenaries with Delphian funds to face the coalition of Thessaly, Locris, and Boeotia. Defeating the Thessalians, who withdrew from the war, Philomelus defended Phocis successfully but was killed at Neon (354). Onomarchus, his able successor, invaded Boeotia and subdued Doris, Locris, and part of Thessaly, where he twice defeated Philip of Macedon (353). In 352 Onomarchus, despite Athenian assistance, was defeated and killed by Philip in Thessaly; his successor, Phayllus, held Thermopylae with aid from Athens, Sparta, and Achaea, and prevented Philip from entering central Greece. He eventually fell ill and was succeeded by Phalaceus, who pillaged the shrine at Delphi. By 347 Phocis and Thebes were exhausted by guerrilla warfare; Thebes and Thessaly invited Philip to intervene, while a faction in Phocis invited Athens and Sparta; but Phalaceus, regaining power, rebuffed both. Athens then allied with Philip, and Phocis, isolated, surrendered to Philip, who reconvened the Amphictionic Council. The Phocians were disarmed and obliged to receive garrisons and to pay an indemnity. Their Amphictionic votes were transferred to Philip.

SACRIFICE (from the Latin *sacrificium*, the performance of a sacred action).

I. A sacrifice, according to Plato (*Euthyphro* 14 c), is a gift to the gods, and this was the current view of antiquity (in which the subject was treated by various scholars, of whom Philochorus is especially noteworthy). Modern comparative method, however, combined with anthropological theory, has sufficiently shown the complexity of the problem. One ancient attempt to classify the confused mass of details is that of Theophrastus, who distinguished offerings of praise, of thanksgiving, and of supplication. We may also distinguish between gods, daemones (heroes), and the dead as recipients of the offerings, and between private and public sacrifices. Finally, we may lay stress on the material of the sacrifice, the difference between vegetable and animal offerings, and on the way in which the offerings were made over to the supernatural powers (communal-sacrificial feast,

holocaust, burial, libation, etc.). In view of the prehistoric origin of most of the sacrificial ritual it is for the most part extremely difficult to detect the real source of the ritual in question, which is very often of a purely magical nature. Only insight into primitive mentality and evolutionary method can here give us a better understanding of the problems; and yet the religious and ethical notions of sacrifice in classical antiquity and in higher religions in general are quite different from those of primitive and savage worshippers.

II. *Bloodless offerings and blood offerings.* (1) Theophrastus and other ancient philosophers believed that man at first knew only vegetarian food and accordingly offered to the gods grass and roots, cereals, vegetables (even blades and leaves), fruits and non-intoxicating liquids (principally milk). Animal food is, however, probably of equal antiquity, but in many Greek cults, especially those of chthonian deities, vegetables were prescribed (all kinds of fruits in the procession for the Sun and the *Horai* at Athens, a dish of beans at the Pyanopsia for Apollo, etc.); in a number of cults cakes (q.v.) were customary (cf. Ar. *Phut.* 661 and schol.). We may add cheese, honey, and oil; and, no doubt, home-grown incense was from the remotest antiquity burnt for the gods (*Obwa* originally means to 'fumigate', later commonly to 'sacrifice', as contrasted with *εραυλίζω*, which is used of offerings to the dead and the heroes).

(2) *Blood offerings* were the most popular form of ancient sacrifice, public and private. The deity was provided with the same food as the worshipper, meat from domesticated or wild animals and birds, and sometimes fish (q.v.). The meat, specially selected for the deity, was burnt on the altar, wine being simultaneously poured into the flames. Many details, known to us from Homer, may have had a magical character; the sacrificer washed his hands, sprinkled barley grains, threw some of the victim's hair into the fire, touched the altar (the centre of sanctity), and in a prayer praised the god, thanked him, or begged for his help. The entrails were separately cooked and tasted before the communal sacrificial feast started (on this point Greek and Roman usage agree remarkably). The deity was the honoured guest: this feature was still more prominent at the *Theoxenia* (q.v.; cf. the *lectisternia*, q.v., of the Romans). Epithets like 'goat-eater' (i.e. Hera), 'bull-eater' (Dionysus) bear witness to the original conception of the deity as really eating of the flesh of the victim. On many inscriptions the necessity of eating the flesh (being sanctified, *tabu*) within the holy precincts is enforced. We may infer that more indifferent worshippers often took it home; in other sacrifices this was quite correct. Concerning Roman ritual it is especially noteworthy that the sacrificer covered his head with his toga during the whole operation. Music (pipes, also lyre) was traditional in Greece as in Rome.

The choice of animals (which ought to be without blemish) was essential and intricate; the rules generally apply to the Greeks as well as the Romans. Male deities usually preferred male victims; bright (celestial) deities demanded light-haired victims, the nether world (and the dead) black victims. The virgins Athena and Artemis sometimes wanted unbroken cattle. A pregnant sow was offered to the earth-goddess in order to intensify her *mana* (her fertility), a cock to the war-god. To some deities animals unfit (or not used) for human food were sacrificed: dogs to Hecate, Eileithyia, Enyalios (Sparta); horses to Poseidon, the Sun (burnt-offering), the Winds (also the river Skamandros into which horses were thrown, according to the *Iliad*; cf. the *equus October* sacrificed to Mars at Rome); asses to Priapus and (at Tarentum) to the Winds. No doubt there existed a mysterious sympathy between these gods and their victims (cf. also the red dog sacrificed to the spirit of the mildew at the Roman Robigalia, *see* ROBIGITAS); the gods were formerly

believed to appear in the shape of these very animals, as legend and archaeological evidence still attest (so Poseidon as god of the earth and the underworld in the shape of a horse). So far we may here use the term communion-feast (see *infra*).

III. The offerings mentioned mostly belong to the regular gift type of sacrifice (honorific sacrifices). Some of them may originate in tithes (*ἀπαρχαί, primitiae*), the first-fruits of field and orchard, game and spoils. These were tabu and the due of the dead, heroes and gods alike. Other offerings, which are utterly destroyed, represent the *piacular* (propitiatory) or *purificatory* type. The buried corpses of the dead had to be fed (cf. the remains of Mycenaean tomb-cult); we know of a number of cases where the blood of the victims and other libations were led through a tube or hole into the mouth of the dead (cf. Paus. 10. 4. 10). The victim itself, being tabu, was burnt, and such burnt offerings (holocausts) were traditional in the cults of the heroes and chthonic deities; but we hear also of common meals of the family or of worshippers round the graves and the altars (as in the present-day grave-ritual of the East). The proper time was the evening, in contrast with the daytime which was prescribed for sacrifices to the Olympian gods.

The offering of a *human victim*, attested by Homer (*Il.* 23. 171 ff.) and Greek myth (Iphigenia; cf. the tradition of the Messenian Wars), is a relic of primitive propitiatory sacrifice, offered to the feared soul or enraged deity, mostly in times of emergency. The *ver sacrum*, q.v., and the *Argei*, q.v., cannot prove human sacrifice at Rome; but in the third century B.C. two pairs of Gaulish and Greek men and women were buried alive in the Forum Boarium in accordance with Sibylline oracles. In the cult of Dionysus a human victim was even rent to pieces, and in the ritual of Zeus Lykaios, on the remote Mt. Lykaion in Arcadia, there were practices reflecting real cannibalism (so King Tantalus feasted the gods on the flesh of his son). The Athenians, however, felt ashamed of the sacrifice of Persian prisoners before the battle at Salamis. The self-sacrifice of the Roman commander on the field of battle, combined with a prayer and curse, is a vicarious sacrifice, originating in magic (see DEVOTIO).

IV. Purely magic is the use of scapegoats, known from Athens (Hippion. fr. 6 ff. Diehl) and Massalia. This may have been a once widespread Mediterranean, later specifically Ionian practice, repeated at fixed intervals. In Athens it was attached to a festival of Apollo, the Thargelia (q.v.). A man, called a *φάρμακός* (or two men or a man and a woman), was treated according to a fixed ceremonial, and then, loaded with all the wickedness of the city, was driven out by the inhabitants. In Massalia a criminal was selected and finally killed.

Another type of magical practice is the *oath sacrifice*. The swearer touched a portion of the victim (or trod upon its genitals), and the contact filled him with its *mana*; thereupon the animal was buried or cast into the sea. As the oath involved a conditional curse, the danger from the communion established with the victim (and secondarily with the oath-gods) involved peril to the perjurer (cf., e.g., *Il.* 3. 103; 19. 267).

V. The ritual of the Athenian *Bouphonia* is peculiar. An ox 'of its own accord' approaches the altar, eats the corn upon it, and is thereupon slain by the priest, who flees into voluntary exile. The axe is adjudged guilty and cast into the sea. The flesh of the ox is eaten, its hide sewed together, and this sham ox is yoked to the plough. The family to which the priesthood of Zeus Polieus belonged was the Bouzygai (those who yoke oxen), who may have supervised the festival called Dipolieia, of which the Bouphonia was part, and the crime appears to be the 'murder' of the plough-ox (the totem theory is to be discarded).

VI. *Sacramental sacrifice*. The 'omophagies' of the Maenads, characteristic of the cult of the Thracian Dionysus—the rending of a bull or goat, the eating of its raw flesh and the drinking of its blood—are to be referred to the conception of the god incarnated in an animal (cf. DIONYSUS, ORPHISM). The citizens of Tenedos preserved reminiscences of a similar communion with the deity (personified as a calf, sacrificed to the god, Dionysus, himself, Ael. *NA* 12. 34). Different from this 'omophagy' is the sacrifice of a wolf to Apollo, a bear to Artemis (both being incarnated in the respective animals). See MAGIC, DIVINATION.

SACROVIR, JULIUS, an Aeduan, whose family had received Roman citizenship, perhaps from Caesar. After having fought for the Romans, he rebelled in A.D. 21 with Julius Florus and collected a large army of his countrymen. He occupied Augustodunum, but was easily defeated by C. Silius and committed suicide. It is doubtful whether his name is inscribed on the arch of Orange.

A. Stein, *PW* x. 796; C. Jullian, *Histoire de la Gaule* iv (1913), 153. For the arch, literature in *CAH*, Plates iv. 192. A. M.

SAEPTA IULIA was the voting-hall of the Roman people, in the Campus Martius, planned by Caesar and completed by Augustus and Agrippa in 26 B.C.; it replaced booths or pens known as *ovile*. It was over 400 m. long and 60 m. deep, in seven aisles formed by eight rows of columns. There were thus formed about eighty rooms, which Hülsen (Jordan, *Topographie d. Stadt Rom* iii. 561) relates to the double division of the thirty-five tribes. It is uncertain whether it had two stories, or whether the upper was the huge hall of the *Diribitorium* (Dio Cass. 55. 8. 3; 7 B.C.). As the building lost its political significance, it came to be used for public meetings and shows. After repairs following the fire of A.D. 80 it became a luxury bazaar (Mart. 9. 59) very like Nero's buildings on the Via Sacra (q.v.). I. A. R.

S(A)EVIVS NICANOR (2nd–1st c. B.C.), grammarian, the first to gain fame by his teaching (Suet. *Gram.* 5), wrote *commentarii*, said to have been mainly borrowed, and a *satura*.

SAGITTARI, see ARMS AND ARMOUR, ROMAN.

SAGUNTUM, a city of the Edetani (or Arsetani; cf. *Arse* on coins) about 16 miles north of Valencia in Spain. It had close trade relations with Massilia. An alliance with Rome (contracted probably after 228 B.C.) did not save it from siege and capture by Hannibal in 219 B.C., an incident which precipitated the Second Punic War. In 217 the elder Scipios moved against it (traces of their camp at the neighbouring Almenara survive) and it fell by 212. The city and its walls were rebuilt by the Romans. Sertorius occupied it, but was driven out by Metellus and Pompey in 75. It became a *municipium civium Romanorum* under Augustus. It was noted for its cereals, a variety of fig, and a type of pottery. Some of the amphorae in Monte Testaccio at Rome came from Saguntum. There survive traces of the Iberian wall and Punic buildings on the citadel and a Roman theatre.

M. Gonzales Simancas, *Sagunto, sus monumentos y las excavaciones* (1929). J. J. van N.

SALACIA, cult-partner of Neptunus (Gellius 13. 23. 2), probably the *numen* of springing water (root of *salire*; for the suffix cf. *salax*); Neptunus (q.v.) is a deity originally of fresh water.

SALAMIS (1), an island in the Saronic Gulf between the western coast of Attica and the eastern coast of the Megarid, closes the bay of Eleusis on the south. In the strait formed by the slopes of Mt. Aegaleus, the island of Psyttaleia, and the promontory of Cynosura southwards, and the small island of St. George northwards, the Persian fleet was crushingly defeated (Sept. 480 B.C.). Though probably colonized by, and originally belonging to, Aegina, and temporarily occupied by Megara (c. 600 B.C.), Salamis shared the fortunes of Athens from the age of Solon and Pisistratus. Declared a cleruchy soon after Cleisthenes' reforms, it was consequently exploited. In 318 it was conquered by Macedonia. Aratus restored it to Athens (c. 230).

C. N. Radas, *La Bataille de Salamine* (1915); L. Büchner, *PW*, s.v.; D. Levi, G. De Sanctis, *Encicl. ital.*, xxx, 489 f. P. T.

SALAMIS (2), the principal Greek city of Cyprus, situated on the east coast within sight of Syria. It succeeded an inland settlement at Enkomi which has yielded very rich Mycenaean remains. It appears to have been the first Cypriot city to strike coins; from these a list of its kings can be recovered. C. 400 B.C. King Evagoras started a Hellenic revival against Phoenician encroachments in Cyprus and conquered most of the island. It was the scene of a notable naval victory by Demetrius the Besieger over Ptolemy I in 306. In the Roman period, from which most of its ruins date, it contained a large Jewish population. S. C.

SALARIIUM ('salt-money') was a sum paid to officers and officials and to professional men (e.g. teachers and doctors), which was regarded not as a regular payment, but as a contribution to expenses incurred. If such honoraria were not paid the recipient could not enforce his claim to them, but could only appeal to a higher authority. Under the Republic all payments to public servants were of this character, but under the Principate fixed payments were made to provincial governors and to officers of the army. Details are lacking, but we know that a proconsul received HS 1,000,000 (Dio 78. 22). For the scale of payments to officers see A. von Domaszewski, 'Die Rangordnung des römischen Heeres', *Bonner Jahrb.* 1908, 140 ff. G. H. S.

SALEIUS BASSUS, see BASSUS.

SALII (from *salire* 'to dance'), an ancient ritual *sodalitas* (see *SODALITES*) found in many towns of Italy, usually in association with the war-god. Outside Rome they are heard of at Lavinium, Tusculum, Aricia, Anagnia, and especially at Tibur, where they were attached to Hercules (Serv. ad *Aen.* 8. 285). At Rome they were connected with Mars, though it is possible that of their two companies, each twelve in number, the Palatini and the Collini (or Agonenses), the latter originally belonged to Quirinus; they were required to be of patrician birth and to have both father and mother living. They wore the old Italian war-dress, *tunica picta*, with breastplate covered by the short military cloak (*trabea*), and the conical felt hat known as the *apex* (Dion. Hal. 2. 70). A sword was girt by their side; on the left arm they carried the *ancilia*, 'figure of eight' shields, preserved in the *sacrum Martis* in the Regia and said to be copies of the original *ancile*, which fell from heaven as a gift from Jupiter to Numa (Ov. *Fasti* 3. 365-92); in the right hand they carried a 'spear or staff' (Dion. Hal. l.c.). The Salii played a prominent part in the Quinquatrus of 19 Mar. and the Armilustrium of 19 Oct., which marked the opening and closing of the campaigning season. On certain days, too, during each of these two months, marked in the calendar by the note *arra ancilia movent*, the Salii went in procession through the city. At certain spots they halted and performed elaborate ritual dances (*tripudium*, cf. Plut. *Num.* 13), beating their shields with

their staves and singing the *Carmen Saliare* (q.v.) or *axamenta*, of which some fragments are preserved. In the evening they feasted and resumed their procession on the next appointed day. C. B.

SALINATOR, MARCUS LIVIUS, was born in 254 B.C.; Livius Andronicus (q.v.) was perhaps pedagogue in his father's house. As consul (219) he campaigned against the Illyrians. After his triumph he was accused of peculation and withdrew from Rome (218). His bitterness and the desertion of his father-in-law, Pacuvius of Capua, to the enemy explain his non-participation in the first part of the Hannibalic War. Recalled by the consuls in 210, he did not speak in the Senate till 208. As consul II (207) he was reconciled in national interests with his colleague C. Claudius Nero (q.v.), his former subordinate officer who had witnessed for the prosecution at the trial. Together they defeated Hasdrubal at Metaurus. Salinator was proconsul in Etruria (206-205) and censor (204), again with Nero for colleague, when he imposed a salt-tax. H. H. S.

SALLUST (GAIUS SALLUSTIUS CRISPUS) (86-c. 34 B.C.), was born at Amiternum of a plebeian family; at Rome Sallust entered the senatorial career and became quaestor. In 52, as tribune of the commons, he joined in opposing Cicero in the trial of Milo (Asc. *Mil.* 33). He was expelled from the Senate in 50 by the censors, Appius Claudius and L. Piso, for alleged immorality, but was reappointed quaestor by Caesar in 49. In 48-47 he commanded one of Caesar's legions, but was unsuccessful (Oros. 6. 15. 8; Dio 42. 52). As praetor in Africa he rendered Caesar important service (*BAfr.* 8 and 34) and was made proconsular governor of Numidia. On his return to Rome he was accused of plundering the province, but either was not brought to trial or was acquitted. He was wealthy enough to buy a fine estate in the Sixth Region, where he laid out beautiful gardens (the famous *Horti Sallustiani*) and spent the rest of his life in retirement.

WORKS

1. *Bellum Catilinae* (on titles see Ahlberg, *Proleg. in Sall.*, Göteborg, 1911, 115 ff.), apparently published in 43 B.C. After his usual philosophic introduction S. gives an account of the conspiracy. The chronology is distorted, the events of a few months being extended to over a year. Hence the work is valued, not for its historical importance, but for the vividness and artistry of the narrative and its fine character-sketches.

2. *Bellum Iugurthinum*, published about 41. An account of the war with the Numidian king (111-106), preceded by a philosophical introduction and the story of Jugurtha's previous life and his rise to power. S. had gathered personal information in Africa and had an abundance of good literary sources, including translations from the Punic (*Iug.* 17. 7); yet as history the *Iug.* is of slight value; chronology is indefinite or disregarded, and even the sequence of events is not strictly followed; but as a literary masterpiece of absorbing interest it ranks high.

3. *Historiae*, in five books, apparently composed after 39. It is preserved only in fragments, including, however, four speeches and two letters, published (in cod. V) for use in the schools; for although S. did not rank high as an orator (Quint. 4. 2. 45), the speeches in his works were generally admired.

4. *Disputed works*. In cod. V, in the same handwriting as the extracts from the *Historiae*, two anonymous *suasoriae* are preserved, entitled *Epistulae ad Ciceronem senem de re publica*; also in some manuscripts of the *Bella* an *Invectiva in Ciceronem*, attributed to S., and an *Invectiva in Sallustium*, assigned to Cicero. The latter is certainly spurious. Quintilian cites the *Inv.* in *Ciceronem* as if genuine, and Kurfess believes it to be

an early work of S. The second *suasoria* (dramatic date 50 or 49) is earlier than the first (dr. d. 46), which is often called an oration, but most editors retain the traditional names and order. The genuineness of the two *Epistulae* has been much discussed, exhaustively, with a full bibliography to date, by Last (*CQ* vii (1923) and viii), who admits that of the first, but denies that of the second. The authenticity of both has found many supporters (see Kurfess's ed.).

5. Sallust adopted a new branch of historiography, the monograph. By way of preparation he carefully studied Thucydides and Cato, and was supplied with an epitome of Roman history by Ateius Philologus (Suet. *Gram.* 10; p. 108 Reiff.). His devotion to the popular party was such that many suspect an ulterior purpose in his writings, but he professes impartiality, and shows it in depicting the character of Metellus in the *Jug.* and in not disguising the faults of his hero Marius. In style he followed Thucydides, and developed a terse and highly rhetorical manner characterized by asymmetry and antithesis. He used so many archaisms that he was accused of pilfering from Cato (Suet. *Gram.* 15; p. 112 Reiff.), but he used them with artistic effect (see *ARCHAISM*). In general, his effort was to avoid commonplace diction, and his style is effective and vivid; it found critics in his own day and later, but also admirers and imitators. As historian, Quintilian (10. 1. 101), Martial (14. 191), and Tacitus (*Ann.* 3. 30) give him high praise. In his personal character he presents an enigma; modern opinion is mostly unfavourable, but Kritz (*Proleg.* to commentary) ably defends him. On the whole, the charges against him are not supported by very good authority. Much weight is naturally given to Varro's accusation (Gell. 17. 18), but it is noteworthy that it finds no mention in connexion with Sallust's expulsion from the Senate, or even in the *Invective*.

SALLUSTIUS (2) CRISPUS, GAIUS, great-nephew and adopted son of the historian, remained an *eques* and was adviser of Augustus and Tiberius. He was privy to the murder of Agrippa Postumus and arrested in A.D. 16 the false Agrippa. He owned copper-mines. To him is addressed Horace, *Carm.* 2. 2. He died in A.D. 20. Stein, *PIW* i A. 1955; E. Hohl, *Hermes* 1935, 350. A. M.

SALMONEUS (Σαλμωνεύς), a son of Aeolus (q.v.). In post-Homeric tradition, e.g. Verg. *Aen.* 6. 585 ff., he was king of Elis, and pretended to be Zeus, flinging torches for lightnings and making a noise like thunder with his chariot; Zeus smote him with a real thunderbolt. It is very likely that this story originates in some rite of weather-magic, a mimic storm to make a real one; see Rose, *Handb. Gk. Myth.* 83, and references in notes 21, 22. H. J. R.

SALONAE, a city of Dalmatia, near modern *Split* (*Spalato*). It served the Romans as a base of operations in the Dalmatian hinterland (L. Metellus, 119 B.C.; C. Cosconius, 78 B.C.; Octavian, 35-34 B.C.), and became

the capital of the province Illyrieum. In 27 B.C. it was constituted as a colony. It rose in prosperity under the Illyrian emperors of the later third century. Diocletian, who was a native of Salonae, retired there in A.D. 305 and built himself an immense palace on the pattern of a military camp. Considerable portions of this palace remain, as also of the town walls, basilica, thermae, theatre, and amphitheatre. M. C.

SALTICA, sc. *fabula*: see *FABULA*.

SALUS, an old Roman goddess, later often identified with the Greek Hygieia (q.v.), the attendant of Aesclepius.

The temple to *Salus publica* on the Quirinal is said to have been built in 302 B.C. by the dictator C. Junius Bubulcus. Under the Empire, *Salus publica* and *Salus Augusti* appear often side by side. Where the genitive 'Augusti' appears, *Salus* may be regarded as definitely a 'virtue' of this emperor, his saving power—not merely his health. An *augurium salutis*, which did not involve any personification of *salus*, was to be taken annually on a day free of all wars: this was an inquiry to ask whether it was permissible to pray for *salus* for the people. The constant wars of the last years of the Republic caused its frequent omission, but it was revived in 29 B.C. and performed on various occasions in the early Principate (Dessau, *ILS* 9337). Prayers 'pro salute Augusti' were commonly offered, as, for example, by the Arval Brethren.

Salus very frequently appears on coins, with the type of Hygieia, feeding out of her patera the sacred snake and holding the sceptre of divine majesty. A rarer attribute, ears of corn, may properly belong to the older Roman *Salus*.

G. Wissowa, *RK* 131 ff., 306 ff., and Index; A. S. Pease on Cic. *Div.* 1. 105. H. M.

SALUTATIO. From six o'clock in the morning until eight most Romans under the Empire who had any social position, high or low, were occupied either in holding or attending a reception—*salutatio*. It was a tiresome business, but it had become recognized as part of the daily routine. The wealthy patron thought that his prestige was enhanced by a crowd of callers, the legacy hunter attended to ingratiate himself with the childless rich, and the needy client, though he might complain of long walks in the cold morning, received compensation in the form of a dole (*sportula*). See also *CLIENTS*.

Juvenal 1. 95-102; 3. 127-30; 5. 19-23; Martial 4. 8. 1-6 and passim. F. A. W.

SALVIANUS was born c. A.D. 400, probably at Trèves, where he witnessed the destruction wrought by the Franks, 418. He joined the holy community at Lérins (St. Honorat), and belonged to the intimate circle of St. Honoratus till the latter became bishop of Arles, 426. Later S. was a presbyter in Marseilles, and still alive there about 470. His most notable work is *De gubernatione Dei* (*De praesenti iudicio*), eight books (440) in which God's government of the world is set over against the moral obliquity of the times. Of Salvian's letters nine are preserved.

Ed. F. Pauly (*CSEL* 8). A. S.

SALVIDIENUS RUFUS was one of Octavian's associates in 44 B.C. and later one of his chief *legati*. In 42 he was worsted by Sextus Pompeius in a naval battle near Messana. He played a prominent part in the Perusine War and was then sent to Gaul and designated consul. During the siege of Brundisium, however, he entered into treasonable communication with Antony, who subsequently informed Octavian. Denounced by the latter in the Senate, Salvidienus was declared a public enemy and either committed suicide or was executed (40).

Appian, *BCiv.* 4 and 5; Dio Cassius, bk. 48. G. W. R.

SALVIUS JULIANUS (L. OCTAVIUS CORNELIUS P. SALVIUS JULIANUS AEMILIANUS) (c. A.D. 100–c. 169), a Roman jurist, born at the village of Pupput near Hadrumetum, disciple of Javolenus (q.v.), the last recorded leader of the Sabinian School. Even as a young man he enjoyed a high authority among his contemporaries, as is clearly proved by the fact that before he was thirty years old he was entrusted by Hadrian with the revision and rearrangement of the praetorian edict. This work procured him a wide reputation, and Justinian praised him for it in the highest terms (*Const.* 'Tanta' § 18, and still more in its Greek version, *Const.* *Ἀέδωκεν* § 18). His official career is given in an inscription (*ILS* 8973). He was: *deceunvir stilitibus iudicandis, quaestor imp. Hadriani (cui diuus Hadrianus soli salarium quaesturae duplicavit propter insignem doctrinam), tribunus plebis, praetor, praefectus aerarii Saturni, item militaris, consul (ord., 148), pontifex, curator aedium sacrarum, legatus Germaniae inferioris (under Pius) and Hispaniae Citerioris (under Marcus Aurelius and Verus), proconsul Africae*. Under Hadrian and Antoninus Pius he was a member of the imperial consilium. His principal works are *Digesta* (in 90 books), a systematic, richly casuistic treatise on civil and praetorian law, partly following the arrangement of the *edictum perpetuum*. A large number of passages have been inserted by the Compilers in the *Digest*, still more numerous (about 500) are the quotations of this work in later literature; Marcellus, Scaevola, and Paulus arranged new editions of it, supplemented by their own notes. Other works of Salvius are: Commentaries to less known jurists, Urseus Ferox and Minicius; a monograph *De ambiguitatibus*. Many of his *Responsa* were published by his pupil Caecilius (q.v. 6) Africanus.

Salvius is the most remarkable representative of Roman jurisprudence. He may justifiably be regarded as an epoch-making figure in Roman legal science, which reached with him the height of its development. His style is plain and lucid, the exposition precise and limpid, his explanation of legal conceptions and institutions is masterly and authoritative; his speciality was concise formulation. And finally, as a fine example of self-criticism, he says (*Dig.* 37. 5. 6) 'saepe animaduerti hanc partem edicti habere nonnullas reprehensiones'.

H. Buhl, *Salv. Julianus* (1888); L. Boulard, *Salv. Julianus* (1902); H. Fitting, *Aber und Folge der Schriften röm. Juristen* (1908), 21 ff.; P. de Francisci *Rend. Ist. Lomb.* xli (1908), 442 ff., xlii (1909); O. Lenel, *Edictum perpetuum* (1927), one of the standard works of the (Romanist) literature; A. Guzzino, *Salvius Julianus* (1936).

A. B.

SALVIUS, see also **OTHO**.

SAMIAN WARE in the time of Plautus was a familiar pottery of an inexpensive kind. It is further mentioned by Martial, and by Pliny, who states that it was still in repute for dinner services. If this implies contemporary production, the ware was probably one of the East-Mediterranean fabrics of *terra sigillata* (q.v.); but the statement of Isidore (*Etym.* 20. 4. 3), that Samian vases were red in colour, would apply equally to *Sigillata* and to some Hellenistic wares, e.g. late Megarian bowls. Up to the present no kilns have been discovered on Samos which would make the identification certain. From Pliny old antiquarians mistakenly borrowed the phrase Samian ware as a label for the *sigillata* found on Roman sites in Britain.

Plautus, *Capt.* 201; Martial, 1. 53. 6, etc.; Pliny, *HN* 35. 169. For *terra sigillata* found in Samos see R. Eilmann, *Ath. Mitt.* lviii (1933), 52.

F. N. P.

SAMNIUM, a region in the southern Apennines whose inhabitants spoke Oscan (q.v.). The Samnite confederation comprised four cantons: Hirpini, Caudini, Caraceni, and the formidable Pentri (Frentani and other Sabelli (q.v.), although often called Samnites by ancient writers, were excluded). The Samnites, primitive but warlike, lived

mostly in agricultural villages, frequently unwallled and unidentifiable, each administered by a *meddix* (q.v.; large Oscan cities sometimes had two *meddices*). In war-time these *meddices* elected a generalissimo to lead the confederation for one campaign; he was eligible for reelection. This confederation, however, was very loose; it lacked a federal assembly to direct policy, and ultimately Latin colonies at Saticula, Beneventum, and Aesernia enabled Rome to split it into its component cantons. In 354 B.C., owing to a Gallic scare, the Samnites signed a defensive alliance with Rome. But they soon recommenced expanding (Strabo 5. 249 f.), and their neighbours sought Roman protection. Samnite Wars inevitably resulted. The First (343–341), for control of Campania (q.v.), is generally but not quite convincingly reckoned apocryphal. The Second (328–[321, 315]–304), despite the Samnite success at the Caudine Forks (q.v.), prevented Samnite domination of Lucania and Apulia. The Third (298–290) involved, and decided the destiny of, all Central and Southern Italy. Samnium was depopulated by these wars but not completely subjugated; some cantons later supported Pyrrhus and Hannibal (Zonar. 8. 6; Livy 22. 61). Subsequently depopulation increased; pastoral pursuits gradually replaced agricultural and by 180 Samnium could accommodate transported Ligurians. The Samnites fought implacably in the Social War and against Sulla, who slaughtered all he could (Diod. 37. 2; Plut. *Sulla* 28 f.). The survivors were gradually romanized. Chief towns: Beneventum, Aeclanum, Abellinum (Hirpini), Caudium, Saticula (Caudini), Bovianum Vetus, Aufidena (Caraceni), Bovianum, Aesernia, Saepinum (Pentri). The Samnites taught the Romans to use maniple, *scutum*, and possibly *pilum*.

Ancient literature: Our principal source, Livy (bks. 8–10), depends on annalists more patriotic than trustworthy. The scanty information supplied by Diodorus (bks. 19, 20) and Polybius (2. 19 f.) is more reliable. Modern literature: F. E. Adcock, *CAH* vii. 581, with bibliography (for history); R. S. Conway, *Italic Dialects* i (1897), 180 (for language); A. Sambon, *Monnaies antiques de l'Italie* i (1903), 103 (for coins); F. Weege, *JDAI* (1909), 98, 141 (for material civilization); S. Weinstock, *Klio* xxiv (1931), 235 (for consilium).

E. T. S.

SAMOS, an island off western Asia Minor, colonized by Ionians c. 1100–1000 B.C. It long preserved a distinctive dialect. Samians settled in Amorgos c. 690 B.C., at Perinthos (601), Bisanthe, and Hermaion Teichos in Thrace, at Naueratis, at Oasis in Libya, in Cilicia, and perhaps at Dicearchia (Puteoli), and c. 490 at Zanele (Messana). Colaeus of Samos made a famous voyage to Tartessus c. 620; Ameinocles of Corinth had built warships for the Samians c. 704, Samian ships helped Sparta in the Second Messenian War. The rich landed class (*γεωμήτορες*) continued influential till late in the fifth century (hence the oligarchic reactions in Samian history), but trade and industry flourished, especially in metal-work and woollen products. Sixth-century Samos was the home of notable architects, sculptors, and gem engravers (Rhoeceus, Theodorus, Mnesicles), of moralists and poets (Aesop, Ibycus, Anacreon). A Samian engineer, Mandrocles, bridged the Bosphorus for Darius. But the greatest of all Samians, Pythagoras, migrated to south Italy.

The consecutive history of Samos begins with the tyranny of Polycrates (q.v.), his steward Maeandrius, and his brother Syloson, the last a vassal of Darius. Samos joined the Ionian revolt, but her ships deserted at Lade (494). When the revolt was crushed the Persians allowed her a democratic government. She fought well for Xerxes at Salamis, but soon turned against the Persians and was an autonomous member of the Athenian Confederacy till her revolt in 441 which Pericles himself suppressed. During the oligarchic revolution of the 400 (411 B.C.) Samos was the stronghold of the democracy. For their loyal co-operation the Samians were made Athenian citizens after Aegospotami (405); but the city

fell to Lysander in 404. About 394 she had a currency alliance with Ephesus, Cnidos, and Rhodes. In 365 Athens captured the island and planted Athenian cleruchs, who were expelled only after Alexander's death. She was eclipsed by Rhodes in the new Hellenistic world, in which her greatest achievement was to produce the astronomer Conon.

Herodotus; Thucydides; Xenophon, *Hellenica*; Polybius; Diodorus. E. Buschor, *Altamische Standbilder* (1935); P. Gardner, *Samos and Samian Coins* (1882); *SIG* 10, 116, 117, 276, 312, 333. P. N. U.

SAMOSATA (mod. *Samsât*), a fortified city on the right bank of the Euphrates; the residence of the kings of Commagene (q.v.). Like Zeugma, it guarded an important crossing of the river on one of the main caravan routes from East to West, and it was consequently of considerable strategic and commercial importance. Its formidable defences twice withstood a Roman siege, but in A.D. 72 it was forced to surrender, and it was garrisoned henceforth by a Roman legion. In 359 a Roman army was defeated here by the Persians; in 637 the city was finally captured by the Arabs. M. S. D.

SAMOTHRACE, an island of the north-east Aegean, consisting of a table-like mountain which rises to 5,250 ft., and containing but little cultivable land. Its Greek population was of Samian origin. It formed part of the two maritime confederacies of Athens; in the third century it frequently changed hands among the Hellenistic dynasts; under Roman rule it was a 'civitas libera'. Its chief importance lay in the mystery cult of its twin gods, the Cabiri (q.v.). This cult attained a wide vogue in the Hellenistic age, and its initiates included some Roman notables. The remains of the temple date back to the sixth century. M. C.

SANCHUNIATHON. Under this name Philon (q.v. 5) of Byblos appears to have published *Φωνικικά*, claiming pre-Trojan authority. In nine books the work, partly preserved in Eusebius, treated cosmogony, the rise of human society, theogony, and Phoenician cult-practice, in Euhemeristic and syncretistic fashion, using probably Hellenistic material based on Phoenician tradition.

O. Eissfeldt, *Ras Schamra und Sanchuniaton* (1939); *FHG* iii. 560 (Philo Byblius). A. H. McD.

SANDAS (Σάνδας, Σάνδης, Σάνδων), a god of Tarsus in Cilicia, perhaps of Luwian origin. At his festival a great pyre was erected and burned; the Greeks accordingly equated him with Heracles. Traces of his cult are found in Cappadocia, Lydia, and other nearby lands, but his real nature remains uncertain.

Philipp, *PW*, s.v. 'Sandon'; J. G. Frazer, *Adonis Attis Osiris* (= *GB* v), ch. 6. F. R. W.

SANDRACOTTUS (Chandragupta), the Maurya (perhaps a tribal name), founded the Mauryan empire. His origin is uncertain. After Alexander quitted India he overthrew the Nanda king of Magadha on the Ganges, the principal Indian kingdom (Greek Prasil), and took the crown; an Indian drama made Parvataka, supposed to be Porus, his helper. Subsequently he subdued all India north of the Nerbudda and the Vindhya mountains and cast of the Indus; the two dates for his accession, 321 B.C. in Ceylonese and 313 (312) in Jain tradition, should refer respectively to the conquest of Magadha and the establishment of his empire. About 305 Seleucus attacked him. What happened is unknown, but a treaty was made by which Seleucus ceded to him Gandhara and the Indian portions of Arachosia and Gedrosia, and gave him a daughter or niece, possibly for his son Bindusara, receiving in return a large force of elephants and the lasting friendship of the dynasty. Chandragupta's empire, a complex of vassal kings and peoples, was described

for Greeks by Megasthenes (q.v.), Seleucus' ambassador at his court; he ruled it from Pataliputra, with viceroys at Taxila and Ujjain. Traditionally he reigned twenty-four years; his personality is unknown.

F. W. Thomas, *Cambridge History of India* i, ch. 18. W. W. T.

SANNYRION, Athenian comic writer. Fragments of three mythological burlesques survive: *Γέλως*, *Δανάη*, and *Ἰώ*. *Δανάη* may be dated after 408 B.C., as fr. 8 refers to the actor Hegelochus' famous mispronunciation *γαλῆν' ὄρῳ* for *γαλῆν' ὄρῳ* in Eur. *Or.* 279 (produced 408; cf. Ar. *Ran.* 304).

FCG ii. 873 ff.; *CAF* i. 793-5; Demiańczuk, *Suppl. Com.* 83. M. P.

SANTRA, a scholar of the Ciceronian age who wrote a *De antiquitate verborum* in at least three books (now lost). He also interested himself in questions of literary history.

Cf. Teuffel, § 211. 2; Schanz-Hosius, § 196. 1; G. Funaioli, *Gramm. Rom. Frag.* 384-9.

SAPPHO, poetess, daughter of Scamandronymus and Cleis, of Eresus and Mytilene in Lesbos, born c. 612 B.C. (Suidas s.v. *Σαπφώ*). As a child, no doubt owing to political troubles, she went into exile in Sicily (*Marm. Par.* 36), though apart from a passing reference to Panormus (fr. 7) no traces of this are left in her fragments. She returned to Mytilene, where she was the centre of some kind of *θίασος* which honoured Aphrodite and the Muses and had young girls for its members. With these she lived in great intimacy and affection, wrote poems about them, and celebrated their marriages with songs. She married Cercylas and had a child Cleis (Suidas l.c., cf. fr. 152 and *Philol.* 1939, 277-86). Her brother Charaxus angered her by his love for the courtesan Rhodopis or Doriëha, whom Sappho is said to have rated (Hdt. 2. 135, Strab. 17. 808, cf. fr. 26). Little else is known of her life, and nothing of her death, since the old story that she threw herself over a cliff in love for Phaon (Ovid, *Ep. Sapph.*, *passim*) seems to be an invention of the New Comedy. Her work was collected in seven books. Book 1 contained poems in the Sapphic stanza and included an address to Aphrodite (fr. 1), which may have been written as a hymn for her companions, but seems to be strictly personal to herself, a poem to an unnamed girl, which was probably inspired by seeing her next to her bridegroom and shows the strength of Sappho's feelings for her (fr. 2), a poem wishing her brother a fair voyage home and offering forgiveness for his faults (fr. 25), lines on the beauty of Anaëtoris (fr. 27), and an invocation to Aphrodite to appear at a festival in the country (frs. 5-6). Book 2 contained poems in the Aeolic dactylic pentameter, such as lines of great feeling and intimacy to Cleis (frs. 40-1), and closed with a narrative poem on the wedding of Hector and Andromache, in which the presence of two Attic forms has raised grave doubts about its authenticity. Book 3 contained poems in the greater asclepiad, including lines of contempt to an uneducated woman (fr. 58) in which the theme that song confers immortality appears explicitly for the first time. Book 4 contained poems in ionic tetrameters mostly too fragmentary to be intelligible, though fr. 65 a seems to have told the story of Tithonus. Book 5 contained poems composed in stanzas of mixed character, especially fr. 98, on a girl who has gone to Lydia and is compared to the moon outshining the stars, and fr. 96, which gives a retrospect of happy days passed with another girl. Of bk. 6 nothing much survives except lines on a girl who is prevented by love from attending to her weaving (fr. 114)—a theme of folk-song. Book 7 probably contained wedding-songs of different character in different metres. In the hexameter fragments a bride is compared to an apple (fr. 116) and to a hyacinth (fr. 117). Fr. 131 gives a dialogue between the Bride and her Maidenhood, another traditional theme. In this book

Sappho was more colloquial than usual and showed an element of badinage (Demetr. *Eloc.* 167, cf. fr. 124). Something of her manner may perhaps be seen from Catullus' imitations of her in his poems 61 and 62. Sappho writes in the vernacular language of Lesbos, except in a small group of poems (frs. 55, 116-19) in which she admits some variations taken from the epic. Her subjects are usually personal; there are few traces of narrative, though some poems (frs. 114, 149) seem to be modelled on folk-songs. She wrote for herself and her friends, gave candid accounts of her and her feelings, had an excellent eye and ear for natural things, a command of verbal melody, and an unequalled directness and power.

SARAPIS (usually in Latin *Serapis*), according to Tacitus (*Hist.* 4. 81) and Plutarch (*Mor.* 361 f-362 c), was brought to Egypt from Sinope by Ptolemy I. There is another tradition that places Sarapis in Babylon in the time of Alexander, and Tacitus reports that Sarapis was believed by some people to have come from Seleucia in Syria, while others thought he came from Memphis. It now seems to have been established that the cult of Sarapis arose at Memphis in the temple above the underground chambers where the bodies of the deceased Apis bulls were entombed, and the projection of all these figures came to be addressed as Osorapis. The probability remains that the king established the worship in Alexandria and sought to make Sarapis an imperial deity. There is some evidence to show that the cult, along with that of Isis, was accepted and propagated by Greeks and Macedonians in the royal civil and military services. The cult of Sarapis did not grow rapidly at Alexandria, however. Although Isis and Sarapis were included in the royal oath by the end of the third century, they do not appear in the oath used in Alexandria. The creation of the cult was marked by the introduction of the worship into Alexandria and, according to tradition, was accomplished through the assistance of Demetrius of Phaleron, the Eumolpid Timotheus, and Manetho. In fact, Demetrius seems to have given the earliest testimony concerning the miraculous powers of Sarapis, since, in his *Paean*s, he is supposed to have shown his gratitude to the god for having restored his sight. The Sarapeum at Alexandria, accounted one of the wonders of the world, was said to have been designed by Parmeniseus, while the cult-statue, a great sitting figure adorned with precious metals, was attributed to Bryaxis. The tradition is consistently uniform that those who had a hand in shaping the external features of the cult were men of Greek speech and culture. Manetho, an Egyptian priest who assisted in the formation of the cult, had some familiarity with Hellenic culture, since he wrote in Greek. It is not surprising that this deity combined the attributes of many potent Hellenic gods with some of the characteristics of Osiris. He was represented with the benign and bearded countenance of Zeus, his head crowned with a modius (emblem of fertility). At the right knee of the seated god was the three-headed dog Cerberus, an attribute borrowed from Hades, while the upraised left hand grasped a staff or sceptre, reminiscent of Zeus and Asclepius. Sarapis was a healer of the sick, a worker of miracles, a deity who was superior to fate and who retained from Osiris the character of a god of the underworld. He spoke to his followers in dreams as Asclepius did, yet partook of their festive banquets as a jovial lord of Olympus might have done. He was identified at times not only with the gods already mentioned, but also with Dionysus, Helios, Jupiter, and others. He was associated with Dolichenus and other powerful deities. At Memphis, as well as at

Abydos and elsewhere, we know of people called *katochoi* who seem to have considered themselves bound to the temple precincts until the god should set them free. Except when identified with another god, Sarapis seldom receives an epithet. Yet, in one inscription, a man with an Alexandrian deme name calls Sarapis the god of the city and addresses him as Sarapis Polieus. Sarapis was the chief god in the cult of the Egyptian deities. His cult usually went with that of Isis and Harpocrates, Anubis and others being included on occasion. In the Aegean area we find that most of the public cults of the Egyptian deities were called cults of Sarapis, even though other deities were included. In many Greek cities there were cult societies of *Sarapiastai* who held banquets on certain days, passed decrees, voted crowns to officials of the society and to distinguishing strangers, and who set up *stelae* recording thereon their official acts. In the period of the Roman Empire, when the mysteries of Isis were quite widespread throughout the Mediterranean world, the worship of Isis tended to eclipse that of Sarapis. Since the worship of both these gods was spread by commercial contacts as well as by zealots, the cults were strong in those cities which had commercial connexions with the East. The acclamation 'There is one Zeus Sarapis', a cry of enthusiasm for the deity, has come down to us in numerous inscriptions.

BIBLIOGRAPHY

ANCIENT SOURCES. Th. Hopfner, *Fontes Historiae Religionis Aegyptiacae* (1922-5), contains the literary sources. The inscriptions are scattered through *IG*, *CIL*, *CIG*, and *Sammelbuch griechischer Urkunden aus Ägypten* (Preisigke). The Delian inscriptions are collected in P. Roussel, *Les Cultes égyptiens à Délos* (1916), and in *Inscriptions de Délos*. Papyri documents may be found in U. Wilcken, *Urkunden der Ptolemäerzeit I* (1922-7), and in *PCairo Zen.*, *PTeb.*, *POxy.*, and elsewhere. Other sources are collected in O. Weinreich, *Neue Urkunden zur Sarapis-Religion* (1919). Statuary: H. Haas, *Bilderatlas zur Religionsgeschichte*, 9-11 Lief. (1926).

MODERN LITERATURE. The classic discussion of the origin of Sarapis is found in part I of U. Wilcken, *Urkunden der Ptolemäerzeit* (1922-7). Other works are: F. Cumont, *Les Religions orientales dans le paganisme romain* (1929); G. Lafaye, *Histoire du culte des divinités d'Alexandrie* (1884); A. D. Nock, *Conversion* (1933); A. Ruche, *De Serapide et Iride in Graecia Cultis* (1926); J. Toutain, *Les Cultes païens dans l'empire romain* (1907-); O. Weinreich, *Neue Urkunden zur Sarapis-Religion* (1919).

SARCOPHAGI. While plain coffins of stone, clay, wood, or lead were usual in Classical Greece, more elaborate forms appear to have been mainly produced, under Oriental influence, for export. The sculptured tombs of south-west Asia Minor may have suggested the movable decorated sarcophagus. The usual Greek type had architectural decoration based on the Greek temple; other types in stone were: the Egyptianizing anthropoid coffin, limited to Cyprus and Phoenicia (5th-4th cc. n.c.); the chest with a recumbent figure on the lid, found in Carthage and Etruria; the banqueting-couch with reclining figures on the lid, favoured in Etruria; and the altar, the earliest to be used in Rome. These types were fully developed by early Hellenistic times; later, simpler forms are found, with decoration limited to garlands. With the increasing use of inhumation over the Roman Empire in the second century, there was a revival which lasted into Christian times; the earlier sculptured types reappeared and there was a new form, the basin (*kyros*).

The most important sarcophagi in clay are the painted series from Asia Minor (6th-5th cc. n.c.), and the examples of the banquet class from Etruria. Wooden sarcophagi have only survived exceptionally (e.g. in the Crimea), while the most important specimens in lead come from Roman Syria.

T. A. B.

SARDES (Σάρδεις), the chief city of Lydia, lying under a fortified hill in the Hermus valley, near the junction of the roads from Ephesus, Smyrna, Pergamum, and inner Asia Minor. As the capital of the Lydian kingdom, especially under Croesus, and later as the headquarters of the principal Persian satrapy, it was the political centre of Asia Minor in the pre-Hellenistic period, and it also attained fame for its progress in the arts and crafts—it was the first city to mint gold and silver coins. It was captured and burnt by the Ionians in B.C. 499, and Xerxes mustered his troops at Sardes before he crossed the Hellespont. In the Macedonian period it belonged in succession to Antigonos, the Seleucids, and the Attalids, and in 133 B.C. it passed to the Romans, who made it the capital of a *conventus* in the province Asia. It was one of the 'Seven Churches' of the Apocalypse. Diocletian made it capital of the province Lydia. Its temple of Artemis has been excavated; among the most important finds were a number of inscriptions in the Lydian language.

W. M. C.

SARDINIA (Σαρδῶν), a large island off western Italy containing *nuraghi* and other megalithic monuments of its prehistoric inhabitants (traditionally a mixture of Libyans, Iberians, and Ligurians). It is more fertile, less mountainous, and much more unhealthy than Corsica. The Greeks apparently never colonized Sardinia. Carthage annexed it (c. 500 B.C.), but failed to pacify the rugged interior. Rome seized the island from Carthage in 238 B.C. (reject Diod. 15. 27) and organized it, with Corsica, as a province in 227 (Corsica became a separate province in Imperial times). The Romans despised the Sardinians ('Sardi uenales: alius alio nequior': Festus, p. 428 L.) and in Republican times allowed them not one free city; Sardinia was treated as conquered land that sent money and grain to Rome (it remained an important granary throughout antiquity). The frequent Sardinian revolts ceased in 114 B.C., but brigandage continued. This was gradually suppressed under the Empire (Tac. *Ann.* 2. 85) and Sardinia achieved a little prosperity: Carales obtained Roman civic rights; Turris Libisonis, Uselis, and Cornus became *coloniae*; and the silver- and iron-mines were worked. But the island never really flourished. Finally it fell successively to Vandals, Goths, Byzantine emperors, and Saracens.

Ancient writers mention Sardinia infrequently. The important references are: Strabo 5. 223 f.; Pliny, *HN* 3. 83 f.; Paus. 10. 17. 2 f.; Diod. 4. 29 f., 5. 15; Justin, bks. 18 and 19; Cic. *Pro Scuro*; Livy, bks. 21–30. Modern literature: E. S. Bouchier, *Sardinia in Ancient Times* (1917); E. Pais, *Storia della Sardegna e della Corsica* (1923); T. Ashby, *CAH* ii. 581; C. Bellieni, *La Sardegna e i Sardi* (1931); A. Taramelli, *Bibliografia romano-sarda* (1939). E. T. S.

SARDUS, a prose writer whose style so charmed Pliny that he read and re-read him (*Ep.* 9. 31).

SARIS(S)A (σάρισσα), see ARMS AND ARMOUR, GREEK.

SARMATAE (Σαρμάται, Σαυρομάται), a nomad tribe, closely related to the Scythians, and speaking a similar Indo-European language, but showing some points of difference in culture. Their women had a freer position, and, in the days of Herodotus at least, hunted and fought alongside the men (4. 116–17). Their troops were all mounted, but while the rank and file were archers, the chieftains and their retainers wore armour and used heavy lances. Until c. 250 B.C. the Sarmatae dwelt east of the river Tanais. During the next 300 years they moved slowly westwards, displacing the Scythians. Of their two main branches, the Roxolani advanced to the Danube estuary, the Iazyges crossed the Carpathians and occupied the plain between the middle Danube and the Theiss. The Roxolani, checked by the generals of Augustus and Nero, became clients of Rome; and the

Iazyges entered into similar relations, serving as a buffer between the Dacians and the province of Pannonia. In the second and third centuries the Sarmatae were again set moving by the pressure of German tribes. The Iazyges allied with the Marcomanni against M. Aurelius, and the Roxolani shared the Gothic raids into Moesia. Eventually large numbers of them were settled within Roman territory by Constantine; the rest were partly absorbed by their German neighbours, partly driven back into the Caucasus.

M. Rostovtzeff, *CAH* xi. 91–104.

M. C.

SARPEDON, in mythology, commander of the Lycian contingent of Priam's allies (*Iliad* 2. 876). He takes a prominent part in the fighting, leading an assaulting column of the allies on the Greek wall (12. 101), and making the first breach (290 ff.). He is finally killed by Patroclus (16. 426 ff.), mourned by his father Zeus (459 ff.), and carried off to Lycia for burial by Sleep and Death (666 ff.).

Post-Homeric accounts make him one of the sons of Zeus and Europa, the difference in mythological dating being got over by supposing that he lived for three generations (Apollod. 3. 6). Ancient critics had already noticed that his connexion with Crete was secondary, schol. *Il.* 6. 199, which makes the difference of time six generations. It is possible that some historical relationship between the two countries lies behind it. At all events, there was an historical cult of him in Lycia, with which the Homeric story of his burial is presumably to be connected; his hero-shrine is mentioned, for instance, by schol. *Il.* 16. 673. The rather wide distribution of place-names formed from his (see Immisch in Roscher's *Lexikon* iv. 393 ff.) suggests that his worship is old and famous, which may well have drawn Homer's attention to him.

H. J. R.

SASANIDS, see SASSANIDS.

SASERNA, a cognomen of the gens Hostilia. Two Sasernae, father and son, wrote on husbandry about the beginning of first century B.C. and were used by Varro, Pliny (*HN*), and Columella.

Teuffel, § 160; Schanz-Hosius i⁴ (1927), 242.

SASSANIDS, kings of the New Persian Empire A.D. 224–636. The dynasty derived its name from Sāsān, grandfather of Artaxerxes I (q.v.), who took over the inheritance of the Achaemenids and Arsacids. Their empire at its greatest extent stretched from Syria to India and from Iberia to the Persian Gulf. The Sassanids constantly sought to drive the Romans from Asia; and the forts of the Euphrates *limes* were fortified against attacks from them. Major campaigns were undertaken against them by various Roman emperors. Valerian was defeated and captured by Sapor I, Constantius defeated Sapor II in 345, Julian died on an invasion of Mesopotamia, Kavadh was defeated by Belisarius; Khosroes II conquered Asia Minor and even threatened Constantinople, but was driven back by Heraclius. On their north-east boundary the Sassanids were menaced by the Hephthalites ('White Huns') and Turks. They were driven from Mesopotamia by the Arabs (A.D. 636), but lingered on as a local dynasty in Iran.

The strongly centralized despotic government of the Sassanid Empire was upheld by the powerful priesthood of the Mazdaean State religion.

SATRAP (*khshatrapavan*), the title held by Persian provincial governors. The satrap was in effect a vassal king, with wide powers within his own province (Xen. *Oec.* 4. 5), but owing allegiance to the Great King. Certain military and civil officials, responsible only to the latter, acted as checks on his autonomy. The political organization of the Persian Empire into satrapies, at first based on the boundaries of the conquered nations, was revised by Darius; his division into twenty satrapies (*Hdt.* 3. 89-94), though modified by subsequent territorial conquests and losses, remained the basis for later kings; Alexander preserved the satrapal system and it was continued by the Parthians. The Sassanids (q.v.) had local governors who partly corresponded in function to the old satraps.

SATURA, satire, the only literary form created by Rome, was so free and personal that its character changed with each satirist. Still, it may be broadly defined as a piece of verse, or prose mingled with verse, intended to improve society by mocking its anomalies, and marked by spontaneity, topicality, ironic wit, indecent humour, colloquial language, frequent use of dialogue, constant intrusions of the author's personality, and incessant variety of tone and style.

2. NAME. *Satura*, from *satur*, 'full', means 'a medley' full of different things. A mixed stuffing was called *satura* too, and the legal formula *per saturam* meant 'en bloc' ('in a mixture'). Since variety was fundamental to satire, the Romans accepted this derivation: Livy alludes to it in his description of primitive satire. A plausible modern suggestion is the Etruscan *satir*, 'speech'; for satire had a distinctly Etruscan origin, and was essentially speech.

3. ORIGINS. *Rome*. Livy (7. 2, probably quoting Varro) says that in 364 B.C. Etruscan dancers performed the first ballet ever seen in Rome. Hitherto the nearest approach to drama (q.v., para. 1) had been improvised dialogues in Fescennine verse; now amateurs, copying the dancers, added rhythmical miming to these improvisations. Finally, professional actors 'performed satires full of different rhythms', in which words, music, and miming all harmonized. So the original *satura* was a disjointed series of action-songs and musical sketches without a plot. Its variety, humour, spontaneity, love of dialogue, and mimic realism are traceable throughout later literary satire.

4. *Greece*. Quintilian (10. 1. 93), comparing Greek and Roman literature, remarks '*satura tota nostra est*'. This is usually translated 'satire is a wholly Roman invention', but probably means 'we are supreme throughout satire' (Rennie, *CR*, 1922). Actually, many Greek influences, which Quintilian must have known, affected Roman satire.

5. First was the Hellenistic street-sermon, as delivered by travelling Cynic and Stoic preachers like Bion (fl. 250 B.C.). Upon ethical themes these men improvised amusing stump-speeches, full of philosophical propaganda made palatable by epigrams, fables, shocking colloquialisms, obscene jokes, vivid character-sketches, parodies of poetry, and dialogues with imaginary opponents. These informal talks were called *diatribai*, 'leisure hours'. Both Lucilius and Horace (cf. *Epist.* 2. 2. 60) similarly call their satires *sermones*. From the diatribe Roman satirists borrowed both the principle called *anagoge*, 'joking in earnest', and the devices

by which it held its audience; the same influence somewhat guided their choice of subjects.

6. Another powerful influence was Athenian Old Comedy, on which Horace (*Sat.* 1. 4. 6) says 'Lucilius entirely depends'. He means that Lucilius did for Roman satire what 'Eupolis atque Cratinus Aristophanesque poetae' did for Attic comedy, by making its bold imaginative humour carry serious criticism of contemporary society. Few close imitations of Aristophanes appear in Lucilius or his successors; but Lucilius' strong, harsh wit, his love for topical themes, his fearless persecution of prominent persons, and his passionate interest in social and political problems, while doubtless rooted in his character, gained conviction from the example of the great comedians.

7. A third, less potent influence was philosophical satire. From the Cynic Menippus (fl. c. 250) Varro borrowed the technique of interweaving prose with fragments of verse. The philosophical Dunciad called *Ξίλλοι*, *Squints*, in mock-heroic verse, by the Sceptic Timon (c. 315-226), possibly guided Lucilius in preferring hexameters to invective iambs. But the Greek satirists were chiefly interested, not in improving society, but in scolding rival philosophers; this limited their influence on Roman satire.

8. DEVELOPMENT. *Ennius* (239-169 B.C.) was the first to write a poetic medley modelled on the stage *satura*. His satires are known to have contained (1) a debate between Life and Death, (2) Aesop's fable of the lark, (3) a parasite's monologue on his profession; and they were in varying metres. Thus, he emphasized (a) the variety of satire, (b) its moral intention, (c) its love of speech, (d) its use of devices borrowed from the diatribe—fable, character-sketch, personification. But his work was less directly critical than that of later satirists.

9. After him satire split into two branches: Lucilian, in hexameter verse; Varroian, in prose and verse intermingled. Horace (*Sat.* 1. 10. 66) called Ennius the *auctor* of satire, because he originated it; and *Lucilius* (180-102) its *inventor*, because he realized its true nature. Lucilius' great innovations were four. He made verse-satire a weapon of attack on the follies and vices of society, naming the fools and knaves he attacked. He fixed on the hexameter as its medium. He wrote chiefly on topical, personal subjects. And it was he who made the language of satire unliterary, colloquial, even coarse.

10. The Menippean satires of *Varro* (116-27) blended prose with all kinds of verse, and even Greek with Latin. Varro was chiefly interested in the application of philosophy to life. Realistic but whimsical, energetic but eccentric, his work lacked the bite of Lucilius' poems and had few imitators.

11. If Lucilius is the wasp and Varro the bee, *Horace* (65-8 B.C.) is the dragon-fly of satire, ornamental but stingless. Although a professed follower of Lucilius, he seldom 'broke his grinders on Lupus and Mucius' (Pers. 1. 115), but exposed mild folly (Hor. *Sat.* 2. 8) and oddities like social climbers (1. 9) and witches (1. 8). Never quite at home in satire, he eventually turned to the milder form of the poetic epistle. *The Pumpkinification of Claudius*, *Seneca's* (4 B.C.-A.D. 65) gibe at the lately deified emperor, is in Varro's manner with a new infusion of venom.

12. *Pertinax* (A.D. 34-62) left six satires strongly tinged with Stoicism. They have the compression of Horace and the coarseness of Lucilius, but their contented thought and allusive style prevent them from attaining the directness and energy of true satire.

13. *Petronius* (d. 66), the Brummell of Nero's court, produced a brilliant parody of Greek romance in a long Menippean satire describing the adventures of three rascally Greeklings. The largest fragment is the masterly *Banquet of Trimalchus*, where the dialogue-element of satire appears at its finest; the book also contains some

remarkable folk-lore and many striking poems. The one element of satire which it lacks is moral intention—elegant, efficient, debauched, it reflects the character of its author.

14. Under the Principate it became dangerous to inveigh directly against the great. Therefore, although satire is essentially topical, satirists turned to attacking lead, symbolic, or insignificant people. Horace used many type-names from Lucilius; Persius, from Lucilius and Horace. *Juvenal* (c. 50–127) deliberately writes of the dead. When he mentions contemporaries, they are symbols or nonentities. Yet his fierce gloomy poems bear the imprint of life; he describes vice with the fascinated disgust of Swift. Despite his colloquial vocabulary, his tone is more rhetorical than conversational.

15. The powerful and dignified invectives of *Claudian* (c. 390) against court enemies are really panegyrics inverted, not true satires. Juvenal was the last genuine Roman satirist, and the Lucilian model, as strengthened and ennobled by him, inspired nearly all modern satirists.

SATURNIAN METRE, a type of early Latin verse used, e.g., by Livius Andronicus (*Odyssea*; e.g. 'uirum mihi Camena / insece uersutum'), by Naevius (*Bellum Punicum*; e.g. 'nouem Iouis concordēs / filiae sorores'), in inscriptions (e.g. Scipionie epitaphs), and presumably in the *versus Fescennini* (q.v.). About 160 indubitable examples are extant; few, if any, can be called primitive; the most frequently quoted is: 'dabunt malum Metelli / Naeuio poetae.' Ennius (*Ann.* 214 Vahl.) despised the metre; to Horace (*Epist.* 2. 1. 157) it was 'horridus', to Virgil (*G.* 2. 386) 'incomptus'. Roman grammarians (e.g. Caesius Bassus) in bewilderment tried to equate its many metamorphoses with various Greek metres; but Servius (*ad Verg. G.* 2. 385) speaks of it as composed 'ad rhythmum solum'. Modern scholars agree that each line falls into two parts; otherwise controversy reigns. Purely quantitative interpretations (e.g. L. Müller, F. Leo, C. Zander), despite the aid of elision, hiatus, synizesis, metrical lengthening, and emendation, are all unsatisfactory. The 'accentual' theory (e.g. O. Keller) which disregards quantity and imposes on Saturnians the rhythm of 'The queen was in her parlour / eating bread and honey' involves incredibly artificial accentuations (e.g. 'dedet Tempēstātēbus'). W. M. Lindsay's view is that three ordinary word-accents in the first part of the line (normally of 7 syllables) and two in the second part (normally of 6 syllables) function as metrical stresses. Saturnians can, indeed, be so read; but most readers would unconsciously introduce a third (non-accentual) stress into the second part. W. J. W. Koster regards the metre as a double 'tripudium' (cf. 'enos Lases iuuat' in hymn of *Frates Aruales*) which later came under the influence of Greek ideas of quantity. Mere syllable-counting, the structural use of word-accents at roughly

equal intervals, and quantitative schemes may all have played a part in the evolution of the Saturnian; but from our meagre remains we cannot confidently define its original nature or trace its history.

SATURNINUS (1), LUCIUS APPULEIUS, tribune in 103 and 100 B.C. and a revolutionary democrat. He was father of Appuleia, wife of Lepidus (q.v. 2, *cos.* 78). His career is known only from hostile sources, which represent him as a powerful but unprincipled demagogue, with no statesmanlike aims. As quaestor serving at Ostia he was embittered when the Senate transferred his duties to M. Scaurus, the Princeps Senatus. His laws in 103 included one giving land in Africa to Marius' veterans, a *lex de maiestate* establishing a new *quaestio perpetua*, and probably a *lex frumentaria*. In 102 Metellus Numidicus, as censor, tried to exclude Saturninus and Glaucia from the Senate, while in 101 Saturninus was arraigned for insulting an embassy from Mithridates. In 100 he proposed measures for founding colonies overseas in Sicily, Greece, and Macedonia and for settling veterans on allotments in Gaul (Cisalpine, or possibly Transalpine). When he attached a clause which imposed an oath of obedience Metellus went into exile rather than take the required oath. Saturninus pressed these laws in spite of tribunician vetoes and secured his own election to a third tribunate. There was also much violence at the consular elections for 99: Glaucia, though praetor in 100, was a candidate, and his rival Memmius was murdered. The *Equites*, whose alliance with the extreme democrats had been largely responsible for the earlier successes of Saturninus and Glaucia, took fright, and when the Senate's *ultimum decretum* was passed, Marius attacked his former ally Saturninus, who surrendered, on promise of trial, but was murdered by a body of *Equites*. His career marks the extreme application (following Gracchan ideas) of Greek principles and methods to Roman politics; some survived (e.g. Caesar used the *exsecratio* in 59). To Saturninus' years of power belong Rome's most serious effort (before the *Lex Gabinia*) to suppress piracy (q.v.).

E. Klebs, *PW* ii. 261; H. Last, *CAH* ix. 164–72.

M. H.

SATURNINUS (2), GAIUS SENTIUS (*cos.* 19 B.C.), of a Pompeian family, related to that Scribonia who married Octavian in 40 (*ILS* 8892). Consul in 19, without colleague for the greater part of the year, he dealt firmly with electoral disorders, refusing to admit the candidature of Egnatius Rufus (q.v.) and thwarting his alleged conspiracy. Proconsul of Africa (c. 14); legate of Syria (c. 9–6), Sentius next appears as legate under Tiberius in Germany (A.D. 4–5); in A.D. 6 he led the army of the Rhine eastwards to participate in the campaign against Maroboduus. Velleius praises warmly this useful public servant and friend of Tiberius—'uirum multiplicem in uirtutibus, nauum, agilem prouidum', etc. (2. 105. 1).

R. S.

SATURNINUS (3), LUCIUS ANTONIUS, governor of Upper Germany, proclaimed himself emperor at Moguntiacum (probably 1 Jan., A.D. 89). On receipt of the news Domitian left Rome and marched northwards. In the meantime, however, the governor of Lower Germany, Lappius Maximus, who remained loyal, defeated and killed Saturninus in a battle fought beside the Rhine (perhaps near Coblenz). It is stated that German allies of the usurper were unable to cross the Rhine to his assistance because of a sudden thaw (Suetonius, *Dom.* 6 f.; Dio 67. 11; Martial 4. 11; 9. 84; *CIL* vi. 2066 (*Acta fratrum arvalium*)). R. S.

SATURNINUS, see also POMPEIUS (7).

SATURNUS, SATURNALIA. Saturnus is one of the most puzzling gods in Roman cult. His festival (see below) is part of the 'Calendar of Numa', and its position, 17 Dec., midway between Consualia and Opalia, is intelligible if we suppose, as has commonly been done (e.g. by Wissowa, *RK*² 204), that his name (also Sacturnus) is to be connected with *satus* and taken to be that of a god of sowing, or of seed-corn. It would represent the ritual following on the completion of the autumn sowing, and would come appropriately enough between commemorations of the deities of the store-bin and, apparently (see ops), of plenty. But serious difficulties attend any such explanation. One remarkable fact is that we have clear evidence that he was sacrificed to in Greek fashion, i.e. with the head uncovered (Festus, p. 432. 1 Lindsay), and none at all that he was ever worshipped in any other manner. The ancients themselves supposed that he was not a native god, but imported from Greece, a story which blends with the flight of Kronos from Zeus, as in Verg. *Aen.* 8. 319 ff. His name seems to find its nearest parallels in Etruria (F. Altheim, *Griechische Götter*, pp. 8, 178), both as to stem (if we reject the connexion with *satus*) and suffix. It is therefore by no means impossible that he is a very old importation from Etruria, and conceivable that the Romans were right in identifying him with Kronos (q.v.).

His temple, the ruins of which are still conspicuous, stands on the clivus Capitolinus, and served as a treasury (*aerarium Saturni*), see Platner-Ashby, 463 ff. His cult-partner is the obscure goddess Lua, whose name seems connected with *lues*, an odd colleague for a god of sowing, but more intelligible if he really had something of the grim character of Kronos. See Gellius 13. 23. 2.

Of the early history of his festival nothing is known; Livy (22. 1. 20) speaks as if it originated in 217 B.C., which is obviously not so, see above. At most, some modification of the ritual, in the direction of hellenization, took place then. In historical times it was the merriest festival of the year, 'optimus dierum', Catullus 14. 15. Slaves were allowed temporary liberty to do as they liked, presents were exchanged, particularly wax candles and little pottery images or dolls, *sigillaria* (q.v.); Macrobius *Sat.* 1. 7. 18 ff., see Wissowa op. cit. 206, note 2 ff., for more references. There was also a sort of mock king, or Lord of Misrule, *Saturnalicus princeps* (Seneca, *Apocol.* 8. 2). By about the fourth century A.D. much of this was transferred to New-year's Day, and so became one of the elements of the traditional celebrations of Christmas (Nilsson in *ARV* xix. 52 ff.). The resemblance to the Kronia was noticed by the ancients (Accius in Macrobius *Sat.* 1. 7. 36-7); it may be pointed out that there is also a resemblance to the Sacaea (q.v.), though the evidence for killing or pretended killing of the mock king is of the weakest (Frazer, *GB* ii. 310 ff.). The connexion between these various festivals is as yet very obscure.

II. J. R.

SATYRS and SILENI are 'spirits of wild life in woods and hills' (II. J. Rose, *Handbook of Greek Mythol.*, 156), bestial in their desires and behaviour, and having details of animal nature, either of a horse or of a goat. Classical authors constantly confused Satyrs and Sileni, but from the fourth century B.C. on Sileni are usually old and retain horse-ears, while Satyrs are usually young (Paus. 1. 23. 5) and have taken over from Pan the traits of a goat. It seems that Satyrs and Sileni had a different origin, but we are ill informed about the early history of the Satyrs. Hesiod (ap. Strabo 471) makes them brothers of the Nymphs (q.v.) and calls them 'good-for-nothing and mischievous'. Apollodorus refers to one Arcadian Satyr who stole cattle and was killed by Argus (2. 1. 2), but clearly identifiable Satyrs first appear in satyr-plays, such

as Euripides' *Cyclops* and Sophocles' *Ichneutae*, and on representations of satyr-plays in art. At that point Satyrs are human beings with some details of a horse (Pollux, *Onom.* 4. 142), although the Ichneutae give one rather the impression of dogs (F. R. Walton, *Harv. Stud.* 1935, 167). The famous wine-pouring Satyr of Praxiteles and the later more idyllic and rustic Satyrs of Hellenistic art and poetry are associated with Dionysus and his circle.

The history of Sileni is much more clear. Attic vases of the early sixth century B.C. (Ch. Blinkenberg, *Lindos* (1931), pl. 126; *Hesperia* 1935, 436) show the shaggy, bearded man with horse-ears, sometimes also a horse-tail and horse-legs, pursuing the Nymphs (*Hymn. Hom. Aphrod.* 262), and an inscription on the François vase dispels all doubt of his identity. He is not at first attached to any god, but seems to resemble folk-lore men of the forest such as the Russian *leshii*. He knows important secrets and is captured to make him reveal them. There may have been many stories on this pattern. On the François vase Silenus is captured by two wild men named Orcios and Therytas. The story that became famous is that of King Midas who caught Silenus after having made him drunk (Theopomp. *FGH* i, frs. 74-7). Ovid links this story with the punishment of Midas for his avarice (*Met.* 11. 90). In Virgil (*Ecl.* 6) Silenus is caught by two young shepherds and sings them mythological stories. About the middle of the sixth century B.C. Silenus (or Sileni, the plural being a matter of small importance in this lower layer of folk mythology) is drawn into the circle of Dionysus. He accompanies Dionysus in the triumphant return of Hephaestus (F. Brommer, *JDAI* 1937, 198), goes along to fight the giants, frolics in the thiasus, rides in the *carrus navalis*, makes music, and helps to make and drink wine. The behaviour of the Sileni is not always the best, and they are apt to attack even Hera or Iris (E. Haspels, *Attic Black-Figured Lekythoi* (1936), p. 20). When Pratinas introduced the satyr-play, the Sileni provided the distinctive costume but suffered a transformation into comic drunkards and cowards. The Silenus *par excellence* in these plays is the old Papposilenus, who has many weaknesses but also has intellectual talents. He is entrusted with the education of Dionysus, and even voices a proverbial philosophy in Pindar (schol. Ar. *Nub.* 223) and in the story of Midas. The comparison of Soerates with Silenus is based not only on common ugliness but also on common irony and wisdom. Portraits of Socrates and idealized heads of Sileni show great similarity (C. Weickert, *Festschrift J. Loeb* (1930), 103). Silenus is often represented as a good father and the Satyrs as his children. Hellenistic art depicts Silenus either as dignified, inspired, and musical, as the painting of the Villa dei Misteri (P. B. Mudie Cook, *JRS* 1913, 157), or as an old drunkard, as in many sculptural and decorative groups.

Kuhnert in Roscher, *Lex.*, s.v. 'Satyros'; F. Brommer, *Satyröl* (1937). G. M. A. H.

SATYRUS (1) (fl. 3rd c. B.C.), Peripatetic biographer from Callatis Pontica, wrote mainly at Oxyrhynchus and Alexandria. Works: (1) *Bioi* of famous men of all types, including Philip II, Sophocles, Demosthenes, Pythagoras, etc. Frs. in Diog. Laert. and Ath.; also four pages of the *Bios Eὐριπίδου*, found at Oxyrhynchus. (2) *Περὶ χαρακτήρων* (Ath. 4. 168 c). *Περὶ δῆμων Ἀλεξανδρέων* is by another Satyrus.

Satyrus widened the scope of biography to include all celebrities; he takes an uncritical delight in anecdotes and personalities. The Oxyrh. fragment (in dialogue form) reveals a careful and attractive style.

FGH iii. 159-66; A. S. Hunt, *POxy.* ix (1912), no. 1175. F. W. W.

SATYRUS (2) (2nd c. B.C.) nicknamed *Zeta*, pupil of Aristarchus, was perhaps the author of a collection of ancient myths (*FGH* i. 20).

SATYRUS (3) (*fl. c.* 150 B.C.), physician, pupil of Quintus (q.v. 1) of Rome, and teacher of Galen at Pergamum. He was a faithful follower of Quintus in the exegesis of Hippocrates and in the teaching of anatomy and pharmacology.

PIV ii A. 235.

SAXA, see DECIDIUS SAXA.

SAXON SHORE (*Litus Saxonicum*), name given to the coastline in Gaul and Britain exposed to Saxon raids (or possibly settled by Saxon *laeti*).

(1) *Not. Dign. occ.* (xxxvii, xxxviii) mentions two ports, Grannona and Marcae, under local military *duces*: their sites are uncertain (Grenier, *Manuel* i. 389, 392).

(2) In Britain the *Notitia* (*occ.* xxviii) lists nine forts under a *Comes litoris Saxonici*, who appears in Ammianus' narrative of A.D. 367 (27. 8. 1). They seem to be grouped in pairs (? for naval organization). Actually ten forts are known from Brancaster (Norfolk) to Porchester (Hants), nine of which are certainly those of the *Notitia* list. Outliers are found in Lincolnshire and Wales. All but two have external bastions and all but two others have roughly rectangular ground-plans. The areas are 6-10 acres. The original idea may be due to Carausius (not later), but one fort, Anderida (Pevensey, Sussex), is later (*c.* 330).

F. J. Haverfield in PIV ii A. 327-34; G. Macdonald in *25 Jahre R-G Kommission*, 107-13; *JRS* xxii. 60-72; R. G. Collingwood, *Archaeology of Roman Britain* (1930), 48-53; J. Mothersole, *Saxon Shore* (1924; popular but sound). C. E. S.

SAXONS, a German tribe first mentioned by Ptolemy (2. 11. 7) as settled in the Cimbric Chersonese (modern *Holstein*). By c. A.D. 200 they seem to have displaced and subdued the Chauci of the lower Elbe; their distinctive pottery is found in Frisia and towards the lower Rhine, where from the fourth century they engaged in warfare with the Franks, while eastward they reached Swabia and Thuringia, and even penetrated into Italy (568). At sea they attracted the attention of ancient authors by their ruthless piracy (cf. *Sid. Apoll.* 8. 6. 13-15). Their raids were succeeded by permanent settlement. In Gaul documents and place-names show them established around Bayeux, near Boulogne, and in south-west Flanders; while in conjunction with their neighbours the Angli and the mysterious Jutes, they began towards the middle of the fifth century to establish themselves permanently in Britain. Saxon settlements were mainly in the south (Wessex, Essex, Middlesex, Sussex), but their name was applied by themselves and others indiscriminately to all the Teutonic invaders.

Full bibliographies in Collingwood-Myres, *Roman Britain*; R. H. Hodgkin, *History of the Anglo-Saxons* (1939); see also L. Schmidt, *Gesch. der deutschen Stämme* (1937). C. E. S.

SCABILLARI, see PANTOMIMUS.

SCAEVA (? SCAEV(I)US) MEMOR, see MEMOR.

SCAEVOLA (1), GAIUS MUCIUS, according to some authors originally bore the *cognomen* Cordus, which he subsequently changed for Scaevola. This was an amulet worn by Roman children, but popular etymology wrongly connected it with *scaeva*, the left hand; thence arose the story of the brave Roman who, having failed to kill Porsenna, showed his indifference to physical pain by holding his right hand in fire. The surmise that the legend merely is a misinterpretation of a monument, which represented a young man stretching his right hand over an altar, is improbable.

G. De Sanctis, *Per la scienza dell' antichità* (1909), 321 ff. P. T.

SCAEVOLA (2), PUBLIUS MUCIUS (*cos.* 133 B.C.), was the first of his family to win distinction as a jurist: a master of the *ius Pontificium*. He advised Tiberius

Gracchus on the provisions of his land-law. As consul he refused to countenance the use of force against the Gracchans, though he later approved the force used by Scipio Nasica. He succeeded his brother Crassus Mucianus as Pontifex Maximus. M. H.

SCAEVOLA (3), QUINTUS MUCIUS, 'AUGUR' (*cos.* 117 B.C.), was a great jurist and probably a moderate reformer in politics. His family connexions clearly suggest that he may have been influential in the democratic party, though perhaps not with the extremists. His granddaughter Licinia (daughter of L. Crassus) married the younger Marius; and it is not surprising that Scaevola refused to countenance Sulla when, in 88, he called upon the Senate to declare the elder Marius a public enemy. Scaevola educated his grandson, M'. Glabrio (*cos.* 67), before whom Verres was tried in 70; and Cicero as a youth attended his legal consultations.

F. Münzer, *Röm. Adelsparteien*, 275 ff.

M. H.

SCAEVOLA (4), QUINTUS MUCIUS, 'PONTIFEX' (*cos.* 95 B.C.), was the son of (2) and cousin of (3) above. As consul with L. Crassus, he carried the *Lex Licinia Mucia*, expelling the Latins from Rome. As proconsul of Asia (94), he issued a provincial edict which served as a model to other governors, e.g. to Cicero in Cilicia. He lost his life in the Marian massacres of 82.

An excellent jurisprudent and teacher, Scaevola published the first systematic treatise on Civil Law. This was the basis of much subsequent work on the *ius civile*, books 'ad Quintum Mucium' being arranged according to his system. His *liber singularis opum* (*Definitionum*) was the earliest work directly excerpted in Justinian's *Digest*. A. B.

SCAEVOLA (5), QUINTUS CERVIDIUS, legal adviser of Marcus Aurelius, teacher of Paulus, Tryphoninus, and (perhaps) Papinian, a famous figure among the Roman jurists of the second century A.D. A sagacious casuist, he pronounced his decisions resolutely and tersely, in a language which is not free from vulgarisms and heaviness, a specialist in *responsa*. Some of his responses deal with cases presented by provincials and infiltrated with new ideas coming from the Hellenistic East. But Scaevola was not easily open to such innovations. His *responsa* fill a special collection (six books) and also a much larger publication, the *Digesta* (in 40 books), renowned as the most prominent work of casuistic literature, though this kind of juridical work did not normally include *responsa*. The relation between Scaevola's *Digesta* and *Responsa* is not quite clear; a new solution, which assumes both works to have been published long after the death of Scaevola has been proposed in recent times (F. Schulz, 'Überlieferungsgeschichte der Responsen Scaevolas', *Symbolae Friburgenses in honorem O. Lenel*, 1934). Other works of Scaevola: *Notae* to *Digesta* of Julian and Marcellus, *Regulae*, *Quaestiones*.

A. B.

SCAMANDRIUS, see ASTYANAX.

SCANDINAVIA. The earliest information about Scandinavia is Pytheas' account (*c.* 325 B.C.) of Thule (q.v.), if its identification with Norway is correct. Mela (3. 3) mentions 'islands' in the Sinus Codanus 'north of the Elbe'; Pliny states (*HN* 4. 96) that the largest and most fertile of these is the island of Scatinavia and mentions Sevo Mons, which may be the mountains between south Sweden and Norway. Tacitus (*Germ.* 44, 45) knows of the Suiones (Svear, Swedes), a seafaring nation which evidently came within the ken of the amber traders at the mouth of the Vistula; Ptolemy mentions numerous tribes in Scandia. Jutland was better known to the Romans, a naval expedition having sailed as far as the Skaw in A.D. 5 (*Mon. Anc.* 26).

The Scandinavian Neolithic Age, fertilized by influences coming with the Megalithic culture from the south-west, was one of considerable achievement, and the subsequent Bronze Age culture, in which the trade in Jutland amber (q.v.) with the south played an important part, was of a high order. There was a falling-off in the Early Iron Age, and by the end of the first century B.C. a number of peoples (Langobardi, Vandili, Burgundiones, Gutones) had migrated, in part at any rate, to the German mainland. The home-staying Scandinavians entered on a new period of prosperity in the first century A.D. and enjoyed a lively intercourse with other peoples, as the great quantity of Roman goods in their graves shows. In the third and fourth centuries they came under the influence of the culture stream from the Gothic settlements on the Black Sea and in the Danube lands.

SCAURUS (1), **MARCUS AEMILIUS** (cos. 115 B.C.), was the husband of Caccilia Metella, afterwards Sulla's wife, and father of Aemilia, later wife of Pompey. Scaurus, though his family had no recent distinction, rose to be *Princeps Senatus*; to Cicero he stands out as the 'Grand Old Man' of the *Optimates*, but his early career is hard to understand. In 110 he presided over the *Quaestio Mamili*, though he had himself served under Bestia in 111 and on the embassy to Jugurtha in 112: Sallust's attempt to portray him as a skilful villain is an unconvincing *tour de force*. It is not known that he was concerned in Opimius' persecution of Gracchans in 121; if he had had no share in Opimius' severities, he might be acceptable to the democrats in 110. With the fall of Opimius and his friends, Scaurus became one of the *Optimate* leaders; he was censor in 109, with the elder Drusus. His marriage with Caccilia Metella is best dated after 102 (see Münzer, *Adelsparteien*, p. 281). He played a prominent part, on the *Optimate* side, in the events of the years before and after 100, and as a strong supporter of Drusus' reforms was accused in 90 at Caepio's instigation under the Varian Commission. He died soon afterwards. He wrote *De vita sua* in three books.

G. Bloch, *Mélanges d'histoire ancienne* (1909); E. Pais, *Dalla guerra punica a Cesare Augusto* i (1918), 91 ff. M. H.

SCAURUS (2), **MARCUS AEMILIUS**, son of (1) above, was Pompey's quaestor in the Mithridatic War; he marched into Judaea and Nabataea. Aedile (58 B.C.), praetor (56), and propraetor in Sardinia, he was in 54 accused *de repetundis*, defended by Cicero and acquitted. Accused again *de ambitu*, he went into exile in 52. He married Mucia, previously Pompey's wife.

Klebs, *PIR* i. 588.

A. M.

SCAURUS (3), **MAMERCUS AEMILIUS**, the last male member of the distinguished republican family of Aemilii Scauri, was a man of unsavoury character, but a distinguished orator and advocate (Sen. *Controv.* 10, praef. 2-3; Tac. *Ann.* 6. 29). Though disliked by Tiberius, he was suffect consul, probably in A.D. 21, but did not govern a province. Twice prosecuted for *maiestas*, in 32 and 34, on the second occasion he committed suicide.

SCAURUS, see **TIRENTIUS**.

SCAZON, see **METRE**, GREEK, II (3).

SCEPTICS (σkeptικοί or ἀπορητικοί), philosophers who confine themselves to criticizing without giving positive views. They taught that the nature of things was not to be known. Therefore one ought to suspend one's assent (ἐποχή: ἐφεκτικοί) and refrain from any judgement.

The sceptical movement of antiquity passed through three stages.

(1) The ethical scepticism of Pyrrhon and his pupils, especially Timon, was shortlived. It is said to have come to an end with or soon after Timon (Menodotus and others ap. Diog. Laert. 9. 115). The 'succession' Diogenes Laertius gives seems a mere figment.

(2) The scepticism of the Middle and New Academy from Arcesilaus to Philon of Larissa aims at a criticism of knowledge, opposing mainly the Stoic theory of 'conceptual perception'. After Carneades and Clitomachus this school maintains the positive side of scepticism, viz. a theory of probability.

(3) Outside the Academy Pyrrhonism or scepticism was revived by Aenesidemus, if not earlier. The new Pyrrhonian school gives a systematic synthesis of Academic-Pyrrhonian teaching and the empiricism of the so-called empirical physicians. In the 'modes' (τρόποι) of Aenesidemus, Agrippa, and others we find criticism reduced to certain formulæ. Sextus Empiricus gives in his preserved works an account of the whole system.

SCHERIA (Σχερία, epic Σχερίη), the land of the Phaeacians, at which Odysseus (q.v.) arrives after his shipwreck (*Od.* 5. 451 ff., cf. 34). It is a fertile country, apparently an island (6. 204), having an excellent, almost land-locked harbour (263 ff.), by which its city stands, at least one river (5 loc. cit.), and a mild climate (cf. 7. 117 ff.; fruits grow all the year round). The population are enterprising and very skilful sea-farers, great gossips, boastful and rather impudent, not very warlike nor athletic, fond of pleasure, but kindly and willing to escort strangers in their wonderful ships. Various real places have been suggested as the original of Scheria, the most popular in ancient and modern times being Corfú; but as that is within some eighty miles of Ithaca, wherest Scheria is distant a night's voyage for one of the magical Phaeacian ships (*Od.* 13. 81 ff.), the identification is unlikely. See, however, A. Shewan, *Homeric Essays* (1935), 242 ff. That details of real places have been used for the picture is likely.

H. J. R.

SCHOLARSHIP IN MODERN TIMES: (a) RENAISSANCE TO 1800. A formal history of classical scholarship in modern times, i.e. from the Renaissance onwards, is too vast for the limits here possible. It must suffice to represent the subject by a general bibliography of works of reference and to indicate some of the features and of the greater names in the periods into which it may be divided. A supplementary selection of books largely biographical, and without claim to be exhaustive, will serve to illustrate features in these periods.

A. GENERAL WORKS OF REFERENCE

Bursian, C. *Geschichte der class. Philologie in Deutschland von den Anfängen bis zur Gegenwart*. 1883.

Gudeman, A. *Outlines of the Hist. of Class. Philology*³.

U.S.A. 1902 [a compact summary].

— *Grundriss der Geschichte der Klass. Philologie*². 1909.

Hallam, H. *Introd. to the Lit. of Europe in the Fifteenth, Sixteenth, and Seventeenth Centuries*². 1869.

- Kroll, W. *Geschichte der Klass. Philologie*. 1908, 1920 [a brief sketch].
- Mayor, J. E. B. *Bibliographical Clue to Latin Literature*. 1875 [edited after E. Hübner with large additions].
- Peck, H. T. *Hist. of Classical Philology*. 1911 [contains bibliographical index pp. 461-76].
- Pökel, W. *Philologisches Schriftsteller-Lexikon*. 1882 [useful for dates and works of classical scholarship up to its time of publication: references under important names to biographical notices].
- Sandys, J. E. *A History of Classical Scholarship*, vol. ii. 1908 [from Revival of Learning to end of 18th century in Italy, France, England, and the Netherlands].
- do. vol. iii, *The Eighteenth Cent. in Germany and the Nineteenth in Europe and U.S.A.* 1908.
- [Both vols. have chronological tables, portraits, and bibliographies and furnish learned and well-written estimates of scholars.]
- *Harvard Lectures on the Revival of Learning*. 1905.
- Sathas, K.N. *Νεοελληνική φιλολογία: βιογραφίαι τῶν ἐν τοῖς γράμμασι διαλαμπάντων Ἑλλήνων* (1453-1821). 1868.

B. PERIODS OF MODERN SCHOLARSHIP AND RELEVANT STUDIES

It will be convenient to follow, with some modification, Sandys's four periods, which he considered predominantly: I. Italian, II. French, III. English and Dutch, IV. German.

I. Of these the first is that of the Renaissance or Revival of Learning, especially in Italy from the death of Dante in 1321 for two centuries to the death of Leo X in 1521. It may be said to begin with Petrarch (1304-74) and to end with the contemporaries of Erasmus (1466-1536). It is the period of learned Greek immigrants in Italy, of the acceptance and promotion of the new learning by humanist scholars and educators, of an energetic quest for manuscripts, and of the extension of classical enthusiasm into many countries of Europe. Representative of a combined devotion to Greek and Latin study were Valla (1407-57), who was among the founders of historical criticism in his disproof of the authenticity of the *Donation of Constantine*; Politian (1454-94), professor of Greek and Latin at Florence, who stimulated a natural Italian interest in writers of the 'Silver Age'; and Ficino (1433-99), renowned as a commentator on and translator of Plato.

The new learning spread more slowly in the north. At Paris, Greek, though taught spasmodically from about 1458, scarcely established itself until after the arrival of Lascaris in 1495. Its introduction into Germany is associated with Rudolphus Agricola (1443-85) and Reuchlin (1455-1522), and in England with William of Selling in 1473 and with Linacre, Grocyn, Latimer, Colet, Sir John Cheke, and others. Typical fruit is seen in Roger Ascham's *Scholemaster*. Greek was taught at Louvain in 1517 and was fostered by Erasmus. More cosmopolitan than the Italian stylists and too sane to tolerate fastidious pedantry (see his *Ciceronianus*, 1528), Erasmus reached the high-water mark in the Renaissance appreciation of the purely literary attraction of the classics.

A limited number of works are here given as guide-posts.

- Allen, P. S. *The Age of Erasmus*. 1914.
- and H. M. Allen (with H. W. Garrod in later vols.). *Opus Epistolarum Desiderii Erasmi denuo recognitum et auctum* . . . 11 vols. 1906-47.
- Baldelli, G. *Vita di Giovanni Boccaccio*. 1806.
- Bandini, A. A. *Italarum et Germanorum Epistolae ad Petrum Victorium* (cum vita Victorii). 2 vols. 1758-60. [Important, as Pietro Vettori's many-sided learning advanced inter alia Aristotelian and Ciceronian scholarship.]
- Boerner, C. F. *De doctis hominibus Graecis litterarum Graecarum in Italia instauratoribus*. Leipzig 1750. [On lives and writings of twelve Greek immigrants including Chrysoloras, Bessarion, Chalcondyles, etc.]

- Boulting, W. *Aeneas Silvius* (Enca Silvio de' Piccolomini—Pius II) *Orator, Man of Letters, Statesman and Pope* (illustr.). 1908.
- Burckhart, J. *Die Cultur der Renaissance in Italien*. 1860 and many later edns. Engl. Transl. by S. G. C. Middlemore, 1878; subsequent issues include that of Phaidon Press, 1937. [Part iii is on humanism from 14th to 16th cent.]
- Cambridge *Bibliography of English Literature*, 4 vols. (including index vol.). 1940. [Vol. i contains sections on scholars and translations; humanists, pp. 664 ff.; Latin and Greek learning, 1500-1660, pp. 859-63.]
- Cambridge Modern History: The Renaissance*, vol. i, 1907 [esp. ch. xvi for R. C. Jebb].
- Christie, R. C. *Etienne Dolet, the Martyr of the Renaissance*. 1880 and 1899.
- Comparetti, D. *Virgilio nel medio evo*. 2 vols. 1872 [cd. 2, 1896]. Engl. Transl. by E. F. M. Benecke. 1895.
- Geiger, L. *Humanismus und Renaissance in Italien u. Deutschland von den Anfängen bis zur Gegenwart*. 1882.
- *Johann Reuchlin*. 1871.
- [The *Epistolae Obscurorum Virorum* in 1516-17 championed Reuchlin by parodying the barbarous Latin of his opponents. Latin text with Eng. rendering and historical introd., F. G. Stokes, 1925.]
- Körting, G. *Petrarca: Leben und Werke*. 1878.
- *Boccaccio: Leben und Werke*. 1880.
- Lupton, J. H. *A Life of John Colet, D.D., Dean of St. Paul's*. 1887.
- Maehly, J. A. *Angelus Politianus: ein Culturbild aus der Renaissance*. 1864.
- Michelet, J. *Histoire de France*, vol. vii 'Renaissance'. 1855.
- Nolhac, P. de. *Pétrarque et l'Humanisme*. 1892.
- Pastor, L. *Geschichte der Päpste im Zeitalter der Renaissance bis zur Wahl Pius II.* 1886 ff. Engl. Transl. by F. I. Antrobus. 1891 ff.
- Rashdall, H. *The Universities of Europe in the Middle Ages*. 3 vols. 1895; new ed. by F. M. Powicke and A. B. Emden, 1936.
- Robinson, J. H., and Rolfe, H. W. *Petrarch the first Modern Scholar and Man of Letters* (with translations from his correspondence). U.S.A. 1898 and 1914.
- Sabbadini, R. *Le scoperte dei codici latini e greci ne' secoli xiv e xv*. 1905. [Records Poggio's recovery of ancient MSS. on four expeditions.]
- *Nuove ricerche*. 1914.
- Saintsbury, G. *A History of Criticism and Literary Taste in Europe*. 3 vols. 1905. [Vol. ii, bk. iv 'Renaissance Criticism' includes Erasmus and Italian editors of Aristotle's *Poetics*, e.g. Castelvetro.]
- Seebohm, F. *The Oxford Reformers of 1498* (being a history of the fellow-work of Colet, Erasmus, and More). 1867.
- Shepherd, W. *The Life of Poggio Bracciolini*. 1802.
- Spingarn, J. E. *A History of Literary Criticism in the Renaissance* (with special reference to the influence of Italy in the formation and development of modern classicism). Columbia Univ., U.S.A. Ed. 1899; 5th impr. 1925. [Italian Transl. by Antonio Fusco, 1905, has additions by the author and preface by B. Croce.]
- Strauss, D. F. *Ulrich von Hutten*. 2 vols. 1857-8; ed. 2, 1871. Engl. Transl. by Mrs. G. Sturge. 1874.
- Symonds, J. A. *Renaissance in Italy*, new ed. 7 vols. 1909-14. [Vol. ii is on 'The Revival of Learning'.]
- Vahlen, J. *Lorenzo Valla*. Vienna 1864; Berlin 1870.
- Voigt, G. *Die Wiederbelebung des class. Altertums oder das erste Jahrhundert des Humanismus*. 1859; ed. 3 by M. Lehnardt, 2 vols. 1893.
- Weiss, R. *Humanism in England during the 15th century*. 1941.
- Woodward, W. H. *Vittorino da Feltre and other Humanist Educators*. 1897.

This was also the period of the earliest printing of classical authors. For a handy conspectus of *editiones principes*, Greek and Latin, with editor, printer, and place of printing, see Sandys, op. cit. ii. 102-5. Here France was considerably behind Italy. The elder Stephanus, Robert Estienne (1503-59), father of Henri (1528-98), links the first two of our periods, and his activities (including the *Thesaurus Linguae Latinae* and eight Greek *editiones principes* from 1544 onwards) take us far into the sixteenth century. The still greater performance of his son followed in the issue of 58 Latin authors and 74 Greek (18 of the latter being *editiones principes*) and of his *Thesaurus Graecae Linguae* and his Plato.

The following works may be consulted:

- Botfield, B. *Prefaces to the first editions of the Greek and Roman Classics*, etc. 1861.
- Dibdin, T. F. *Introduct. to knowledge of rare and valuable editions of the Greek and Latin Classics*. 1827.
- Didot, A. Firmin. *Alde Manuce et l'hellénisme à Venise*. 1875.
- Renouard, A. A. *Annales de l'imprimerie des Aldes*. 3 vols. 1834.
- *Annales de l'imprimerie des Estienne*. 1843.

II. This period, opening approximately with the founding of the Corporation of Royal Readers (later, the Collège de France) by Francis I at the suggestion of

the famous Greek scholar Budaeus (Budé) in 1530, and closing about the end of the seventeenth century, may with fairness be considered a French period. Its four outstanding names are those of (1) Julius Caesar Scaliger's still more eminent son Joseph Justus Scaliger (1540-1609), who, after editing several Latin poets and Festus, turned from textual criticism rather more to subject-matter (e.g. in his *Manilius*) and to the verification of ancient chronology; (2) a scholar who aimed at conveying to readers his own interest in ancient life, Isaac Casaubon (1559-1614), of Huguenot parentage, a famous editor of Persius and father of Mérie Casaubon, whose education and scholarly activities are associated with England; (3) Justus Lipsius (Joest Lips, 1547-1606), who showed himself a great Latinist, not least in his editions of Tacitus and of Seneca; and (4) Salmasius (Claude de Saumaise, 1588-1653), who discovered the MS. of the Greek *Anthologia* of Cephalas and who as editor of several Latin historians earned his call to Leyden in 1631. In France there belong to this period also Ramus (Pierre de la Ramée); three Royal Readers in Greek, Turnebus, Dorat, and Lambinus (noted for his *Horace*); Muretus, Pithou, Petau, the Daciers, the distinguished palaeographer Mabillon, and others. France too holds the credit of Du Cange's glossary of medieval Latin, first published in 1678, and of Huet's series of Delphin classics (1670-80).

In the Netherlands Vivès, Spanish by birth, had left his mark on education at Louvain; Canter marked a new era by editing the Greek tragic poets; and Cruquius remains memorable for his edition of Horace, which gives our only information about the *codex antiquissimus Blandinius*. Among compatriots who handed on the tradition of scholarship in the seventeenth century were the elder Dousa and his two sons; Merula (*Ennii fragmenta*, 1595); Vossius the elder (an authority on rhetoric and grammar); Meursius; Daniel Heinsius, in whose Latin work Scaliger's influence appears, as it does in Grotius, whose *De Jure Belli et Pacis* is more widely known than his skilful Latin renderings from the Planudean Anthology. The next generation yielded distinguished names in Daniel Heinsius's son Nikolaas, J. F. Gronovius (successor to D. Heinsius at Leyden in 1659), while Jacob Gronovius and Bentley's correspondent Graevius carried learning into the eighteenth century. The Dutch scholar Perizonius (Voorbroek) in his *Animadversiones Historicae*, 1685, first raised the question of the importance of primitive lays in the shaping of Roman legends.

Scholarship in England during the period is perhaps best remembered for the Tudor translators, among them Philemon Holland, and later for Dryden's *Virgil*. Ben Jonson's friend Farnaby edited among his Latin texts Seneca's tragedies and published a Latin grammar in 1641. Sir Henry Savile's *Chrysostom* was a triumph of erudition and printing; Gataker issued his *M. Aurelius* with a Latin translation; and to the learned jurist Selden we owe the rescue of the *Marmor Parium*. Scotland produced an eminent scholar in George Buchanan, translator of the Psalms, while Arthur Johnston also showed great skill in his Latin verse. This period, it may be noted, included the age of Milton and of the Cambridge Platonists. More than one scholar, Creech included, worked on the still misty text of Lucretius, and before the end of the century Potter wrote his *Antiquities of Greece*.

In Germany the generation succeeding Reuchlin witnessed the diligence of Melanchthon (Schwarzerd, 1497-1560), who merited the title of 'praeceptor Germaniae' by his editions of Greek and Latin classics and his grammars. His friend and biographer Camerarius (Kammermeister) is best known for a Plautus of 1552. Sturm (1507-89) was a staunch upholder of speaking and writing Latin. Greek texts were carefully edited by Nylander (= Holtzmann, 1532-76), whose *Pausanias* was completed by Sillburg. Janus Gruter (1560-1627),

who, though born at Antwerp and educated at Norwich, Cambridge, and Leyden, was long associated with Heidelberg, edited some seventeen Latin authors, and at Scaliger's instigation compiled a corpus of ancient inscriptions. The *Polyhistor* of Morhof (1639-91), professor at Rostock, should be mentioned as of interest to students of literary history.

In Italy Ciceronian study was furthered by the *Lexicon* of Nizolius (1498-1566): Sigonius worked on Livy and used his Ciceronian scholarship to forge a *Consolatio*. Robortelli edited the *Poetics* of Aristotle (1548) over twenty years before Castelvetro's edition. In both the sixteenth and the seventeenth centuries an increasing bent towards archaeology is discernible among Italian scholars.

A series of '*Delitiae*' showed the skill in Latin verse attained by the scholars of several different countries.

BIBLIOGRAPHY. For a fuller appraisal of scholarship in the sixteenth and seventeenth centuries see Sandys, *op. cit.*, vol. ii.

III. For scholarship in England, the eighteenth century may be described as the period from Bentley to Porson: the continuance of its influence into the next century is well marked by Cobet's acknowledgement of debt to his 'three Richards'—Bentley, Dawes, and Porson. Bentley's lead in insistence upon the fundamental necessity of sound texts, and his boldness in the purgation of what he judged to be corrupt, gave, in spite of some hostile critics, an enlivening impulse to textual criticism (q.v.) and chronology. Although Wood's *Essay on the Original Genius and Writings of Homer* (1769) influenced Wolf and Heyne abroad, Homeric scholarship did not equal that on the Greek drama; but the general vitality of works by English scholars is proved by translations into French and German and by notices in the Leyden *Bibliotheca Critica* founded by Wyttenbach with Ruhnkens's approval. It is not surprising that in an age when classical quotation came readily to Chatham, Burke, Fox, and Pitt, the Public Schools should publish their verses, and several renderings be made of *Paradise Lost* and Gray's *Elegy*. Translation into English was carried on with equal vigour, and many examples might be specified besides the renderings of Homer by Pope and his associates. Studies of Aristotle's *Poetics*, of Horace's *Ars Poetica*, and of the treatise *On the Sublime* indicated growing attention to literary criticism, while other works were concerned with lexicography, ancient geography, topography, and the antiquities of Greece and Rome. Travel in Greece and Asia Minor fostered enthusiasm for archaeology, inscriptions, and ancient

art; acquaintance with the East was responsible for Sir Wm. Jones's realization of the linguistic importance of Sanskrit (see COMPARATIVE PHILOLOGY); and Roman remains at home were the subject of Horsley's noteworthy *Britannia Romana*. Representative works of pure scholarship were Bentley's famous *Dissertation upon the Epistles of Phalaris* (1699, translated into Latin in 1777 and into German about 80 years later), his *Horace* (1711, containing over 700 textual changes), his *Terence* (frequently cited in the O.C.T. edition), and his *Manilius*; Wasse's *Sallust* (based on collation of 80 MSS.) and his manuscript commentary on *Thucydides* incorporated in Duker's *Thucydides*, Amsterdam, 1731; Markland's *Sylvae of Statius*; Taylor's *Lysias*; Dawes's *Miscellanea Critica*; Toup's *Emendationes in Suidam*; Tyrwhitt's *Poetics* of Aristotle; and, about the end of the century, Porson's editions of four plays of Euripides, marked by the wonderful memory and grasp of metre which made him the greatest Atticist of his day.

In Italy among the best-known names are those of the lexicographers Facioli and Forcellini. Corsini's *Fasti Attici* signally advanced Greek chronology. France, like Italy, furthered archaeology, and included among its scholars possessing other interests Olivetus (Cicero), the three Capperoniers, and Montfaucon, who may be called the founder of Palaeography (q.v.). Of several Alsatian scholars, Brunck was eminent for his editions of Greek dramatists. Villoison's publication of the Venetian scholia to the *Iliad*, 1788, helped to fertilize Homeric studies anew. Germany's noteworthy names included J. A. Fabricius (*Bibliotheca Latina* and *Bibliotheca Graeca*), Gesner (*Scriptores Rei Rusticae*, *Thesaurus Linguae Latinae*, etc.), Scheller (*Lexicons*), Ernesti (Cicero), Reiske (*Oratores Graeci*, 12 vols., and edns. of many Greek classics), Heyne (Virgil, 4 vols. 1775; *Iliad*, 8 vols. 1802), and F. A. Wolf, author of the epoch-making *Prolegomena to Homer*, 1795, and editor of both Greek and Latin classics. The works of such pupils of Wolf as Boeckh, Bekker, Buttmann, and Bernhardt bear witness to his fertile and wide-reaching influence in the nineteenth century. Interest in ancient art was stimulated by Winckelmann and Lessing.

But no country of the time eclipsed the Netherlands. An imposing array consists of the two Burmans, uncle and nephew (both industrious editors of Latin authors and the younger widely known for his edition of the *Anthologia Latina*); Kuster (whose *Suidas* was published at Cambridge); Duker (whose *Thucydides*, we have seen, incorporated work by Wasse); Drakenborch (Livy, Silius); Hemsterhuys (whose mastery of Greek owed much to Bentley and who edited Pollux and the greater part of Lucian); Oudendorp (Lucan, Frontinus, Caesar, Apuleius); Valekenae (Euripides' *Phoen.* and *Hipp.*, Theocritus, Callimachus); Ruhnken (edn. of Timaeus' *Lexicon vocum Platoniarum*, and *Historia Critica Oratorum Graecorum*); and Wytttenbach (biographer of Ruhnken and the indefatigable editor of Plutarch's *Moralia*, etc.).

BIBLIOGRAPHY. For the eighteenth century see Sandys, op. cit., vols. ii and iii, and his bibliographical notes. The following may be mentioned:

SCHOLARSHIP IN MODERN TIMES: (b) 19TH AND 20TH CENTURIES. (Living scholars are not, as a rule, discussed in the articles on modern scholarship.)

I. INTRODUCTORY

1. The nineteenth century, based upon solid and indispensable foundations laid in the eighteenth, exhibited a deepening and widening of classical research productive of a fresh renaissance in which no single section of study seems self-sufficient. To this new humanism nothing which illumines the literature, languages, life, thought, or art of classical antiquity can be considered alien. Virtually it has realized the broad conception of the classics entertained by Wolf as a vast structure whose constituent parts should combine in a deep penetration into the infinite variety of Greek and Roman life. Brilliant services were rendered to textual criticism (q.v.), but establishment of a sound text, though fundamental, is only one of the functions of scholarship; for complete exegesis many other departments of learning have to be drawn upon. Verbal study may demand reinforcement from closer investigation of dialects Greek and Italian, or of archaic inscriptions or of Latin as late as the *Itinerarium Aethiopiae*; much in Herodotus calls in anthropology; the dramatic value of some scenes of a Greek tragedy must be assessed in relation to conditions of theatrical representation or to half-forgotten elements of religious ritual. So ancient classics, to exert their full humanistic effect, need constant reinterpretation in the light of increasing knowledge in many different branches.

2. Some features of the period may be mentioned in illustration. It is marked by a stricter system of textual criticism (e.g. Lachmann), an intensified care in assessing the value of manuscripts and their interrelation, and the application of palaeographic knowledge (e.g. Traube). There has been a more scientific investigation of the grammar, syntax, and history of ancient languages in the light of the steady development of comparative philology (q.v.). Lexicography has been advanced by the labours of scholars like Wölfflin in the *Archiv für latein. Lexikographie u. Grammatik* (1884-1909) and by the *Thesaurus Linguae Latinae*, still in progress. The *Greek-English Lexicon* of Liddell & Scott, as revised and augmented by Sir H. S. Jones and R. McKenzic, 1940, is deservedly hailed as one of the triumphs of recent scholarship.

3. Fresh interest in the earlier Latin authors is exemplified by works like Vahlen's *Ennius* (1854, 1903²), Marx's *Lucilius* (1904 f.), Büchler's *Menippean Satires* of Varro (1922⁶), while the importance of those later writers who have rescued for us fragments of archaic literature is recognized in editions such as Hosius's *Gellius* (1903) and Lindsay's *Nonius Marcellus* (1903). The grammarians and rhetors of Greece and Rome have been carefully collected, and exact attention paid to the metres and prose-rhythms of Greek and Latin and to the principles of composition in prose and verse. The practice of composition in both languages has nowhere been more tastefully cultivated than in the universities and classical schools of Britain. Skill and felicity in serious translation of great modern poetry and even in renderings of light verse have been exhibited by some of the most distin-

guished British editors of the classics (e.g. Kennedy, Munro, Shilleto, Jebb, Headlam) and justify Wilamowitz's acknowledgement in his *Erinnerungen* that appreciation of his own verses was keener in England than in Germany.

4. The light thrown upon the life of ancient Greece and Rome by archaeology and epigraphy has served both literary and historical research, especially through the conduct of excavation on increasingly scientific lines. The late nineteenth century witnessed and welcomed the recovery in Egypt of papyri, some bearing on commercial and social life, and others containing literary works, e.g. several of Bacchylides' odes, the *Ἀθηναίων πολιτεία*, considerable portions of Menander's comedies and Herodas' mimes, all of which were at once a stimulus to interest and a challenge to skill in textual restoration. The comparatively new science of anthropology has illuminated much in ancient custom and religion (e.g. Frazer's edition of Ovid's *Fasts*).

5. The immeasurably extended range of subjects now embraced under classical learning may be gauged from the contents of the volumes of Müller's *Handbuch der Altertumswissenschaft*, Pauly's *Real-Encyclopädie* (1839-52) (of which a new edition, begun by Wissowa in 1893, is almost complete), or *A Companion to Greek Studies* and *A Companion to Latin Studies* (Camb. Univ. Press). The bibliographical sections in Naim's *Classical Hand-list* (1939²) provide further illustration.

6. A feature at once signaling and aiding advance has been the collection of the results of past research which provide material for future work in the *Corpora* of inscriptions, of ecclesiastical writers and of writers on agriculture, astrology, geography, grammaties, medicine, metrology, music, etc. Add to these valuable collections of fragments such as those of the Greek and Roman dramatists, poets, and historians whose partial survival we owe largely to quotation by other ancient authors.

7. With this expansion of range the increase of Classical Societies or Academies has kept pace. Learned periodicals circulate in many languages to record and promote classical learning. The spread of Greek and Latin scholarship is significantly represented by the separate sections devoted in Sandys's *History of Classical Scholarship*, vol. iii, to the modern scholars of Scandinavia, Greece, Russia, and the United States of America. Of erudition so widely spread only a mere fraction can here come under notice.

II. GERMANY

8. In Germany scholarship during the nineteenth century was marked by a transmission of vital influence due to stimulating teachers. Much was achieved by suggestion of subjects for research to pupils destined sometimes to be collaborators with their professors. This transmission was so notable that a fair conception of modern German scholarship can be gained from observing the groups or 'schools' formed. Thus it has been usual to differentiate a grammatico-critical school continuing the Hermann tradition from the historico-antiquarian school continuing the Boeckh tradition—a convenient if not in every case a rigid division.

9. Gottfried Hermann (1772-1848), who had precursors among scholars of England and Holland and whose authority on metre is demonstrated in his editions of Greek poets, left a succession of students whose names represent, though they do not exhaust, the record of classical learning in the earlier part of the period. They include Näge (Dirae, *Lydia*); Reisig (especially devoted to Greek and Latin grammar); Thiersch (whose enthusiasm for Greek grammar, poetry, and epigraphy revived classics in Bavaria); Hercher (*Scriptores Erotici Graeci*; *Epistolographi Graeci*); Lobeck (the acknowledged learning of whose *Aglaophamus* contained good-humoured criticism of Creuzer's ultra-mysticism); Meineke (Aristophanes; Comic Fragments); K. F. Hermann (Greek Antiquities;

Juvenal); Trendelenburg (Aristotelian logic); Spengel (*Rhetores Graeci*); Classen (Thucydides); Ritschl (who opened a new era in the study of Plautus, his labour on nine of the plays being continued by his pupils Loewe, Goetz, and Schoell); Sauppe (co-editor with Baiter of *Oratores Attici*); Haupt (G. Hermann's son-in-law and editor of his posthumous Aeschylus, who convincingly separated the bucolics of Calpurnius and Nemesianus); Bergk (*Poetae Lyrici Graeci*); Koehly (editor of many Greek classics); Bonitz (Platonic and Aristotelian scholar); Passow (whose repeated re-editions of Schneider's lexicon formed a basis for Liddell and Scott); and Schaefer (specially interested in Demosthenes' times).

10. Dissen (1784-1837, a pupil of Heyne: *Greek Moods and Tenses*; editions of Pindar, Tibullus, and *De Cor.*), though representative of grammatical and critical study, disliked Hermann's method and was not of his school.

11. Wilhelm Dindorf (1802-83) edited most of the Greek poets, and his brother Ludwig (1805-71) most of the Greek historians. Together, they were the main editors of the *Thesaurus Linguae Graecae* (Paris, mid-19th c.).

12. The leader of the historico-antiquarian school was Boeckh (1785-1867; Pindar, 4 vols. 1811-22; *Corp. Inscript. Graec.* 1825-40, continued by Franz, E. Curtius, and Kirchhoff; *Public Economy of Athens*, 1st Germ. ed. 1817). Boeckh was himself a follower of Wolf, whose most distinguished pupils were Bekker (1786-1871; Demosthenes; *Oratores Attici*; Aristotle); Buttmann (*Lexilogus*, 1818-25); Heindorf (Plato; Theocritus) and Bernhardt (who wrote on both Greek and Roman literary history and issued a monumental Suidas, 1834-58).

13. Among Boeckh's own pupils the most prominent were K. O. Müller (1797-1840: *Die Dorer*; *Die Etrusker*; ed. of Varro, *De Ling. Latina*; *Lit. of Ancient Greece*); E. Curtius (1814-96; the historian whose influence largely contributed to the excavation of Olympia); Koehler (secretary of the German Archaeological Institute at Rome); and Kirchhoff (1826-1908; distinguished in the textual criticism of Euripides, Plotinus, and Aeschylus, as well as in epigraphy).

14. Here it is worth observing that the dissertations on the *Eumenides* (1833; Engl. transl. 1835) accompanying K. O. Müller's text are of a type which Boeckh, Dissen, and Welcker preferred to the exclusive method of verbal criticism followed by Hermann. Welcker's (1784-1868) *Die griechische Tragödien*, 1841, still possesses value; for followers of the historical line of research were often drawn to the aesthetic side of the ancient world, and Welcker's aim was to view Greece under the threefold aspect of religion, poetry, and art, an aim colouring his editions of Hesiod's *Theogony*, etc., while his most extensive work dealt with Greek tragedies in relation to the epic cycle.

15. The influence bequeathed by teachers, whether purely Hermannic or Boeckhian, whether a blend of these or sometimes rather reminiscent of Heyne or Wolf, was a great and varied stimulus.

16. Lachmann (1793-1851), who was a junior colleague and collaborator at Göttingen of Dissen, Heyne's pupil, consistently upheld method in textual criticism when editing Latin and Greek authors, signally so in his masterpiece, Lucretius. It appeared exactly in the middle of the century with lasting effects. Similarly, Lobeck (1781-1860) at Königsberg passed on a portion of Hermann's influence to his pupil Lehrs (*De Aristarchi studiis Homericis*, 1833; 1882²); and Bernhardt—one of Wolf's pupils, as we have seen—taught Nauck (1822-92), who edited Homer, Sophocles, Porphyry; *Tragicorum Graecorum Fragmenta*, 1856, 1889², with *Index tragicarum dictorum*. In his Euripides the influence of Porson and that of Elmsley are also evident.

17. Between the two rival schools there was a good deal

of interaction: e.g. K. O. Müller's student Schneidewin (1810-66), whose training was largely archaeological, is best known for his Sophocles; and Otto Jahn (1813-69), by some classed in the antiquarian school for numerous archaeological papers, was highly successful in editing many Greek and Latin authors, notably Persius. Ribbeck, whose life (1827-98) almost reached the close of the century, and who was pupil and biographer of G. Hermann's pupil Ritschl, may be selected as a further example of transmitted German influence—though he was a scholar of independence and ingenuity, as seen in his reconstruction of tragedies of the Roman Republic, in his theory of a double text for Juvenal (*Der echte u. d. unechte Juvenal*), and in his text of Virgil.

18. As to influence, it is right to emphasize that of Bentley and Porson on German metrists and of Elmsley on specialists in Greek drama. G. Hermann had listened to Reiz in his lectures at Leipzig insisting on Bentley's example. Jahn in his courses at Bonn recommended Porson and Elmsley as masters to follow alongside of Hermann, Valckenær, and Madvig; and Nettleship dates his appreciation of Bentley's greatness from attendance at Haupt's lectures on Horace.

19. Like Ribbeck, Lucian Müller (1836-98) selected for his domain the Latin poets (except Plautus and Terence). He dealt with their prosody and published the fragments of the chief early poets, besides editing Lucilius, Phaedrus, Horace, and Nonius Marcellus. A contemporary was Emil Baehrens (1848-88), to whom we owe the useful collections *Poetae Latini Minores* (not seldom too arbitrarily emended), *Fragmenta Poetarum Latinorum*, and Statius' *Silvae*.

20. Many names of the nineteenth century must be omitted, but mention should be made of the work done early in the century on the Greek Anthology by Jacobs and later on Greek dialects by Ahrens; Westphal on Greek rhythm and music; Rohde on the Greek novel and religion (*Der griechische Roman; Psyche*); Kock and Müller-Strübing on Aristophanes and Greek comic fragments; Halm on Cicero; Merkel on Ovid; Hiller on Tibullus; Ulrichs and Dettelsen on the elder Pliny.

21. In the twentieth century among prominent German scholars who died in its first decade were Von Christ (1831-1906), whose *Griechische Literaturgeschichte* has been revised by Schmid and Stählin; Dittenberger (1840-1906), a Platonic and Aristotelian scholar and editor of Greek inscriptions; Blass (1848-1907), noted for *Die Attische Beredsamkeit*, and an authority on Greek pronunciation and prose-rhythm; Furtwängler (1853-1907), one of the most versatile of modern archaeologists, and successor to Brunn as professor in Munich; Zeller (1814-1908), the venerable historian of Greek philosophy. The Roman side lost within the same period by death Buecheler (1837-1908), an able textual critic, conversant with archaic Latin and Italic dialects, editor of Petronius and *Carmina Latina Epigraphica*; Wölfflin (1831-1908), the lexicographer already named who contributed much to the historical study of Latin syntax and edited some books of Livy; Schwabe (1835-1908), best known for work on Catullus and his revision of Teuffel's *Geschichte d. römischen Literatur*; Friedländer (1824-1909), whose works included a survey of Homeric criticism from Wolf to Grote, *Sittengeschichte Roms* (Engl. transl.), Petronius' *Cena Trimalchionis*, and Juvenal.

22. Of those who died within the next thirty years there should be mentioned, mainly on the Greek side, Wecklein (1843-1926), in particular a student of Attic drama; von Arnim (1859-1931), memorable for his labours on Stoic philosophy; Diels for his *Doxographi Graeci* (1879, rp. 1929), studies of commentaries on Aristotle, and editions of the pre-Socratics; Eduard Meyer (1855-1930), admirably represented by his elaborate *Geschichte des Altertums*, 5 vols.; and Birt (1852-1933), author of *Das antike Buchwesen*, etc. Wilamowitz-Moellendorf (1848-1931), one

of the greatest Greek scholars of all time, produced a long series of works including important treatises on Homer, Pindar, Plato, Greek Tragedy, and the text of the lyric and bucolic poets, editions of Eur. *HF* and other plays, the epoch-making *Verskunst*, and the posthumous *Glaube der Hellenen*. His powerful genius embraced literature, art, archaeology, history, and other subjects as parts of a unified Hellenism.

23. On the Roman side there died in this period Leo, author of important studies of Plautus and Roman comedy, whose *The Archaic (Roman) Literature* (1913) was an instalment of his projected *Roman Literature*; Schanz (1842-1914), whose monumental *Römische Literaturgeschichte* has been revised by Hosius and others; Kroll (d. 1937), a student of Ciceronian society who shared in the reissue of Teuffel's *Röm. Lit.* and of Pauly-Wissowa, *Real-Encyclopädie*; Seeck (1850-1921), author of *Gesch. des Untergangs der antiken Welt*.

24. There also passed away Vollmer (1867-1923), a competent textual critic, editor of Horace and Statius and reviser of parts of Baehrens's *Poet. Lat. Minores*; Im-misch (1862-1936), who added to many classical writings his *Horazens Epistel über die Dichtkunst*; Hosius (1866-1937), who edited A. Gellius (after Hertz) and Lucan, and also re-edited several volumes of Schanz; W. Heraeus (1862-1938), editor of Petronius and Martial. Dessau (1856-1931) is best known by his *Inscriptiones Latinae Selectae*, and Wissowa (1859-1931) is remembered equally for his *Religion u. Kultus der Römer* and for his editorship, after Pauly, of the *Realencyclopädie*.

25. A few Austrian names may be added: Hartel (d. 1907) for Greek epigraphy; Swoboda (d. 1926) for competence in problems of Greek history; Kappelmacher (d. 1932) for work on Lucilius and other authors.

III. GREAT BRITAIN

26. In Great Britain, for the early part of the nineteenth century a dominant feature was the survival of the Porsonian tradition of exact verbal scholarship. Its representatives were, at Oxford, Elmsley in separate plays of Euripides, Aristophanes, and Sophocles from 1806 to 1823, and the Cambridge scholars Dobree, who with his *Plutus* edited Porson's notes on Aristophanes, 1820; Blomfield, editor of five plays of Aeschylus, who had joined Monk in publishing Porson's *Adversaria . . . in poetarum Graecos*, 1812; and Monk, author of *The Life of Bentley*, 1830, and editor of several plays of Euripides after 1840. They did not confine themselves to Greek drama: Elmsley published a Thucydides in six volumes; Dobree gave attention to the Attic orators, especially Demosthenes and Lysias. Badham (1813-84) united with his fidelity to Porson an enthusiasm for Cobet: he went in 1867 to Sydney, where, as Professor of Greek, he greatly furthered Australian education.

27. The tastes of Gaisford (1779-1855), Professor of Greek at Oxford, though he published Porson's notes on Pausanias, lay mainly elsewhere. He edited Cicero's *Tusculans* with Bentley's emendations and turned to Greek authors, *Poetae minores Graeci*, Herodotus, Suidas, Hephæstion, and Stobaeus.

28. Another factor operative at a time when in England a measure of lethargy weakened learning was direct touch with classical lands. Both before and after Greece won her independence, travel by scholarly observers was frequent. Their journals and drawings made Greece, Greek islands, Troy, and other parts of Asia Minor living attractions. There is permanent value in the works of Dodwell, Gell, Christopher Wordsworth, and Colonel Leake (an accomplished topographer and numismatist). Mure, whose five volumes on Greek literature were well received by the reading public in 1850, had issued his account of *A Tour in Greece and the Ionian Islands* in 1842; and Fellowes, the discoverer of the Xanthian marbles, published in various years after 1839 the journals

he kept in Asia Minor. These heralded Newton's history of his discoveries at Halicarnassus, Cnidus, and elsewhere in the Levant, 1862-5. They paved the way for Bunbury and Tozer on ancient geography and for fresh explorations in Asia Minor from the eighties onwards by W. M. Ramsay and others.

29. But whatever the galvanizing effects of travel and the study of ancient art, the classics could not live a fully awakened life by these and the Porsonian tradition. There was justification for J. W. Donaldson's complaint in his *Varronianus*, 1844, that Latin scholarship was not flourishing in England, but lagged behind the standard reached by continental research.

30. Rectification was at hand. By the date of the third edition of *Varronianus*, 1860, Donaldson discerned proofs of a renewed devotion to the minutiae of Latin criticism. This was aided by recognition of the stimulating labours of continental scholars—Ritschl, Madvig, Lachmann. University Colleges in England were increasing in number, and the Scottish Universities developing fresh vigour. Glasgow provides an example. Lushington, senior classic at Cambridge in 1832, became Professor of Greek at Glasgow in 1838 and held the Chair for nearly forty years. An inspiring teacher, he possessed consummate skill in composition and breadth enough to combine admiration for both Hermann and Boeckh. Among his pupils were three distinguished scholars, all of whom went to Balliol: W. Y. Sellar, Professor of Humanity, Edinburgh, who began his literary works with *Roman Poets of the Republic*, 1863; Lewis Campbell, Professor of Greek, St. Andrews, editor of Sophocles 1871-81, and an accomplished writer of Greek verse; and D. B. Monro, Provost of Oriel, author of *A Grammar of the Homeric Dialect*, 1882 (2nd ed., 1891).

31. Henceforth the balance was more evenly held between Greek and Latin and there is steady achievement in the latter from the time of Conington, the first occupant of the Latin Chair at Oxford (1854-69) and H. A. J. Munro, first occupant of the Latin Chair at Cambridge (1869-72). Conington's early Aeschylean and Homeric works are not so memorable as his Virgil (1863), his verse translation of Horace, often extremely happy, and his Persius (Lat. and Engl.), edited after his death by his successor in the Latin Chair, Nettleship. Munro, who tempered his admiration for Ritschl and Lachmann with sturdy independence, had produced his *Acta* and his famous Lucretius before he was Professor. His studies in Catullus appeared in 1878: the fragments of Lucilius and of Euripides occupied him, and his virile rendering of Gray's *Elegy* is a good specimen of his verse composition.

32. Other latinists in Britain during the later nineteenth century and in the twentieth should be mentioned. Several of the best scholars published grammars which have gone through many editions. *A Grammar of the Latin Language* by Roby first appeared in 1871: later he devoted attention to Roman private law. Lexicography was represented by Key in his unfinished dictionary published posthumously in 1888; and several of Nettleship's papers proved the increased interest in lexicography and ancient grammarians. John Wordsworth's *Fragments and Specimens of Early Latin* directed attention to the archaic documents and writers. W. Ramsay of Glasgow (d. 1865) had his unfinished *Mostellaria* of Plautus completed by his nephew G. G. Ramsay; and Plautine studies were later developed by Sonnenschein, Lindsay, and others. The elder Ramsay's *Roman Antiquities*, originally published 1851, was enhanced in usefulness by Lanciani's revision of 1901.

33. The achievement of the period in Latin can be appreciated from a selection of editions. Holden's Minucius Felix goes back to 1853, but by his Aristophanic and other work and his skill in composition he belongs to both languages. Sound scholarship was shown in Wickham's

Horace (1874-9), and in Palmer's *Satires of Horace* (1883): Palmer's ability in textual criticism was also exercised on Ovid's *Heroides*, Propertius, Plautus' *Amphitruo*, and Catullus, and among Greek authors on Bacchylides and Aristophanes. Another scholar who aided Horatian study was A. S. Wilkins in the *Epistles*: his *De Oratore* (3 vols., 1879-92) included a survey of ancient rhetoric. Authors of the Silver Age were represented in Furneaux's Tacitus (1884 ff.) and in Peterson's Quintilian X (1891) and Tacitus' *Dialogus* (1893). The Dublin physician, James Henry, gave years of close attention to the MSS. and interpretation of Virgil in his *Aeneidea* (1873-89). Over a long period, J. S. Reid, who became Professor of Ancient History in Cambridge, greatly advanced Ciceronian scholarship by editions of the *Academica*, *De Finibus*, and many of the speeches.

34. If one pursues the record for Latin into the twentieth century, other scholars emerge. Robinson Ellis (1834-1913), Professor of Latin at Oxford, an able textual critic, is especially associated with Catullus, Ovid's *Ibis*, Avianus, *Aetna*, and (1907) with the *Appendix Vergiliana*. Warde Fowler (1847-1921) had a wide range of interests—*Julius Caesar*, *The City State*, *Roman Festivals*, *Social Life in the Age of Cicero*, *Religious Experience in the Age of Cicero*, *The Messianic Eclogue* (with J. B. Mayor and R. S. Conway), and suggestive studies of some of the later books of the *Aeneid*. Postgate (d. 1926), Professor of Latin at Liverpool, an expert on grammar and style (*Sermo Latinus*), edited the *Corpus Poetarum Latinorum* (i, 1894, ii, 1905), to which he himself contributed Catullus, Propertius, Grattius, Columella, parts of Statius, Nemesianus, etc. Phillimore (1873-1926), tutor of Christ Church, Oxford, afterwards Professor of Greek and then of Humanity at Glasgow, edited Propertius, Statius' *Silvae*, etc. *Musa Clauda* shows his power of versification. Conway (1864-1933), Professor of Latin, Manchester, made his mark by his *Italic Dialects*; but, besides his eminence as a philologist and grammarian, he was a Virgilian enthusiast whether in lecturing or writing. His projected revision of Conington's *Aeneid* got no farther than Book I. With others he edited a great part of Livy (O.C.T.).

35. Housman (d. 1936), Professor of Latin, Cambridge, secured fame as an English poet, textual critic, and exact scholar. Perhaps nowhere are his qualities better seen than in his Manilius, the revised edition of which (5 vols.) was completed in 1937, the year after his death. To Postgate's CPL he contributed the *Ibis* and Juvenal, the latter being also separately edited 'editorum in usum' (1905, 2nd ed. 1931). A. C. Clark (1859-1937), Professor of Latin, Oxford, did work of great importance on Cicero (e.g. volumes of *Orationes*, O.C.T.) and on Latin prose-rhythm (*Fontes Prosaе Numerosae*, etc.). Lindsay (1858-1937), Professor of Humanity, St. Andrews, produced his *Latin Language* in 1894, followed by *A Short Historical Latin Grammar* and *Early Latin Verse*. For O.C.T. he edited Plautus, Martial, Isidore, and in collaboration Terence, and for the Teubner series Nonius Marcellus and Festus. S. G. Owen (1858-1940), Reader in Latin, Oxford, devoted attention to Ovid, Persius, and Juvenal, and for a time edited *The Year's Work in Classical Studies*.

36. Some scholars serve as a bridge between Latinists and Hellenists, e.g. J. E. B. Mayor (1825-1910), whose many works include an edition of *Odyssey ix-x*, an elaborate Juvenal, Pliny, *Epistles III*, and *A Bibliographical Clue to Latin Literature* (based on Hübner); Shuckburgh (1843-1906), who divided his labours between history (*Augustus*), editions (Herodotus 5, 6, 8, 9), and a translation of Cicero's letters (4 vols., 1899-1900); and Tyrrell of Dublin (1844-1914), a tasteful translator into Greek and Latin verse, the editor of many classics in both languages (*Bacchae*, *Troades*, *Sophocles*, *Tragedies*, Plautus' *Mil. Glor.*) and, with Purser, of *The Correspondence of Cicero*

(arranged chronologically with revision of text, commentary, and essays).

37. We go back to those who, after about the middle of the last century, were predominantly Hellenists. B. H. Kennedy (1804-89) after his Headmastership at Shrewsbury was for twenty-two years Professor of Greek at Cambridge. Though he produced a *Latin Primer* in 1866 (since revised for two generations) and a Virgil, he used both languages skilfully in *Sabrinæ Corolla* and in *Between Whiles*. He translated the *Birds*, and edited (with transl.) *Agamemnon*, *Theaetetus*, and *Oedipus Tyrannus*. Shilleto (1809-76) was noted for his *De Falsa Legatione* (1844) and his Greek and Latin compositions. Blakesley (1808-85) brought geography and history to bear on his Herodotus (1852-3). Blaydes (1818-1908) concentrated on Aristophanes and Sophocles. Paley (1815-88), a fertile scholar, issued, after Propertius and the *Fasti*, his editions of Aeschylus (1855), Euripides (3 vols., 1856-60, 2nd ed. 1872-80), and the *Iliad* (1866).

38. The study of Roman history was materially helped at this period by the stimulating lectures and writings of Pelham (1846-1907), as well as those of Strachan-Davidson (1843-1916), Master of Balliol, an authority on Cicero, Republican politics, and the criminal law of Rome.

39. The study of Aristotle was continued by Cope's *Rhetoric* (1867) and by Sir A. Grant's *Ethics* (1857; 1884⁴), and Chandler's standard work on Greek accents (1862) should not obscure his deep knowledge of Aristotle; while the study of Plato was continued by Geddes's *Phaedo* (1863 and ed. 2 later), Riddell's *Apology* (1867), with a valuable digest of Platonic idioms, and by W. H. Thompson's *Phaedrus* (1868) and *Gorgias* (1871). In the same year Jowett, Professor of Greek in Oxford, made the *Dialogues* 'an English classic' and ten years later published his translation of Thucydides and the *Politics* in 1885. The year after his death (1894) his text of the *Republic* (with Campbell) came out. Archcr-Hind (1849-1910), an excellent translator into Greek prose and verse, had issued a *Phaedo* (1883) and *Tymæus* (1888). James Adam (1860-1907), a profound student of Plato, edited various smaller dialogues and the *Republic* (1897). The substance of his Gifford lectures at Aberdeen appeared posthumously as *The Religious Teachers of Greece* (1908). The Platonic record was continued in the *Phaedo* (1911) of Burnet of St. Andrews, and his *Plato* (O.C.T.). He was extensively concerned with Early Greek philosophy. E. Abbott (1843-1901), editor of the *Hellenica* essays and joint translator of Duncker's *Greek History* (1896), issued Herodotus 5, 6 (1893), and later 9. Others, who annotated books of Herodotus were Sayce, 1-3 (1883), and Macan, 4-5, 7-9 (1908).

40. Jebb (1841-1905) before exchanging the Greek Chair at Glasgow for that in Cambridge had produced his *Bentley*, his introduction to *Homer*, and his *Attic Orators*, and had begun his masterly edition of Sophocles (1887-96). *Bacchylides* came out in 1905 and his translation of Aristotle's *Rhetoric* was edited by Sandys in 1909. His volume of *Translations* with Jackson and Currey illustrated his felicity in versions from and into Greek and Latin prose and verse. Haigh (1855-1905), besides collaborating with Papillon on Virgil, gave attention to the stage of the Athenians in *The Attic Theatre* (1889; rev. 1898) and to the dramatists in *The Tragic Drama of the Greeks* (1896). W. G. Headlam (1866-1908) showed profound grasp of Greek lyric diction, particularly in Aeschylus: his *Agamemnon* (ed. A. C. Pearson) and his *Herodas* (with A. D. Knox) came out posthumously. Much of Headlam's work on Aeschylus first saw the light in George Thomson's edition of the *Oresteia*. Rutherford (1853-1907), an admirer of Cobet, produced a valuable work on Attic Greek in *The New Phrynichus* (1881), and edited Babrius' *Fables* (1883), Thucydides 4 (1889), and *Scholia Aristophanica* (1896). Butcher (1850-1910), Professor of Greek at Edinburgh,

is well remembered for his prose translation with Lang of the *Odyssey* (1879). His addresses at Harvard are naturally in lighter style than that in his Exposition of Aristotle's *Theory of Poetry and the Fine Arts* (with critical text of the *Poetics*). Verrall (1851-1912), ingenious, stimulating, often daring in hypothesis and exegesis, is well represented by *Studies in the Odes of Horace* (1884), *Euripides the Rationalist* (1895), and editions of *Agamemnon*, *Choephoroi*, *Eumenides*, and *Ion*. Bywater (1840-1914), Professor of Greek in Oxford, edited Heraclitus' fragments (1877), *Ethica Nicomachea* (1890), and the *Poetics* (1898). His contributions to *Journal of Philology* (1879-1914) were mainly on Aristotelian subjects. Beare (1857-1918), of Dublin, published his *Select Satires of Horace* (1882), *Greek Theories of Cognition* (1906), and his translation of the works (*Parva Naturalia*, etc.) contained in the Oxford *Works of Aristotle*, iii (1907). His colleague, Mahaffy (1839-1919), was a fertile writer on Greek literature and social life. His writings include *Prolegomena to Ancient History* (1871); *A History of Greek Classical Literature* (1880); *The Flinders-Petrie Papyri* with transcriptions, commentaries, index [with J. G. Smyly], 3 vols. 1891-1905. Merry (1835-1918) edited the *Odyssey* and, with congenial understanding, many plays of Aristophanes. His contemporary Rogers (1828-1919) published 1910-15 *The Comedies of Aristophanes*, edited, translated, and explained. Henry Jackson (1839-1921), Professor of Greek, Cambridge, contributed powerfully by his lectures to the study of Greek philosophy, especially of Plato and Aristotle. Valuable articles from his pen appeared in *Journal of Philology* (e.g. on Plato's later theory of Ideas), in *Transactions and Proceedings of the Cambridge Philological Society*, and in *Encycl. Brit.* R. A. Neil's (1852-1901) *Knights* is an outstanding edition. Sir Samuel Dill (1844-1924), Corpus Christi College, Oxford, Professor of Greek, Belfast, wrote two notable works, *Roman Society in the Last Century of the Western Empire* and *Roman Society from Nero to Marcus Aurelius*.

41. Bury (1861-1927) was an indefatigable worker. His bibliography includes the *Nemean and Isthmian Odes*, Greek and Latin verse, Valerius Flaccus (in Postgate's *CPL*), histories of Greece, of the Roman Empire, of the later Roman Empire, and many articles and reviews. On the Byzantine Empire he was an expert. He had been Professor of Greek in Dublin; there he had also been Professor of Modern History, and later in Cambridge held the corresponding chair.

42. Leaf (1852-1927) combined business activities with wide Homeric scholarship, linguistic and archaeological, especially in his *Iliad* (2 vols.).

43. Sir J. E. Sandys (1844-1922), Public Orator at Cambridge (1876-1914), edited various speeches of Demosthenes; *Bacchae* (1880; 1900⁴); Cicero, *Orator* (1885); *Aristotle's Constitution of Athens* (1893; 1912²). He was author of *A History of Classical Scholarship*, 3 vols.; *Latin Epigraphy* (1909); contributor to *Camb. Companion to Greek Studies*; editor of and contributor to *Companion to Latin Studies* 1910; 1921¹; rp. 1935.

44. Sonnenschein (d. 1929) was a learned and productive grammarian: his Plautine works include editions of *Captivi* and *Rudens*. Farnell (1856-1934) proved his authority on Greek religion in *The Cults of the Greek States*, 5 vols., 1896-1909, in published series of lectures, and towards the end of his life in what was a long-cherished enthusiasm, an edition of Pindar, 1930-2.

IV. FRANCE

45. France in the nineteenth century made noteworthy contributions to scholarship. The study of the classics faced difficulties under the First Empire and Latin in schools met with set-backs from changes of government policy in education; but a renaissance can be traced to

the foundation in 1866 of the *École pratique des Hautes-Études* by Duruy, himself an eminent historian, when Minister of Public Instruction. There were other factors. The wealth of MSS. in French libraries, the Roman remains in Provence and North Africa, the inspiration of the Louvre, the training of many classicists in the French Schools at Athens (from 1846) and at Rome (from 1873) all played a part as incentives. The attraction of archaeology and the establishment of two Schools abroad, with their varied influence, justify consideration of this subject in the first place.

ARCHAEOLOGY. 46. Early in the century, among archaeologists A. L. Millin was the author of *Monuments antiques inédits* (1802-6) and produced full descriptions of Roman remains in southern France. Quatremère's *Le Jupiter Olympien* (1815), the Comte de Clarac's outline-engravings of sculptures in the Louvre (1826-30), Rochette's views on Pergamene art, all bequeathed material of value. The Lenormants, father and son, were active researchers in ancient art and numismatics. Mionnet on coins and Rayet on the Tanagra figurines merit attention. From the middle of the century the influence of the School at Athens was marked. A summary of its inspiration is given by Sandys (*Hist. Class. Scholarship* iii. 266-7) up to the directorate of Homolle at the beginning of the twentieth century. Radet published a history of the School, and the School itself published its results at first as *Archives*, then as a *Bulletin*, which in 1879 became the *Bulletin de Correspondance Hellénique*.

47. Archaeology was not the sole concern kept in view. The range into literature, grammar, history, and religion may be seen from a few names and titles by former members of the School who drew therefrom their stimulus towards researches for which afterwards they won fame. Beulé (*L'Acropole*, 1852-4; books on several Roman emperors); De Coulanges, in 1875 Professor of Ancient History at the Sorbonne; *La Cité Antique*, 1864, influential as a survey of political institutions; Decharme (*Euripide et l'esprit de son théâtre*, 1893); Collignon (*Sculpture grecque*, 2 vols.; completion of Rayet's *Céramique grecque*); Riemann 1853-91 (thesis on Livy's language and grammar 1879; collaborated with Goelzer in *Grammaire Comparée du Grec et du Latin*, 2 vols., 1897-1901; *Syntaxe Latine*, revised by Lejay and then by Ernout, reached its 8th ed. 1927); S. Reinach (*Cultes, mythes et religions*, 5 vols., 1902-23, and other works on religion and art; *Reliefs*, 1909-12); Hauvette (d. 1908; shared in exploration of Delos; wrote on Athenian strategoi, and on Herodotus, Simonides, Callimachus, his lectures in Paris being mainly on Greek literature); Monceaux (*Apulée*, 1889; *Les Africains*, 1894; *Hist. lit. de l'Afrique chrétienne*, 7 vols., 1902 ff.); and Homolle, as Director of the School responsible for the excavations at Delphi and Delos.

48. The School at Rome comes later (1873), and *La Bibliothèque des Écoles françaises d'Athènes et de Rome* includes valuable work on literature and history, e.g. *La Vie municipale dans l'Égypte* by Jouguet, the papyrologist, Albertini's *La Composition dans les ouvrages philosophiques de Sénèque*, and Carcopino's *Virgile et les origines d'Ostie*.

PALAEOGRAPHY AND INSCRIPTIONS. 49. B. E. C. Miller (1812-86) entered the MSS. department of the Paris Library in 1834 and became an expert palaeographer, examining MSS. in many countries, especially Medieval Greek. He joined with Beulé, de Presle, and d'Eichthal in founding the French Association for the Promotion of Greek Research. Egger (1813-85), editor of *Longinus* and of Varro, *De Lingua Latina*, wrote on criticism among the Greeks, on papyri and inscriptions, and remains memorable for his work on Hellenism in France. A young scholar, Graux (1852-82), who lived less than thirty years, achieved notable proficiency in Greek

palaeography. He was a pupil of Tournier (1831-99), who edited Sophocles in 1867. Valekenae (1771-1852), secretary of the Academy of Inscriptions in 1840, was a Horatian scholar and student of ancient geography. Desjardins also united keenness for geography and epigraphy. Renier (1809-85) edited the Roman inscriptions of Algeria. Cagnat, an epigraphic authority on North Africa, we shall mention again when we come to the twentieth century. L. Delisle, Director of the Bibliothèque Nationale (d. 1909) by his catalogues, palaeographical knowledge, and personal help rendered eminent services to classical scholars everywhere.

PURE CLASSICS. 50. In Pure Classics, the record may begin with Boissonade, Larcher's successor as Professor of Greek in the University of Paris, 1813, and Gail's successor at the Collège de France, 1828. Boissonade's annotated Greek poets in 24 vols. saved some of them from oblivion; his editions of prose authors were mainly of the later Greek age. His services to the Greek *Thesaurus* should be recalled. J. L. Burnouf (1775-1844), famous for a Greek grammar, translated Tacitus; and Victor Cousin (1792-1867) the whole of Plato. Nearly contemporary with Cousin, Patin translated Horace and issued his studies, showing learning and judgement, of Greek tragic authors and of Latin poets.

51. T. H. Martin (1813-84) was led by his studies on Plato's *Timaeus*, 1841, to the domain of ancient science. A later generation saw Greek science treated by Tannery (1843-1904). Portions of Hippocrates and Galen, 1854-6, were translated by Daremberg, familiar as Saglio's coadjutor on the *Dictionnaire des Antiquités*. Another renowned lexicographer, Littré, also worked on Hippocrates, completing his edition and translation (10 vols., 1839-61). Alexandre (1797-1870), editor of the Sibylline oracles, deserves mention for his *Greek and French Dictionary*. Charles Thurot (1823-82), whose father and uncle were scholars, concerned himself in Greek with Aristotle and in Latin with the grammar of medieval schools. His international outlook is shown in his respect for Madvig's *Adversaria Critica*. An older scholar, Saint-Hilaire (1805-95), made Aristotle the concern of a long lifetime both as translator and expositor. Another authority on Aristotle and on aspects of ancient, medieval, and Renaissance philosophy was C. Waddington, of English descent. His cousin was W. H. Waddington, educated in Paris and Cambridge, who travelled in Greece and Asia Minor, served as ambassador of France to Great Britain 1883-93, and made his mark in epigraphy and numismatics.

52. Benoist (1831-87) worked chiefly on Latin. Those of his school included Waltz, Goelzer, Plessis, and Causseret. His larger edition of Virgil was published in 1876-80. He raised the standard of editing in France and with his pupil Riemann edited Livy 21-5.

53. In the history of literature and literary criticism there was a field where the genius of France shone and deserves a conspicuous place. The history of Greek literature can be studied in the five vols. of A. and M. Croiset (1888-99), a work of graceful lucidity. Couat's *Alexandrian Poetry under the First Three Ptolemies* is authoritative on a special period. Desiré Nisard (1806-88), Professor of Latin Eloquence at the Collège de France, produced attractive studies on the Latin poets of the decadence and the four great Latin historians: his brother Charles contributed French translations of several Latin authors edited by Desiré. Pichon's *Histoire de la littérature latine* has appeared in several editions well into the twentieth century, and has been followed in 1934 by Bayet's work on the same subject. Lamarre's account of the literature to the end of the Republic (4 vols., 1901) is over-elaborate in illustrative quotations. De la Ville de Mirmont published studies on the oldest Latin poetry in 1903, and Lejay, editor of Horace's *Satires* and Virgil, a history of Latin literature

to Plautus, 1928. Labriolle records ably the *History of Latin Christian Literature*, 1924².

54. In studies of individual authors France has been prolific from Sainte-Beuve's *Étude sur Virgile* and Taine's *Essai sur Tite-Live* to such later works as Macé's *Suétone* (1900), Boissier's *Martial* in his *Tacite* (1904²), Villeneuve's *Perse* (1918), Bourguery's *Sénèque le prosateur* (1922), Guillemin's *L'Originalité de Virgile* (1931), Bornecque's *Tite-Live* (1933).

55. France has always been strong in rhetoric. The Chair of Eloquence at the Sorbonne and the lectures of Villemain, brilliantly popular rather than deep, exemplified a national passion, although about the beginning of the twentieth century Navarre's *Essai sur la rhétorique grecque* expressed fears of a coming period of neglect. But books which kept the subject in view were Jullien's *Les Professeurs de littérature dans l'ancienne Rome*, 1886, Berger and Cuheval's *Hist. de l'éloquence romaine depuis la mort de Cicéron jusqu'à l'avènement de l'Empereur Hadrien*, 1892², and Cuheval's survey of *Roman Eloquence after Cicero*, 1893.

56. Bornecque too, besides editing and translating Seneca's *Controversiae et Suasoriae*, Cicero's *Orator*, 1921, and the *Rhet. ad Herennium*, 1932, had in 1902 published *Les Déclamations et les déclamateurs d'après Sénèque le père*. From Marouzeau's *Essai de stylistique latine* it is not a far step to the kindred subject of literary style in individual writers. Virtually all the main classical and patristic authors have been surveyed in French monographs.

57. To linguistics and grammar distinguished scholarship has been devoted. Riemann has been mentioned among ex-pupils of the School at Athens. Among Meillet's works may be cited *Les Dialectes indo-européens*, 1908, 1922; *Introd. à l'étude compar. des langues indo-européennes*, 1937⁸; *Aperçu d'une histoire de la langue grecque*, 1913, 1920²; *Esquisse d'une histoire de la langue latine*, 1933¹. Meillet combined with Vendryes (author of *Le langage: introd. linguistique à l'histoire*, 1921) for a *Traité de grammaire comparée des langues classiques*², 1927 and with Ernout, an authority on dialectic and archaic Latin, for a *Dict. étymologique de la langue latine*, 1931.

58. Among French scholars who lived into the twentieth century were Victor Henry (1850-1907) of the Sorbonne, well known for comparative grammars of Greek and Latin; the veteran Boissier (1823-1908), delightful for a winsome blend of literary brilliance and archaeological learning in *Cicéron et ses amis* (often republished since 1865; Engl. transl.), *La Religion romaine*, 1874, *L'Opposition sous les Césars*, 1875, *Promenades archéologiques*, 1880, *La Fin du paganisme*, 1891, *L'Afrique romaine*, 1895, etc.;

59. Cagnat, epigraphist and historian, author of *Étude historique sur les impôts indirects chez les romains*, 1882, *Cours d'épigraphie latine*, 1885, 1914⁴, *Carthage Timgad Tebessa*, 1909, *L'Armée romaine d'Afrique*, 1912, *Inscriptiones graecae ad res romanas pertinentes*, 1901-; Weil (1818-1909); *Euripides*, 7 plays, 1868; *Demosthenes*, chief speeches; *Aeschylus*, 1884, 1907²; *Études*, 1897-1900 (his pronounced Hellenism helped towards a fairer view of Euripides: obituaries by Bouché-Leclercq and others, Bursian's *Biog. Jahrb.* 1911); Havet (elected F.B.A. 1917, since deceased), *De Saturnio latinorum versu*, 1880; *Phaedri Fabulac; Manuel de critique verbale appliquée aux textes latins*, 1911.

60. Political history both of Greece and of Rome can be represented by Duruy (1811-94), already mentioned in another connexion. A new edition of his *Histoire des Romains* was issued 1917-20. More limited periods have been covered in books like that by De Presle (an expert in modern Greek) on the Greeks in Sicily and Greeks under Roman rule, or Mérimée's handling of Catiline and the Social War, and his collaboration in the *Histoire de César* by Napoleon III. In the twenties of this century an important series appeared under the broad title

of *L'Évolution de l'humanité*, to which competent scholars like Chapot, Glotz, Grenier, Homo, Jouguet, Lot, and Toutain contributed volumes on classical subjects covering a wide range from Aegean civilization to the Macedonian and from primitive Italy to the end of the ancient world.

61. There have been many special studies of individual historical figures and of emperors, of Roman towns in France and North Africa, and of economic and social problems (e.g. Wallon's learned account of ancient slavery, 1847, republished 1879). To Reinach's history of religions, already named, may be added Toutain's *Les Cultes païens dans l'empire romain*, 3 vols. 1908-20.

V. ITALY.

62. In Italy the record of modern classical scholarship may open with Cardinal Mai (1782-1854), whose discoveries from palimpsests at the Ambrosian and Vatican Libraries led to his publication of the correspondence of M. Aurelius and Fronto (Milan, 1815; Rome, 1823). At Rome he edited large portions of Cicero *De Republica* from a Vatican palimpsest: later, his extensive collections from Vatican MSS. amounted to over thirty volumes. His publications from Greek included portions of Isaeus and Dionysius of Halicarnassus.

63. Peyron (1785-1870) edited fresh fragments from Cicero's speeches; but did not restrict himself to Latin, for he published fragments from Empedocles and Parmenides (1810), a commentary on Theodosius of Alexandria (1817), and accounts of Greek papyri at Vienna.

64. Vallauri (1805-97), the opponent of Ritschl's methods in critical study of Plautus, published editions of four plays 1853-9, followed by a critical text of the whole, 1873. Vallauri's history of Latin literature, 1849, was the predecessor of several works in the twentieth century.

65. De Vit (1810-92) was noted as a lexicographer: his enlarged Forcellini was completed (except for the unfinished *Onomasticon*) in 1879. Corradini (1820-88) laboured in the same field. His new edition of Forcellini was continued by Perin, 1864-90. Gandino (1827-1905) took special interest in ancient Latin (1878), was a valued contributor to the *Rivista di Filologia*, and author of a work on Latin style (1895).

66. It is intelligible that Greek in Italy should not have been studied in modern times with the fervour of the Renaissance. Mai and Peyron, it is true, had their Hellenic sides. So too had Bonghi (1828-95), who translated Plato, but also wrote a history of Rome and an account of Roman festivals.

67. In Comparative Philology the chief work of Pezzini (1844-1906) was *La lingua greca antica*, 1888, covering the phonology, morphology, and dialects of the Greek language. Ascoli, appointed to the Chair at Milan, attracted notice outside Italy and recognized the linguistic value of Celtic.

68. Archaeology thrived in Italy. The Archaeological Institute had been founded in 1829, and Canina (1795-1856) published a second edition of his standard work *L'architettura antica*, 12 vols., 1844. E. A. Visconti (1751-1818) contributed much to the study of Greek and Roman art. Borghesi (1781-1860), an expert on coins and inscriptions, published fresh fragments of the *Fasti Consulares* (2 vols., 1818-20). The nine volumes of his *Collected Works* appeared from 1862 to 1884. The fame of Cavedoni (1795-1865) rested on his numismatic knowledge. Avellino (1788-1850), a professor of Greek, was founder of and frequent contributor to the *Bulletino Archeologico Napolitano*; Garrucci (1812-85) concerned himself with the *Graffiti di Pompei*, and in his later residence at Rome with collections of inscriptions of the Republic and coins of ancient Italy. Fabretti (1816-94) at Turin represented Etrurian antiquities, and Serradifalco with Cavalieri handled those of Sicily (5 vols. fol. 1834-42). After the expulsion of the Bourbons Fierelli (1824-96) became

head of the museum at Naples, and director at Pompeii for fifteen years. In 1875 he took charge of museums and excavations in Rome. Bruzza (1812-83), notable for his collection of inscriptions from Verecelli, exercised a stimulus on the study of early Christian archaeology, and De Rossi (1822-94), an able epigraphist and topographer, was an expert not only on early inscriptions from Rome but also on the Christian inscriptions of the catacombs.

69. With monuments of classical antiquity available, with excavations scientifically conducted, and finds (as at Pompeii) skilfully restored, archaeology continued to flourish as in congenial soil. Lanciani, professor at Rome and Director of Excavations (1878), was the eminent author of *Forma Urbis Romae* and other works in Italian and English. He carried on his labours into this present century in *Storia degli scavi di Roma*, 1903, *Golden Days of the Renaissance* (Engl. transl. 1906), and *Wanderings in the Campagna*, 1909. Since his day exploration has been intensified, and its progress recorded in the *Notizie degli scavi* since 1877. Inside the capital itself and along its walls, investigations have been pursued (G. Boni 1859-1925): its more immediate surroundings have been closely examined (e.g. Tomassetti, *La campagna romana*, 3 vols., 1910-13). Pompeii has had many of its structures restored and much of its life re-created (e.g. Matteo della Corte, *Juventus*, 1924, etc.), and the Italian Government has faced the harder problem at Herculaneum (Maiuri, *Herculaneum*, illust. 1932). P. Orsi (1859-1935) rediscovered prehistoric Sicily; L. Pigorini (1842-1925) studied the *terra mare*. Overseas perhaps the most spectacular achievement has been in Crete, where an Italian Archaeological Mission headed by F. Halbherr discovered the great inscription of Gortyn (1884) and began its excavation in 1900 at Phaestos, second only to Knossos as a Minoan palace: cf. Pernier, *Il palazzo Minoico di Festo*, 1935). Excavations in Cyrenaica have yielded among other objects important fragments of Augustan edicts (1927).

70. The *Rivista di filologia* was founded in 1873; the *Studi di filologia classica* in 1893. *Atene e Roma*, from 1898, has borne a share in quickening the interest in Greek (e.g. Bignone, its editor, has published studies in Theocritus, *Poeti Apollinei*, and *L'Aristotele Perduto e la formazione filosofica di Epicuro*, 2 vols., 1936). Perhaps it is symptomatic that two studies of Sophocles should be published in the same year, Perrotta's *Sofocle*, 1935, and Untersteiner's *Sofocle: studio critico*, 2 vols., 1935.

71. *Il Mondo Classico* also bears its share in reviewing books from different countries. For Latin authors the Paravia series was expressly designed under Pascal's editorship so that Italy should not be obliged to rely on foreign texts: another valuable collection of Latin and Greek writers is published by the Accademia dei Lincei.

72. Among Italian classical scholars of the twentieth century one of the greatest was G. Vitelli (1849-1935), a pioneer in papyrological research.

73. In literary history, Rostagni's *Storia della letteratura Greca*, 1937, made a worthy precursor to his *Letteratura di Roma repubblicana ed Augustea*, 1939. His bibliography records works written by Italian and foreign scholars on the primitive culture and languages of Italy, on archaic and classical authors, including texts. He had competent predecessors on the literary history of Rome in Giussani (1899), Amatucci (2 vols., 1912-16), Marchesi (2 vols., 1925-7; 1933³), and Ussani (1929). Cocchia in 1924-5 concentrated on Latin anterior to Hellenic influence. A history of the Latin language was written by G. Devoto (1940), who also published an edition of the *Tabulae Tigurinae* (2nd ed. 1940). E. Bignone started a new history of Latin literature in 1945. Distinguished research on Lucretius has been carried out by Bignone, on Varro by P. Fraccaro (1907), on the *Odes* of Horace by G. Pasquali (1920), on Horace *Ars Poetica* by A. Rostagni (1930) who wrote also a commentary on Aristotle's

Poetics (1927) and a much-discussed book on *Virgilis minore* (1933). G. Funaldi edited *Grammaticae Romanae fragmenta* I (1907) and studied the ancient commentators of Virgil (1930). Cicero was examined as a lawyer by E. Costa (2nd ed. 1927) and as a politician by E. Ciaceri (1926-30). C. Marchesi wrote on Seneca (3rd ed. 1944) and on Tacitus (1924). E. Maleovati edited the *Fragmenta of the Roman Orators* (1930).

74. Of editions, Giussani's Lucretius belongs to 1896-8, but has been re-edited by Stampini 1921 ff. Comparetti and Sabbadini were elected in 1916 and 1922 respectively as corresponding members of the British Academy. The former (b. 1835) was Professor of Greek at Pisa and Florence, published texts of Hyperides and Procopius, wrote on papyri from Herculaneum and the laws of Gortyn in Crete, though his fame chiefly rests on his *Virgilio nel medio evo* (Engl. transl. 1895). Sabbadini distinguished himself as an authority on texts of the Italian Renaissance in virtue of *Le scoperte dei codici latini e greci ne' secoli xiv e xv*, 1905, and *Nuove ricerche*, 1914. He edited Virgil, 2 vols., in 1930. Pasquali published *Storia della tradizione e critica del testo* in 1934.

75. In political history De Sanctis has written both on the Greeks (2 vols.) and on the Romans (4 vols., 1907-23). Pais followed his *Storia di Roma* (2 vols., 1898) and *Ancient Legends of Roman History* (1906) with a *Storia Critica di Roma* for the first five centuries (1913-20), and dealt also with the period of the Mediterranean conquests and the internal history from the Punic Wars to the Graecoan revolution (1931). The most noted of the works of Ferrero, who left Florence for Geneva (d. 1942), is *Grandezza e decadenza di Roma* (E.T. 1909).

76. The study of Roman law owes much to Italian scholars like I. Alibrandi (1823-84); P. Bonfante (1864-1932); V. Arangio-Ruiz; P. De Francisci; S. Riccobono. C. A. Nallino (1929) and E. Volterra (1937) discussed relations between Roman law and oriental laws. P. Fraccaro chiefly contributes to Roman Public Law.

VI. THE LOW COUNTRIES AND SCANDINAVIA

(a) HOLLAND. 77. Dutch contact with British scholars, though often significant, was not so intimate as in the eighteenth century. We note first the influence of Wytenbach, who held for forty-five years Chairs at Amsterdam, 1771-99, and at Leyden, 1799-1816. He died in 1820. Among his pupils were Mahne, his biographer; van Lennep, professor at Amsterdam for over half a century from 1799 (*Heroides*, Terentianus Maurus, Hesiod); van Heusde, keenly interested in Platonic philosophy; and Bake, notable for intercourse with English Porsonian and for works on Attic oratory and Ciceronian style.

78. Among Bake's pupils was Suringar (1805-95), author of *Ciceronis Commentarii de Vita sua* and *Annales Ciceroniani*, 1854. Geel (1789-1862) in his edition of *Phoenissae*, 1846, supported Valekenner's views and showed Porson's influence. The group of Greek scholars round Bake and Geel at Leyden included the two brothers W. A. Hirschig (ed. *Scriptores Erotici Graeci*, 1856) and R. B. Hirschig (ed. *Gorgias*, 1873). Reuvers (1793-1835) became known abroad as an archaeologist (e.g. on orientation of the Parthenon and on adornments of Asinius Pollio's Library; his able work was continued (1806-69) by the epigraphist L. J. F. Janssen).

79. To S. Karsten of Utrecht we owe *Agamemnon* (1855), a study of Horace (1861), and works on Greek philosophy, and to his son H. T. Karsten a dissertation on Plato's *Letters*. His pupil C. M. Francken wrote his life and edited Lucan, 1896-7. *Varroniana* appeared in *Mnemosyne* when he was eighty. Peerlkamp (1786-1865), of French descent, was professor at Leyden 1822-48 and issued his much debated *Odes* of Horace 1834; the still less convincing *Ep. ad Pis.* followed 1845 and *Satirae* 1863. His *Aeneid* belongs to 1843.

80. His successor at Leyden was the great Greek scholar Cobet (1813-89). He spent years examining manuscripts in Italy, and the fruits are visible in *Commentationes Philologicae*, 1850-1; *Variae Lectiones*, 1854; *Novae Lectiones*, 1858; *Miscellanea Critica*, 1876; and texts of Greek classics. Exact experience of manuscripts and thorough knowledge of Greek, especially Attic, were essential elements in his methods for curing faulty texts. Concentrating mainly on Greek authors of the Golden Age, he inclined to over-regularize in accord with Attic usage, but he was a critic whose pronouncements could carry commanding authority without sacrificing geniality. Though German scholars like Reiske, the Dindorfs, Bergk, Meineke, Lehrs, and (in his best work) Nauck were valued highly by Cobet, he had by the time of his return from Italy admittedly freed himself from the German school, so that English methods increasingly won his admiration in his 'three Richards'—Bentley, Dawes, Porson—and the heirs of Porson's influence, Elmsley and Dobree. As a vigorous contributor to *Mnemosyne* (founded 1852) he gave fresh life to its second series from 1872.

81. Among Cobet's pupils were Naber (b. 1828; ed. of Josephus, Fronto, and Photius); Halbertsma (*Lectiones Lysiacae*, and posthumous *Adversaria Critica*, ed. Herwerden); and du Rieu (1829-96), proposer of a scheme for photographic reproduction of complete Greek and Latin manuscripts executed under his successor de Vries. These are comparable in utility with Chatelain's *Paléographie des classiques latins*, fol., Paris, 1884-1900, where, for example, the two Leyden manuscripts of Lucretius are finely done and the introduction is of value. Naber and Herwerden (b. 1831) are among Dutch scholars to whom Wilamowitz makes favourable reference in his *Erinnerungen*.

82. Cornelissen (1839-91), who succeeded Pluygers in the Latin Chair at Leyden, was an admirer of Cobet; and van der Vliet (1847-1902) studied Greek palaeography under Cobet and Latin under Pluygers, covering a wide range in his publications.

83. An example of other scholars who continued their labours into the twentieth century was van Leeuwen. After holding 1884-1914 the Chair vacated by Cobet he migrated to Switzerland. Besides papers in *Mnemos.*, he edited Menander (Lat. comm. 1919³), and *Iliad* and *Odyssey*, each in 2 vols. (Lat. comm.), 1912-17. He issued his Aristophanes (Lat. comm.; prolegg.) 1896 to 1909, commendably terse annotation replacing the Burman style of expansive comment. Long before, Boott's notes on *Epp. ad Atticum*, 1865-6 (2nd ed. 1886), had set a pattern of greater brevity.

84. J. J. Hartman of Leyden may be chosen to represent Latin—the indefatigable co-editor of and contributor to *Mnemos.* (e.g. *Propertiana*, 1922). He was the accomplished winner in 1899 of the Hoeufft medal for writing Latin verse (open to any nationality). The notice in *memoriam*, *Mnemos.* 1924, in a page of Latin prose deeply laments his loss.

85. The scholarly traditions of Holland have been worthily maintained in the best theses of its universities.

(b) BELGIUM. 86. Louvain is the oldest university of Belgium—having been active, with some interruptions, from 1426. The other three, Liège, Ghent, Brussels belong to the nineteenth century. At first after 1830 they were staffed in part from abroad. In contrast to Dutch scholars, who on the whole specialized in textual criticism, the Belgian forte was archaeology and constitutional antiquity. De Witte (1808-89) illustrates this point. A traveller in the Near East, he was in touch with many French and Italian institutes, edited the *Gazette archéologique* and the *Revue numismatique*, and published collections illustrating ancient life. A constant correspondent of his was Roulez (1806-78), who became Professor of Greek at Ghent, lecturing on a wide range of subjects, archaeology, art, mythology, literature, and law.

87. Gantrelle (1809-93), Professor of Latin at Ghent, is associated mainly with Tacitus. He and his colleague Wagener (1829-96) were active in editing the *Revue de l'instruction publique*, the former with closer attention to grammar, the latter to archaeology and history. Educated in Germany and France, Wagener combined much that was best in the systems of both countries. Antiphon, Plutarch, Cicero, Tacitus engaged his special attention. A mission to Greece and Asia Minor deepened his knowledge, and after a considerable interval of politics and administrative experience he returned to Ghent to lecture on Greek epigraphy and constitutional history.

88. Roersch (1831-91) of Liège, an expert linguist, championed the study of the ancient world, and collated several manuscripts for his edition of Cornelius Nepos. His sketch of Belgian philology in the encyclopaedia *Patria Belgica* was an able performance. In 1885 with Professor Paul Thomas of Ghent he produced a good Greek grammar. Thomas had a distinguished Latin side commemorated in Brakman's well-deserved greeting on his seventieth birthday (*Mnemos.* 1922) honouring his services to the textual criticism of Terence, Manilius, Velleius, Seneca, Petronius, and other Latin authors.

89. Nève (1816-93) was an orientalist as well as a classic. In his memoir on the *Collegium Trilingue* (1856) he surveyed the study of the learned languages from the sixteenth to the eighteenth century, and much later he dealt with minor humanists of the southern Netherlands.

90. Thonissen (1816-91), for thirty-six years Professor of Criminal Law at Louvain, in a long series of historical and legal works ranged from law in primitive Greece to his study of modern socialism in comparison with the laws of Crete, Athens, Sparta, Rome, and Plato's ideal State.

91. Willcms (1840-98), student at Louvain and foreign universities, Paris, Berlin, Leyden, found his life's work not directly in his earlier studies, whether oriental or literary, but mainly in the composition of standard books on the political institutions of Rome. He held a chair at Louvain 1865-98. In 1870 he published his treatise on Roman antiquities, entitled after its first edition *Le Droit public romain*, and 1878-85 his yet more renowned work *Le Sénat de la république romaine*. He founded the *Musée Belge* 1897.

92. To Belgian learning we are indebted in recent years for Cumont's studies of literature, philosophy, and religion (esp. Mithraism) in the Roman Empire.

(c) DENMARK. 93. In the nineteenth century Denmark was distinguished for its contributions to linguistics and grammar. Rask (1787-1832), a student of Icelandic and of Eastern languages, first recognized the philological importance of Zend. To some extent he anticipated 'Grimm's Law'. Verner (1846-96) made his name later by elucidating the exceptions to that 'Law'. But the most famous Danish record was that of Madvig (1804-86), whose special field lay in grammar and verbal criticism. For over half a century he was professor at Copenhagen. By education a Danish product, versed early in legal documents, and later experienced in politics and administration, he brought to bear a judge-like discernment in weighing the truth of doubtful texts. Cicero, *de Finibus*, 1839, won him a European reputation and his Latin Grammar, 1841, was translated into almost every continental language. When he left the Ministry of Education, his interest in Roman constitutional history had as its outcome *Die Verfassung und Verwaltung des römischen Staates*, 1881-2, *Emendationes Livianae*, 1860, and, with Ussing, his pupil, Livy, 1861-6. *Adversaria Critica* on Greek and Latin writers came out 1871-3.

94. Ussing (1820-1905), though originally by birth and on Madvig's advice an archaeologist, published commentaries on Greek authors and a work on Greek and Roman education (translated from Danish into German, 1870), but was best known abroad for collaborating with Madvig on Livy and for his own annotated Plautus 1875-87.

95. In the 20th c. the leading scholars were J. L. Heiberg (d. 1928), A. B. Drachmann (d. 1935), C. Hude (d. 1936), and Ada Adler (d. 1946).

(d) NORWAY. 96. For Norway a university was founded at Christiania (now Oslo), where Bugge (1833-1907), a well-equipped linguist, held for over forty years the Chair of Comparative Philology. Apart from his authority on Scandinavian literature and mythology, he proved a worthy pupil of Madvig by work on Italic dialects, emendations on Plautus, and an edition of *Mostellaria*.

(e) SWEDEN. 97. The endeavour of Queen Christina of Sweden in the seventeenth century to create a Renaissance of the North inspired her invitations to foreign scholars, Grotius, Vossius, N. Heinsius and others, and her purchase of books and manuscripts from France and Italy.

98. Sandys gives a conspectus of professors at Upsala and Lund who contributed to classical learning. It is characteristic of Sweden that scarcity of manuscripts has meant more study in foreign universities, and travels in Italy and Greece have meant more attraction to archaeology. This comes out in typical names. Einar Löfstedt (1831-89), who studied in Germany, succeeded Spongberg in the Greek Chair at Upsala in 1874. He travelled in Italy and the Near East in 1876-7. Among his works was a Greek grammar, 1868; 1885¹. A later Einar Löfstedt, of Lund, has earned acknowledged authority in Latin by his *Philologischer Kommentar zur Peregrinatio Aetheriae*, 1911, by *Vermischte Studien zur lateinischer Sprachkunde und Syntax*, 1936, and by *Syntactica*, 1928, 1933 (ed. 2, 1942).

99. Zander's *Versus Saturnii* reached a third edition at Lund, 1918. Lundström (d. 1940), of Göteborg, combined studies on Plautus, Columella, and other Latin authors with archaeology (*Undersökningar i Roms topographi*, 1929). Valmin's work on *The Swedish Messenia Expedition*, 1938, stands for a similar interest in archaeology. A pure scholar, Sjögren (1870-1934: obit. *Bursian*, 1940) was a pupil of Leo at Göttingen. He furthered Ciceronian scholarship by developing Lehmann's views on the text of the *Letters*: L. C. Purser and A. C. Clark thought highly of his work. His *Commentationes Tullianae* appeared 1910 and letters *Ad Familiares* (1925) and *Ad Atticum* (1916-32, not yet complete).

VII. SWITZERLAND

100. Switzerland holds an honourable record in devotion to the classics. In the forefront stands Johann Caspar Orelli (1787-1849), of a scholarly family in Zürich and noted for editions of Plato, Cicero, Horace, and Tacitus. He is already mentioned in the German section. Baiter, also from Zürich, who studied at several German universities, joined Orelli and his colleague W. Winckelmann (b. Dresden) in editing Plato, 1839 ff. Baiter published Orelli's Horace, 1850-2; and with Halm continued ed. 2 of Cicero's works, 1846-62, interrupted by Orelli's death. At Zürich, Baiter joined Sauppe (b. near Dresden) in the *Oratores Attici*.

101. Mähly (1828-1902), the author of biographies of Politian and of Bentley, made an important contribution to Latin scholarship in his *Varroniana*, but was interested in Greek as well as Latin lyrics.

102. Schweizer-Sidler (1815-94) edited Tacitus' *Germania* and in half a century at Zürich made his reputation in Latin and Sanskrit. Witz (1842-1914) issued a critical edition of Sallust. Plüss (1845-1919) was the author of *Horazstudien*, 1882.

103. Among Hellenists may be noted: Hug (1833-95) for his *Anabasis*, *Cyropardia*, Plato's *Symposium*, etc.; Hitzig (1843-1918) for his Pausanias in collaboration with Blümner, his German colleague at Zürich; Oeri (1844-1908) for works on Greek tragic writers; Käpf (1849-1923), for a Greek grammar prized in Switzerland; Finsler, for his Homeric learning; and Nicole for Greek papyrology.

104. In history, Billeter (1873-1929) wrote an inquiry on rates of interest in Greece and Rome and on the essence of the Greek character. Stähelin (b. 1873) chose a work of national significance in *Die Schweiz in römischer Zeit*.

105. Switzerland has nowhere proved her strength better than in linguistics, e.g. Wackernagel (1806-69); Thurneysen, whose specialities were Latin and Celtic; De Saussure, teacher of Meillet, the French scholar; Schwyzzer (1874-1943), Hellenist and linguist who held professorial chairs in Zürich and in Germany. Wölflin (1831-1908), already mentioned in the German section for services to the historical study of Latin syntax and to the *Thesaurus*, was born in Bâle, and his professional work in Zürich preceded that in Erlangen and Munich.

106. The classical periodical founded in 1943, *Museum Helveticum*, is intended to give fuller expression to Swiss scholarship.

J. W. D.

VIII. U.S.A.

107. The condition of classical learning in the United States of America at the start of European emigration to the west naturally depended on the qualifications of the particular teachers to be found among the emigrants. English influence was followed by Dutch, Irish (particularly of Ulster), and Scottish. The contributions made were not particularly striking before the nineteenth century, being cultural rather than crude. With the advent of the nineteenth century, and more and more as the century proceeded, many of the best classical students of the American universities, both State and other, continued their education in the German universities, and that practice persisted into the twentieth century. Elegant compositions in Greek and Latin have never been a characteristic feature of American classical scholarship, but important contributions, as good as those from any European country, have been made in the fields of comparative philology, grammar in the widest sense, lexicography, epigraphy, palaeography, papyrology, history (especially economic and social), religion, and archaeology. Students in other countries will neglect at their peril such periodicals as the *American Journal of Archaeology* (1895-), *American Journal of Philology* (1880-), *Classical Philology* (1906-), *Classical Weekly* (long edited by Charles Knapp, 1907-), *Harvard Studies in Classical Philology* (1890-), and *Hesperia* (1932-).

108. Among notable editions of classical authors are Pind. *Ol.* and *Pyth.* by B. L. Gildersleeve (1885), Dem. *De Cor.* by W. Goodwin (1901), *Meid.* (1906), Amm. *Mare.*, by C. U. Clark, etc. (1910-15), Cic. *Div.* by A. S. Pease (1920-3), Verg. *Aen. IV* by A. S. Pease (1935).

COMPARATIVE PHILOLOGY: C. D. Buck, *Compar. Gram. of Gk. and Lat.* (1937), *Intro. to Study of Gk. Dialects, Grammar of Oscan and Umbrian* (1928).

GREEK AND LATIN GRAMMAR: B. L. Gildersleeve and C. W. E. Miller, *Syntax of Classical Gk. from Hom. to Dem.* (1901-11), W. W. Goodwin, *Syntax of the Moods and Tenses of the Greek Verb*, new ed. (1889), H. W. Smyth, *Sounds and Inflections of Gk. Dialects, Ionic* (1894), W. G. Hale, *The Cum Constructions* (1887-9), C. E. Bennett, *Syntax of Early Latin* (1910-14).

GREEK AND LATIN LEXICOGRAPHY: E. A. Sophocles, *Gk. Lexicon of the Rom. and Byz. Periods*, 3rd ed. (1914), G. Lodge, *Lexicon Plautinum* (1901-33), various contributors, in *Arch. latein. Lexikogr.* (1884-); W. A. Oldfather, *Concordance to Cic. epist.* (1938), to Sen. *Tragedies* (1918), and others.

PALAEOGRAPHY (especially by pupils of L. Traube (ob. 1907)): E. A. Lowe, *The Beneventan Script* (1914), *Scriptura Beneventana* (1929), *Codices Latini Antiquiores* (1934-), H. B. Van Hoesen, *Roman Cursive Writing* (1915), E. K. Rand, *The Script of Tours* (1929-), L. W. Jones, *The Script of Cologne* (1932), K. and S. Lake, dated Greek facsimiles (1934-).

PAPYROLOGY: especially *Michigan Papyri* (1931-47).
 EPIGRAPHY: B. D. Meritt, *Greek Inscriptions* (1931),
 W. K. Prentice, *Greek and Latin Inscriptions* (1908),
 J. R. S. Sterrett, *Epigraphical Journey in Asia Minor*,
Wolfe Expedition to Asia Minor (1888), A. B. West, 'Latin
 Inscriptions' (*Corinth Excavations* viii. 2 (1931)).

HISTORY: M. L. W. Laistner, *Survey of Ancient
 History to the Death of Constantine* (1929), etc., M. Ros-
 tovtzeff, numerous works by this Russian-born scholar,
 all of high importance, M. Hammond, *The Augustan
 Principate* (1933), T. Frank (editor and part author),
Economic Survey of Ancient Rome (1933-40, 5 vols.).

RELIGION: A. D. Nock, *Conversion* (1933); C. H.
 Moore, *Religious Thought of the Greeks* (2nd ed. 1925).

ARCHAEOLOGY, Platner-Ashby, *Topographical Diction-
 ary of Ancient Rome* (1929), E. B. van Deman, *Building
 of the Roman Aqueducts* (1934), G. M. A. Richter,
Sculpture and Sculptors of the Greeks (2nd ed. 1930);
 parts of *Corpus Vasorum Antiquorum* by various authors,
 G. M. A. Richter, *Ancient Furniture* (1926). A. S.

SCHOLARSHIP, GREEK, IN ANTIQUITY. Until
 the end of the sixth century B.C. Greek literature de-
 pended for its survival on oral tradition. Rhapsodes
 claimed to be exact about the actual words of Homer
 (*Xen. Mem.* 4. 2. 10). But textual corruption and varia-
 tion were inevitable. Pisistratus is said to have had an
 official text of Homer compiled, but the method of
 recension is unknown, and interpolations were alleged in
 antiquity. From the sixth to the fourth century Homeric
 criticism was not so much philological as directed against
 the morality of his mythology, as in Plato's famous
 attack (*Resp.* 377 d). Texts were prepared by Anti-
 machus and Aristotle; a treatise was written by Demo-
 critus, and a commentary by Ion of Ephesus, but their
 nature and value are uncertain.

2. Towards the end of the fifth century the popularity
 of the Athenian drama stimulated the development of the
 trade in books, and private collections became possible,
 though on a small scale (cf. the library of Euripides).
 But this development did not secure texts from corrup-
 tion. The absence, in many cases, of an authoritative
 text, the difficulties presented to the copyist by the form
 of the fifth-century book, which lacked word-division
 and punctuation, careless or ignorant transcription, and,
 in the case of the drama, actors' tampering with the text,
 were continual sources of danger. Tragedy suffered so
 badly in the fourth century that in 330 B.C. Lycurgus
 ordered that a public copy of the text of the three great
 tragic poets should be deposited in the State archives.
 This was perhaps merely a copy of the best acting-
 version. That it was not regarded as presenting the
 original text of the poets seems clear from Alexandrian
 criticism. Autograph manuscripts of Plato and Aristotle
 may have been kept in the Academy and Lyceum.
 Aristotle made the first important contribution to literary
 history with his *Didascaliae*, and other Peripatetics
 devoted themselves to the history and criticism of
 literature and to grammatical and scientific scholarship,
 e.g. Theophrastus and Demetrius of Phalerum.

3. The last-named was credited with advising Ptolemy
 Soter (305-285 B.C.) to found a library at Alexandria.
 With the establishment of this library in the Bruchaeum,
 of the smaller library in the Serapeum, and of the col-
 legiate body in the Museum, scholarship really began.
 The libraries contained a huge collection of papyrus
 rolls, which grew in number from 200,000 c. 285 B.C. to
 700,000 in the first century B.C. The successive librarians
 were learned scholars (e.g. Zenodotus, Aristophanes).
 Research was facilitated by their careful classification of
 authors and texts (cf. Callimachus, *Pinakes*), by their
 determination of genuine and spurious works, and by
 their introduction of rolls of standard size, which made
 possible the division of large works, formerly incon-
 venient to handle, into groups of rolls. These Alexan-
 drian scholars sought to reconstitute the original text
 of the classical writers, especially Homer. They adopted
 the sound practice of comparing manuscripts; but they
 also followed too subjective criteria. Caution grew with
 experience and knowledge, Aristophanes and Aristarchus
 modifying the arbitrary method of Zenodotus. Their
 work is best shown in the Venetian scholia to the *Iliad*.
 In their recensions (*διορθώσεις*) they used marginal

signs, of which the most important were the *obelus* (ὄβελος—), used by Zenodotus and later scholars to mark a spurious line, the asterisk (ἀστερίσκος *), used by Aristophanes to mark incomplete sense and by Aristarchus to mark a verse wrongly repeated elsewhere, the *κεράνιον* (Τ) marking a succession of spurious lines, the *ἀντίρριγμα* (J), used by Aristophanes to indicate erroneous repetition and by Aristarchus to mark disturbed word-order, the *διπλή* (>) marking anything noteworthy. The authors thus edited formed the basis of the Alexandrian canon of the best poets, later extended to include prose-writers. Besides such critical editions, the Alexandrians produced exegetical commentaries (*ὑπομνήματα*), filled with antiquarian and mythological lore, works of literary history and criticism, and lexicographical studies; they also pursued research in metric, grammar, and accentuation. Concurrently with the development of literary studies in Alexandria went the growth of Pergamum as a rival centre of learning with a large library, in which parchment was first used on a considerable scale for books. Here scholarship was exercised rather upon prose than upon poetry, and although editions and commentaries were produced (notably by Crates of Mallos), its best work was probably done in the fields of antiquarian and grammatical research.

4. From the second century B.C. the demand for popular editions and handbooks brought forth variorum commentaries, published separately from the text, but having lemmata (see SCHOLIA) and compilations (cf. especially the writings of Didymus), which preserved the best features of Alexandrian scholarship and from which much of the older scholia on classical authors is derived. These commentaries were of great importance in preventing a text's corruption, since the notes would fit only the particular text for which they had been written (cf. the excellent preservation of the nine annotated plays of Euripides, and the seven comedies of Aristophanes in the Venetian MS.).

5. From the time of Hadrian Greek scholarship declined. The systematic study of grammar (e.g. by Apollonius Dyscolus and Herodian), of metric (e.g. by Hephaestion), and the compilation of lexica (e.g. by Harpocration and Hesychius) continued the preservation of the results of Alexandrian research. But the steadily diminishing interest in Greek classical authors and the preference for select editions and anthologies (cf. the works of Proclus and Stobaeus) caused the disappearance of the writings of many earlier authors. The process of disappearance was further helped by the transfer of texts from the decaying papyrus rolls to durable vellum codices in the fourth and fifth centuries, when only such texts as were valued were copied. Marginal scholia, which had been rare in the papyrus rolls, now became common, and such annotated texts were more reliable than texts without scholia. Although the Roman and early Byzantine ages were a period of loss, texts were not seriously corrupted. The evidence of papyri shows that the quality of texts suffered little between the second and eleventh centuries. Poets were more fortunate than prose-writers in escaping corruption, thanks to the transmission of the Alexandrian commentaries, but some prose-authors, notably Herodotus, Isocrates, Plato, Demosthenes, have come down to us in a good state.

6. After the eighth century, which was the darkest age for Greek literature and scholarship, there came a revival in the ninth century, begun by Photius and Arethas, whose enthusiasm probably helped, along with the industry of lexicographers like 'Suidas', q.v. (10th c.), to save many texts, and many of our best manuscripts belong to this time. In the twelfth century Tzetzes annotated the *Iliad* and Eustathius produced his important Homeric commentary and struggled to secure the preservation of the monastic libraries. Under the Palaeologi at Byzantium there was a renaissance of

learning which produced editions of classical authors, commentaries, handbooks, and lexica. But scholars like Thomas Magister and Demetrius Triclinius (early 14th c.) were often wilful and drastic in textual criticism, and their unsatisfactory views of metre and language led them into frequent error. Their texts became current in Italy, and, but for the fall of Constantinople, their method would have left an indelible mark on Greek literature.

J. F. L.

SCHOLARSHIP, LATIN, IN ANTIQUITY. Interest in systematic Latin scholarship began in Rome with the visit of Crates (q.v.) of Mallos c. 168 B.C. His influence may be seen in the orthographical and literary investigations of L. Accius (170-c. 85) and in the satires of Lucilius (180-102). But the first Roman 'scholar' was L. Aelius Stilo Praeconinus of Lanuvium (c. 154-c. 74), whose studies included, besides grammar and literary history (he made a list of the genuine plays of Plautus), etymological, antiquarian, and historical subjects. He inspired M. Terentius Varro (116-27) to his encyclopaedic studies: Varro's antiquarian researches (*Antiquitates rerum humanarum et divinarum*), his grammatical writings (*De lingua Latina*), his educational treatises (*Disciplinarum libri novem*) formed a storehouse and model for later critics and scholars. The interest aroused by Varro and his predecessors in grammar and the history of Roman literature is seen in Cicero, Horace, and Caesar amongst others. Varro's scholarship was rivalled by that of P. Nigidius Figulus (98-45), who wrote *Commentarii grammatici* and shares with Varro the credit of inventing the terminology of Latin grammar. Other professed scholars of the same period are L. Ateius Praetextatus and Valerius Cato. A great stimulus to scholarship was given by the founding of the Palatine Library with its collections of Greek and Latin literature in 28 B.C. and the appointment of C. Julius Hyginus (64 B.C.-A.D. 17) (who wrote a commentary on Virgil) as librarian. At the close of the Augustan period Fenestella's *Annales* continued the encyclopaedic scholarship of Varro; Verrius Flaccus wrote his *De orthographia* and in his *De verborum significatu* produced the first Latin lexicon, a storehouse of information later abridged by Pompeius Festus and drawn upon by all subsequent scholars. Later, in the first century A.D., Q. Remmius Palaemon, the teacher of Quintilian, wrote an *Ars Grammatica*, the first formal Latin grammar. The tradition of literary criticism was continued by L. Annaeus Seneca, Petronius, and Persius. Q. Aseonius Pedianus (A.D. 3-88 or, according to others, 9 B.C.-A.D. 76) wrote a commentary on Cicero's orations and a defence of Virgil, and the elder Pliny (A.D. 23-79) wrote on *dubius sermo*. M. Valerius Probus (d. A.D. 88) of Berytus not merely studied the *sermo antiquus* (upon which he wrote a *Silva observationum*) but produced careful texts based upon a study of early manuscripts of a number of Latin authors. Fabius Quintilianus (d. 95?), in the *Institutio Oratoria*, summed up the current views upon grammar and literary criticism. In the next century C. Suetonius Tranquillus (d. c. 140) wrote, besides lives of orators, poets, and scholars (*De viris illustribus*), a treatise upon critical signs. His younger contemporary Aulus Gellius, in his *Noctes Atticae*, supplies valuable details on the earlier language and literature and on lexicography and grammar. At the end of the century Terentianus Maurus published a manual on prosody and metre; Aeron commented on Terence and Horace; and Festus abridged Verrius Flaccus.

In the third century Porphyry commented on Horace, C. Julius Romanus wrote on grammar, and Solinus wrote an epitome of Pliny, while the learned Censorinus compiled his *De die natali* (A.D. 238). Early in the next century Nonius Marcellus compiled his *De compendiosa doctrina* from the works of earlier scholars; C. Marius Victorinus wrote on metre and commented on Cicero; Aelius Donatus compiled his celebrated grammar, wrote a noted commentary on Terence and another on Virgil; Charisius and Diomedes compiled grammars. At the end of the century Maurus Servius Honoratus wrote his famous commentary on Virgil (extant in a longer and shorter form), omitting nothing but literary criticism. St. Jerome (c. 348–420) revised the Latin Bible, wrote *De viris illustribus* (after Suetonius), and translated the chronicle of Eusebius. At the end of the century Macrobius wrote a commentary on Cicero's *Somnium Scipionis*, and in his *Saturnalia* discussed Virgil and ancient Latin literature and language. Martianus Capella, early in the fifth century, summarized ancient learning in his *Nuptiae Philologiae et Mercurii*. The list of Latin scholars closes with the name of Priscian, early in the sixth century, who wrote a grammar in eighteen books, sixteen of which dealt with accidence, in which was summed up all the grammatical learning of previous centuries. See also LITERARY CRITICISM, II.

SCHOLIA. The word *σχόλιον* is first found in Cicero (*Att.* 16. 7. 3); its plural is now generally used to describe a body of notes (preserved in the margins of texts) which expound or criticize the language or subject-matter of an author. An individual scholium usually consists of a lemma (i.e. a word or phrase repeated from the text of the author) and an interpretation. In default of a lemma, a reference mark or the mere position of the item in the margin indicates the passage with which the note is concerned. Though the distinctions between scholia, glosses, and commentaries cannot be rigidly drawn, the term 'gloss' is usually applied to sporadic interpretations of the meanings of separate words and the term 'commentary' (*commentum, commentarius*) to an exposition which (except for interspersed lemmata) is continuous and is generally transmitted as a separate work (e.g. Porphyry on Aristotle, Asconius on Cicero). Many items, however, in a body of scholia do not differ in length or substance from glosses, while others are clearly due to a learned pen. Most scholia, indeed, are the *disiecta membra* of lost commentaries; and it is often possible to trace them with some probability to their immediate or ultimate sources. The breaking up of a commentary into marginal scholia met the convenience of readers of a text, but inevitably caused the loss of much that we should have valued. Where space permitted, the successive owners of a manuscript would sometimes add notes of their own or excerpts from commentaries not previously incorporated; and this heterogeneous material was always at the mercy of copyists who sometimes curtailed or recast it. Yet despite many trivialities and much useless lumber, scholia often throw valuable light on points of fact or problems of exegesis (especially when based on the work of one of the great scholars of antiquity), and sometimes their interpretations contain evidence for the author's text. Their lemmata, however, which were frequently adjusted by copyists, need to be used with the utmost caution. Individual manuscripts or groups of manuscripts of a single author often present sets of scholia which bear little immediate relationship to each other; for example, the Homeric scholia in cod. Venetus A are quite distinct from those in cod. Venetus B, and both sets differ from the scholia in cod. Townleianus.

2. GREEK SCHOLIA. The notes found in the Venice

codex (A) of Homer afford a good illustration of the origin of scholia. Though they cite the views of Zenodotus of Ephesus, Aristophanes of Byzantium, and Aristarchus, they are not based directly on the continuous commentaries (*ὑπομνήματα*) and special treatises (*συγγραμματα*) of the great Alexandrians. Nor are they directly derived from the work of the indefatigable Didymus Chalcenterus (1st c. B.C.), who summed up the countless Homeric *προβλήματα*, *ζητήματα*, and *λύσεις* of earlier scholars; for they contain references to Aristonicus (the younger contemporary of Didymus) and to Herodian and Nicanor (both of the 1st cent. A.D.) who wrote on Homer's prosody and on punctuation. Their chief immediate source is a lost commentary composed not earlier than the middle of the second century A.D.; and on the reliability of its author we depend for our knowledge of the work of his many predecessors. The extant scholia (or, rather, sets of scholia) on Hesiod, Pindar, Aeschylus, Sophocles, Euripides, and Aristophanes are all indebted ultimately to Didymus; but in every instance there are probably several intermediate stages between him and them. Behind the scholia on the Alexandrian poets Apollonius Rhodius, Theocritus, Lycophron, and Nicander lies the work of Theon, a scholar of the age of Tiberius. Scholia on prose authors, apart from Plato and Demosthenes, are comparatively scanty. Late manuscripts of the poets frequently contain scholia taken from Byzantine scholars such as Tzetzes (12th cent.), Eustathius (12th cent.), Demetrius Triclinius (early 14th cent.), and Thomas Magister (early 14th cent.).

3. LATIN SCHOLIA. None of the collections of scholia on Latin authors is earlier than the third century A.D. and many are as late as the sixth or seventh century. Despite attributions made in the Middle Ages, they are all several stages removed from the work of first- and second-century scholars (Cornutus, Probus, Velius Longus, Arruntius Celsus, Aemilius Asper, Terentius Scaurus). Of prose authors, only the speeches of Cicero have scholia. Terence is the only Republican poet whose text is thus annotated (the scholia in the cod. Bembinus being particularly important). The various but not extensive sets of scholia on Virgil are overshadowed by the great commentary of Servius, but the scholia Bernensia (closely related to Philargyrius) are valuable. For Horace there are collections attributed to Acron and Porphyrio (qq.v.) as well as the less important notes of the commentator Cruquianus. The *Ibis* of Ovid and the *Aratea* of Germanicus both have scholia; and of the poets of the first century A.D., Persius, Lucan, Statius, and Juvenal each has two or more sets of annotations.

A. Gudeman, art. 'Scholien' (Greek only) in *PW*; reports on scholia literature in Bursian, vols. clxxxviii (P. Wessner), cxxxix, and cclii (Fr. Lammert); P. Faider, *Répertoire des éditions de scolies et commentaires d'auteurs latins* (1931); J. E. Sandys, *Hist. of Class. Scholarship* i² (1906); F. W. Hall, *Companion to Classical Texts* (1913). Ample information can be found in the sections devoted to individual authors in Christ-Schmid-Stählin, *Geschichte der Gr. Lit.*, and Schanz-Hosius, *Geschichte der Lat. Lit.*; to the editions there mentioned add: J. F. Mountford, *Scholia Bemina* (1934); H. J. Botschuyver, *Scholia in Horatium Aesh. codicum Parisinorum* (1935); and P. Wessner, *Scholia in Juvenalem vetustiora* (1931).

SCHOOLS, see EDUCATION.

SCIPIO AFRICANUS, see SCIPIO (5) and (11) below.

SCIPIO (1) BARBATUS, LUCIUS CORNELIUS, consul 298 B.C.; his sarcophagus was the oldest discovered in the Scipios' tomb. The inscription subsequently carved on this sarcophagus records Scipio's exploits in Samnium and Lucania (Dessau, *ILS* 1), and is more trustworthy than Livy (10. 12 f.), who describes his Etruscan successes.

E. T. S.

SCIPIO (2), LUCIUS CORNELIUS, son of (1) above, was curule aedile, consul (259 B.C.), and censor (258). In 259 he attempted to use the new Roman fleet to deprive the Carthaginians of a naval base against Italy; he captured

Aleria and reduced Corsica, but failed to storm Olbia in Sardinia. Two inscriptions (Dessau, *ILS* 2, 3) record his career, but do not mention the triumph which the *Fasti Triumphales* assign to him. Near the Porta Capena he dedicated a temple to the Tempestates which had spared his fleet.

H. H. S.

SCIPIO (3) CALVUS, GNAEUS CORNELIUS, son of Lucius (2) above, brother of Publius (4), and uncle of Africanus Major (5). As consul in 222 B.C. he campaigned with his colleague Marcellus (q.v. 1) against the Insubres whom he routed at Mediolanum. In 218 he was sent to Spain to prevent reinforcements reaching Hannibal in Italy and to break the Carthaginian power in Spain. His strategy was to advance southwards along the coast, winning adequate bases and command of the sea. In 217 he won a decisive naval victory off the Ebro. His brother Publius arrived to take supreme command, and together they advanced to Saguntum (traces of their camp survive at Almenara, 5 miles north). In 215 they inflicted a crushing defeat near Ibera on Hasdrubal, who was attempting to break through to Italy. By 212 they had captured Saguntum, from which base they could advance farther south. In 211, while Publius was defeated on the upper Baetis, Gnaeus was destroyed with his army at Ilorci in the hinterland of Carthago Nova. (On the site see H. H. Scullard, *Scipio Africanus* (1930), 50 ff., 143.)

H. H. S.

SCIPIO (4), PUBLIUS CORNELIUS, was younger brother of Gnaeus (3) above, and father of Africanus Major (5). Consul in 218 B.C., Scipio had to divert his army, destined for Spain, to suppress a Gallic rising in north Italy. With fresh troops he reached the mouth of the Rhône, only to find that Hannibal had slipped past. Scipio hastened back to north Italy, where he hoped to fight delaying actions along the tributaries of the Po. Beaten back and wounded in a cavalry skirmish at Ticinus, he retired to Trebia where he was joined by Sempronius who insisted on engaging Hannibal. The Romans were defeated and lost two-thirds of their army (Dec. 218). In 217 Scipio was sent as proconsul to join his brother in Spain. For his campaign there and his death in 211 see Scipio (3).

H. H. S.

SCIPIO (5) AFRICANUS MAJOR, PUBLIUS CORNELIUS (236–184 B.C.), son of Publius (4) above, and husband of Aemilia, the sister of Paullus (q.v. 2); father of two sons (8 and 9 below) and two daughters, Cornelia, wife of Scipio (10) Nasica, and Cornelia (q.v.), mother of the Gracchi. Born in 236 B.C., Scipio is said to have saved his father's life at the battle of Ticinus (218) and as military tribune to have rallied the survivors of Cannae (216). After being curule aedile (213), he was appointed by the People to the command in Spain, being the first *privatus* to be invested with proconsular *imperium* (210). In Spain he followed his father's offensive strategy rather than the cautious policy of his own predecessor, Nero (q.v. 2). He seized the enemy's base, Carthago Nova (q.v.), by a brilliant *coup de main* (209). He drilled his army in new tactics, by which the three lines of the Roman army acted with greater mutual independence; he also adopted the Spanish sword and improved the *pilum*. In 208 he defeated Hasdrubal Barca at Baecula (*Bailen*) in Baetica: screened by his light troops, his main forces divided and fell on the enemy's flanks, a movement which was a complete break with traditional Roman tactics. He wisely avoided a wild-geese chase after the fleeing Hasdrubal (q.v.) and decided to fight on in Spain, where he finally defeated the two other Carthaginian armies at Ilipa (*Alcala del Rio*, near Seville): he held the enemy's main forces while the wings outflanked them (206). Thus Roman domination was established in Spain.

2. As consul for 205, Scipio carried through his determination to invade Africa, despite senatorial opposition

led by Fabius. With an army composed partly of volunteers he crossed to Sicily and succeeded in snatching Locri from Hannibal. In 204 he landed with perhaps 35,000 men in Africa, where he besieged Utica and wintered on a nearby headland (Castrum Cornelium). Early in 203 he successfully attacked and burnt the camps of Syphax and Hasdrubal some six miles to the south. At Campi Magni (*Souk el Kremis*) on the upper Bagradas, Scipio defeated another enemy army by a double outflanking operation. When he captured Tunis, Carthage sought peace. During an armistice terms were referred to Rome, but after Hannibal's return to Africa the Carthaginians renewed the war in 202. After joining Masinissa, Scipio finally defeated Hannibal in the battle of Zama (q.v.), where neither side could outflank the other and the issue was decided by the Roman and Numidian cavalry, which broke off its pursuit of the Punic horsemen and fell on the rear of Hannibal's army. Scipio was named Africanus after the country he had conquered.

3. In 199 Scipio was elected censor and became *princeps senatus*. A keen supporter of a philhellenic policy, he prudently but vainly urged in his second consulship (194) that Greece should not be completely evacuated lest Antiochus of Syria should invade it. In 193 he was sent to Carthage to investigate a frontier dispute between Carthage and Masinissa. When his brother Lucius (7) was given the command against Antiochus (190), Africanus, who could not constitutionally yet be re-elected consul, was 'associated' with the command. After crossing to Asia, where he received back from Antiochus his captured son Lucius (9), Scipio fell ill and took no active part in his brother's victory at Magnesia (189). Meanwhile in Rome political attacks, led by Cato, were launched on the Scipios, culminating in the 'Trials of the Scipios', on which the ancient evidence is conflicting. Africanus intervened when Lucius was accused in 187; whether he himself was formally accused either in 187 or 184 is doubtful. But his influence was undermined and he withdrew embittered and ill to Liternum where he died soon afterwards (184).

4. An outstanding man of action, Scipio was nevertheless something of a mystic, in whom contemporary legend saw the spiritual descendant of Alexander the Great and the favourite of Jupiter Capitolinus. Profoundly convinced of his own powers, Scipio personified a new era in which Greek ideas swept over Roman life. By his tactical reforms and strategic ideals he forged a new weapon with which he asserted Rome's supremacy in Spain, Africa, and the Hellenistic East, championing Rome's imperial and protectorate mission in the world. He turned a city-militia into a semi-professional army. For ten years he commanded a devoted army, and his victory at Zama gave him the most powerful position yet held by a Roman general. But the time had not yet come when the individual challenged the power of the Senate. Scipio, who could make peace as well as war, sank back into the life of a private citizen, but he achieved less success as a statesman and was ultimately forced into virtual exile by personal rivalry and antagonism.

W. Schur, *Scipio Africanus und die Begründung der römischen Welt Herrschaft* (1927); H. H. Scullard, *Scipio Africanus in the Second Punic War* (1930), to which add id., *JRS* 1936, 19 ff. on the site of the battle of Ilipa; R. M. Haywood, *Studies on Scipio Africanus* (U.S.A. 1933); A. H. McDonald, 'Scipio Africanus and Roman Politics in the Second Century B.C.', *JRS* 1938.

On the ancient sources and Scipionic 'legend' see H. H. Scullard op. cit. ch. 1; Ed. Meyer, *Kleine Schriften* II (1924), 331 ff. On the 'Trials' see Mommsen, *Römische Forsch.* II; P. Fraccaro, *I processi degli Scipioni* (1911) and in *Athenaeum* 1939. For a possible coin portrait see *CAH* Plates IV, p. 57; but cf. *Numb. Chron.* 1935 *Proc.*, p. 4.

H. H. S.

SCIPIO (6) NASICA, PUBLIUS CORNELIUS (cot. 191 B.C.), son of Scipio (3), received the Magna Mater (204), was curule aedile (197), praetor in Further Spain (194),

defeating the Lusitanians at Ilipa, and consul in 191, when he completed the subjugation of Boian territory (191-190). His failure in the censor elections of 189 and 184 marks the Scipionic decline, and apart from the founding of Aquileia (181) and his action as patron in the Spanish inquiry of 171, he played no further part in public life.

Livy 29, 11 and 14; 35, 1; 36.

A. H. McD.

SCIPIO (7) ASIATICUS (ASIAGENUS, ASIAGENES), LUCIUS CORNELIUS (cos. 190 B.C.), brother of Scipio Africanus, whose legate he was in Spain (207-206), Sicily (205), and Africa (204-202), was curule aedile (195) and praetor in Sicily (193). In 191 he was with M'. Acilius Glabrio at Thermopylae, and in 190 succeeded him as consul. This marked the Scipionic control of policy against Antiochus, and Scipio Africanus accompanied him to the East in effective command. Making a truce with the Aetolians, he crossed to Asia Minor to defeat Antiochus at Magnesia (probably Jan. 189). After preliminary peace negotiations he was succeeded by Manlius Vulso, returning to triumph in 188, with votive games in 186. The senatorial opposition to Africanus' dominance, however, brought on him a demand for accounts and for inquiry into monies received from Antiochus, and eventually a charge of peculation, on which he would have been imprisoned except for the intervention of Sempronius Gracchus (cf. s.v. PETILLIUS and MINUCIUS 3). Cato degraded him from equestrian status in 184. An undistinguished figure, his career follows that of his great brother.

Livy bks. 28-30; 36, 21; 37-8; Polyb. bks. 21, 23; Appian, *Syr.* 23 ff.; Diod. bk. 29; Gellius 4, 18. De Sanctis, *Stor. Rom.* iv, 1, pp. 180, 583; W. Schur, *Scipio Africanus* (1927); A. H. McDonald, *JRS* 1938, 158.

A. H. McD.

SCIPIO (8) PUBLIUS CORNELIUS, elder son of Africanus Major, adopted the later Africanus Minor before 160 B.C. Augur in 180, he was precluded from a public career by ill health; an outstanding orator, he also wrote an historical work in Greek. An inscription in Saturnian verse from the Tomb of the Scipios probably refers to him (Dessau, *ILS* 4).

H. H. S.

SCIPIO (9), LUCIUS CORNELIUS, son of Africanus Major, was captured in the war with Antiochus (192 B.C.), but was released unransomed before Magnesia in 190. He gained the praetorship (174) with the help of his father's secretary, but incurred the censors' displeasure. Details of his capture and personality are confused: see Münzer, *PW*, s.v. 'Cornelius (325)'.

H. H. S.

SCIPIO (10) NASICA CORCULUM, PUBLIUS CORNELIUS, curule aedile in 169 B.C., distinguished himself in the Pydna campaign (168); his account of it in an *ἐπιστόλιον* is preserved by Plutarch (*Aem.* 15-18). On account of irregular election, he resigned the consulship of 162. Censor in 159, he removed unauthorized statues from the Forum. Consul in 155, he ended the Dalmatian War. He checked the building of a theatre on grounds of public morality. Against Cato's policy of destroying Carthage, he urged the moral stimulus of Carthage to Rome, presumably representing the traditional liberal Scipionic policy in Africa. In 152 he forced Masinissa to withdraw from Carthaginian territory. He was envoy to Andrisus (150), Pontifex Maximus (150), and *princeps senatus* (147). Learned in pontifical and civil law, he upheld traditional standards of morality and politics, at home and abroad.

Livy, bks. 44-5; *Per.* 47-50. M. Gelzer, *Philol.* 1931, 261.

A. H. McD.

SCIPIO (11) AEMILIANUS AFRICANUS NUMANTINUS, PUBLIUS CORNELIUS (185/4-129 B.C.), the second son of L. Aemilius Paullus (q.v. 2) Macedonicus,

was adopted by P. Scipio (8), the elder son of Scipio Africanus. He accompanied Paullus to Greece in 168, and fought at Pydna. His youthful development and family circumstances are described by Polybius (31, 23-9). In 151 he volunteered to serve as military tribune in Spain, distinguishing himself at Intercatia. On a mission to Masinissa (150), he shared in the negotiations between Numidia and Carthage after the outbreak of hostilities. In 149 he went as military tribune to Carthage where he dominated the fighting: *ὅλος πέπνυται*, as Cato said (cf. *Od.* 10, 495). In 148 he settled the succession to Masinissa, dividing Numidia and undoing the king's work. He was elected consul for 147 by special dispensation on account of his youth, and received, also by special vote, the command against Carthage. Establishing efficiency in the army, he blockaded Carthage, and in 146 destroyed the city, enslaving its people and setting up the province of Africa. If he wept over the destruction (Appian, *Pun.* 132), it came from his own policy and strategy.

2. In 144 he gained control of policy in Spain by the commands of Q. Fabius and C. Laelius, and in 142 became censor, exercising his authority with traditional severity. His two years' embassy for settling relations with Egypt, Syria, Pergamum, and Greece is assigned either to 141-140 or to 136-135. Laelius' proposals for land-settlement, probably in 140, represent his policy of internal restoration. His prosecution of L. Aurelius Cotta in 138 shows his regard for good government. The *Lex Cassia* of 137, introducing the secret ballot in popular jurisdiction, reflects his aim of limiting the influence of clientship, abused by the senatorial houses. In Spain he opposed conciliation, rejecting Mancinus' agreement, and in 134 became consul for the second time, again by special dispensation, as re-election to the consulship had been prohibited in 151. Receiving the command in Spain, with a distinguished staff, he restored discipline in the army, and blockaded and destroyed Numantia in 133.

3. His hostility to the 'Flaminian' character of Tiberius Gracchus' agrarian programme and to his demagogy and constitutional irregularity was undisguised: *ὡς ἀπόλοιτο καὶ ἄλλος ὅτις τοιαῦτά γε ῥέζοι* (*Od.* i. 47). He publicly declared his opinion: 'si occupandae rei publicae animum habuisset, iure cacsus' (Vell. 2, 4, 4). He rejected Papirius Carbo's proposal to legalize the re-election of tribunes, and showed his contempt for the populace. He did not check the work of the Gracchan Land Commission, however, until it began to threaten the interests of the Italians: then he stepped in to hold the balance in State and Confederation with all his authority. His death after popular disorder at the Feriae Latinae of 129 raised the suspicion of assassination, although the official *laudatio* ignored this. He married Sempronia, sister of the Gracchi, but left no children.

4. Liberal in culture, Stoic in belief, literary in interests, the centre of the brilliant Scipionic Circle, he was yet traditional in his basis of thought. As a soldier he inherited the professional competence of Aemilius Paullus; as a statesman he practised the strict senatorial policy of civic and Confederate balance and provincial domination. Pre-eminent in authority, he appeared at the crisis of Roman constitutionalism, and his death removed the hope of stability; his life might well inspire Cicero's conception of a principate.

SCIPIO (12) **NASICA SERAPIO**, **PUBLIUS CORNELIUS**, consul in 138 B.C. and optimate leader against Tiberius Gracchus, was son of Scipio (10) and of Cornelia, a daughter of Scipio Africanus Major. He was a staunch upholder, like his father, of the old, simple manners. In 133, when disorder threatened on Ti. Gracchus' candidature for a second tribunate, Serapio called on the consuls to use force, and on their refusal, himself headed the majority of the senators in an attack, in which Tiberius lost his life. To avoid the consequent unpopularity, Serapio was sent on a mission to Asia, though he was Pontifex Maximus. He died soon after, at Pergamum.

M. H.

SCIPIONIC CIRCLE means the philosophic and literary coterie (mid-2nd cent. B.C.) headed by Publius Cornelius Scipio (q.v. 11) Aemilianus (Africanus Minor) and Gaius Laelius, both distinguished orators, whose friendship Cicero's *De Amicitia* commemorates. Admirers of Greek literature and learning, they cultivated a Hellenic purity of form and style in Latin literature, and attracted to themselves many educated Roman nobles similarly desirous of uniting the best of both civilizations. Scipio's own friendship with Polybius, the exiled Greek historian, did much to promote Greek studies, which were furthered by the transport to Rome (167 B.C.) of the library of Perseus of Macedon. Closely connected were C. Lucilius the satirist and the young African comic dramatist, Terence, who enjoyed such support that his plays were sneeringly attributed to his patrons. The dominating influence in philosophy and political thought was the Greek Stoic Panaetius. Other less prominent members appear as speakers in Cicero's *De Republica*.

R. M. Brown's *Study of the Scipionic Circle*, Iowa Studies, 1934, seeks to extend its personnel and date.

G. C. W.

SCIRAS, writer of phylax-plays, like Rhinthon, also of Tarentum, probably in third century B.C. One title, *Μελέαγρος*, survives, with one fragment of 2 vv. (parody of Eur. *Hipp.* 75).

CGF 190.

SCIRON (Σκίρων), a brigand infesting the dangerous Seironian Way (Σκυρωνίης ὁδός, Hdt. 8. 71. 2) over the Seironian Cliffs (Σκυρωνίδες πέτραι, Strabo 9. 1. 4) near Megara. He made passers-by wash his feet and, as they did so, kicked them over the cliff, where, according to some, they were devoured by a great tortoise (Apollod. *Epit.* 1. 2; Plut. *Thes.* 10; Hyginus, *Fab.* 38. 4; and other authors, see O. Waser in Roscher, art. 'Skiron'). Theseus (q.v.), on his way to Athens, threw him into the sea, where, according to Ovid, *Met.* 7. 444 ff., his bones turned into the cliffs bearing his name. The Megarian account made him no brigand but a most respectable and highly connected person (Plut. loc. cit.).

H. J. R.

SCIROPHORIA, an Athenian festival, also called *Scira*, celebrated the 12th Scirophorion (June/July), and, according to ancient texts, in honour of Demeter and Kore. (The attempt to claim it for Athena alone must be rejected.) The name indicates that something was carried, the σκίρα. The ancient interpretation that these were parasols is improbable, although it is said that the priestess of Athena Polias and the priest of Poseidon-Erechtheus went from the Acropolis to a place called Scira walking under a great white baldachino. The rites seem to have a connexion with those of the Thesmophoria.

E. Gjerstad, *ARW* xxvii (1929), 189 ff., justly criticized by L. Deubner, *Attische Feste*, 49 ff.

M. P. N.

SCOLIA, drinking-songs, especially Attic. Athenaeus (15. 693 f.) preserves a collection for the late sixth and early fifth centuries. They were sung in the Prytaneum;

a singer held a myrtle-branch and, when he had finished, passed the branch to another and called on him for a song. The process is illustrated in Ar. *Vesp.* 1216 ff., cf. schol. Pl. *Grg.* 451 c, Plut. *Quaest. conv.* 1. 1. 5. There were also choral σκόλια, possibly of a later date, like two pieces in a papyrus at Berlin (*Scol. Anon.* 30).

R. Reitzenstein, *Epigramm und Skolion* (1893), 3-44; C. M. Bowra, *Greek Lyric Poetry* (1936), 402-33.

SCOLION METRE, see METRE, GREEK, IV (3).

SCOPAS (4th c. B.C.), sculptor, of Paros; possibly son of Aristander, who was working in 405 B.C., if the Parian sculptor, Aristander, son of Scopas, known from signatures of the first century B.C., is a descendant. Pliny dates him 420 B.C., perhaps by his birth. Selected works, (i) dated: 1. Temple of Athena Alca at Tegea; after 395 B.C. Scopas was ἀρχιτέκτων and made marble statues of Aesclepius and Hygieia; he must have designed and supervised the pediments (A. Calydonian boar-hunt, B. Achilles and Telephus). The surviving fragments are the basis of all attributions (Winter, *KB* 300. 2-4). A copy of the Aesclepius has been recognized. He also made a beardless Aesclepius for Gortys (Arcadia). 2. One column in Artemis temple at Ephesus, after 356 B.C. Doubtful, since *una a Scopas* should perhaps read *in scopas*. 3. East side of Mausoleum, after 351 B.C. Slab 1022 (Winter, *KB* 304. 3) recalls the Tegea sculptures in style.

(ii) Undated: 4. Hercules in Sicyon, marble. Copies have been recognized in the Lansdowne Hercules, etc. (Winter, *KB* 300. 8; 301. 1). 5. Bacchant, marble. Callistratus' description justifies recognition of Dresden Maenad (Winter, *KB* 306. 4) as copy. 6. Apollo from Rhamnus, later in Palatine temple. Marble, represented as Citharode. Reproduced on Sorrento base. 7. Poseidon, Thetis, Achilles, Nereids, Tritons, etc. In temple of Neptune at Rome (built by Cn. Domitius Ahenobarbus, 32 B.C.). The base has been recognized (Winter, *KB* 384. 5). The Tritoness of Ostia may derive from the group. 8. Seated Mars and Venus in temple of Mars at Rome (built by D. Junius Brutus Callaicus, 138 B.C.). 9. Apollo Smintheus at Chryse. Represented on coins. 10. Aphrodite Pandemus at Elis, bronze. Represented on coins. 11. Niobid group. Attributed to Scopas or Praxiteles. The style of surviving copies (Winter, *KB* 307) suggests neither.

(iii) Attributed: 12. Meleager (Winter, *KB* 300. 7, 301. 2). The Tegea sculptures are remarkable for the expression of violent emotion and movement. His influence is seen in many later works, e.g. the Pergamene gigantomachy (Winter, *KB* 352-5).

T. B. L. W.

SCOPELIANUS, famous Sophist in Smyrna, in the reigns of Domitian and Hadrian; author of an epic *Πηνελόπεια*.

Philostr. *VS* 1. 21.

SCORDISCI, a Celtic tribe, later intermingled with Illyrians and Thracians, dwelling south of the lower Sava as far as the upper Margus, first appeared in the third century B.C. The Romans, after occupying Macedonia, had frequently to repel raids of Scordisci against this province. Subdued by Tiberius in 15 B.C., the Scordisci remained loyal thereafter, and even supported Tiberius against the Pannonians in 12 B.C. Aelia Mursa was founded in their territory (A.D. 118).

Fluss, *PIW*, s.v.; C. Patsch, *Sitz. Wien* 214 i (1932); R. Syme, *JRS* 1934, 117 ff.

F. A. W. S.

SCRIBAE meant originally all persons who practised writing. Subsequently, when copyists came to be called *librarii*, the term was restricted to secretaries of private

individuals, who wanted assistance in correspondence and book-keeping, or of magistrates, especially those concerned with finance and municipal affairs. These public *scribae* were generally freeborn citizens, belonged to the class of the knights, and received a regular salary. They formed several corporations, e.g. the *scribae quaestorii*. Divided into three *decuriae*, they kept the archives of the Senate, transcribed documents, and acted as cashiers and accountants at the *aerarium*. With the growth of bureaucracy in the imperial age, *scribae* were generally appointed to assist any financial, military, or municipal magistracy.

Mommsen, *Röm. Staatsr.* i² 346 ff.; C. Lécrivain, *Dar.-Sag.* iv. 2, 1123 f.; E. Kornemann, *PW*, s.v. P. T.

SCRIBONIA, sister of L. Seribonius (q.v. 1) Libo, was married to Octavian (her third husband), for political reasons, in 40 B.C., and divorced in the following year. In 2 B.C. she accompanied her daughter Julia into exile.

Suetonius, *Aug.* 62; Appian, *BCiv.* 5. 53; Dio Cassius 48. 16 and 34; 55. 10.

SCRIBONIANUS (1), LUCIUS ARRUNTIVS CAMILLVS, was descended, probably, from Sex. Pompeius, and was consul in A.D. 32. He was legate of Dalmatia under Gaius and Claudius. In 42, at the instigation of Annii Vinicianus and many Roman senators and *equites*, he persuaded his two legions (VII and XI) to revolt against Claudius. After four days the legions abandoned the revolt, and he was murdered. J. P. B.

SCRIBONIANUS (2), FURIUS (LUCIUS ARRUNTIVS SCRIBONIANUS), son of (1) above, was banished in A.D. 52 for consulting astrologers and died soon afterwards.

SCRIBONIUS (1) **LIBO**, LUCIUS (b. c. 90 B.C.?), brother of Scribonia (q.v.) and father-in-law of Sextus Pompeius, commanded a division of Pompey's fleet in the Adriatic in 49 and 48. He was proscribed in 43, and became one of the chief supporters of Sextus Pompeius, representing him in negotiations with Antony (40) and taking part in the conference near Misenum (39). After Naulochus Libo accompanied Sextus to Asia Minor, but abandoned him when he persisted in carrying on against hopeless odds (35). He was consul in 34.

Cicero, *Letters*; Caesar, *BCiv.* bks. 1 and 3; Appian, *BCiv.* bk. 5. G. W. R.

SCRIBONIUS (2) **LIBO DRUSUS**, MARCUS. The trial of the highly born Libo Drusus before the Senate in A.D. 16 was the first of the important treason trials of Tiberius' principate. Tacitus (*Ann.* 2. 27 ff.) considered him an innocent, if half-witted, victim of conspiracy; possibly, however, he was a serious conspirator (cf. F. B. Marsh, *The Reign of Tiberius* (1931), 58 ff., 291 f.). He committed suicide during the trial. J. P. B.

SCRIBONIUS (3) **LARGUS**, Roman physician c. A.D. 1-50, studied at Rome in the time of Tiberius. In 43 he accompanied Claudius on his British campaign, probably on the recommendation of his patron C. Julius Callistus, secretary to Claudius, who also procured the Emperor's patronage for Scribonius' writings. In gratitude Scribonius dedicated to Callistus his only work to come down to us, the *Compositiones* (prescriptions). The contents of this show him to be an empiricist in method, closely akin to Celsus. His work was largely used by (among other writers) Marcellus Empiricus.

Ed. G. Helmreich (1887); *PW* ii A. 876. W. D. R.

SCROFA, GNAEVS TREMELLIUS, friendly with Cicero and Atticus, and chief interlocutor in the first two books of Varro's *De Re Rustica*. Importing elegance into his work on agriculture, he thought little of the matter-of-fact Sasernae (q.v.; Varro, *Rust.* 1. 2. 25). Varro, Pliny, Columella used him. J. W. D.

SCULPTURE, GREEK. The origins of monumental sculpture in Greece are still uncertain, but some inheritance from Minoan and Mycenaean times must be taken for granted. Monumental sculptures of the Bronze Age are known, as, for instance, the Gate of the Lionesses at Mycenae, and cult statues at Mycenaean shrines must have survived the Dorian invasion and have been taken over by the invaders. Thus at Lindus in Rhodes there was a very ancient image, probably Mycenaean, that survived into Hellenic times. The Greeks therefore had instances of sculpture before their eyes to imitate. From the 'Geometric' period (c. 1000-700 B.C.) a stone base of a life-size statue found at Samos survives this time. On Geometric and Proto-Corinthian vases appear figures which can plausibly be identified as statues. The famous Apollo of Amyclae, described by Pausanias and represented on late coins of Laconia, appears to have been a statue of the eighth century.

2. But the earliest actual Greek statues which we possess cannot be dated before 650. These belong to a clearly defined style known as the Dorian, common in all Dorian lands, Crete, Sicily, Rhodes, Thera, and Peloponnesus. The marble statue dedicated by Nicandra and found at Delos is typical of this style, which as a whole is represented by a multitude of smaller works of art in bronze, terra-cotta, and ivory found throughout the Dorian world and dating from 690 to 600. A splendid version of the style is a small stone figure from Crete (the 'Auxerre lady', now in the Louvre); and a later group of architectural sculpture in the same style comes from Prinias in Crete. The Peloponnesian and Crete may generally be taken as the centre from which this style emanated, and the priority in the making of statues therefore belongs to that part of Greece.

3. The origins of Attic sculpture are unknown, but by 600 statues larger than life-size were made in marble, with great technical efficiency. Examples are the *kouros* (young male figure) in New York, the *kouros* from Sunium, and the head of a *kouros* from the Dipylon cemetery. This vivid and vigorous style has nothing to do with the Dorian style, so that Attica can claim an independent school of sculpture at an early date.

4. Sculpture in eastern Greece began later. Two separate and distinct schools grew up there, one connected with Samos and Naxos, together with Miletus, the other with Siphnos, Paros, and Chios and perhaps other islands. Both styles were current in the mainland of Ionia, and semi-Hellenic communities like Lyeia fell under the influence of the second style. The Heraeum at Samos and the Sacred Way at Branchidae near Miletus have produced most of the statues of the first style. Theodoros Rhoeaeus and Telecles were famous Samian sculptors. Micegiades and Archermus of Chios are known to have worked there. The sculptures of the Siphnian Treasury at Delphi represent the work of that island. The school as a whole may be called 'Cycladic'. The period of the two schools is roughly the same, c. 560-500. Earlier work is known in Ionia itself, and some of the Samian sculpture may go back to 580. But no known Ionian work dates to the seventh century.

5. The Peloponnesian school developed in the sixth century, with the two sculptors Dipoenus and Scyllis as its most famous representatives. Sicyon became a famous artistic centre; its Treasury at Delphi and the statues of

Cleobis and Biton at the same shrine are typical of this school and period. *c.* 500 Canachus had a high repute at Argos.

6. The 'Cycladic' school achieved an immense popularity at the expense of the rival Samo-Milesian school. Its style deeply influenced Attic sculpture from 550 onwards, largely under the patronage of Pisistratus. Attic sculpture, of which the Acropolis *korai* (maidens) are typical for this age, closely but not slavishly follows 'Cycladic' conventions. The Peloponnese, on the other hand, retained its independence, and only one region, Laconia, showed influences from the east of Greece.

7. By 500 the gaiety and brilliance of the conventional 'Archaic' styles gave place to a powerful and general tendency towards experimentation, checked for a time by the disturbances of the Ionian revolt and the Persian wars. From 500 to 480 little work was done, though the island of Aegina showed great activity. The pediments of the temple of Aphaea are typical of these decades, and two sculptors, Callon and Onatas of Aegina, achieved great fame. But the controlling factor in the new experiments was the great popularity of the new processes of bronze-casting, which enabled sculptors to devise more free compositions than the limitations of stone-carving allow. From 480 to 450 some of the greatest masterpieces of Greek sculpture were produced. Pythagoras, Calamis, mere names to us, were influential experimentalists who advanced the art of sculpture. Myron, about whom we know more, also made important contributions. Many superb original masterpieces of this age survive, such as the Bronze god from Artemisium, the 'Ludovisi' Throne and the Charioteer of Delphi, all in excellent preservation. The influence of the Peloponnese now extended to Athenian sculpture. The Athenian artists Hegias, Critius, and Nesiotes were typical of the period immediately following the Persian wars. But the greatest surviving masterpiece of the age is the large group of sculpture (*c.* 75 per cent. of the whole) from the two pediments of the temple of Zeus at Olympia. Although the authorship of these works is entirely unknown, they are the work of a very great artist. These sculptures mark the climax of pure stone-carving in Greece. The figure of Apollo is unequalled in all art. The sculptures of the Parthenon on the other hand represent a totally different technique and outlook. (See PHIDIAS.)

8. *c.* 450 Phidias led sculpture into a new direction and created the Classical style as such. He was a superlatively good artist who broke with the old traditions and invented new methods and compositions. But we know his work only at second-hand. His influence was now predominant in Greece, except in the Peloponnese, where Polyclethus was only partly influenced by him, and sculpture became standardized in style and method. Almost every sculptor of 450-400 owed his inspiration to Phidias. Alcámenes, Agoracritus, Paconius, and the sculptors of the Erechtheum and the Nike Temple Balustrade all derived from him. Elegance and refinement now took the place of the grandeur and solemnity of the work of the first half of the century. Just as the gaiety and exuberance of the sixth century gave place to the severe simplicity of the early fifth, so the sophisticated skill and brilliance of the later fifth century superseded the austerity of the preceding generation. The close of the Peloponnesian War marked a pause in artistic development, and artists like Cephisodotus at the beginning of the next century merely carried over the classical traditions of the past.

9. With Praxiteles sculpture in Greece took a new turn. Artists were now individuals and no longer members of regional schools. Sculpture now showed a tendency to become slightly self-conscious. Figures strike attitudes and demand an audience. But superlative technical skill and great charm mark works such as the Hermes holding the infant Dionysus, found at Olympia and now held by many to be a fine Roman copy

of an original by Praxiteles. Of Scopas we know almost nothing except that his style, as Pliny tells us, was indistinguishable from Praxiteles'.

10. With Lysippus the long and virile tradition of the Peloponnese took a new lease of life. Lysippus, whose style is best seen from the statue of Agias at Delphi, a contemporary copy of a bronze work from the sculptor's studio, foreshadowed new tendencies which heralded the Hellenistic styles of Greece. Lysippus was a carver of vigorous and active figures and a maker of portraits. True portraiture in Greece now begins and is represented by a large series of superb portraits of famous Hellenistic rulers, or of men like Demosthenes, known to all Greeks. Apart from portraiture Hellenistic sculpture was mainly an experiment in pastiches, with a permanent tendency to be synthetic rather than original. Few outstanding works are preserved, but the Victory of Samothrace and the sculptures in high relief from the Altar of the Gods at Pergamum show respectively a revival of fifth-century style and a new experiment in baroque, the first of its kind in Greece.

11. It would be difficult to say when Greek sculpture as such ceases. It merges into Roman and is the controlling element in all Roman work down to *c.* A.D. 350. Hellenistic styles and inventions, such as the Laocoon group or the Venus de Milo, led to fashions and imitations and deeply influenced Roman work.

S. C.

SCULPTURE, ROMAN. Etruscan sculptors are recorded to have worked at Rome during the regal period, and some fragments in terracotta, of regal or early republican date, have recently been recovered. Etruscan sculpture is well known from the seventh to the first century B.C. The Etruscans produced votive sculpture in bronze and clay, and architectural sculpture in the latter material; stone they reserved for tomb sculpture and sarcophagi. Early sculptures of local style have also come to light in other regions of Italy. From the third century onward Greek artistic currents percolated into Rome through Etruria and Campania, and many Greek statues reached the city as war booty. But with the possible exception of portraiture (*q.v.*), sculpture does not seem to have been produced at Rome until the last century of the Republic, when marble (usually assisted by colour) came into use for statuary and architectural ornament.

The most important product of Roman sculpture is the great series of historical and commemorative reliefs on ornaments and buildings of the capital and other cities. The historical relief originated in Republican times, but came into prominence under the Empire. The Ara Pacis (*q.v.*) illustrates the idealizing Greek style introduced under Augustus, but in the next notable extant monument, the Arch of Titus, there was a return to Italian tradition with its greater feeling for atmosphere and pictorial effect. The columns of Trajan and Marcus Aurelius exemplify the 'continuous' style, in which the history of a campaign is unrolled around the shaft in separate episodes. There was a brief return to Greek classicism under Hadrian, but with the Antonines the pictorial style was resumed, with experiments in perspective, crowd-representation, and deep-cut contrasts of light and shade. The Arch of Septimius Severus closed this phase; little but portraits and sarcophagi was produced in the third century, and the contemporary reliefs on the Arch of Constantine marked the beginning of late antique art, with new and Oriental conceptions of relief-sculpture.

Other types of relief were: decorative, for interior walls (stucco and terracotta were here employed as well

as marble); and sepulchral: from the second century until Christian times there was a large output of sarcophagi with mythological, battle, or genre scenes. Of Roman pedimental sculpture little remains, though some information is provided by coins and other representations. Sculpture in the round was largely confined to adaptations of Greek types; honorific portrait statues appear in toga, cuirass, or in heroic nudity. The sculpture of the provinces was largely, though not exclusively, sepulchral; the Eastern Provinces, possessing their own artistic traditions, in some respects led the capital; the Western Provinces followed Italy, though some stylistic phases of the metropolis were absent and there were local forms, e.g. the Jupiter-columns of Germany.

E. Strong, *Roman Sculpture* (1907) and *Scultura Romana* (1923-5); CAH, chs. on Republican and Early Imperial art by E. Strong in vols. ix, x, on the later Empire by G. Rodenwaldt in vols. xi, xii. See also ALTAR, PORTRAITURE, SARCOPHAGI, and individual monuments such as the ARA PAEIS. For provincial sculpture see E. Espérandieu, *Recueil général des bas-reliefs de la Gaule romaine* (1907-28); S. Ferri, *Arte romana sul Reno* (1931), *sul Danubio* (1933).

SCUTUM, see ARMS AND ARMOUR, ROMAN.

SCYLAX of Caryanda explored for Darius 'an Indian river' flowing eastward; from its mouth he returned by sea to the Isthmus (Hdt. 4. 44). Strabo quotes this 'ancient writer' on Troad geography; Aristotle, on India (*Pol.* 1332^b23). Suidas mentions a life of Heraclides of Mylasa (Hdt. 5. 121). The extant *Periplus* is a fourth-century compilation in his name.

GGM 1. 565; PW, s.v.

J. L. M.

SCYLLA (Σκύλλη, -α), (1) a sea-monster, living in a cave opposite Charybdis (q.v.); she had six heads, each with a triple row of teeth, and twelve feet. She lived on fish of all sorts, but if a ship came near enough, she would seize six men at a time from it and devour them. The only way to restrain her was to implore the intervention of her mother Cratais. She was immortal and irresistible (see Homer, *Od.* 12. 85 ff., 245 ff.). Later authors (e.g. Verg. *Ecl.* 6. 75) say she had a girdle of dogs' heads about her loins. There were also stories, of uncertain date and origin, to the effect that she had once been of human shape but was turned by magic into a monster. E.g. Ovid (*Met.* 13. 730 ff., 14. 1 ff.) says she was loved by Glaucus (q.v. 2) the merman, and changed by Circe (q.v.), who was her rival. Tzetzes on Lycophron, 46 and 650, makes Poseidon the lover and Amphitrite the rival. Rationalizations of her into a rock (cf. Ovid, *Met.* 14. 73) or other natural danger of the sea are fairly common; her father is regularly Phorcys, q.v. She is often (as Verg. loc. cit.) confused with (2), daughter of Nisus (q.v.) king of Megara.

H. J. R.

SCYMNUS, a Greek of Chios, alleged author of a prose *περιήγησις*. He is not the author of the extant *II*, an unpoetical geographical summary in iambics, written c. 90 B.C. or earlier: introduction, Europe, especially coasts of Spain, Italy, Sicily, Adriatic, Euxine; then Asia. The rest is lost. [S.J., using various authors, is worth little, except on the Euxine, Ligurian, and Spanish coasts, and Greek colonies.

GGM 1, lxiv ff., 196 ff.; PW, s.v.; E. H. Bunbury, *Hist. Anc. Geog.* (1879), ii. 69 ff.

E. H. W.

SCYTHIA was the name given by the Greeks to the country between the Carpathians and the river Don. Its eastern half (between the Don and the Dnieper) was mostly an arid steppe; but western Scythia, the 'land of the black earth', was one of the world's natural wheat-fields. The valleys of the Dnieper and the Kuban (north of Mt. Caucasus) were seats of a prehistoric culture dating back to the third millennium; its inhabitants practised agriculture and metallurgy, and had a relatively high standard of art. But the whole country was exposed

to recurrent invasions by ruder nomadic peoples. In the seventh century it was occupied by the Scythians, a people of uncertain provenance, but of Indo-European speech. One section of the invaders also overran upper Mesopotamia and Syria (c. 650-620 B.C.), and another advanced across the Carpathians to the middle Danube; but the main body stayed on in South Russia.

The Scythian armies consisted of mounted archers who were well versed in elusive 'desert tactics'. The folk was divided into several tribes, each with its separate grazing area. Each tribe stood under kings and subordinate chiefs, who were buried in large mounds (*kurgans*) along with their horses and retainers. The Scythians remained true to their nomadic habits, exploiting the labour of the previous inhabitants, especially in the black-earth zone, whose surplus wheat they sold to the Greeks of the Black Sea coast. In return the Scythian chiefs avidly bought Greek pottery and metal-work. Their tombs have produced a profusion of ornaments in gold (probably from the Urals), showing animal *motifs* and hunting-scenes of the best Greek workmanship.

The Scythians beat off an invasion by the Persian king Darius (c. 512 B.C.), and c. 325 they destroyed an expedition under Alexander's general Zopyrion. But after 300 they were ousted from the Balkan lands and central Europe by the oncoming Celts, and in the last three centuries B.C. they were displaced in south Russia by the Sarmatae. Some remnants found refuge in the Crimea and the Dobrudja, but under the Roman Empire the Scythians pass out of history.

SCYTHINUS of Teos, contemporary of Plato, wrote *Ἰαμβοί* which expressed Heraclitus' doctrine in verse, and also a prose work *Περὶ φύσεως* and a *Ἱστορία* which was a novelistic account of Heracles' deeds as benefactor of the human race.

Ed. Diels, *PPF* 169. *PIV* iii A. 696.

W. D. R.

SEALS (*σφραγίς*, *signum*, *sigillum*) played an important part in ancient life, taking the place of the modern signature on documents and, to some extent, of locks and keys. The materials for sealings were lead and wax for documents; in commerce a lump of clay was commonly pressed down over the cordage. In Roman times small seal-cases were frequently employed to protect the impression from damage. The seal was usually a finger-ring with an intaglio cut on the bevel or on an inset stone. Some types of stones, set in swivels, were worn about the neck, but this custom was Oriental rather than Greek. Greek cities possessed civic seals, for public documents or public property; the Romans utilized a magistrate's personal seal. It was also customary to stamp with the maker's name a variety of products, from bread to bricks, as a trade-mark; for this purpose stamps of wood or metal, oblong, circular, or foot-shaped, were employed.

V. Chapot, *Dar.-Sag.*, s.v. 'Signum'.

F. N. P.

SECESSIO means the 'withdrawal' of the plebs from the rest of the Roman community. Unlike a 'general strike', it implies detachment from public life and withdrawal from the town. The plebeians *en masse* retired outside the *pomerium*, often to the Aventine, which was turned over to them c. 450 B.C. We have no means of deciding how many secessions (five are recorded between 494 and 287 B.C.) actually occurred. It would be too radical to accept only the last, for the account of it differs widely from that of the earlier ones, so that a mere anticipation would be incomprehensible. The first secession (traditionally dated to 494), which was stopped by Menenius Agrippa (q.v.), and the second of 449,

which is reputed to have caused the fall of the decemvirs, are perhaps fictitious. Nor is the third, with which Canuleius (q.v.) is credited, better supported, although the *Lex Canuleia* (445) may have been forced through by a secession. The fourth, which is not beyond suspicion, was merely a military rebellion (342). The fifth secession of 287 is indisputably historical. Social troubles, arising from the pressure of debts, led the plebs to withdraw to the Janiculum. A plebeian dictator, Q. Hortensius (q.v.), was appointed, and his law terminated the struggle of the Orders.

SECTATORES, see CANDIDATUS.

SECULAR GAMES, scenic games (*ludi*) and sacrifices performed by the Roman State to commemorate the end of one *saeculum* and the beginning of a new one. The *saeculum*, defined as the longest span of human life, was fixed in the Republic as an era of a hundred years. The celebration was ordered by the Sibylline Books and was under the direction of the *duumviri* (later *decemviri* (q.v.) or *quindecimviri sacris faciundis*). The ceremony took place in the Campus Martius, near the Tiber, at a spot which was known as Tarentum or Terentum. The gods honoured in the republican *ludi* are said to have been Dis and Proserpina, who had an altar near by. The games were associated in origin with the Valerian *gens*, and Valerius Corvus' first consulship, 348 B.C., may have been the date of the first celebration. The secular games of 249 B.C. are much better authenticated. Many scholars believe that the ceremony was actually introduced in that year from Tarentum, though the connexion of the site of the games with the south Italian city is by no means certain. The next celebration took place in 146 B.C. (a date attested by contemporary writers, and therefore more trustworthy than Livy's assignment of the games to 149). Like modern centennials, the *saeculum* was not always celebrated punctually. No games were held a century later (although, if we may trust the indications of coins with symbols of the *saeculum* on them (Alföldi, *Hermes* lxx. 369 ff.), there were plans in 45-42 B.C. to celebrate the *ludi* in the near future. The Fourth Eclogue has been interpreted as a prediction—not fulfilled—of games to be held in 40 B.C.

Augustus' plans to celebrate the beginning of a new age were known to Virgil, who died two years before the games took place, and were referred to in the familiar words 'aurea condet saecula' (*Aen.* 6. 792-3). At Augustus' request the *quindecimviri* made calculations for the celebration and fixed the length of the *saeculum* at 110 years. Augustus' *ludi* in 17 B.C. are well known from Horace's *Carmen Saeculare* and from an inscription, found near the Tiber, which gives details of the complicated ritual. They consisted of three nights and three successive days of sacrifices and archaic scenic games, and of seven supplementary days of more modern entertainment in theatre and circus. Dis and Proserpina do not appear among the gods honoured. Each night Augustus and Agrippa made appropriate offerings and sacrifices beside the Tiber to the Moerae, to the Ilithyiae, and to Terra Mater. On the first two days they made sacrifices on the Capitol to Jupiter and Juno Regina; on the third day they made offerings to Apollo and Diana on the Palatine. The scenic games continued night and day, and 110 matrons held *sellisternia* for Juno and Diana. As we know from the inscription, it was after the offerings on the third day that twenty-seven boys and twenty-seven girls, whose fathers and mothers were living, sang Horace's hymn, first on the Palatine and then on the Capitol. In the hymn Horace brings into great prominence Augustus' patron god Apollo in his new Palatine temple.

The antiquarian emperor Claudius revived the *saeculum* of a hundred years and held games in A.D. 47 for the eight-hundredth birthday of Rome. Following his example, Philip in 248 celebrated the thousandth anniversary of the city. Domitian in 88 and Septimius Severus in 204 calculated their festivals by use of the Augustan *saeculum* of a hundred and ten years. From Septimius Severus' celebration extensive inscription records have been discovered, including a fragmentary secular hymn written in hexameters by an unknown poet.

Horace, *Carmen Saeculare* and the *scholia*; Censorinus, *D.N.* 1. 1; Livy, *Per.* 49; Val. Max. 2. 4. 5; Zosimus 2. 1 ff.; *CIL* vi. 32323-3. For the recent discoveries of the inscription of Septimius Severus see *Not. Scav.* 1931, 313 ff. L. R. T.

SECUNDUS, see JULIUS (11), POMPONIUS (3).

SECURITAS, commonly associated with the Emperor or the State as a 'virtue' or 'desirable state' (*res expetenda*). Securitas was commonly invoked when some imminent danger had been averted or on an occasion like 10 Jan., A.D. 69, when the Arval Brethren sacrificed to her on the adoption of Piso. Her characteristic attribute is the column on which she leans.

G. Wissowa, *RE* 335.

H. M.

SECURITY in Roman law was given to the creditor in the form of rights over the property of the debtor. By the earliest real security, *fiducia*, the creditor acquired ownership of the pledged object, with the obligation to retransfer it to the debtor after payment of the debt. Restrictions of this fiduciary ownership, transferred to the creditor by *manipatio* (q.v.) or *in iure cessio* (see DOMINIUM), could be laid down in a special agreement between creditor and debtor, concerning especially the creditor's obligation to reconvey the property. By the later form of pledge (*pignus*) the creditor acquired only possession of the object handed to him, with interdictal protection, but without right of *usucapio* (see POSSESSIO). From *pignus* arose later another form of security, practised particularly in relations between landlords and agricultural tenants, whereby the object pledged for the payment of rent (slaves, cattle, agricultural implements) was left in the hands of the tenant: the creditor required neither ownership nor possession. For this form of security the term *hypotheca* was later applied. The debtor could hypothecate the same object successively to several creditors, but the earlier mortgage had priority: later mortgagees might enforce their rights only if the preceding one was satisfied. Some mortgages, as for taxes due to the *fiscus* or for the dowry of a woman, were privileged (the latter by a reform of Justinian). A. B.

SEDIGITUS, see VOLCACIUS (1).

SEDŪLIUS (fl. c. A.D. 435), a Christian Latin poet, author of the *Paschale Carmen*, with a prose version *Paschale Opus*, in five books, a scriptural elegy, and a hymn to Christ.

Edition: Huemer, *CSEL* (1885).

SEGESTA (correct Greek form: **Egeata*. See Festus, p. 458 L.), a city of north-western Sicily. Segesta was thoroughly hellenized by the fifth century B.C., but actually was neither Greek, Phoenician, nor Sicilian (Strabo 6. 272, exceptionally, regards Ionian Phocaean as founders of Doric-speaking Segesta). The Segestans reckoned themselves Trojans. Presumably they were Elymi (= Asiatics?). Against Selinus (q.v.), her traditional enemy, Segesta usually invoked outside aid, e.g. Cnidians and Rhodians in 580 B.C. The combatants in 454 are unknown, Diodorus' text (11. 86) erroneously mentioning Lilybaeum (q.v.). In 426 and 416 Athens supported Segesta, induced thereto by exaggerated notions of Segestan wealth (Thuc. 6. 6 f.; however, no poverty-stricken city built the magnificent surviving

temple). The Athenian expedition, however, failed disastrously at Syracuse (413), whereupon Segesta sought Carthaginian help (410). Carthage responded, sacked Selinus, and obliterated Himera (409). Segesta thereby became a Carthaginian dependency which was temporarily seized by Agathocles (307), who treacherously razed it, and Pyrrhus (276). In the First Punic War Segesta immediately surrendered to, and was generously treated by, the Romans, who like the Segestans claimed Trojan descent. Segesta became a *civitas libera et immunis*, but declined rapidly after the Servile War (102). By Strabo's time its port, Emporium, had outstripped it. Subsequently Segesta disappeared.

Diod. 5. 9; 13. 43 f.; 14. 48, 53 f.; 20. 71; 36. 5; Cic. *Verr.* 3. 92; 4. 72; 5. 125. E. T. S.

SEIA, an obscure Roman goddess, said to be the guardian of corn while underground (Augustine, *De civ. D.* 4. 8). Her statue, with that of Segesta and a third who must not be named indoors, stood in the Circus Maximus (Pliny, *HN* 18. 8; cf. Tert. *De Spect.* 8, Macrobian. *Sat.* 1. 16. 8).

H. J. R.

SEJANUS (LUCIUS AELIUS SEIANUS; d. A.D. 31). The maternal ancestry of Sejanus was distinguished; his father was an *eques*, L. Seius Strabo. He was made his father's colleague as Prefect of the Praetorian Guard by Tiberius on his accession, and soon, on his father's appointment as Prefect of Egypt, he became sole commander of the Guard, whose strength he increased by quartering all the cohorts in a single barracks near the Porta Viminalis. Over Tiberius he exercised a steadily increasing influence. After the death of Tiberius' son Drusus in 23 (which Sejanus was suspected of compassing) his influence in the Senate was paramount, and in a succession of treason trials he attacked his enemies (chiefly friends and adherents of Agrippina). He failed to secure Tiberius' consent for a marriage with Livia, the widow of Tiberius' son Drusus, in 25, but his influence increased through Tiberius' retirement (which he encouraged) to Capreae in 27. In 29 he secured the arrest and deportation of Agrippina and her eldest son Nero; her second son Drusus was imprisoned in the Palace in 30. In 31 Sejanus appears to have planned to strike at the principate. He was consul, had perhaps been granted *imperium proconsulare*, and had hopes of *tribunicia potestas*. Tiberius, however, warned by Antonia, the widow of his brother Drusus, sent a letter to the Senate. Sejanus was arrested, brought before the Senate, and executed, the command of the Guard having been transferred to Macro (q.v.). The ease with which he was suppressed shows that his conspiracy was still in an early stage.

J. P. B.

SELENE, the moon-goddess of the Greeks. There was no cult of the Moon amongst the Greeks (that of the Sun may either be pre-Greek or, as e.g. in Rhodes, imported from the East). A real cult of the Moon in old Crete is very problematic and can hardly be proved from the rings and gems on which these heavenly bodies are represented (a cult of the Sun may be more acceptable). In Greek mythology, however, Sun and Moon had a significant place from olden times (but no doubt the Sun as the symbol of all physical life was the more important in the religious ideas of the Greeks). According to Hesiod they were both born of the Titan Theia, but Aeschylus made the Moon the daughter of the Sun, others again his wife. A number of goddesses and heroines have been equated with the Moon by mythologists—Hera, Io, Artemis, Hecate; 'whether Io (whose wanderings were compared with the course of the moon) or Hera had anything to do with the moon before the oriental influence (in the 7th c. B.C.), is a difficult question' (A. B. Cook, *Zeus* i. 456). But usually it is assumed that the Cretan Pasiphae, daughter

of Helios by Perseis, was a hypostasis of Selene (her oracular function at Thalamae may support this view). Much more important is the role which the Moon played in Greek poetry and folk-lore, especially sorcery, in which she was almost identified with Hecate (Artemis). The Greeks shared with most other peoples the superstition about the influence of the Moon on all organic and erotic life. The waxing Moon made everything prosper, the waning had the contrary effect (recommended for healing diseases, for malevolent magic); the full Moon was sometimes prescribed for love-charms (note the use of the stone selenites), the rising Moon for magical procedure in general. Eclipses of the Moon were due to sorceresses (Thessalian superstition). Selene was also thought to be the abode of the souls, at least in Hellenistic times.

SELEUCEIA (1) ON TIGRIS was founded c. 312 B.C. by Seleucus I Nicator, as the capital of his empire. It became the great outpost of Greek civilization in the Orient, and replaced Babylon as the entrepôt of trade between east and west. Built beside the ancient Opis, on a natural lake where the Nahrmalka canal from the Euphrates joined the Tigris, Seleuceia was a port for maritime shipping (Strabo 16. 739). The city had a mixed Greek and Babylonian population and a large Jewish colony; Pliny estimated the total population as 600,000 in his day (*HN* 6. 122). Even after the centre of Seleucid power had shifted to Syria, Seleuceia maintained its essentially Greek character. When the Parthians conquered Babylonia, they preserved its free constitution, and kept their troops and administrative officials at Ctesiphon (q.v.) on the opposite river bank. In the Parthian period Seleuceia was still a great commercial centre, in spite of the rivalry of Vologesocerta. But it became the seat of violent factions and dynastic quarrels; after a seven years' revolt (A.D. 35-42—Tac. *Ann.* 11. 9. 6) it was heavily punished. Excavations show that the city thenceforward gradually became orientalized; burnt down by Trajan, it was rebuilt in Parthian style. Its final destruction in A.D. 164 by Avidius Cassius marks the end of Hellenism in Babylonia.

M. S. D.

SELEUCEIA (2) IN PIERIA was founded c. 300 B.C. by Seleucus I as the seaport of Antioch. Captured by Ptolemy III c. 245, it was recovered in 219 by Antiochus III; its adult male citizens then numbered 6,000. It issued municipal coinage from Antiochus IV's reign, coined as one of the Brother Peoples (149-147), and in 108 received its freedom, which was confirmed by Pompey in reward for its resistance to Tigranes. It was the station of an imperial fleet; Vespasian improved the harbour.

A. H. M. J.

SELEUCUS (1) I (NICATOR) (c. 358-280 B.C.), son of Antiochus (presumably a Macedonian noble). He accompanied Alexander to Asia, but was never among his most prominent generals, though probably a close personal associate. After Alexander's death he obtained the satrapy of Babylonia (321), where he supported Antigonus against Eumenes, but nevertheless lost his satrapy and fled to Egypt (316). He regained Babylon by a spectacular exploit, and soon gained Media and Susiana also: from this year (312) the Seleucid Era begins.

Selcucus naturally joined the coalition of 'separatist' generals against Antigonus, and the victory of Ipsus (301) gave his kingdom access to the Mediterranean through

Syria and (296) Cilicia. Henceforth his policy had a predominantly western bias, as illustrated by the founding of Antioch (300) to balance Seleuceia (q.v. 1), by his marriage to Stratonice daughter of Demetrius (298), and by the avenues for expansion which he sought in Syria and Asia Minor. In the East he ceded the Indian provinces to Chandragupta early in his reign (304?). He finally won Asia Minor with the victory of Corupedium over Lysimachus (281), which also gave him hopes of seizing the vacant throne of Macedonia. He invaded Europe, but was murdered by Ptolemy Keraunos, who wanted Macedonia for himself.

The achievement of Seleucus was inferior only to that of Alexander, for he reassembled most of Alexander's empire in Asia. The dual character of his dominion, Mediterranean and continental, was implicit in his two capitals and his two wives (he never repudiated the Bactrian Apama, his wife since 324). But, unlike Alexander, he built his army, bureaucracy, and new cities primarily on Graeco-Macedonian immigrants as a foundation. In character he was the most humane, and one of the ablest, of the Successors.

ANCIENT SOURCES. For the Seleucids in general the sources are too scattered to be indicated briefly. See Bibliographies to *CAH* vi, ch. 15 (W. W. Tarn); vii, chs. 3 (Tarn), 5 (M. Rostovtzeff), and 22 (Tarn); viii, chs. 6 and 7 (M. Holleaux) and 16 (E. R. Bevan).

MODERN LITERATURE. *CAH* vi-viii; E. R. Bevan, *The House of Seleucus* (1902); E. Bickerman, *Institutions des Séleucides* (1938).

G. T. G.

SELEUCUS (2) II (CALLINICUS) (c. 265-226 B.C.) was the eldest son of Antiochus II and Laodice. In this reign (commencing in 247) the Seleucid Empire first suffered severely from the same centrifugal tendencies which had previously beset the Persian Empire. In the Far East, Bactria became definitely independent, and the native kingdom of Parthia also came into existence (248-247): in the West, Seleucid Asia Minor was lost temporarily. Seleucus was hampered throughout by dynastic troubles: first, the pretensions of his step-brother which produced the invasion of Ptolemy III with its spectacular (though ephemeral) successes ('Third Syrian War', 246-1), and, later, the revolt of Antiochus Hierax in Asia Minor. Seleucus spent his life on campaign, but it remained for his son Antiochus ('the Great') to restore the kingdom.

G. T. G.

SELEUCUS (3) III (SOTER) (c. 245-223 B.C.), eldest son of Seleucus II, reigned three years only, being murdered (for reasons unknown) on a campaign against Attalus I of Pergamum.

SELEUCUS (4) IV (PHILOPATOR) (c. 218-175 B.C.), second son of Antiochus III, in whose lifetime he already held important commands. In his reign (which commenced in 187) he maintained correct relations with Rome and observed the terms of the peace of Apamea (188), which forbade political adventures in the West, and rendered them impossible by reason of the severe indemnity which it imposed upon him. But he also kept up friendly relations with Macedonia and Egypt, the two Powers of the Near East which remained independent of Rome.

G. T. G.

SELEUCUS (5) of Seleuceia on the Tigris (c. 150 B.C.), described by Strabo (16. 1. 6; 1. 1. 9) as a Chaldaean or Babylonian, stands alone as a thoroughgoing supporter of Aristarchus of Samos' heliocentric hypothesis, which he tried to demonstrate (Plut. *Quaest. Plat.* 8. 1, 1006 c; *Dox. Graec.* 383). He wrote on the tides in opposition to Crates of Mallos; he attributed the tides to the moon's resisting the rotation of the earth; Strabo (3. 5. 9) says that he discovered periodical inequalities in the flux and reflux of the Red Sea, which he attributed to the position of the moon in the zodiac.

T. H.

SELEUCUS (6) HOMERICUS of Alexandria was perhaps at the court of the Emperor Tiberius (Suet. *Tib.* 56). He is said to have written commentaries in Greek on practically every Greek poet. Besides works on Greek language and style and on Alexandrian proverbs, he wrote a criticism of the critical signs used by Aristarchus, a history of philosophy, a biographical work probably on literary figures, a theological treatise, a paradoxographical study, a miscellany, and a commentary on the *axones* of Solon.

FHG iii, 500; M. Müller, *de Seleuco Homérico* (1891); R. Reitzenstein, *Geschichte der griechischen Etymologiker* (1897).

J. F. L.

SELIDES (σελίδες), see BOOKS, 1. 5.

SELINUS (Σελινούς), a Greek city on the south-west coast of Sicily, founded from Megara Hyblaea (651 or 628 B.C.), quickly became prosperous, founding its own colony of Heraclea Minoa. Its earliest definite personalities are the tyrants Peithagoras and Euryleon the Spartan (510). Its isolated, westerly situation necessarily made Selinus opportunist; it even supported Carthage in the Himera campaign (480). In the fifth century B.C. Selinus flourished and built the temples whose impressive ruins survive at *Selinunte*. Ultimately, however, its traditional enmity with Segesta (q.v.) proved disastrous, provoking Athenian and Carthaginian intervention in Sicilian affairs; Carthage actually sacked Selinus (409). Selinus' refugees soon returned, but as Carthaginian tributaries. Such they remained, except occasionally, until Carthage evacuated and razed Selinus (250 B.C.), which thus disappeared from history (reject Pliny, *HN* 3. 91).

Strabo 6. 272; Thuc. 6. 4. 20; 7. 50, 58; Hdt. 5. 46; Diod. 5. 9; 11. 21 f.; 13. 54 f.; 114. J. Hulot-G. Fougères, *Selinunte* (1910); J. Bérard, *Bibliogr. topogr.* (1941), 89.

E. T. S.

SELLA CURULIS was an ivory folding seat, without back or arms, used by magistrates *cum imperio*. Its Etruscan origin is merely a conjecture of ancient authorities. The name was derived (Gell. 3. 18. 3 ff.) from the chariot (*currus*) in which the chief magistrate was conveyed to the place of judgement, and originally the *sella curulis* served as the seat of justice. Subsequently it became the attribute of all the higher ('curule') magistrates.

Mommsen, *Röm. Staatsr.* i², 399 ff.; B. Kübler, *PIW*, s.v. P. T.

SEMELE (Σεμέλη), otherwise called Thyone (Θυώνη), in mythology, a daughter of Cadmus and mother of Dionysus (qq.v.). Whether or not Semele is Zemelo and originally the name of a Thracio-Phrygian earth-goddess, it is certainly not Greek, whereas Thyone is. Such double namings are not uncommon, cf. Alexander-Paris. Her story consists almost wholly of her relations with Zeus and Dionysus. The former's association with her aroused Hera's jealousy, and the goddess, disguising herself (Ov. *Met.* 3. 259 ff.; Hyginus, *Fab.* 167, 179, from older sources, cf., e.g., Eur. *Bacch.* 6 ff.), advised her to test the divinity of her lover by bidding him come to her in his true shape. She persuaded him to give whatever she should ask, and he was thus tricked into granting a request which he knew would result in her death. The fire of his thunderbolts killed her, but made her son immortal (cf. Ov. *Fasti*, 3. 715 f.; Rose in *GR* 36 (1922), 116). Zeus put the unborn child in his thigh, whence he was born at full time, and, after coming to maturity, he descended into Hades and brought Semele up (Pind. *Ol.* 2. 25 ff.; Paus. 2. 37. 5—Argive legend of the place where he went down to fetch her; and elsewhere); she thus became an Olympian goddess. This, if she was originally a goddess, is evidently secondary. She had a cult in Thebes in historical times (Eur. loc. cit.; Paus. 9. 12. 3-4).

The statement of Hesychius, s.v. *Ἐγχώ*, that this was

another name for her, is pretty obviously due to a misunderstanding of a lost comedian's joke. Someone had said that Dionysus was son of 'Pour-out' or 'Fill-up' and his words had been taken seriously; see Rose in *CQ* xxvi (1932), 58. For Actaeon's love of her (in which case he can hardly have been her nephew) see Acusilaus in Apollod. 3. 30, and cf. ACTAEON. H. J. R.

SEMI RAMIS (Σεμίραμις), in Greek legend, the daughter of the Syrian goddess Derceto (see ATARGATIS). Exposed at birth, she was tended by doves till found by shepherds. Her first husband was Onnes, her second Ninus, king of Assyria, after whose death she ruled many years, renowned in war and as builder of Babylon (this point Berosus, *FHG* ii. 507, denies). At death she was changed into a dove, which was accordingly held sacred (Diod. Sic. 2. 4-20). The historical figure behind this legend is almost certainly Sammuramat, wife of the Assyrian king Shamshi-Adad V, and herself regent 810-805 B.C. in the minority of her son Adad-Nirari III. F. R. W.

SEMO SANCUS DIUS FIDIUS (for the full name see Dion. Hal. *Ant. Rom.* 4. 58. 4). A deity of puzzling origin and functions, said to be Sabine (e.g. Propert. 4. 9. 74; he is there identified with Hercules, q.v., apparently from the interpretation of *Dius Fidius* as *Iouis filius*, and *Sancus* is, as often, corrupted, whether by Prop. himself or a copyist, into *Sanctus*). *Semo* appears to be his name, and suggests the *Semunes* of the Arval hymn, usually taken to be deities of sowing; *Sancus* would seem to be an epithet, perhaps connected with *sancire*, cf. the adj. *sanguialis*, which also shows a *u*-stem. *Fidius* pretty certainly is to be explained as cognate with *fides*, and *Dius* is simply 'divine' or 'heavenly'. In historical times he is connected with oaths and treaties (Wissowa in Roscher's *Lexikon*, iv. 318 f., cf. *RK* 130 f.), hence the common oath *medius fidius*. Hence he has some connexion with thunder. His temple stood on the Quirinal (Platner-Ashby, 469 f.), and he had some sort of cult on Tiber island also (Wissowa, locc. cit.). Conceivably a deity of sowing had been absorbed by Jupiter (q.v.). H. J. R.

SEMONIDES, iambic and elegiac poet, originally of Samos, but connected especially with Amorgos (Suidas s.v. Σημωνίδης, Strabo, 487, Steph. Byz. s.v. Ἀμοργός). Suidas makes him a contemporary of Archilochus, Cyril places him in 664-661 (*Adv. Iul.* 1, p. 12), and modern critics have tended to place him later still because of an alleged dependence, not only on Archilochus (fr. 1 and Archil. fr. 84), but also on Phocylides (fr. 7 and Phoc. fr. 2). A piece of elegiac verse on the shortness of life which Stobaeus (4. 34) attributes to Simonides of Ceos has been ascribed with some reason to Semonides. He is also said to have written a history of Samos in two books of elegiacs (Suidas). Of his iambic fragments the longest, fr. 7, describes various types of women by comparing them to animals and shows the influence of popular fables; another, fr. 1, discourses on the illusions and uncertainties of life and prescribes a mean between desire and despair. Semonides has plenty of humour and some satirical gift; he writes easily. His language is Ionic. See also IAMBIC POETRY, GREEK.

Text: E. Diehl, *Anth. Lyr. Graec.* i. 3, pp. 50-64. C. M. B.

SEMOS of Delos (c. 200 B.C.) was a careful, scholarly compiler.

WORKS. (1) Geographical and antiquarian: *Delias* or *Deliaca*, on the geography, antiquities, institutions, products, etc., of Delos; *Nesias*, a work on islands; *On Paros*, *On Pergamum*, *Periodoi*.

(2) *On Paean*s, of which a valuable fragment survives describing the masks, dress, and performance of αὐτοκάβαλοι, ἰθυόβαλοι, φασσάφοροι (*FHG* iv. 492 ff.).

SEMPRONIUS, see ASELLIO, GRACCHUS, TUDITANUS.

SENATUS. I. REGAL AND REPUBLICAN ROME

(a) *Composition*. The Senate was the council of the kings and survived the monarchy. Tradition attributes to Romulus the institution of a Senate of 100 members, but the oldest certain number is 300, evidently connected with the 3 tribes and 30 curiae. Sulla increased the number to 600, Caesar to 900, and Augustus reverted to 600. The distinction between patrician and plebeian senators, whatever its origin, must have been already definite in the second half of the fifth century B.C. The patrician senators, called *patres*, continued to retain certain prerogatives (cf. below). Plebeian senators were called *adlecti* or *conscripti*. Patricians and plebeians together were called *qui patres qui conscripti* or *patres (et) conscripti*. *Senatores pedarii*, who voted but did not speak, were probably at first those who had not held magistracies, and later magistrates of low rank. The senators were chosen first by the kings, later by the consuls, and after the *plebiscitum* of Ovinus (q.v.) by the censors. Late in the third century it was the rule to choose first ex-curule magistrates, who could take part in the sessions before formal appointment. In the time of the Graeci plebeian aediles and, by the *plebiscitum Atinium*, *tribuni plebis* secured the same privileges. Sulla made admission to the Senate depend mainly on the quaestorship. Thus the Senate was recruited indirectly by popular election. Censors could only remove qualified persons if guilty of misconduct; the exclusion could be revoked by their successors. Certain professions (e.g. petty industry) and certain civic punishments or moral transgressions disqualified from admission. Freedmen or sons of freedmen were not usually admitted. A property qualification (1,000,000 sesterces) was first imposed by Augustus, but the senators usually had at least equestrian census.

Senators wore the *clavus latus* (q.v.) and special shoes of red leather. They had reserved seats at religious ceremonies and public entertainments. They were not allowed to leave Italy without the Senate's permission. Being excluded from State contracts and the possession of large ships (see CLAUDIUS 7), they were predominantly a landlord class. They had at times an exclusive or privileged position as judges in criminal and civil courts (see QUAESTIO 8). As office depended mainly on wealth and birth, 'new men' were rare, and the Senate tended to become hereditary (see NOVUS HOMO, OPTIMATES). Membership being *de facto* permanent, senators exerted great influence on internal and foreign policy. The transformation of the Senate into a body of ex-magistrates avoided serious clashes between the *imperium* of the magistrates and the *auctoritas* of the Senate and made the Senate responsible in the last centuries B.C. for the direction of the Roman State. The Republic collapsed when military leaders destroyed the authority of the Senate.

(b) *Procedure*. The Senate was summoned by the presiding magistrates, either holders of *imperium* or, later, tribunes, according to an order of precedence. Sessions were held between dawn and sunset, but were forbidden by a *Lex Pupia* (2nd or 1st c. B.C.) during the Comitia. Only during the Empire were the times of meeting fixed—usually two each month. The meeting had to take place either in Rome (see CURIA 2), or within a mile of the city, in a place both public and consecrated. The first sitting of the year was in the temple of Jupiter Capitolinus.

Sittings were held in private, but with opened doors, the tribunes of the plebs sitting in the vestibule in the period before their admission to sessions. Each senator spoke from his seat. Freedom of speech was unlimited during the Republic. Augustus imposed a time-limit. First came the report (*relatio*) of the chairman or another magistrate, who submitted it in writing. Each senator

was asked (*interrogatio*) his opinion (*sententia*), according to his rank (*censorii, consulares, praetorii, aedilicii*, etc.). Within each category the patricians took precedence, the senior patrician *censorius* of the *gentes maiores* (after 209 B.C. any patrician *censorius*) heading the list as *princeps senatus*. After Sulla the magistrate gave priority to the consuls designate or, in their absence, to any *consularis*; and *princeps senatus* became a merely social title open to plebeians. After the debate the different opinions were put to vote by a division (*discessio*). Sometimes *relatio* was followed by *discessio* without *interrogatio*. Certain resolutions required a quorum. Any resolution, called either *decretum* or, more commonly, *senatus consultum* (q.v.), could be vetoed by the tribunes. The urban quaestors kept the records in the *aerarium*. The publication of official reports in the *acta rerum urbanarum*, ordered by Caesar, was suppressed in part by Augustus. Improvements in short-hand made accurate reports possible.

(c) *Functions*. The Senate existed, formally, to advise the magistrates. The patrician senators retained two special functions. The first, which became a pure formality, was to ratify the deliberations of the People (and probably of the plebs) and was called *patrum auctoritas* (q.v.). The second was to elect an *interrex* (q.v.) for the arrangement of elections, if no magistrates were available.

The Senate advised the magistrates in matters of domestic and foreign policy, finance and religion, and on their legislative proposals. It could invalidate laws already voted by pointing out technical flaws in procedure. It suggested the nomination of a dictator, assigned the various duties to the magistrates, decided the *prorogatio imperii*, established the equipment (*ornatio*) for each magistrate and pro-magistrate, and marked out the two provinces destined for the consuls. In war-time it influenced the choice and the extension of commissions, fixed the number of the levies, and criticized the conduct of war. In finance it determined the rate of the tribute, supervised revenue and expenditure, and controlled the *aerarium*. It could order the censors to redraft contracts and regulated the coinage (at least of the mint of Rome). The practical decision of war, the conclusion of peace treaties, and the conduct of foreign policy were usually in the hands of the Senate, but the formal declaration of war and ratification of treaties belonged to the *Comitia*. It often received ambassadors and appointed senators to help the magistrates or pro-magistrates in concluding treaties and in settling the organization of conquered territory. The arbitration of the Senate was often asked by Italian communities, by provincials and client States. Religious life was controlled by the Senate, which contained the members of the principal priestly colleges and could order religious ceremonies and introduce new cults. In urgent cases the Senate could order dispensation from the observance of law, subject usually to ratification by the *Comitia*, and after the Gracchan period it could pass the *senatus consultum ultimum* (q.v.).

II. THE IMPERIAL AGE

(a) *The ordo*. In Augustus' view the preservation of the Senate's prestige was vital to his intended restoration of the Republic. The Senate was left to govern Italy and those provinces which required only small garrisons (see *PROVINCIA*). Consequently it retained the *aerarium*. But the emperor soon acquired control both of the *aerarium* and of the whole senatorial administration. The Senate retained only the supervision of copper coinage. Tiberius transferred to it the actual election of the magistrates, but the imperial *nominatio* and *commendatio* (q.v.) reduced the importance of elections to a minimum. Thus the self-recruitment of the Senate by the quaestorian elections was influenced by the will of the emperors, who could also, by *adlectio* (q.v.), directly introduce new members to any senatorial rank.

The Senate became a hereditary order, since, except for new men introduced by the emperor, only the sons of the senators could become senators. Most of the high offices in the State (governments of provinces, with few exceptions, commands of legions, *praefectus urbi, praefecti aerarii, legati iuridici, correctores*, etc.) were reserved for senators. The senators became a privileged class interested in preserving the Empire. Future senators served at first a year in the army as *tribuni laticlavii*, then held the vigintivirate and entered the Senate at twenty-five through the quaestorship. The senators were called *clarissimi*, a title extended during the second century to wife, sons, and daughters.

(b) *Functions and authority*. The Senate developed judicial functions from Republican precedents. A legislative power grew out of its advisory capacity. *Senatus consulta* had acquired full recognition as laws at least by A.D. 200. The emperor had the right of convening, presiding over and laying matters before the Senate, and had the titular position of *princeps senatus*. The *relatio* of the emperor took precedence. It was usually a written speech (*oratio*), which the later jurists quoted as authoritative rather than the subsequent *senatus consultum*. The number of senators attending meetings continually decreased. Mere *acclamations* were often substituted for discussion. On the whole, the Senate lost its independence; its freedom was restricted to the choice of a new emperor when the throne was vacant, or during a revolution. The Senate, however, was always in formal connexion with the People, the true repository of the *imperium*: it conferred his powers on the *princeps*. The acknowledgement of the Senate, therefore, was the condition of the legitimacy of an emperor (see *AUGUSTUS, PRINCEPS*). Furthermore, the Senate preserved a tradition of discussion, of competence, of respect for the public interest and for Republican procedure, and represented a sort of public opinion—of the wealthy classes. Friendly relations between Senate and emperors were taken to distinguish 'good' emperors from tyrants. *Damnatio memoriae* (q.v.) depended on the Senate.

(c) *From the Principate to the Late Empire*. In the late Republic numbers of municipal Italians and even some provincials entered the Senate, especially under Julius Caesar. Under the Empire, the number of provincial senators increased almost continuously, but until the time of Septimius Severus the majority were Italian. In the first century the provincials came mostly from Spain and Gallia Narbonensis; afterwards Orientals and Africans prevailed. The Danubian provinces never supplied many members.

The distinction between senatorial and imperial provinces was gradually eliminated, and the *aerarium* became simply the city-treasury of Rome. Gallienus deprived senators of the command of legions and greatly reduced their share of provincial government. The increasing importance of the *Equites* resulted under Constantine in a virtual fusion of the two orders. This new senatorial order recovered much administrative authority. Consequently, the number of senators greatly increased (probably 2000, c. A.D. 350). Constantine matched the Senate of Rome with another in Constantinople, which in A.D. 359 was made completely equal to that of Rome. Entry to the Senate was now through the praetorship; and the usual imperial *adlectio* was *inter consulares*. Senators were divided into three groups: *clarissimi*; (*clarissimi et spectabiles*); (*clarissimi et illustres*). By 450 the two lower classes were excused from attendance in the capital. Under Justinian only the *illustres* were entitled to speak, *sententiam dicere*. The *praefectus urbi* usually presided. Senators were free from municipal burdens, but subject to special taxes. As a political body the Senate naturally declined still further; but it remained the representative of the Roman People and continued to legislate. As a body of great landlords, the Senate

remained an essential element of the social structure of the Empire. In the fourth century senators led the defence of Paganism in Italy and in the fifth many assisted the barbarian generals to destroy imperial authority. The Roman Senate is last mentioned in A.D. 580.

SENATUS CONSULTUM was the advice of the Senate to the magistrates. In Republican times it had no legislative force, but *de facto* it was binding. If it was vetoed, it lost its binding force, but conserved the *senatus auctoritas*. During the Empire the *senatus consulta* were at first implemented by a clause in the praetor's edict; after Hadrian certain *senatus consulta* immediately had the force of law. The *senatus consultum* was drafted after the session of the Senate in the presence of the presiding magistrate and some witnesses, usually including the proposer. If necessary, it was translated into Greek. Many *senatus consulta* are preserved in their Greek translation.

A *senatus consultum* usually contained: (1) the name of the presiding magistrate, date, place of assembly, witnesses; (2) the magistrate's report; (3) the introductory formula: 'd(e) e(a) r(e) i(ta) c(ensuerunt)'; (4) the terms of the *consultum*, which often confirmed its own advisory nature in references to the magistrates such as s(i) e(is) u(i)debatur; i(ta) u(tei) e(is) e r(e)p(ublica) f(ideu) s(ua) u(ideatur); (5) the letter C (= *censuere*), indicating senatorial approval. In the Imperial age was added the number of the senators present.

The texts of *senatus consulta* were deposited in the *aerarium*. Another copy was in ancient times given to the plebeian sanctuary of Ceres. The documents were classified, but not sufficiently to avoid losses and falsifications. The jurists often named them after one of the consuls of the year (*SC Orfitianum*) or more rarely after the emperor who proposed them (*SC Claudianum*) or after the occasion of the *SC* (*SC Macedonicum*).

Many *senatus consulta* are collected in Bruns, *Fontes* (1909). For the Greek texts, P. Viereck, *Sermo graecus quo S P Q R magistratque populi romani . . . uti sunt* (1888), is fundamental. P. Willems, *Le Sénat de la république romaine* i. 248; ii. 204; O'Brien Moore, *PW*, Suppl. vi, 800 (with a list of *SC*). A. M.

SENATUS CONSULTUM ULTIMUM, a declaration of public emergency by the Senate, usually interpreted as authorizing the magistrates to employ every means of repression against public enemies (not necessarily

specified *nominatim*), without being subjected to *provocatio* and *intercessio* (Sall. *Cat.* 29). The formula was: 'senatus decreuit darent operam consules ne quid res publica detrimenti caperet' (Sall. loc. cit., cf., e.g., Caes. *BCiv.* i. 5). The proper name was *SC de republica defendenda*. The name *SC ultimum* is derived from Caesar, loc. cit.

Its first certain use concerned C. Gracchus. The other assured instances are: the 'tumultus' of Saturninus and Glaucia (100 B.C.), against Sulla (83), Lepidus (77), Catiline (63), in the disturbances of 62 (Metellus Nepos) and 52 (Clodius), against Caesar (49), M. Caelius Rufus (48), the disturbances of Dolabella (47), against M. Antonius and against Octavian (43). It was last employed against Salvidienus Rufus in 40.

The exercise of this power by the Senate was hotly contested, e.g. in connexion with C. Rabirius (q.v.). The law of Clodius *de capite civis Romani* in 58 was also a partial condemnation of the *senatus consultum ultimum*.

Last, *CAH* ix. 84; id. *JRS* 1943, 94. A. M.

SENECA (1), LUCIUS (or perhaps MARCUS ANNAEUS), writer on rhetoric, was born of equestrian family at Corduba in Spain about 55 B.C. Of his life we know little; he was certainly in Rome both as a young man and after his marriage, and his knowledge of the contemporary schools of declamation implies that he spent much time there. He amassed a considerable fortune and may have held an official post in Spain or engaged in trade. By his marriage with Helvia, a fellow countrywoman, he had three sons—Annaeus Novatus, who after adoption by L. Junius Gallio became governor of Achaëa, L. Annaeus Seneca (q.v. 2) the philosopher, and M. Annaeus Mela, the father of Lucan. He died between A.D. 37 and 41, after the death of Tiberius and before the exile of his son the philosopher.

His historical work, covering the period from the outbreak of the civil war to his death, is lost. The *Oratorium sententiae divisiones colores*, addressed to his sons, consists of extracts, supplied by his retentive memory, from the declaimers whom he had heard during his long life, interspersed with digressions and comments of his own. The work comprised ten books devoted to *controversiae*, each with a preface, and at least two devoted to *suasoriae*. In our manuscripts only five books (1, 2, 7, 9, and 10) of the *controversiae* and one of the *suasoriae* have survived and these have suffered some mutilation: an abridgement made for school use (probably 4th c.) gives us some knowledge of the contents of the missing books of *controversiae* and, what is more important, preserves, with some mutilation, seven of the prefaces.

Shrewd observation, a phenomenal memory, and an experience extending from Cicero's age into the reign of Gaius make Seneca's work a most valuable source for the literary history of the early Empire. The rhetorical schools were his lifelong interest, but he clearly recognized their excesses and dangers. While the new movement fascinated him, his own sympathies were with the oratorical tradition of Cicero. The specimens of the handling of some forty themes by more than a hundred *rhetores*, great and small, if they are not verbally exact quotations, show remarkable skill in reproducing the styles and mannerisms of others; they are relieved by pithy incidental criticisms and scraps of literary reminiscence which serve to maintain the atmosphere of informality. Seneca's own views, both on individual declaimers and on the general tendencies of his time, are developed at greater length in the prefaces, written in an easy but terse and incisive prose which represents the transition from the periodic to the pointed style. The

work bears out the character ascribed to him by his son: he was 'maiorum consuetudini deditus', a man of old-fashioned Roman strictness, fair-minded but suspicious of novelty and of Greek culture, critical of the decadence of contemporary society but combining seriousness with a satiric humour. See also LITERARY CRITICISM, LATIN, para. 4.

SENECA (2), LUCIUS ANNAEUS, born at Corduba, c. 5 or 4 B.C., was the second son of (1) above. The family was equestrian, wealthy, and distinguished. As a small child, Seneca was taken to Rome in charge of an aunt, his mother Helvia's sister, and by her care was pulled through an ailing childhood and early youth, while her influence helped him in early stages of his official life. At Rome he studied the rhetoric which was a natural prelude to a senatorial career, and (against his father's liking) the philosophy which, with money-making and the lesser hobby of viticulture, formed his lifelong unofficial pursuit. His first step in the *cursum*, the quaestorship, came perhaps shortly after A.D. 32. Details of his beginnings are as lacking as definite dates, but we know that by Caligula's accession he ranked as an orator and writer of the first standing, and that this fact, as an affront to the Emperor's megalomania, nearly caused his death. Seneca was in his mid-forties when in Claudius' first year, 41, Messalina secured his banishment to Corsica for adultery with Julia Livilla, an improbable enough charge to suggest an ulterior but equally unproven motive. In Corsica he remained, broken and unstoically despondent, till in 49 he was recalled by Agrippina's influence and, with Afranius Burrus, appointed tutor to Nero, a praetorship in 50 sealing his rehabilitation. With Nero's accession in 54, S., still associated with Burrus, passed from tutor to minister, obtaining in 55 or 56 a suffect consulate, which marks roughly the peak of his ministerial influence. He and Burrus were reluctant accessories to Agrippina's murder in 59, and it was Seneca who composed Nero's explanation to the Senate. On the death of Burrus, three years later, S., now nearing seventy, attempted to retire and relinquish his very great wealth to the Emperor, his relations with whom had become strained. Nero refused the gift, though in 64 he seems to have partially reconsidered the refusal in view of the need for restorations after the Great Fire; the retirement he permitted, at least tacitly, for Seneca henceforth spent little time in Rome and much in Campania, living in the leisure which the letters to Lucilius Junior incidentally reveal. When the Pisonian conspiracy foundered in 65, Seneca was named among those concerned by one of the conspirators; further evidence seems tenuous, but it sufficed. He faced the self-inflicted end he was permitted to choose with tranquillity, and must be allowed a courage in his death which in his life had not been so evident. Seneca married twice: his infant son by his first wife died before the exile; his second, Pompeia Paulina, considerably younger than himself, would have died with him but for Nero's intervention.

2. Seneca's extant works do not comprise his whole literary performance. All his forensic oratory has vanished—a specially regrettable loss. There are scraps, titles, or mentions of some dozen other works not extant, and he himself speaks (*Dial.* 1 = *De Prov.* 1, 1, *Ep.* 106. 2) of a design for a comprehensive ethical survey; but the lateness of the references and perhaps his own temperament suggest that this was a design only. The survivals, containing few materials for dating them, leave the tracing of intellectual or stylistic development mainly conjectural.

3. We have first ten pieces passing under the misnomer of *Dialogi*. Of these, three are formal *consolationes*—*Ad Marciam*, *Ad Polybium*, and *Ad Helviam Matrem*, the first dateless but probably not late, the other two belonging to the early part of the exile. The remaining seven are philosophical or ethical treatises: *De Providentia*, showing that the sufferings of the good under Providence are only apparent, dedicated to Lucilius and probably late; *De constantia sapientis*, on the impossibility of the Stoic adept, written after Caligula's death; *De ira*, a rather badly constructed discussion of the nature, futility, and cure of anger, addressed to his brother Novatus, and probably to be placed early in Claudius' reign; *De vita beata* (incomplete), an exposition of the Stoic theory of happiness, addressed to the same brother (but now as 'Gallio', hence later than *De ira*), containing an apologia for the philosophic millionaire which sounds personal, and hinting at a date not far before the sacrifice of 61; *De otio*, a fragment justifying retirement from public life for the Stoic, perhaps pointing to a slightly later phase of the same crisis; *De tranquillitate animi*, presenting Annaeus Serenus, who seeks advice on the occasional vacillations of the proficient, an imposing but irrelevant discourse on the disquiets of the idle and vicious, probably not early; *De brevitate vitae*, maintaining to Pompeius Paulinus that life is long enough if no time is wasted, written apparently in 49.

4. Three other prose treatises stand outside the *Dialogi*: *De clementia* (the autocrat should be merciful), seemingly addressed to Nero early in his reign, one book and a part out of an original three; *De beneficiis*, to one Aebutius Liberalis, on the nature of benefits, their proper recipients, and so forth, unsystematic and rather patchily readable, written intermittently after Claudius' death; *Naturales quaestiones*, dealing with curiosities of fire, air, and water, and the nature of winds, earthquakes, and comets, its recipient being Lucilius and its central date 63 (see METEOROLOGY). Of the *Epistulae morales*, to the same person and of the same period, we have 124, and know that others are lost; in these Seneca plays the part of philosophic and ethical director to a less advanced friend.

5. The *Apocolocyntosis*, in the medley of prose and verse proper to Menippean satire, is a venomous and moderately amusing skit on the deification of Claudius, written just after his death.

6. Seneca's prose is a highly rhetorical product, owing its stimulus to the practice of *recitatio* and the consequent need to sparkle, in an easily bored generation. His mastery is rather of epigrammatic point and the artifice appropriate to its presentment than of language as a sustained and flexible means of expression. So, too, his thought is rather spasmodic than consistent and his ethical ring truer in emotional appeal than in speculation. His letters are his most attractive work: their purpose makes no great demands on originality, and gives scope for an undoubted experience of men and an innocuous assumption of the superiority so necessary to his egoism, while the epistolary form allows the development of themes in isolation, without too much revealing a weakness in sustained and constructive thought, and admits relief in glimpses of personal circumstances and social conditions. His 'causidicalis argutia' and 'uernacula eruditio' (Gellius 12. 2) are there, but in this environment have a not unpleasant freshness.

7. His most important poetical works are nine tragedies: *Hercules* [*Furens*], based generally on the *Hercules Furens* of Euripides; *Troades*, with a dual source in Euripides' *Troades* and *Hecuba*; *Phoenissae*, so disjointed that it is doubted whether its episodes belong to one play; *Medea*, mainly empurpled Euripides, but other sources may here and there be latent; *Phaedra*, the myth debased to a not very subtle story of minx and misogynist; *Oedipus*, with a considerable Sophoclean basis; *Agamemnon*, in

which a debt to Aeschylus is rather to be assumed than easily traced; *Thyestes*, a crassly horrific treatment of the gruesome myth, without extant source; *Hercules Oetaeus*, with but little in it, apart from subject, to suggest the *Trachiniae*—long, dull, and psychologically incredible.

8. A tenth tragedy, *Octavia* (q.v.), interesting as the sole surviving *praetexta*, and for its subject, but for little else, long and strangely ranked, against its own unequivocal evidence, as Seneca's; it is now recognized as Senecan pastiche.

9. That the tragedies were written for reader or listener rather than playgoer is shown by episodes unsuited for stage presentation. Their strength lies in passages of rhetorical and descriptive power; their weakness, glaringly emphasized beside Greek counterparts, in crude characterization and psychology. Conventional moralizing (mainly Stoic) companions the bloodily macabre, and peaks of emotional stress are seldom unpointed (or untravestied) by epigram. Their versification is polished but monotonous in texture, while the choruses, lacking the relief of strophic arrangement, frequently hammer at one short metrical phrase, without system-break or other diversion, *ad nauseam*.

10. The tragedies cannot be dated, but suggest the clever immaturity of a youngish man. Though false standards of taste and their peculiar survival-position gave them an undue influence on the early moulding of modern tragedy in England and elsewhere, it is now less by their own merits than as a clue to the author's character that they interest us.

11. Besides the tragedies we have seventy-seven epigrams, a few handed down under Seneca's name, and others attributed to him with more or less probability. A recent survey (Peyrani) allows more than forty of them, on linguistic and other grounds, a reasoned authenticity, but it is a fragile canon.

12. Seneca's character, with its lamentable rift between principle and practice in crises, is sometimes pronounced detestable. He preached detachment and was conspicuously a money-maker; defiance of circumstance, yet whined in Corsica and crawled before Polybius (q.v. 2); contempt for death and pain, yet, till finally trapped, evaded them by flagrant complaisance. He could vent spite, or curry favour, or both by clever sniggering at a dead and by no means contemptible emperor, yet five years later connives supinely at more than common murder by a vicious live one. With all this he affects the moral guide. Such is briefly the indictment. It may be observed, first, that most neurotics are superficially detestable either to a small or a large audience, but that the causes are preponderantly beyond their control, the problem more clinical than moral, and detestation irrelevant; second, that Seneca's life and works present a fairly clear-cut picture of neurosis. The early ill-health is significant: youthful designs of suicide (*Ep.* 78. 2) and a temporary leaning to occultism of the ascetic-ceremonial kind (*Ep.* 108. 17 ff.) point to neurotic maladjustment, despair over physical inferiority and, alternatively, flight from reality. The flight proceeds in his philosophy, which becomes a ready-made escape-system (analogous to but less obvious than the arbitrary system of complete paranoia) in which he moves a leader calm and unruffled, compensating and submerging his inferiorities, inadequacies, and dismal failures before the reality to which he can react only with discomfort or terror. Consistent with this are his thought and style, neither architectonic: the one capable of developing cleverly rather than profoundly a limited theme, but hardly of framing and supporting a consistent personal philosophy; the other aiming at point rather than period, and displaying at times a considerable eloquence of the propagandist type, with an appeal rather to emotion than intellect. In the tragedies, too, we meet no product or promise of a balanced artist-mind, but the primitive thought-forms,

rough-hewn idola, and nightmares risen out of a tortured egoist's unconscious mind. Everywhere are traceable the erratic ability and the limitations which are common stigmata of paranoiac abnormality. Abnormal his character is; not devoid of a disfigured greatness in its mutilation, and one which it is more profitable to understand than to condemn unconditionally.

SENECIO, *see* HERENNIUS; SOSIUS.

SENONES, the last Gauls to settle in Italy, came from a parent stock which in Caesar's time inhabited the Seine basin (Caesar, *BGall.* 2. 2, etc.). In Italy, ousting the Umbrians, they established themselves on the Adriatic coast between Ariminum and Ancona, the Ager Gallicus of historical times. Diodorus and Livy, but not Polybius, say that Senones led the marauding Gallic band that captured Rome in 390 B.C. Thereafter Senones remained a constant menace for 100 years until Rome subjugated them in 283 (Polyb. 2. 17 f.; Diod. 14. 113 f.; Livy 5. 35). They then disappeared from Italy, being either expelled or massacred. Their territory was used partly for colonies (Sena, Ariminum), partly for the allotments which Flaminius assigned to individual Roman citizens in 232.

For bibliography *see* CISALPINE GAUL.

E. T. S.

SENTENTIA, in the language of Roman literary and rhetorical criticism, means the finished expression of a thought. In post-Augustan times the word is used especially to denote the terse, pointed, epigrammatic expression of a striking thought (cf. Quintilian 8. 5. 2), which often is of general application (in which case *sententia* is equivalent to 'aphorism', 'wise saw'), but is not necessarily so; any striking thought expressed in this terse, pointed manner can be denoted by the word *sententia*.

Such *sententiae* are found in early Latin literature, e.g. in the elder Cato (from whom Seneca (*Ep.* 94. 27) quotes 'emas non quod opus est, sed quod necesse est; quod non opus est, asse earum est', as an example of a thought 'packed into a *sententia*'). Quintilian (12. 10. 48) tells us that he finds such *sententiae* in Cicero; they are found also in the fragments of Varro's *Saturae Menippeae* and in the historian Sallust; and the mime of the late Republic afforded ample scope for their use (cf. the surviving *Sententiae* of Publilius Syrus (q.v.); e.g. 'tam dest avaro quod habet quam quod non habet'). It was in the Silver Age, however, when the influence of the rhetorical schools on literature became much more marked, that the employment of *sententiae* reached its full development. In prose, for instance, the moralizing essays of Seneca are full of them, and Tacitus uses them with masterly effect (e.g. *Agr.* 30. 7 'ubi solitudinem faciunt, pacem appellant'). So too in verse: e.g. the dramas of Seneca, the epic of Lucan (whom Quintilian, with references to this characteristic, calls 'sententiis clarissimus'; e.g. 1. 128 'uictrix causa deis placuit sed uicta Catoni'), the satires of Juvenal (e.g. 1. 74 'probitas laudatur et alget'), and, of course, the epigrams of Martial.

See W. C. Summers, *Select Letters of Seneca*, Introduction A ('The pointed style in Greek and Roman literature'); J. Wight Duff, *Lit. Hist. Rome (Silver Age)*, Index and passim. *See also* CROMY (ὑπόμνημα). W. S. W.

SENTIUS, see **SATURNINUS** (2).

SEPTIMIUS (1), **PUBLIUS**, a Republican writer on architecture mentioned by Vitruvius (7. *praef.* 14).

SEPTIMIUS (2) **SERENUS**, one of the 'neoteric' school in Hadrian's time, wrote rural poems.

Teuffel, § 353.

SEPTIMIUS, LUCIUS, see **DICTYS**.

SEPTIMIUS, see also **GETA**, **ODAENATHUS**, **SEVERUS**, **VABALLATHUS**.

SEPTIZONIUM, a famous ornamental façade, screening the south-east corner of the Palatine Hill at Rome, and dedicated by Severus in A.D. 203 (*CIL* vi. 31229). It closed the vista of the Via Appia like a stage-back-ground, in which the elements were three large niches girt with three stories of colonnading. Earlier examples of *septizonia* occur in Rome (Suet. *Titus* 2, schol. cod. Berolin. fol. 337) and Lambaesis (*CIL* viii. 2657). The adjective *ἐπτάζωνος* is applied to the seven planets (Dio Cass. 37. 18), and although the word is not itself used metathetically of the days of the week which they govern (see Dombart, *PIW*, s.v.), the representations of these gods upon calendars is a common-place. Perhaps, therefore, these great ornamental façades, filled with statuary, mosaics, and numbers, served as public calendars as well as embellishments.

Ch. Hülsen, *Das Septizonium des Septimius Severus*, *Winckelmanns-programm*, n. 46 (1886); Th. Dombart, *Das Septizonium zu Rom* (1922). I. A. R.

SEPTUAGINT (in abbreviation, **LXX**), the collection of writings which became the Old Testament of the Greek-speaking Church. They are mainly translated from the Hebrew (or Aramaic), but include in the Apocrypha some pieces originally composed in Greek.

The name is derived from a story told in Greek by a Jewish writer in the Epistle of Aristaeas to Philocrates to the effect that in response to a suggestion of his librarian, Demetrius of Phalerum, Ptolemy II Philadelphus asked for a copy of the Jewish law, and was sent from Jerusalem seventy-two learned Jews who at Alexandria made a translation of it for the royal library. The story which at first has some verisimilitude is embellished by later writers with legendary elements and extended to include beside the Law the other translated books.

The translation was evidently done by different hands at different times. Nearly all of it was finished before the Christian era. It was intended probably for use by those Jews whose first, or only, language was Greek, or possibly for use in attracting Gentiles to the synagogue. Apart from Jews or Christians, few writers show any knowledge of it. Greek and Roman references to things Jewish are not derived directly from the **LXX**. The single citation of Genesis in the anonymous treatise *On the Sublime* 9. 9 is an exception that proves the rule. The influence of the **LXX** is probably first manifest in less literary circles, as in the *Corpus Hermeticum* and in the magical papyri. The rendering varies in style and literalness; when not influenced by the underlying Semitic, the Greek as in the New Testament represents the vernacular Hellenistic (*Koine*).

Since the Hebrew from which the **LXX** was translated is older than the oldest Hebrew manuscripts extant, and even than the standardized (Massoretic) text, the **LXX** is invaluable in efforts at reconstructing the original text of the Old Testament. The **LXX** itself was corrupted in copying and was revised. Origen collated it in his famous *Hexapla* not only with the Hebrew, but with the Greek versions of Aquila, Symmachus, and Theodotion. It was (with some exceptions) the text used in scripture quotation by the New Testament and later Christian

writers, as well as by Philo and Josephus. It had some influence upon the Vulgate and other versions of the Old Testament.

Critical text: A. Rahlfs (1936), *Septuaginta* (ix. 1, x. xiii, xiv), Göttingen 1931-. Text with apparatus: A. E. Brooke and N. McLean (1906-), H. B. Swete 1907-12 (and later reprints). Textual criticism: F. G. Kenyon, *Text of the Greek Bible* (1937). Introduction: H. B. Swete (2 vols., ed. 1914). Handbook: R. R. Ottley (1920). Grammar: R. Helbing (1907). H. St. J. Thackeray (1909), Abel (Paris, 1927). Influence: A. Deissmann, 'Die Hellenisierung des semitischen Monotheismus' in *Neue Jahrb.* vi (1903); H. St. J. Thackeray, *The Septuagint and Jewish Worship* (2nd ed. 1923); C. H. Dodd, *The Bible and the Greeks* (1934); C. H. Roberts, *Two Biblical Papyri in the John Rylands Library* (Manchester, 1936); F. Wulz, 'Systematische Wege von der Septuaginta zum hebräischen Urtext', *JTS* xiv (1937), 158-61.

Aristaeas. Text: Teubner (Wendland, 1900), Swete (see above). Translation: Thackeray (1917); H. G. Meecham, *The Oldest Version of the Bible* (1932); H. G. Meecham, *The Letter of Aristaeas* (1935); W. W. Tarn, *The Greeks in Bactria and India* (1938, excursus). Concordance: Hatch and Redpath (1896-1906). H. J. C.

SERAPION (1) of Alexandria, founder of the empirical school of medicine (c. 200-150 B.C.), wrote (1) *Πρὸς τὰς διαίσεις*; (2) *Θεραπευτικά*. He placed individual observation and experiment first, the statements of recognized authorities second, and argument from analogy third—to be used when the other two are lacking. He is much praised by Galen.

PIW ii A. 1667.

W. D. R.

SERAPION (2) of Antiocheia, a mathematical geographer (2nd or 1st c. B.C.), held that the sun is eighteen times the size of the earth. He also wrote on astrology. He may probably be dated later than Hipparchus and Ptolemy, and earlier than Ptolemy.

Ed. in *Catalogus Codicum Astrologorum*. *PIW* ii A. 1666.

W. D. R.

SERAPIS, see **SARAPIS**.

SERENUS (1) **SAMMONICUS**, a voluminous writer of the time of Septimius Severus (A.D. 193-211), was murdered by Caracalla's orders in A.D. 212. His only known work is *Res reconditae*. He had a library of 62,000 books.

PIW ii A. 1675.

SERENUS (2) (or **SERENIUS**), **QUINTUS** (or **QUINCRIUS**), author of a medical text-book in verse, *Liber medicinalis*, which may be dated between the end of the second and the fourth century. It depends in the main on the *Medicina Plinii* and on Pliny's Natural History. The author may have been the poet Serenus Sammonicus (son of the other Serenus Sammonicus, q.v.), who was a friend of Gordian I (b. c. A.D. 159) and the teacher of Gordian II (b. c. 192), and died before 235.

PIW ii A. 1675. Ed. F. Vollmer, *CML* ii. 3 (1916).

W. D. R.

SERENUS (3), mathematician, from Antinoë in Egypt (formerly thought to be of Antissa in Lesbos), may probably be dated between Pappus and Theon of Alexandria (i.e. c. A.D. 300-50). Two of his works are extant: *Περὶ κελύδρου τομῆς* and *Περὶ κώνου τομῆς*; both edited by J. L. Heiberg (1896). A commentary on the *κωνικά* of Apollonius of Perga has been lost. Serenus is not of first-rate importance, but preserves much that is of value from earlier writers, notably Apollonius.

PIW ii A. 1677.

W. D. R.

SERES, the Chinese and Tibetans, first known to Greeks left by Alexander in inner Asia. Aristotle knew vaguely of silk, but not of China. They became famous from Augustus' time as producers of silk sent by land to Asia Minor and by sea to Egypt. As trade developed, the name Seres was applied to Chinese and Tibetans as

approached by land, 'Sinae' being their name as approached by sea from India. By Nero's reign further Chinese products were reaching the Roman Empire, the Seres were definitely placed above India, and some geographical details filtered through. In A.D. 97, after Chinese conquests in central Asia, Kan Ying visited Antioch, and c. 120 a 'Roman' Maes Titianus sent agents, probably to Kashgar and Daraut Kurghan (where 'Chinese' were met) and beyond. These learnt of cities—Daxata (*Singanfu?*), where Roman coins have been found) and Sera (*Loh Yang?*), seven months from Kashgar (or Daraut Kurghan), and gained rough ideas of Pamir, Tian Shan, and Altai Mountains, and of rivers (Hwang-ho and Yang tsze-Kiang?), but nothing of the sea east of China. They proved that silk was an animal product. Meanwhile one Alexander had explored from India to Cattigara (q.v.); others reached the Sinae in China itself, naming their capital 'Thinae' (*Nanking?*). Yet Ptolemy made the Chinese coast face west and join Africa. In 166 a mission reached China from Marcus Aurelius, another in 284. About 550, silk-moth eggs were smuggled to Constantinople.

Ptol. *Geog.* 6. 16. 1 ff. (Seres); 7. 3. 1 ff. (Sinae); Warmington, *Indian Commerce*, 36-7, 71-2, etc. F. Hirth, *China and the Roman Orient* (1885). Honigsmann, *PW*, s.v. E. H. W.

SERFS. Various Greek States possessed unfree agricultural labourers that are best described as serfs. In opposition to slaves they consisted of groups of natives reduced to hereditary servitude. They normally had families and homes of their own on the estates of their masters; they turned over to the latter a part of the produce of the land and kept a part for themselves. Greek tradition attributed their status to conquest, and in the case of two groups (the *maryandynoi* of Heraclea Pontica and some of the *penestai* of Thessaly) reports a compact made between them and their masters. Serfdom has assumed so many forms that the name is not inappropriate, even if some of the features of Greek serfdom differ from those of the better-known examples. Thus the compacts mentioned forbid sale beyond the borders and so imply that sale within the borders was permitted, which, furthermore, is specifically attested for the *maryandynoi*. Best known of all are the helots (q.v.) of Sparta, the *penestai* of Thessaly, and the serfs of Crete, but serfdom is attested also for Argos, Sicyon, Byzantium, and Heraclea Pontica, and seems to have been common in Asia Minor, Magna Graecia, and Sicily. The distribution suggests that it was common particularly in Doric States. In Crete the great code of Gortyn does not seem to have differentiated between slaves and serfs, but later there were special names both for serfs on public (*μνωῖται*) and on private estates (*ἀφαιμῶνται* and *κλαρῶνται*). For the position of the *hektemoroi* of early Athens and the *coloni* of late Rome see *HEKTEMOROI* and *COLONI*.

ANCIENT SOURCES: Pollux 3. 83; Athen. 6. 263-71; other scattered references. Discussions of serfdom in individual States are common, but comprehensive accounts rare.

MODERN LITERATURE: *Encycl. Social Sciences*, s.v. 'Serfdom'; G. Busolt, *Griechische Staatskunde* (1920), 135-8, 283-8, and *passim*. J. A. O. L.

SERGIUS, author (date unknown) of *Explanations in Donatum* (ed. Keil, *Gramm. Lat.* iv. 486-565; cf. also 475-85). In manuscripts his name is often confused with that of Servius.

SERGIUS, see also *CATILINE*.

SERMO bears a variety of meanings in Latin. Besides being used for conversation, verse in conversational manner and with satiric bent (as in Lucilius and Horace), for style, and for the language of a nation (*in Latino sermone*, Cic. *De Or.* 3. 42), *sermo* is in rhetoric especially applied to the sketch of effective lines of argument well illustrated in the set of shorter pseudo-Quintilianean *declamationes* (q.v.). J. W. D.

SERPENTS, SACRED. As the *δεισιδαίμων* in Theophrastus (*Char.* 16. 4) when he sees a snake in his house takes it for a warning to invoke a god or found a *heroon*, it may be assumed that less pietistic persons had similar feelings regarding some serpents. They are, indeed, the regular accompaniment of heroes and of some, especially chthonian, deities. Sabadius is mentioned in Theophrastus; the god whom Aeschines' mother is alleged to have served, apparently Attis (Demosth. 18. 260), had snakes in his ritual, which were handled by some of the officiants; Zeus Meilichius is represented by a huge snake (Harrison, *Prolegomena*, p. 18 and fig. 1). When, therefore, Alexander of Abonutichus produced his new god in serpent form (Lucian, *Alex.* 7 ff.) he was following time-honoured tradition. In Italy the serpent was connected with the genius (q.v.), cf. Cicero, *Div.* 2. 62, where Ti. Sempronius Gracchus, father of the tribesmen, sees two snakes, a male and a female, in his bedroom and is told that according as he kills one or the other, he or Cornelia will die, which duly comes to pass. However, they are not found only in this context. Apart from foreign cults (as that of Aesculapius, see especially Ovid, *Met.* 15. 669 ff., where the god in serpent form follows the embassy sent to bring him to Rome) and stories of foreign colour (as Tacitus, *Ann.* 11. 11. 6), in the old Italian worship of Juno Sospita the serpent played a part (Prop. 4. 8. 3 ff.). See also *ANIMALS, SACRED*; *ASCLEPIUS*, para. 5; *RELIGION, MINOAN-MYCENAEAN*.

H. J. R.

SERRANUS, an epic poet who died prematurely, mentioned with Saleius Bassus (q.v.) by Quintilian (*Inst.* 10. 1. 89-90) and Juvenal (7. 80).

SERRANUS, see *ATILIUS*.

SERTORIUS, QUINTUS (c. 122-72 B.C.), was of Sabine extraction. He was *tribunus militum* in Spain (98) and legate in the Social War. Since Sulla barred his election to the tribunate, he declared for Marius, although he did not approve his Terror. Appointed governor of Hispania Citerior (83), he was proscribed by Sulla and escaped to Mauretania, where he defeated a Sullan army. He failed in an attempt to return to Spain and is said to have dreamed of fleeing to the Blessed Isles. Later, invited by the Lusitani, he successfully returned to Spain, where he gathered around him many Roman followers and gained the goodwill of the natives, who regarded his white fawn as a sign of divine protection. While his general Hirtuleius overran Hispania Citerior, Sertorius defeated Fufidius, legate of Ulterior (80) and, by guerrilla tactics, his successor Metellus Pius (79-78). Reinforcements under Perperna (q.v.) reached him in 77. Master of most of Spain, Sertorius created a rival Senate of 300 Romans and established a school for sons of native chiefs at Osca (*Huesca*), thereby incidentally gaining hostages.

Sertorius prevented Metellus joining Pompey, who arrived with reinforcements (77), and outmanoeuvred Pompey near Lauro (76). But Metellus defeated Hirtuleius near Segovia (75), while control of Carthago Nova assured the communications of the senatorial commanders with Italy. After Sertorius had won a half-victory near the Sucro (Jucar), his enemies effected a junction (75). Sertorius negotiated an ineffective military alliance with Mithridates (75), but could not check the slow exhaustion of his movement. His popularity, and possibly his character, declined, until he was murdered by Perperna in 72.

Sertorius, like Caesar, was one of several Roman generals who tried to master Rome from the provinces. By necessity or inclination he dealt generously with his native supporters and linked himself with the enemies (Mithridates and pirates) of the senatorial government.

But despite military skill, chivalrous bravery, and personal integrity he failed to master and unify the movement.

Sources: Plutarch, *Sertorius*, from Sallust; fragments of Sallust's *Historiae*; Diodorus 37. 22; Appian, *BCiv.* 1. 108-15; Livy, *Per.* 90-6. See Schulten, *Fontes Hist. Antiquae*, iv. Cf. Rylands Papyri iii, n. 473 (1938). Modern: A. Schulten, *Sertorius* (Leipzig, 1926); T. Rice-Holmes, *The Roman Republic* i (1923); V. Ehrenberg, *Ost und West* (1935), 177 (with bibliography). A. M.

SERTORIUS, see also MACRO.

SERVASIUS, SULPICIUS LUPERCUS, JUNIOR ('Sebastus', cod. Leid. Voss. of Ausonius; 'Sebastus', Schryver, Bachrens; 'Servastus', Wernsdorff), a fourth-century A.D. schoolman of uncertain name, has left three Sapphic stanzas *De vetustate*, and forty-two elegiac lines *De cupiditate*.

Text w. tr.: J. W. and A. M. Duff, *Minor Latin Poets* (1935).

J. W. D.

SERVILIA (b. c. 100 B.C.) was daughter of Q. Servilius Caepio and Livia (the sister of M. Livius Drusus), step-sister of Cato Uticensis and mistress of Caesar. She married first M. Junius Brutus, to whom she bore Brutus, the murderer of Caesar, and next D. Junius Silanus (*cos.* 62). Her three daughters by Silanus became respectively wives of the triumvir Lepidus, P. Servilius (*cos.* 48), and C. Cassius, the murderer of Caesar. She was the real head of one of the most important aristocratic groups of Rome. After Caesar's death her influence on Brutus was considerable.

F. Münzer, *PIV* ii A. 1817; R. Syme, *The Roman Revolution* (1939), see index. A. M.

SERVILIUS (1) **AHALA**, GAIUS. The legend that Servilius saved his country in 439 B.C. by killing the usurper Sp. Maelius (q.v.) with a dagger concealed under his armpit was probably invented as an aetiological myth to explain the *cognomen* Ahala or Axilla (i.e. armpit) borne by the *gens* Servilia. When it was discovered that Servilius Ahalae occurred in the Fasti before 439, a different version was elaborated, according to which Servilius acted neither as a private citizen nor illegally, but as Master of Horse in Cincinnatus' second (fictitious) dictatorship. Later embellishments, due to political propaganda of Graecian and Sullan times, include Servilius' exile from his ungrateful country. The legend of the tyrannicide and saviour of republican liberty decisively influenced a descendant of the *gens* Servilia, M. Brutus.

Mommien, *Röm. Forsch.* ii. 199 ff.

P. T.

SERVILIUS (2) **VATIA ISAUERICUS**, PUBLIUS (134-44 B.C.), assisted Sulla in his last campaigns against the Marians and was rewarded with a consulship in 79. As proconsul of Cilicia in 78-75 he made a systematic attempt to reduce the pirate haunts in south Asia Minor. In 77 he cleared east Lycia and Pamphylia by naval action and siege operations. Crossing Mt. Taurus into Isauria, he spent the campaigns in 76-75 in subduing its strongholds. These successes laid open the northward and more vulnerable side of Cilicia Trachea, the chief pirate base; but they were not followed up, because of the outbreak of the Mithridatic War. In 63 Servilius was defeated by Caesar in the competition for the office of Pontifex Maximus. In 57-56 he was active in the recall of Cicero and the repression of Clodius. As censor in 55-54 he repaired the Tiber embankment after a disastrous flood.

For his campaigns see H. A. Ormerod, *JRS* 1922, 35 ff. M. C.

SERVILIUS (3) **VATIA ISAUERICUS**, PUBLIUS, son of (2) above, in early life supported Cato, but became a Caesarian and Caesar's colleague as consul in 48 B.C. After suppressing the disturbances of Caelius he governed Asia, whence he corresponded with Cicero in 46. After

Caesar's murder Cicero affected to regard him as an ally, but knew him for a man of straw or worse (cf. *ad Brut.* 2. 2. 3, if genuine), and in 43 Servilius betrothed his daughter to Octavian and became reconciled with Antony. Octavian jilted Servilia, but compensated her father with the consulate of 41, in which he showed his usual caution during the Perusine War.

G. E. F. C.

SERVILIUS (4) **NONIANUS**, MARCUS (*cos.* A.D. 35), famous for his *recitationes*, the applause on one occasion attracting Claudius Caesar to join his audience (Plin. *Ep.* 1. 13. 3). For his style in history see Quint. *Inst.* 10. 1. 102; Tac. *Dial.* 23; Peter, *HRRel.* ii, p. cxxviii. 98.

SERVILIUS, see also CAEPIO, CASCA, GLAUCIA, RULLUS.

SERVITUDES. Restrictions on ownership arising from the rights of other parties were already recognized in early Roman law. A particular group of these *iura in re aliena* formed *servitudes*: their essential mark was that the owner of a plot of land was entitled to exercise certain rights on a neighbouring estate (e.g. walking, using the roadway, driving or pasturing cattle, drawing water, etc.). *Servitudes* were a burden for the owner of the *praedium quod servit*, but they originated in the needs of agricultural economy, a dominant interest in ancient Rome. They ranked with *res mancipi* (see MANCIPIATIO), and were considered as vested in the land itself (*iura praediorum*), so that they passed from one proprietor to another. A counterpart to these *servitudes praediorum rusticorum* were *servitudes praediorum urbanorum*, introduced later in the interest of buildings: a neighbour could be obliged not to build too high, or not to obstruct the access of light, etc. Whilst the rustic *servitudes* consisted in positive actions on the part of the owner of the dominant estate, the urban ones were mostly negative, and merely bound the owner of the servient tenement to abstain from certain actions.

Another category of rights over the property of other parties consisted in *servitudes personarum*. The qualification of these rights as 'servitudes' perhaps dates from Justinian or the post-classical period. To this class of rights belong: *usufructus* (a right to use and draw produce from another's property—land, or movables such as slaves and cattle); *usus* (a mere *ius utendi* without any right to profits); and rights analogous to *usus*, namely *habitatio*, relating to another person's house or lodging, and *operae servorum or animalium* (in which case *ius utendi* was restricted to the labour of slaves or animals). The category of personal *servitudes* was substantially reformed in post-classical times and by Justinian. The application of some general rules to all types of *servitudes*, and the equalization of the methods by which they were constituted and protected, made it possible to include all the personal *servitudes* in the same group as the predial *servitudes*.

P. Bonfante, *Corso di diritto romano* iii (1933); W. W. Buckland, *Law Quarterly Review* 1927, 1928, 1930; B. Biondi, *La categoria romana delle servitutes* (1938). See also the text-books of Roman Law under LAW AND PROCEDURE, ROMAN, 1. A. B.

SERVILIUS (1) **TULLIUS**, the sixth king of Rome (traditionally 578-535 B.C.), is an indisputably historical figure, whose Roman or Latin origin (despite his later identification with the Etruscan *Mastarna*, q.v.) is attested by his having built the temple to the Latin goddess Diana on the Aventine. Here the text of a treaty between Rome and the Latin League, traditionally attributed to Servius and known to authors of the Augustan age, was preserved. There is no reason to doubt the authenticity of the treaty, the invention of which would have been wholly purposeless. The tradition that Servius was the son of a maidservant, and that he built the fortifications of Rome (cf. *under WALL OF SERVILIUS*) must be rejected. The constitution attributed

to him (as a reputedly liberal ruler) is probably a fictitious precedent for the laws passed in the fourth century on behalf of the plebs (see CENTURIA, CLASSIS).

H. Last, *CAH* vii. 391 ff. For papyrological evidence: POxy. 2088; M. A. Levi, *Riv. fil.* 1928; A. Piganiol, *Scritti in onore di B. Nogara* (1937), 373 ff. For a more conservative view of the Servian reforms see H. Last, *JRS* 1945, 30 ff. P. T.

SERVIUS (2) (4th c. A.D.), grammarian and commentator (called *Marius* or *Maurus Servius Honoratus* in MSS. from the 9th c. onwards). His greatest work was a commentary on Virgil (in the order *Aen.*, *Ecl.*, *G.*), for which he directly or indirectly brought under contribution much of the earlier Virgilian criticism. He relied greatly on Aelius Donatus, though he names him only when he disagrees with him. Since his work was designed for school purposes, he stresses grammatical, rhetorical, and stylistic points, but he does not neglect subject-matter, on which some of his notes show considerable learning. By way of illustration he quotes freely not only from Virgil but also from Terence, Cicero, Sallust, Lucan, Statius, and Juvenal. Often he reports conflicting views, but he retains his own judgement and is always a keen defender of his author. The Servian commentary is found in a longer and a shorter version in manuscripts; but only the shorter was printed until Pierre Daniel in 1600 published the longer form, which he regarded as the original Servius. G. Thilo, however, in the nineteenth century showed that the so-called Servius Auctus or Servius Danielis consisted of (a) Servius and (b) the remains of a much more learned commentary (composed in the order *Ecl.*, *G.*, *Aen.*) which he attributed to some Irish monk of the seventh or eighth century (possibly Adamnan). In his edition he printed what he judged to belong to this hypothetical commentary in italics. The current opinion (cf., e.g., E. K. Rand in *CQ* 1916, 158-64) is that the 'additions' in Servius Danielis are virtually parts of the commentary of Aelius Donatus which S. himself had not incorporated. The standard edition is that of G. Thilo (vols. i, ii, iii. pt. 1, 1881-7; vol. iii. pt. 2 = *Appendix Serviana*, ed. H. Hagen, 1902); but a new edition (vol. ii, 1946) by a group of Harvard scholars is in course of publication. The other extant works of S. are: *Explanatio in artem Donati*, *De finalibus*, *De centum metris*, *De metris Horatii* (ed. Keil, *Gramm. Lat.* iv. 405-48, 449-55, 456-67, 468-72). The *Glossae Servii grammatici* (ed. G. Goetz, *Corp. Gloss. Lat.* ii. 507-33) are an apocryphal compilation. See also SCHOLARSHIP, LATIN, IN ANTIQUITY, and cf. Teuffel, §431; Schanz-Hosius, §248.2 and §835. J. F. M.

SERVIUS, see also SULPICIUS (2).

SESOSTRIS (Hdt. 2. 102-11) was a mythical Egyptian king to whom were ascribed great conquests in Africa and Asia. In Ptolemaic times he was regarded as a person who had once lived and been heroized. Little of historical value can be gained from the somewhat lengthy discussion of the story by Herodotus. The subject is discussed thoroughly by Wiedemann, *Herodots Zweites Buch*. T. A. B.

SESTIUS, PUBLIUS, as quaestor (63 B.C.) helped Cicero against Catiline, and later actively promoted Cicero's recall from exile. As tribune (57) he struggled with an armed band against Clodius. In 56 he was accused *de vi* and *de ambitu*. In the accusation *de vi* he was defended by M. Crassus, Hortensius, Licinius Calvus, and Cicero (cf. *Pro Sestio*, and *In P. Vatinius testem interrogatio*; P. Vatinius was a witness against Sestius) and was acquitted. In 52 he was defended by Cicero on a charge of bribery and probably acquitted. Praetor (in 55?) and proprator in Cilicia (49), he passed over to Caesar after Pharsalus and accompanied Domitius Calvinus against Pharnaces.

E. Cicero, *Cicerone* ii (1930), 76; cf. L. G. Pocock, *A Commentary on Cicero in Vatinius* (1926). A. M.

SESTOS, a city of the Thracian Chersonese, possessing the best harbour in the Dardanelles, and commanding the chief crossing of the straits (to Abydos). Its original Greek population came from Lesbos. Darius returned by way of Sestos from his Scythian Expedition, and Xerxes here set foot on Europe, crossing the Dardanelles by a bridge of boats. Athenian interest in Sestos began with the occupation of the Chersonese by Miltiades; at this time perhaps it received an Athenian settlement. It was the first town to be freed from Persia by the Athenian fleet (479-478), and it was the chief Athenian station during the naval operations against Sparta in the Dardanelles (411-404). After a brief Spartan occupation (404 to 393 or 386) it reverted to Athens in 365. A rebellion against Athens in 357 led to its recapture by Chares, the enslavement of the population, and the establishment of an Athenian cleruchy (352). After a frequent change of overlords in the Hellenistic age it became a free city under Roman rule, but it lost its position as the principal crossing-point between Europe and Asia to Byzantium.

S. Casson, *Macedonia, Thrace and Illyria* (1926), 210-27.

M. C.

SET (called **Typhon** by the Greeks) was a god of Upper Egypt. He appears in the myth of Osiris as the wicked brother who murders the great god of the underworld and wounds his son Horus. The role of Set in this myth was well known to the Greeks, hence he is the wicked Typhon in Plutarch's essay concerning Isis and Osiris (13 ff.). The Greek Typhon (q.v.) was a wicked son of Gaea and Tartarus who was overcome by Zeus, just as Horus finally overcame Set.

SEVERUS (1), LUCIUS SEPTIMIUS, Emperor A.D. 193-211. A native of Africa, after distinguished service under Marcus, he became consul in 190 and subsequently governor of Upper Pannonia. Saluted Emperor at Carnuntum (13 Apr. 193), he entered Rome on 9 June (see PERTINAX and DIDIUS JULIANUS). His first act was to dismiss the Praetorians and constitute a new guard for which all legionaries were eligible. The Senate he sought to conciliate by a promise to put no senator to death and the people by a *congiarium*. After the funeral and apotheosis of Pertinax he set out against his rival Pescennius Niger.

2. Victories by Septimius' guards at Perinthus, Cyzicus, and Nicaea were followed by a decisive battle at Issus (194; see PESCENNIUS NIGER), and after punitive expeditions against the Osroeni, Adiabeni, and Scaenite Arabs the war was ended. To prevent a recurrence of civil war Syria was divided into two provinces, Coele and Phoenice. The reason for the early termination of the war was fear of Albinus, who was alleged to be in treasonable correspondence with the Senate (see CLODIUS ALBINUS). Before leaving for Europe, Septimius raised his son Caracalla to the rank of Caesar and adopted himself into the family of the Antonines (196). After a brief visit to Rome he rejoined his army in Gaul, and the issue was settled at a battle near Lugdunum (Feb. 197). Britain, like Syria, was divided into two provinces, and a rigorous persecution of the adherents of Niger and Albinus initiated.

3. After a short stay in Rome Septimius was summoned East by news of a Parthian attack on Nisibis. A successful campaign culminated in the fall of Ctesiphon (198), in honour of which Caracalla was raised to the rank of Augustus and his brother Geta to that of Caesar. After two abortive attacks on the desert fortress of Hatra the war ended with the annexation of Mesopotamia (199). The next three years were spent in Palestine and Egypt, where Alexandria was given a municipal council. On 1 Jan. 202 Septimius and Caracalla became joint-consuls at Antioch, and then returned to Rome.

4. Septimius spent most of the next six years in Rome (see PLAUTIANUS). In 208 he set out with his wife and two sons for Britain. In the hope of intimidating the Caledonians Scotland was invaded, but the Roman losses were severe, and a temporary peace was patched up in the autumn of 210. Worn out by sickness and broken in spirit by Caracalla's unfilial conduct he died at York in 211.

5. *Administration.* Septimius' reign marks an important stage in the development of the powers of the equestrian order. Three new legions (I-III Parthicae) were commanded by equestrian *praefecti*, the new province of Mesopotamia was, like Egypt, governed by a knight, and *vicarii*, who were equestrian procurators, not infrequently replaced the regular senatorial governors in other provinces. Most significant are the additional powers given to the Praetorian Prefect, who became supreme criminal judge beyond the rooth milestone from Rome, and took over the control of the corn supply from the *praefectus annonae* (see PLAUTIANUS). By contrast the Senate was treated with disdain and became little more than a *claque* for applauding the emperor's proposals and messages. Yet there are, apart from political persecutions, few indications of misuse of power. Useful legislation based on equity and humanitarianism was passed, and the principle affirmed that the law is no respecter of persons.

6. In the sphere of finance the *fiscus* received the revenues of both imperial and senatorial provinces, together with the bulk of the emperor's *patrimonium*. The *aerarium* was reduced to a municipal treasury, and a new exchequer, *res privata principis*, was instituted to receive the profits of imperial confiscations. If Septimius' methods of raising money are open to criticism, his use of it was extravagant. In addition to *congiaria*, corn, oil, and medicine were distributed free to the populace of Rome, the alimentary system was revived, and the cost of the imperial post taken over by the *fiscus*. Rome was adorned with new buildings, an arch in the Forum, a palace on the Palatine, and the Septizonium or House of the Seven Planets, a monument to the emperor's faith in astrology, which had guided him to choose Julia Domna, a lady with a royal horoscope, for his second wife (see JULIA DOMNA).

7. The chief military reform was the constitution of the new Guard, which henceforth served as a seminary for officers. This change represents not a barbarization but a democratization of the army, just as the stationing of II Parthica at Albanum illustrates Septimius' policy of placing Italy on a level with the provinces. New concessions were made to the soldiers, who were allowed to marry during their service and on their discharge enjoyed special benefits.

8. In the provinces Hadrian's Wall was repaired and outposts south of the *Limes Tripolitanus* established. New colonies, which frequently received *ius italicum*, were founded, notably in Africa and Syria. But Antioch, Byzantium, and Lugdunum, which had espoused the cause of Niger or Albinus, were harshly punished. Similarly conditions in the country-side varied; in the West there was probably less distress than in Lydia and Egypt, where the peasants were ground down by imperial agents or landlords. Severus was champion of neither town nor country. The army was the factor that determined his policy, and to maintain its cost the civil population was subjected to a variety of imperial requisitions. On his death-bed the Emperor is said to have exhorted his sons to live in peace, enrich the soldiers, and despise the rest of the world.

SEVERUS (2) ALEXANDER, MARCUS AURELIUS, Emperor A.D. 222-35. This was the title by which Alexianus son of Mamaea was known, when he was adopted by Elagabalus at the age of thirteen and became sole emperor (221-2). Of a friendly and amenable disposition, virtuous and honest, he was also vacillating and ineffective, and this weakness was accentuated by the possessive devotion of his mother, who had sought to shield him from the licentious influences of his cousin.

2. The first nine years of his reign, when first Maesa and then Mamaea controlled the government, were without incident, apart from the murder of the prefect Ulpian (q.v.) by the praetorians, who were restive under his strict command. The finances were rehabilitated without curtailing useful expenditure (e.g. on baths at Rome and road-making in the provinces). Alexander's reign is represented in the *Historia Augusta* (q.v.) as a resuscitation of senatorial power, but apparently the Senate recovered no more than the appearance of supremacy which Dio suggests in the speech of Maecenas to Augustus (52. 14 ff.). There were two important reforms in this direction. A new *consilium principis* (q.v.) was formed, comprising 20 juriconsults from the equestrian order, and 70 senators. Although the senatorial members formed the majority, with men like Ulpian and Paulus (q.v.) taking part in the discussions, the real power lay with the bureaucrats. Secondly, the incompatibility between the status of a senator and a praetorian prefect was removed. But if this enhanced the Senate's prestige, it also extended the powers of the prefect, who could preside at senatorial trials. Further, there was no decline in the power of the soldiers in politics and it was, for instance, fear for his safety at their hands that led the Emperor to send the historian Dio (q.v.) to Bithynia during the year of his consulship. But because after his death the Senate declined as a political body, Alexander became the hero of those who regarded senatorial power as a panacea, and from such panegyrics grew up the historical novel which constitutes the Life of Severus Alexander in the *Historia Augusta*.

3. In 231 Alexander and his mother left Rome for Antioch, to repel an invasion of Mesopotamia by the Persian king Artaxerxes (q.v. 4). After quelling some mutinies he prepared for a campaign in the following spring, in which his army was divided into three divisions. The result was not an unqualified success, but Mesopotamia was recovered.

4. Alexander returned to a triumph in Rome (233), but his stay was short, as news of unrest in Germany necessitated his presence on the Rhine. The army, part of which was sent direct from Syria, was concentrated at Mainz, but Alexander made the fatal mistake of trying to buy peace. This pacifism was interpreted as cowardice by the European legions, which were further incensed at the favouritism shown by the Emperor and his mother to the Oriental troops. Looking for a leader of courage and energy, their choice fell on a Thracian peasant called Maximinus (235). Soon afterwards Alexander and his mother, deserted even by their Orientals, were murdered.

SEVERUS (3), SEXTUS JULIUS, a Dalmatian by birth, rose to senatorial rank, pursuing under Hadrian (q.v.) a brilliant career. Preliminary and urban offices once discharged, he was successively commander of Legio XIV Gemina, governor of Dacia (c. 120-6?), consul (127), governor of Lower Moesia (128-30), of Britain (c. 130-3), of Judaea (c. 133-5), and then—the first to hold this office—of the newly formed Syria Palaestina.

PIR, I 374; P. Lambrechts, *La Composition du Sénat romain...* (1927-28) (1936), p. 41, no. 93. C. H. V. S.

SEVERUS (4), FLAVIUS VALERIUS, a rough soldier and boon companion of Galerius, chosen at his wish to succeed as Caesar in the West in A.D. 305. On the death of Constantius Chlorus in 306 Severus succeeded him as Augustus, and Constantine, proclaimed in Britain, was fitted into the system as his Caesar. When Maxentius rose in Rome, Galerius ordered up Severus from Milan to suppress him. Baffled by the walls of Rome and deserted by his own men Severus retired to Ravenna and surrendered, on the promise of his life, to the old Maximian. When Galerius invaded Italy in 307, Severus was treacherously put to death by Maxentius at Tres Tabernae.

H. M.

SEVERUS (5), SULPICIUS, a Christian writer of note, born soon after A.D. 350 in Aquitania. He was a successful advocate and married into a wealthy consular family, but he became a monk. His chief works include his *Chronica*, a chronicle reaching from Old Testament times to his own, and *Dialogues* that centre round Saint Martin of Tours.

Kappelmacher, *PIW*, s.v.

SEVERUS, CASSIUS, see **CASSIUS** (9).

SEVIUS NICANOR, see **SAEVIUS**.

SEXTILIUS ENA, see **ENA**.

SEXTIUS (1), TITUS, was *legatus* to Caesar in Gaul and governor of Africa Nova (Numidia) from 44 B.C. After Mutina he was ordered by the Senate to transfer two of his legions to Italy and the third to Cornificius, governor of Africa Vetus. Later he attacked Cornificius, defeated him, and annexed his province (42 or 41). He handed over both provinces to Octavian's lieutenant Fango (on instructions from Lucius Antonius), recovered them during the Perusine War as Antony's representative, and surrendered them to Lepidus shortly afterwards.

Appian, *BCiv.* 3-5; Dio Cassius 48. 21-3. F. L. Ganter, *Provinzialverwaltung d. Triumvirn* (1892), and *Philol.* liii (1894), 144-6. G. W. R.

SEXTIUS (2), QUINTUS, philosopher of the time of Augustus, founded a philosophical school which met with great success at first but did not last long. He claimed to be the founder of a native school of philosophy, but was in fact an eclectic, borrowing from Stoicism his ethical views, from Plato the theory that the soul is an incorporeal entity, and from the Pythagoreans a belief in vegetarianism. See **DIATRIBE**. He is probably identical with the botanical and medical writer Sextius Niger, whose work *Περὶ ὕλης ἰατρικῆς* was used by Pliny and Dioscorides.

PIW ii A. 2040.

W. D. R.

SEXTIUS LATERANUS, see under **STOLO**.

SEXTIUS NIGER, see (2) above.

SEXTUS (1) of Chacronea, nephew of Plutarch, Platonist, teacher of Marcus Aurelius and Varus.

PIW ii A. 2057.

SEXTUS (2), called **Empiricus**, physician and sceptical philosopher, wrote in the last third of the second century A.D. His epithet **Empiricus** (so already Diog. Laert. 9. 116) shows that he belonged to the 'empirical' school of physicians (cf. [Galen], *Isagoge* 4). In one point, however, he disagrees with them (*Pyrr.* 1. 236).

His medical writings are lost. As a philosopher S. lacks originality. He represents the new sceptical school founded by Aenesidemus, whose system he sets out with

clarity though not wholly without errors and repetitions. Now and then he criticizes Aenesidemus from a more modern point of view. To us his writings are most valuable, being the only complete description of ancient scepticism.

His books are: *Outlines of Pyrrhonism* (*Πυρρώνειοι ὑποτυπώσεις*): bk. 1 gives a general account of the sceptical basic terms, and discusses the end and method of Pyrrhonism; bk. 2 refutes dogmatic logic and theory of knowledge, bk. 3 physics and ethics.

In detail we find this criticism in the five books of *Against the Dogmatists* (*Πρὸς δογματικούς*). A third work is *Against the Schoolmasters* (*Πρὸς μαθηματικούς*), in six books, criticizing the non-philosophical subjects of general teaching: grammar, rhetoric, mathematics, astronomy, music. The former work, which follows in the manuscripts after the latter, is also counted as *Πρὸς μαθημ.* 6-11.

Texts: I. Bekker (1842); H. Mutschmann (vols. i and ii, 1912-14; iii still lacking); Loeb (with Engl. Transl., without the last work). Studies: E. Pappenheim, *Lebensverhältnisse des S. E.* (1875); L. Haas, *Über d. Schriften des S. E.* (1882); A. Kochalsky, *De S. E. adv. logicos libr. quaestiones crit.* (Thesis, Marburg 1911); W. Heintz, *Studien zu S. E.* (1932); *P.W.* ii 2057 A. See also **SCPTICS**.

K. O. B.

SEXTUS (3), originator of a collection of gnomes, *Σέξτου γνώμαι*, mentioned by Origen and translated into Latin by Rufinus, who gave it the name of *Anulus*. The Syriac translation bears the title *Dicta selecta sancti Xysti episcopi Romani*, but Jerome argues against the authorship of Xystus (A.D. 256-8) and calls the author Sextus Pythagoreus. The original collection was probably non-Christian and made in the second century A.D., but additions implying a Christian background were gradually made, though definite allusions to Christ or to Christian doctrine were avoided.

Ed. A. Elter (1891-2). *PIW* ii A. 2061.

W. D. R.

SHIPS. The shipping of the ancient Mediterranean consisted of two main types of vessels—the slim, light-draught war-galley (see **TRIREME**, **QUINQUIREME**) and the heavy, slow merchant ship. The distinction between these, which accompanied the separation of merchant and pirate in the archaic Greek period, reflects the wide difference in functions: the merchant ship kept the sea night and day with heavy cargoes, in all but the worst weather; for the war-ship, considerations of seaworthiness were subordinate to efficiency and handiness in battle. Fleets of war, in consequence, often found blockades and long cruises dangerous.

The proportion of length to breadth, in the galley about 7:1, approximated to 4:1 for the transport. Merchant and war-vessels alike were constructed from wood, chiefly larch, cypress, and fir (Theophrastus, *Hist. Pl.* 5. 7). As to-day, a keel was set upon ways in a dock-yard; to this shipwrights attached ribs, upon which the planking of the hull was nailed. Strengthening cables seem to have taken the place of stringers parallel to the keel in some cases. The prow of the merchant vessel was simple, without ram or voluted prow-post; the stern-post, which curved back towards the prow, on cargo ships often resembled a goose's neck. While war-galleys were at most decked only on prow and stern, other craft were usually completely decked by 400 B.C. and had a cabin aft. In the stern were a ladder for use if the ship were beached, usually an anchor in addition to the prow-anchor, and the tutelary image of some god, from which the ship might take its name. This name, or some indicative symbol, was often placed on the prow. The steering-gear consisted of two large rudder-oars, one projecting on either side of the stern.

Merchant craft, having a permanent mast, relied chiefly on sail, though long sweeps could be used. At first they had one mast, which bore a square sail, made

from linen or sometimes from hides; later a small forward mast was added, and in the Roman Empire two or three main masts are sometimes found, with triangular sails above the main yard. Such sailing-vessels apparently made three to four knots in normal conditions (*see* NAVIGATION).

With the spread of commerce merchant vessels increased in size. The unique *Alexandria* of Hiero II rated at 3,310 tons, and the Alexandrian grain-ship *Isis*, of the second century A.D., measured roughly 140 by 36 feet, with a depth of 33 feet and a weight of 3,250 tons. These were exceptional; but by the Roman Empire the average *navis oneraria* rated perhaps at 50 tons.

Acts xxvii-xxviii; Lucian, *The Ship*. E. Assmann, 'Seewesen' in A. Baumeister's *Denkmäler des klassischen Altertums* (1888; numerous reproductions); F. Niltner, *PIV*, s.v. 'Seewesen'; C. Torr, *Ancient Ships* (1894); A. B. Cook, *Comp. Gr. Stud.* ch. vi, § 11. C. G. S.

SIBYLLA. This word, of uncertain etymology, appears first in Heraclitus (ap. Plut. *Pyth. Or.* 6; Clem. Al. *Strom.* 1. 70. 3), and was early used as a proper name (e.g. Ar. *Pax* 1095, 1116). As a single prophetic female the Sibyl was variously localized, and legends of her wanderings account for her presence at different spots, but as early as Heraclides Ponticus (Clem. *Strom.* 1. 108. 3) she became pluralized, and thereafter we find two, three, four, five, six, or ten Sibyls, in different places and some bearing individual names, since the term Sibyl had now become generic. Varro's *Res Divinae* (ap. Laet. *Inst.* 1. 6. 8-12) lists ten: 1. Persian; 2. Libyan; 3. Delphic; 4. Cimmerian (in Italy); 5. Erythraean; 6. Samian; 7. Cumaean (named Amalthea, Herophile, Demophile, or, in Verg. *Aen.* 6. 36, Deiphobe); 8. Hellespontic (at Marpessus near Troy); 9. Phrygian (at Ancyra); 10. Tiburtine (named Albunea). Sibyls at Delos, Clarus, Colophon, Sardis, Dodona, and elsewhere (A. Bouché-Leclercq, *Hist. de la divination*, ii (1880), 175, 183. Buehlholz in Roscher, *Lexikon* iv. 796-803) are doubtful and perhaps to be identified with some of those in Varro's list. For a legend of the Cumaean Sibyl *see* APOLLO, para. 6.

The ecstatic character of Sibylline prophecy (cf. Heraclitus ap. Plut. loc. cit.) is described by Virgil, *Aen.* 6. 77-102. The content of such utterances was early reduced to written form, in Greek hexameter verses, the genuineness of which was often guaranteed by acrostics (Cic. *Div.* 2. 112; Dion. Hal. 4. 62. 6). They were originally, in the case of the Cumaean Sibyl (Varro ap. Serv. *Aen.* 3. 444), inscribed on palm-leaves. Collections of these verses were made for later consultation, and there is a famous story (Dion. Hal. 4. 62. 1-6; Plin. *HN* 13. 88; Laet. *Inst.* 1. 6. 10-11; Serv. *Aen.* 6. 72, etc.) of the sale to Tarquinius Priscus of one such collection which was put into the charge of a special priestly college (*see* QUINDECIMVIRI SACRIS FACIUNDIS), to be consulted only at the command of the Senate, in contrast to the unrestricted consultation of Sibyls elsewhere. After these Sibylline Books had been destroyed in the burning of the Capitol in 83 B.C. a new collection was made from various sources to replace them. To the Jewish-Hellenistic culture and later to Christian influence are due many blatant forgeries, and fourteen somewhat miscellaneous books of oracles are still extant (ed. by A. Rzach, 1891; J. Geffcken, 1902). The last known consultation of the books was in 363 (Amm. Marc. 23. 1. 7), and the official collection was burned in the time of Stilicho (Rut. Namat. 2. 52). The influence of Jewish and Christian interpolations, however, combined with the prophecy of the Cumaean Sibyl in Virgil's *Fourth Eclogue* to give to all the Sibyls a position in Christian literature and art somewhat similar to that accorded the Old Testament prophets.

A. S. P.

SICELIDAS, *see* ASCLEPIADES (2).

SICELS. The Sicels, or *Siculi*, were the native inhabitants of Sicily whom the Greeks found in possession of the island. They had unquestionably migrated long before from north Africa in consequence of the drying up of the Sahara. Some occupied the southern half of Italy, which explains the frequent classical references to *Siculi* even near Rome itself. They represent a pre-Aryan stratum (cf. under LIGURIANS) and their language may have been totally unrelated to Italic; possibly it was akin to the surviving Berber languages. The movement of *Siculi* from Italy to Sicily described by Thucydides, Philistus, and Hellanicus, who date by the Trojan war, refers to a far later period (middle or late Bronze Age).

Excavations, principally in eastern Sicily, give consecutive pictures of Siculan culture until it was killed out by the Greeks. The Neolithic period, arbitrarily termed 'Sicanian', is interesting chiefly for the incised pottery of Stentinello. The 'First Siculan' period is Chalcolithic and remarkable for unique painted wares with simple geometric patterns. The rock-hewn chamber-tombs are characteristic; wide commerce is already suggested. The 'Second Siculan' is full Bronze Age; it marks the zenith of the native culture. Mycenaean influence is then quite strong, marked especially by imports of the Late Minoan Third types. The 'Third Siculan' is Iron Age, beginning with the tenth century; it shows stagnation and decline. Intercourse with Greece of the Dipylon period, however, continued and resulted in some interesting native pottery.

T. E. Peet, *Stone and Bronze Age* (1908); 'Sicilien' in Ebert's *Real-Lexikon der Vorgeschichte* (bibliography and illustrations).

D. R.-MacI.

SICILY. PREHISTORY. Ancient writers know three native peoples: Sicani in western, Siculi in eastern (*see* SICELS), and Elymi in north-western Sicily. Thucydides (6. 2) attributes an Iberian origin to the Sicans, Italic to the Sicels, and Trojan to the Elymians. The Sicans are now often considered the Neolithic inhabitants. Despite the linguistic difficulty of separating Siculi from Sicani (Siculi: Sicani = Romuli: Romani), recent philological research tends to reinforce Thucydides' opinion and show that the Sicel language was Indo-European and more nearly connected with Latin than Osco-Umbrian, while some place-names in the Sicani area may be connected with Iberia. The origin of the Elymians remains obscure, but toponymy renders a Ligurian connexion probable. It must also be noted that there is no distinction of culture between east and west corresponding to the distinction of Siculi and Sicani.

2. **THE GREEK PERIOD.** The extent of early Phoenician colonization in Sicily is unknown, but in historical times it was limited to Motya, Solus, and Panormus. The Elymians, whose principal towns were Segesta, Eryx, and Entella, became traditional allies of the Carthaginians. From c. 735 B.C. (the chief source, Thucydides 6. 3-5, is only approximately reliable) there followed a prolonged period of Greek colonization in the island (*see* COLONIZATION; also the several Greek cities). The natives were ejected from the best sites, when not reduced to serfdom, as at Syracuse. The penetration of Greek customs slowly transformed the Sicel peasant, but the assimilation was incomplete before Hellenistic times. The economic development was favourable. Wheat, wine, oil, cattle, and horses were exported. Abundant pottery imported from Corinth and Rhodes, later from Attica, proves a considerable trade with Greece. Carthaginian and south-Italian markets also were open, as was Rome from c. 500 B.C. (whether the Sicilian agrarian cult of Demeter passed). Many sixth-century temples attest the culture and wealth of this period, and the first Sicilian coinage belongs to the second half of the century. The Phoenicians, allied with the Etruscans, stood on the

defensive, but defeated the attempts of Pentathlus (c. 580) and Dorieus (c. 510) to colonize Lilybaeum.

3. Tyranny emerged, as in Greece, but the aristocracy was much stronger, Carthaginians and Sicels affected internal politics, and there was in general greater social instability. The early tyranny of Phalaris (q.v.) of Agragas led on to numerous revolutions after c. 550. Hippocrates (q.v.) of Gela founded the first great tyrannical State in Sicily, which his successor Gelon (q.v.) extended to Syracuse. A coalition of Anaxilaus (q.v.), the Carthaginians, Selinus, and Himera tried to check him and his ally Theron of Agragas, while the Greek homeland was involved in the Persian War. They were defeated at Himera (480). Under Gelon and Hieron, Sicilian culture reached its zenith. Greek culture penetrated deeply into the Phoenician colonies. The Elymian cities became half-Phoenician, half-Greek. After the deaths of Theron and Hieron (467-466) the tyrannies soon came to an end. The attempts of the Sicel chief Ducetius (q.v.) to organize a national movement proved abortive.

4. Leontini and Rhegium, the enemies of Syracuse, renewed a former alliance with Athens (433) which had ambitions towards the west. After a preliminary intervention on their behalf (427-424), Athens undertook the great expedition against Syracuse which ended in tragedy (413). Carthage now profited by the exhaustion of Syracuse to attempt the complete conquest of Sicily (409). Selinus and Himera fell in 409, Agragas and Gela in 406-405.

5. The Greeks could resist only by transforming their political structure. In Sicily democracy had been less productive than in Greece, but it had given rise to rhetoric. Under the tyranny of Dionysius I (q.v.) a Sicilian State was organized, which deprived the Greeks of their freedom and wealth, but repelled the Carthaginians to their former boundary. The price of power was internal dissolution. Chaos followed Dionysius' death, and petty tyrants established themselves in various cities. Timoleon (q.v.) beat off a fresh Carthaginian attack. After his death (c. 330) the restored free governments lost ground; many fell to adventurers like Agathocles (q.v.) who, on the basis of an anti-aristocratic and anti-Carthaginian policy, rebuilt a large but shortlived State in Sicily. New tyrants appeared, and many of the best men (e.g. Timaeus, Theocritus) abandoned Sicily in view of the patent dissolution of the Greek settlements. The Mamertines (q.v.) established themselves as land-pirates in Messana (c. 288). To meet a fresh Carthaginian attack the Greeks sought the help of Pyrrhus (q.v.), who failed to expel the Carthaginians. Syracuse, under Hieron II (q.v.), made the final effort, checked the Mamertines, but allowed Carthage to occupy Messana. This precipitated Roman interference and the First Punic War (*see PUNIC WARS*), after which Sicily became a Roman province. Hieron's kingdom remained autonomous and prosperous till his death in 215, when Syracuse went over to Carthage. After Rome had reduced Syracuse (211) the State of Syracuse was incorporated in the Roman province.

6. THE ROMAN PROVINCE. The province was governed by a praetor with one quaestor in Syracuse and another in Lilybaeum. The provincial council of natives was merely an ornamental body; Messana and Tauromenium were theoretically considered as federated cities, because they had not fought against the Romans. A few communities became *liberae* and *immunes* (e.g. Segesta, Panormus). The remainder were either tithe-paying (*decumanae*) or tithe-and-rent paying (*ensoriae*; the number of these is uncertain): in the *civitates censoriae* the land was considered *ager publicus*. All the cities enjoyed considerable independence in home affairs. The bronze coinage of the cities continued until after Augustus. The rules of the *decuma* (q.v.) were derived from a law of

Hieron II. During the Republic the Romans fostered wheat-growing. Many Romans bought estates in Sicily. Italian immigration was considerable. The development of *latifundia* favoured the rebellions of slaves (135-132; 104-100 B.C.). The governorship of C. Verres (73-71 B.C.) was only a small episode, but the fight between Sex. Pompeius and Octavian added a heavy burden. As Sicilian wheat lost importance, much ploughland was turned into pasture. *Latifundia* spread enormously. The emperors became the biggest landowners. Foreign trade, still flourishing in Republican times, declined.

7. The Sicilians apparently obtained the Latin rights by Caesar's gift. Antony published a scheme of Caesar to grant Roman citizenship to Sicily, but Octavian did not implement it. Under Augustus Messana and then a few other cities obtained Roman citizenship. Augustus founded colonies of veterans in Catana, Panormus, Syracuse, Tauromenium, Termac, and Tyndaris. The old system of administration was probably replaced with (a) tax-free Roman colonies and *municipia*; (b) tax-free Latin *municipia*; (c) tax-paying Latin *municipia*. A fixed levy replaced tithes. Latin and Greek culture long coexisted. In the fifth century the Vandals with their fleets partially held and totally controlled Sicily.

SICINIUS, GNAEUS, tribune of the plebs (76 B.C.), attempted to repeal the law of Sulla about the tribunate, but was frustrated by the consuls and perhaps murdered.

SICINIUS, *see also* DENTATUS.

SICULUS FLACCUS, *gromaticus*, of unknown date; author of a treatise on categories of land-tenure in Italy.

SICYON, Corinth's western neighbour, stood in a rich plain two miles from the sea. The archaic town lay at the foot of a large triangular plateau which was the acropolis. Demetrius Poliorcetes transplanted it to the acropolis. The remains of this town include the theatre, stadium, agora with fountains and portico, and large Roman buildings.

Sicyon was founded from Argos, and owed Argos religious and originally also political duties. These were set aside by the tyranny which, begun by Orthagoras c. 660 B.C., and favouring the non-Dorian elements, lasted over 100 years. Its greatest power was attained under Cleisthenes, who led the forces which destroyed Crisa in the first Sacred War (c. 580), and also had relations farther west. He celebrated his daughter's wedding with fabulous magnificence (Hdt. 6. 127). Sparta put down the tyranny and Sicyon became her faithful ally. In the third century its chief citizen, Aratus, gave it an important

position in the Achaean League. Sicyon was a famous centre of art. In the archaic period it was a home of painting and pottery (Plin. *HN* 35. 151-2), but the attribution of the proto-Corinthian vases to Sicyon is now discredited (H. Payne, *Necrocorinthia*, 1931, 35 ff.). In the fourth century it owned the leading school of painters and produced the sculptor Lysippus.

T. J. D.

SIDON, a city on the coast of Phoenicia, was ruled under Persia by a native dynasty which had close commercial relations with Athens and was already hellenized, as the sarcophagi of the kings show. The dynasty was confirmed by Alexander but suppressed in the early third century (the last known king was the Ptolemaic admiral Philocles), and Sidon became a republic, ruled by Suffetes. From Antiochus IV's reign it issued municipal coinage, still mostly inscribed in Phoenician. In 111 B.C. it gained its freedom, which was recognized by Pompey but taken away by Augustus in 20. It received, however, about this time a great accession of territory up to Mount Hermon (see *ITURAEA*), and was probably soon again freed. Under Elagabalus it became a Roman colony. Sidon was a great commercial city and also possessed two important industries, purple-dyeing and glass-blowing; the latter art was discovered in the first century B.C. at Sidon, and the names of many Sidonian glass-blowers of the early Principate are known, chiefly from signatures on extant pieces.

A. H. M. J.

SIDONIUS APOLLINARIS (GAIUS SOLLIVS MODESTUS(?) APOLLINARIS SIDONIUS), a Gallo-Roman of noble family, was born at Lugdunum (*Lyons*) about A.D. 430. He married Papianilla, daughter of Avitus, and through her acquired the estate of Avitacum in Auvergne. Avitus was proclaimed emperor, July 455. Sidonius accompanied him to Rome, and there recited in his honour, 1 Jan. 456, a panegyric in verse (*Carm.* 7), which was rewarded with a statue in Trajan's Forum. Avitus was soon dethroned. S. then joined an insurrection with headquarters at Lyons, but was finally reconciled to Majorian, the new emperor, and delivered at Lyons (458) a panegyric on him (*ibid.* 5). In 459 or 460 he held some government post at Rome. After Majorian's fall (461) he spent some years in his native country. In 467 he led a Gallo-Roman deputation to the Emperor Anthemius at Rome. On 1 Jan. 468 he recited his third and last panegyric (*ibid.* 2), after which he became *praefectus urbi*. He returned to Gaul in 469 and accepted the bishopric of Auvergne with seat at Clermont-Ferrand. Although ill equipped for ecclesiastical office, he discharged his sacred duties with earnestness and success; above all, he upheld his people in resisting the Goths. In 475 Rome, to his dismay, ceded Auvergne to Euric. S. was subjected to a mild imprisonment in the fortress of Livia, near Carcassonne. Soon released, he was ultimately allowed to resume his bishopric. The usual date for his death, 479, is probably a little too early. He was canonized.

WORKS. (1) *Carmina*: (a) 1-8, the three long panegyrics (in reversed chronological order) together with prefaces and dedications; (b) 9-24, professedly youthful poems, ranging from 4 to 512 lines, practically all addressed to, or concerned with, friends. (2) *Epistulae*, nine books, addressed to many friends and relations. Bks. 1-2 belong to the period before his episcopate. Some letters were specially written for the collection, the others were carefully revised. Both poems and letters throw important light on the fifth century. They show S. as a genial and sympathetic man, a loyal friend and ardent patriot, but also as a rather narrow-minded aristocrat and literary pedant. His originality was limited, but he had a keen eye for external details. His language is absurdly

stilted and obscure, with all manner of rhetorical tricks exaggerated *ad nauseam*.

Apoll. and His Age* (bibliog.; 1933).

W. B. A.

SIEGECRAFT, GREEK. The limitations of Greek siegecraft before the fourth century B.C. were partly those of Greek engineering. They are best illustrated by the strategy of the Peloponnesian War, which was based on the fact that Athens was impregnable. Potidaea and Plataea (not great cities) had to be starved out; the famous siege of Syracuse was little more than an unsuccessful attempt at blockade. A beleaguered city, if well provisioned, had far more to fear from treachery within its walls than from the enemy without.

The problem for the besieger was the city-wall, how to go under it, over it, or through it. Undermining, scaling-ladders, or a movable tower, the ram—all these were tried in the fifth century or earlier, but the defence had effective—if primitive replies (see, e.g., Thucydides 2. 71-8; 3. 20-4 and 52: Plataea). The invention of the catapult was important (c. 400, perhaps in Syracuse), because its missiles (stones or arrows) could clear a wall of its defenders while a ram breached it or a tower disgorged a boarding-party. Dionysius at Motya was the first to co-ordinate 'machines' and show that they could capture a strong island fortress (398: Diodorus 14. 47-53). Why the generals of Greece were so slow to imitate is uncertain: lack of money probably accounts for much, and also lack of stimulus among cities accustomed to wars of attrition rather than destruction. Philip of Macedon (359-336) had the first 'modern' siege-train in Greece, and he introduced a short era in which the attack was ahead of the defence, a development which probably had profound political effects, helping him to conquer Greece without a war *à outrance*.

The supreme success of Alexander in siege warfare was due less to a further technical advance than to the personal factor: by all reasonable standards Tyre was impregnable, but he took it (Arrian, *Anab.* 2. 16-24). Later, at natural strongholds like Aornos (q.v.) and 'the Sogdian rock', his machines might help him, but far more it was his obvious contempt for the natural obstacles that got him through. The siege of Rhodes by Demetrius (305: Diod. 20. 81-8 and 91-100) was, technically, the most elaborate in antiquity: Demetrius had an unprecedented siege-train, but the Rhodians, too, had artillery besides a good wall. Already, in fact, the balance had shifted back in favour of the defence. Catapults could serve both sides. A solid wall of dressed stone could withstand rams for a time, roofed battlements could protect its defenders, a ditch in front could hinder rams and towers from approaching. And all the old tricks remained: even the armoured 'Helepolis' of Demetrius was ultimately fired by the Rhodians. It was not so much degeneration in subsequent besiegers as the improved equipment of the besieged which fixed the aerie of Greek siegecraft towards the end of the fourth century, and made the third century an age of few great sieges.

G. T. G.

SIEGECRAFT, ROMAN. Rome was slow in adopting Greek artillery and does not seem to have made any great contribution to its development.

Two types of heavy artillery were used, the *catapulta* and the *ballista*, the former for shooting arrows, the latter for stones. Their construction was based upon the elasticity of torsion produced by twisted strands of gut

or horschair made taut by a windlass, which when released forced the discharge of the projectile. Later we hear of the *onager*, so-called from its 'kicking' propensities, in which the strings were stretched horizontally and not vertically. For the *catapulta* see the tombstone of C. Vedennius Moderatus, a soldier of Legion XVI (ILS 2034).

These engines were used mainly for defensive purposes, as the projectiles, although effective in clearing the battlements of defenders, were not sufficiently heavy to breach solid walls. The principal attacking engine was the *aries*, a beam with an iron head, which is shown on Trajan's column. It was moved up to the walls in a *testudo* or frame which was protected against fire by a wooden roof covered with clay or hides. A variety of the *aries* was the *terebra* for boring into a wall, while the *falx muralis* loosened the stones on the top. Movable towers were employed by Caesar at Massilia, and in Titus' siege of Jerusalem.

Another method of assault was by driving an underground gallery into the town. The mining party was protected by a *musculus* or wooden shed, 60 feet long, 4 feet wide, and 5 feet high, with a sloping roof covered with fire-proof material. It was moved up to the wall on rollers. A variety of it was the *vinea* which had one of its sides left open; the *pluteus* was a screen capable of protecting a small squad.

H. S. Jones, *Companion to Roman History* (1912), 215-23; R. Schneider, *PW*, s.v. 'Geschütze'. H. M. D. P.

SIGILLARIA. The custom of making presents of little pottery figures at the Saturnalia (q.v.), was so firmly fixed at Rome that there was a regular market for them, where apparently other trifling wares were also sold (Ausonius, *Cent. nupt.*, p. 206, 7 Peiper). It was usual to give dependants money for this fair (c.g. Sueton. *Claud.* 5). The origin of the custom is not known; the date of the fair was, in Imperial times, the last of the seven days which the Saturnalia then lasted (Macrobius, *Sat.* 1. 10. 24).

H. J. R.

SIGNA MILITARIA. The earliest standard of the Roman Army was the *signum* of the maniples. Its primitive form was a hand on the top of a pole, which later was replaced by a spearhead decorated with *phalerae*, *coronae*, and zodiac emblems. It was used by the centurion commanding the maniples for giving orders or for rallying his troops. When the cohort superseded the maniples, the *signum* of the first maniples in each cohort was used as the standard of the cohort. The century had no separate *signum*.

In the pre-Marian army there were also five legionary standards, which were placed for safety in battle between the first two lines. In substitution for these Marius gave each legion an *aquila* of silver or gold with *coronae* as its sole decoration. The *aquila* was the *numen legionis*; its loss sometimes entailed the disbandment of the legion.

Under the Principate the legion retained its *aquila* and *signa*. The praetorians had only *signa* and *vexilla*. (For other uses of *vexilla*, see *VEXILLUM*.) The legions, urban cohorts, *vigiles*, and *auxilia* were also given *imagines*, which were medallions with the portrait of the reigning princeps.

SILANUS, DECIMUS JUNIUS, husband of Servilia (q.v.), when *consul designatus* in 63 B.C. proposed the 'extreme punishment' for the Catilinarian conspirators, but after Caesar's reply modified his opinion.

F. Münzer, *PW* x. 163.

SILENI, see *SATYRS*.

SILIUS (1), GAIUS, grandson of P. Silius Nerva (cos. 20 B.C.) and described as 'iuuentutis Romanae pulcherrimus', attracted the guilty passion of Messalina and was involved in a liaison, perhaps in a plot to displace Claudius. It is said that the lovers openly celebrated a marriage while the Emperor was absent at Ostia. The imperial freedmen, in alarm, took counsel together and compelled Claudius to act. Silius and his paramour were put to death (A.D. 48).

R. S.

SILIUS (2) **ITALICUS** (a recent inscription (*CR* xlix. 216-17) mentions his full name, TIBERIUS CATIUS ASCONIUS SILIUS ITALICUS). His birthplace is uncertain, perhaps Padua (*CR* i. 56-8), but not Italica in Spain. He died c. A.D. 101 aged 75, from voluntary starvation to shorten an incurable ailment (Pliny, *Ep.* 3. 7): this fixes his birth in 26. As a pleader he won fame, and, after receiving a bad name as a Neronian informer, was consul in 68; he supported Vitellius for the succession (*Tac. Hist.* 3. 65), and later about 77 gained high praise for his administration of Asia. Thereafter, he enjoyed an elegant retirement amongst numerous friends in Rome and Campania; a connoisseur of books, pictures, and statuary, he owned many country-houses, including one of Cicero's, for whom he showed great reverence, as for Virgil, whose tomb in Naples he repaired. From Martial's flattering references to him after 88 it seems that his poetic interest began only late in life. His Stoic outlook and death are confirmed by his acquaintance with Epictetus (*Arr. Epict. diss.* 3. 8. 7).

WORKS. *Punica*, the longest Latin poem, an historical epic in 12,200 verses on the Second Punic War. The seventeen books begin with Hannibal's oath and, except for digressions on Regulus and Anna, proceed in regular order of events to Scipio's triumph after Zama. The poem was planned by 88, but probably only bks. 1-6 appeared under Domitian (E. Bickel, *Rh. Mus.* lxxvi. 505); as 14. 686 dates from the close of Nerva's principate, hasty workmanship would explain the inferiority of the final books. Since he wrote 'maior cura quam ingenio' (Plin. *Ep.* 3. 7. 5), sources should be traceable for his facts; though owing most to Livy's Third Decad, he is not a mere free versifier of Livy. His main additional historical authority was Valerius Antias. On geography Varro is his chief source, along with Hyginus; his ethnography rests ultimately on Posidonius. Of Ennius, who described the same war, there is little direct imitation. His poetry owes most to the *Aeneid*, but adaptations occur from Lucan's and the other epics.

The *Ilias Latina* (q.v.), sometimes ascribed to him as a youthful work, is perhaps by Baebius Italicus.

Despite his clinging to a mythological scheme and the outworn epic machinery, Silius is distinctive. His learning, displayed in endless epithets and catalogues, is tiresome; he has too many rhetorical speeches; his language is not really poetic, and accounts of battles are confused and gruesome; but the versification is not monotonous; similes, if excessive, are clear and lifelike; and short passages show good narrative skill or straightforward description. Scipio fails as hero, and Hannibal comes nearer the part. *See also* EPIC POETRY, LATIN, para. 3.

SILK. In early times silk was exported from the Far East by overland routes to the countries of western Asia, and in the days of Herodotus the Persians regarded a silk robe as one of their choicest possessions. The pure silk robe—*vestis serica*—however, was not the same as the *vestis Coa* or the *vestis bombycina* with which it is sometimes confused. The Coan robe was made at Cos from the pierced cocoons of a worm—*bombyx*—which lived on oak and ash trees, the bombycine robe from the pierced cocoons of the true mulberry silkworm; and as in both cases it was impossible to unwind the cocoons, they were carded and then spun into a coarse silk. The Chinese alone knew the method of unwinding the entire cocoon, and the raw silk—*μέταξα*—was imported into Italy before the beginning of the Christian era. It was very expensive and at first a silk robe was only half silk—*subserica*—the warp of linen, the woof of silk; and even so was by law confined to women. In the late Empire the pure woven silk stuffs were imported, a pound of gold being paid for a pound of silk—*holoserica vestis*—and Elagabalus was the first to wear such a robe. F. A. W.

SILO, *see* GAVIUS, POMPAEDIUS, POMPEIUS (6).

SILURES, a tribe in south-east Wales, an offshoot of the Iron Age B culture. Under the leadership of Caratacus, they gave trouble to the Roman armies, but were finally subdued by Frontinus (A.D. 74-8), who planted a legionary fortress at Isca (*Caerleon*). A Roman town in the plain (Venta Silurum, *Caerwent*) replaced their hill forts.

Collingwood-Meyers, *Roman Britain*, 94-7, 110-12. C. E. S.

SILVA, like *ἵλη*, could mean raw material, and, perhaps with a suggestion of its Ciceronian sense of a forest-like abundance, was extended as a literary title to work of varied content (cf. Suetonius' *Pratum*). Quintilian (*Inst.* 10. 3. 17) explains it as a rapid draft, and this applies to Statius' *Silvae*, which are occasional poems hastily composed. Ben Jonson's definition, 'the Ancients call'd that kind of body *Sylva*, or *ἵλη*, in which there were workes of divers nature, and matter congested', indicates why it remained an appropriate title for miscellaneous verses into the Renaissance, e.g. Mantuanus' 'subitaria carmina' (Bologna, 1052) or Politian's 'Sylvae'. J. W. D.

SILVANUS, the Roman god of uncultivated land beyond the boundaries of the tillage. He was thus

uncanny and dangerous, *see* PILUMNUS. His personality also seems to have been very vague, for he has no name, *Silvanus* being merely an adjective, unless, with Wissowa, *RK* 213, we suppose that the substantive Faunus (q.v.), is to be supplied. Clearly it would be well to propitiate him when making inroads into his domain, so it is quite understandable that 'every estate has three Silvani' (Gromatici, p. 302, 14 Lachmann), one for the boundary, one *domesticus*, *possessioni consecratus* (watching over the farm-house itself?), and one for the herdsmen; of course a late and somewhat fossilized form of the worship, which itself dated from times when such land represented the felling of trees and other interferences with the wild country. Silvanus thus bears a kind of resemblance to Greek satyrs and Sileni, and is freely identified with them and with Pan (Wissowa, *ibid.* 215), also with foreign, especially barbarian, gods somehow connected with untilled land, or supposed to be, regardless of their relative importance. Silvanus also occurs as a title of Mars (q.v.; Cato, *Agr.* 83), unless *Marti Silvano* is archaic asyndeton for *Marti et Silvano*. II. J. R.

SILVANUS, *see* PLAUTIUS (1), (3), and (5).

SILVER. Though known in remote antiquity, silver was for long a rarer and more valuable metal than gold, which could be easily obtained from alluvial deposits by simple washing, whereas silver had to be extracted by regular mining processes. The Phoenicians are said to have been the first to bring silver into general use; several of the silver objects mentioned in Homer have Sidonian associations. The main sources for classical Greece were Bactriana, Colchis, Lydia, Mt. Pangaeus in Thrace, and Laurium, which provided abundant supplies for Athens down to 413 B.C. In the western Mediterranean Spain was the most prolific source of supply, with Sardinia, Gaul, and Britain as minor sources. The conquests of Spain and Asia made silver plentiful at Rome, where it had previously been rare.

Silver was worked with a hammer into plates which were soldered or riveted together and then decorated with repoussé work (*ἐμψαιστική*), stamping, chasing, and engraving. Vases might be hammered or cast from a mould and were often adorned with reliefs (*emblemata*), let into the body of the vessel or *crustae* soldered upon the surface. To provide colour contrast silver objects were often gilded, a practice mentioned in the Acropolis inventories. Niello, a form of enamelling, does not appear until Roman Imperial times.

Less popular than gold for jewellery, silver was especially used for valuable and luxurious specimens of objects for which bronze was the common material. It was extensively used for statuettes, but rarely for larger sculpture; for the domestic furniture of wealthy Romans; and, above all, for services of dinner-plate. Many of these services (*ministeriuma*) have been preserved, examples being the Treasures of Hildesheim in Berlin, and of Boscoreale in Paris, both of the early Empire; and the Esquiline Treasure in London, of the late Empire. They include flat dishes for eating (*lanceae*), flat or hemispherical bowls for drinking (*calices*, *scyphi*), jugs (*urceoli*), saucers (*trulli*), buckets for fruit (*situlae*), spoons (*cochlearia*), pepper-casters (*piperatoria*), etc. Cups were the special subjects of artists of whom Pliny gives a list dating from the fourth and third centuries B.C.; he remarks that while no names of goldsmiths have been preserved, the silver-smiths (*argentarii*) are numerous.

Pliny, *HN* bk. 33; H. B. Walters, *Catalogue of Silver Plate in the British Museum* (1921). F. N. P.

SILVIA, a name now generally discarded in the title of *Peregrinatio ad loca sancta* (q.v.).

SILVIUS, son of Aeneas (q.v.) and Lavinia, father of Silvius Aeneas and ancestor of the Alban royal house of Silvii (Verg. *Aen.* 6. 760-7; Liv. 1. 3). A legend due to the name, but unknown to Virgil, told that Lavinia, fearing the jealousy of Ascanius, fled to the woods and there gave birth to her son (Dion. Hal. 1. 70). C. B.

SIMMIAS (1) (or **Simias**) of Thebes, a member of the inner circle of Socrates' friends, one of those who were prepared to put up money to secure his escape from prison, and who were with him on the day of his death. He had previously associated with the Pythagorean Philolaus, and in the *Phaedo* he ably defends Pythagorean theories. In the *Phaedrus* Plato praises highly his philosophical ability. Diogenes Laertius ascribes to him twenty-three dialogues (not extant), but it is doubtful whether this ascription is sound.

PW iii A. 144.

W. D. R.

SIMMIAS (2) of Rhodes, poet and grammarian, lived in Rhodes (Strabo 364, 655) about 300 B.C., wrote three books of γλῶσσαι and four of ποιήματα (Suidas s.v. Σιμμία). Of the first Athenaeus gives a few quotations (327 e, 472 e, 479 c, 677 c) about the meanings of words. The poems vary in character. Fragments survive of a hexametric epic on Apollo (fr. 1 Powell), and others called *Gorgo* and *Mēves* (frs. 6-8), and of lyrical poems (frs. 13-17). There are also three complete *Technopaegnia* called *Wings* (fr. 24), *Axe* (fr. 25) and *Egg* (fr. 26) and epigrams (frs. 18-22) which are in the epideictic manner of the time. His style shows affinities to the Coan circle of Theocritus, and though he calls himself Δωπία ἀγδών, he does not write in any single dialect.

Text: E. Diehl, *Anth. Lyr. Graec.* ii. 257-75; J. U. Powell, *Coll. Alex.*, 109-20. Criticism: H. Fraenkel, *De Simia Rhodio* (1915).

C. M. B.

SIMON of Athens, a shoemaker, was according to a late tradition a friend of Socrates, who used to visit him in his workshop and discuss philosophical questions with him. He plays a considerable part in the (late) *Socraticae epistulae*, and Diogenes Laertius says he was the first to write reminiscences of Socrates in dialogue form. But he is never mentioned by Plato or Xenophon, and his very existence as a real personage is not quite certain.

PW iii A. 163.

W. D. R.

SIMONIDES (c. 556-468 B.C.), lyric and elegiac poet, born at Iulis in Ceos c. 556 B.C. (fr. 147), the son of Leoprepes. In the last years of the sixth century he wrote Epinician Odes for Glaucus of Carystus (fr. 8, Paus. 6. 10. 1) and Eualcidas of Eretria (fr. 9, Hdt. 5. 102). He was the guest of Hipparchus at Athens ([Pl.] *Hipparch.* 228 c), and to this period may have belonged some of his fifty-six victories in dithyrambic competitions (fr. 79). A couplet honouring the murderers of Hipparchus, though attributed to him (fr. 76), is not necessarily by him, while his epitaph on Hippias' daughter, Archedice, shows his affection for the family (fr. 85). About 514 he went to Thessaly, where he was the guest of the Scopads, and celebrated their chariot victories (Theoc. 16. 42-7). He was miraculously preserved when their house fell and destroyed them (Callim. fr. 71, Cic. *De Or.* 2. 86). He lamented them in a Dirge (schol. Theoc. 16. 36). To the same period belong his dirge on Antiochus the son of Echekratidas (ibid. 44), but the only substantial fragment from this time is his lines to Scopas on the nature of virtue (fr. 4) in which he seeks to substitute a good conscience as the right test for a good man instead of all-round excellence. He was back in Athens in 490, when his epitaph on the fallen of Marathon was preferred to that of Aeschylus (*Vit. Aesch.*, p. 4). In the wars of 480-479 he rose to great prominence and wrote a commemorative hymn for the Spartans who fell at Thermopylae (fr. 5), a hymn of thanksgiving for the victory of

Artemisium (frs. 1-3), and epitaphs for the fallen, including his own friend Megistias (fr. 83) and the Spartans who died with Leonidas (fr. 92). At this time he was a friend of Themistocles (Plut. *Them.* 5, Cic. *Fin.* 2. 32. 104), in whose interest he carried on a verbal warfare with Timocreon (frs. 169-70, Diog. Laert. 2. 25, 40). About 476 B.C. he went to Syracuse as the guest of Hieron, with whom various stories connect him (Pl. *Ep.* 2, Ath. 656 d, Ael. *VH* 9. 1), and made peace between him and Theron (Timaeus ap. schol. Pind. *Ol.* 2. 29). He died in 468 (*Marm. Par.* 73) and was buried at Acragas (Callim. fr. 71). He was said to be ugly (Plut. *Them.* 5), fond of money (Ar. *Pax* 698, Callim. fr. 77), and the inventor of a technique for remembering (Cic. *De Or.* 2. 357). His work falls into the following classes: (1) Hymns, of which very little survives, except frs. 1-2, 5. (2) Scolia and Encomia, including his poem to Scopas (fr. 4) and his quatrain on the four best things (*Scol. Att.* 7). (3) Dirges, for which he was extremely renowned (Quint. *Inst.* 10. 1. 64), notably frs. 6-12. The famous lines on Danac (fr. 13) do not necessarily come from a Dirge. (4) Epinicians, written for many patrons, including Astylus of Croton (fr. 10), Crius of Aegina (fr. 13), Xenocrates of Acragas (fr. 6), Anaxilas of Rhegium (fr. 7). In these he seems to have been much more playful than Pindar. (5) Elegies, frs. 62-6, 84, 99, 128, 130, including both poems on public events such as the battle of Plataea and short, sympotic poems. (6) Inscriptional epigrams for dedications and epitaphs. The authenticity of these is very doubtful in many cases, as they were probably not collected till the fourth century and would not have the author's name on the stone. The most likely to be genuine are frs. 79, 83, 85, 91; see *EPIGRAM*, 1 (1). (7) Since many apophthegms are attributed to him, a collection of such may have existed. He was admired for his choice of words (Dion. Hal. ii. p. 205, 7, *De Imit.*), his sweetness (Cic. *Nat. D.* 1. 22), his harmonious style (Dion. Hal. *Comp.* 23).

Text: E. Diehl, *Anth. Lyr. Graec.* ii. 61-118. Criticism: U. von Wilamowitz-Moellendorf, *Sappho und Simonides* (1913), 137-212; C. M. Bowra, *Greek Lyric Poetry* (1936), 317-401; A. Hauvette, *Les Epigrammes de Simonide*; M. Boas, *De Epigrammatis Simonideis* (1905). C. M. B.

SIMYLUS, (1) Greek didactic iambographer, of whom a few fragments survive, of the third or second, or even of the first, century B.C. Probably not identical with a comic poet of the same name (*CAF* ii. 444). See *LITERARY CRITICISM, GREEK*, para. 4.

(2) Greek author of an elegy or epigram on Tarpeia, perhaps slightly earlier than the Augustan age. *Anth. Lyr. Graec.* ii. 248.

SIN. The various words which may be translated by 'sin' and the ideas which they represent fall into two classes, a lower and a higher. In the former the act is one which brings about undesirable relations between the agent and his supernatural environment; it may be the breach of a tabu, disobedience to the command of a supernatural being, departure from the recognized standard of conduct (*doxa*, *fas*) of his community. It need not be what we should regard as immoral; it does not necessarily connote any evil intention, or any intention at all, on the agent's part; it often is not individual in itself, very often not individual in its consequences. Indeed, the fact that its consequences are supposed to extend far beyond the sinner is the main reason for general objection to it. In the latter the act is itself considered wrong, offending a deity or deities because the god or gods are supposed to be righteous and interested in human morality. The history of Greek thought in this respect is a progress from the lower to the higher

conception. Rome seems of herself to have made but small advance in this direction till enlightened by Greek theology.

2. Of the former stage, in Greece, Hesiod furnishes a good example (cf. SUPERSTITION). He forbids, with equal earnestness and apparently equal assuredness that divine vengeance will follow transgression, on the one hand a number of acts of which any moral code would disapprove, such as the ill-treatment of orphans and of one's own parents (*Op.* 330 ff.), and on the other purely ritual offences such as omitting to wash the hands before pouring libation (*ibid.* 724 ff.; full list in R. Pettazzoni, *La Confessione dei Peccati* iii (1936), 174 ff.). This is in a poem which repeatedly and emphatically insists on the justice of Zeus. In some archaic rites, such as that of the Samothracian gods, confession of offences was a preliminary to initiation; it does not appear that anything more was needed, the confession being simply a process of getting rid of the state of sinfulness and so leaving the candidate ritually pure; Pettazzoni, *op. cit.* 163 ff., cf. i. 60 ff.; *Harv. Theol. Rev.* xxx (1937), 1 ff., the last giving other examples of confession in ancient ritual, especially Oriental cults.

3. For Rome, a similar state of things can be detected for early times. It is significant that the word *seclus*, perhaps the nearest classical equivalent of 'sin', can also, in Plautus and other Republican authors, mean 'ill-luck', such as would naturally come mechanically from the violation of some tabu. A legend, the more significant because it is probably pure invention and therefore shows fairly early ideas of what is proper in such matters, represents grave consequences befalling as the result of a wholly accidental *vitium*, or shortcoming, in the celebration of games to Jupiter (*Livy* 2. 36). The XII Tables show at least the beginnings of a movement towards a more enlightened view, for they make provision for lenient treatment of a merely accidental homicide (*Cicero, Top.* 64).

4. Greece, as early as Homer and more articulately and detailedly in later authors down to about the end of the fifth century B.C., develops a theory which strongly stresses the moral aspect. Sin is the result of *ὕβρις* or overweening disregard of the rights of others; Theognis in a famous passage declares this due to *κόπος*, satiety, in other words too much prosperity, but adds 'when wealth attends a base man' (*Theog.* 153, cf. Solon, fr. 3. 9 Diehl), while Aeschylus (*Ag.* 751 ff.) emphatically denies that prosperity of itself has any such result (contrast *Hdt.* 1. 32. 6-9). In any case, this *ὕβρις* results in *ἄρνη*, a state of blindness to both moral and prudential considerations, in which 'the evil appears good' (*Soph. Ant.* 622, see Jebb *ad loc.*), and this brings about utter ruin. These sins appear in no case to be mere ritual offences, but serious wrongdoings. It was further held that punishment might not overtake the actual sinner, but either his descendants (as Solon, fr. 1. 29 ff. Diehl) or those somehow associated with him (Hesiod, *op. cit.* 240; cf., e.g., Horace, *Carm.* 3. 2. 29 f.), despite their innocence. This problem seems to have exercised Aeschylus greatly, for several of his plays deal with the problem of the hereditary curse, as the surviving trilogy and that of which the *Seven against Thebes* remains. His solution would appear to be that the children of the sinful inherit a certain tendency to sin, but are nevertheless free agents who may return to better ways.

5. Some of the more mystical religious systems, notably Orphism (q.v.), occupied themselves with the relations between sin and suffering, and seem to have found a solution in the theory that sins committed in one life may be atoned for in another, see especially Pind. *Ol.* 2. 56 ff. (probably Pythagorean). Orphism seems actually to have had a kind of dogma of original sin (Pind. fr. 127 Bowra, see Rose in *Greek Poetry and Life* (1936), 79 ff.).

6. Further examination of this and kindred problems

was mostly left to the philosophic schools (it is worth noting that the Christian word for sin, *ἁμαρτία*, may derive from a Stoic technicality, see Wilamowitz-Moellendorf, *Glaube der Hellenen* ii (1932), 120). Many of the later, orientalizing cults elaborately developed the idea of punishment for sin after death, which in Homer hardly exists, save for the penalties inflicted on a few who had directly and personally offended the gods (*Od.* 11. 576 ff.), but expanded under philosophico-religious influences (Orphic-Pythagorean?) into such schemes of Hell, Purgatory, and Paradise as are found in Verg. *Aen.* 6 and became extremely minute and particular in later documents (see A. Dieterich, *Nekyia*², 1913).

Literature: besides the works mentioned in the text, a good summary is A. W. Mair in Hastings, *ERE* xi. 545 ff., cf. J. S. Reid, *ibid.* 569 ff. H. J. R.

SINIS, a brigand who lived on the Isthmus of Corinth. He made all comers contend with him at holding down a pine-tree, which, when they could no longer hold it, flung them into the air and so killed them (so Apollod. 3. 218 and others, see for details Wörner in Roscher, s.v.), or, more intelligibly, tied them to two such trees which were then let go and tore them asunder (so Diod. Sic. 4. 59. 3 and others). Hence he was surnamed *Pityocampetes* (*Πυτοκαμπήτης*), i.e. pine-bender. Theseus (q.v.) on his way to Athens, killed him in the same manner, *Plut. Thes.* 8, who adds that Perigune (*Περιγούνη*), Sinis' daughter, became the concubine first of Theseus and later of Deionceus son of Eurytus of Oechalia. H. J. R.

SINNIUS CAPITO, scholar of the Augustan age whose *Epistulae* (containing grammatical discussions), *Liber de syllabis*, and *Libri spectaculorum* are mentioned by later writers. Cf. Teuffel, § 260; Schanz-Hosius, § 353; G. Funaioli, *Gramm. Rom. Frag.* 458-66.

SINON, a pretended deserter from the Greek forces at Troy, who told the Trojans a long and false tale of the building of the Trojan Horse (*Verg. Aen.* 2. 57-194) and after it had been taken within the walls released the Greek soldiers inside it and joined in the sack of the city. The story is derived from the epic cycle and is treated by several extant writers.

O. Immisch in Roscher, *Lexikon* iv (1915), 935-46; A. C. Pearson, *Fragments of Sophocles* ii (1917), 181-3. A. S. P.

SINOPE, a town situated almost at the midpoint of the south shore of the Euxine on an easily defended peninsula with two good harbours about its base, and near the place where the crossing to the Crimea is shortest. The promontory is well watered and fertile (Strabo speaks of market gardens), the tunny catch was famous, and the mountains noted for their timber and cabinet woods. Founded by Miletus traditionally before 756 B.C., it was destroyed by the Cimmerians and refounded before 600. It early commanded the maritime trade of much of the Pontic region and established many colonies along the coast, some of which were tributary to it in Xenophon's time. In spite of mountain barriers it drew trade from the interior, notably in Sinopic earth (cinnabar). In 444 it was freed from a tyrant by Pericles. It was attacked and perhaps eventually captured by the Persian satrap Datames (c. 375). The town probably maintained its freedom under Alexander and his immediate successors, and with the assistance of Rhodes repelled Mithridates III of Pontus in 220, but was finally occupied by Pharnaces I in 183 and soon became the Pontic capital. In the Third Mithridatic War it was captured and constituted a free town by Lucullus. It was occupied and suffered severely at the hands of Pharnaces II (q.v.), but Caesar repaired its losses by settling a colony with the title of Colonia Julia Felix Sinope. An abundant coinage attests its prosperity both in the early and the Imperial periods, and the appearance of men of Sinope all about

the Euxine, the Aegean, at Athens, and at Rhodes attests the wide commercial connexions of the city. Its vigorous hellenism is shown by the names of Diogenes the Cynic, Diphilus the comic poet, and other men of letters. Strabo describes it as a city with fine buildings, market-place, porticoes, gymnasium, and fortifications.

Strabo 12. 545; D. M. Robinson, *Ancient Sinope* (1906); F. Miltner, *Anatolian Studies Presented to William Hepburn Buchler* (1939), 191 ff. T. R. S. B.

SIRENES, half women, half birds endowed with enchanting song. In the *Odyssey* (12. 39, 184) the S. live on an island near Scylla and Charybdis. Sailors charmed by their song land and perish; the meadow is full of decaying corpses. But Odysseus following the advice of Circe passes safely. Similarly Orpheus saves the Argonauts by competing with the S. (Ap. Rhod. 4. 893; Apollod. 1. 9. 25). In other stories the S. must die if a mortal can resist their song (Hyg. *Fab.* 141). The escape of Odysseus and of Orpheus and their defeat by the Muses (q.v.) lead to their death. The S. are omniscient and have the power to quiet the winds (with their song? Hes. fr. 69 Rzach). S. are sometimes called daughters of Earth; they sing the strains of Hades (Soph. fr. 861 Pearson), and they live in Hades (Pl. *Cra.* 403 d). S. accompany the dead on their voyage to the lower world and crown tombs, from very early times. This leads some authorities to assume that they were originally birds inhabited by souls of the dead. A poetical interpretation makes these funereal S. grieve for the dead with mournful songs just as they mourn for Persephone (Dositheus viii in Hyg. *Fab.* ed. Rose; Eur. *Hel.* 167 f.). When definite geographical locations began to be attached to Homeric geography, it was held that S. ranged along the coast of south Italy, where they were worshipped by the seafaring population (Strabo 1. 22) in Naples, Sorrentum, and Sicily. They probably figured in Timaeus (q.v.).

In art, S. begin as rapacious singing monsters, but like many other monsters they are ennobled in Classical art to mourning, beautiful beings; in Hellenistic art and literature they are representatives of music almost as much as Muses and are said to be daughters of a Muse (Ap. Rhod. 4. 896). Occasionally they are given an erotic character (Attic comedy).

Weicker in Roscher, *Lexikon*, s.v. 'Seirenen'; H. Payne, *Necrocorinthia* (1931), 139; E. Haspels, *Attic Black-Figured Lekythoi* (Paris, 1936), 150. G. M. A. H.

SIRMIMUM, a town on the Savus in Pannonia (Inferior), founded by the Celtic Taurisci, was occupied by the Romans (perhaps by 35 B.C.) and became a colony under the Flavians. Important as a road-junction and as a base against Dacians and other Danube tribes, Sirmium had an arms factory (Not. Dign. Occ. 9. 18), a *statio classis primae Flaviae Aug.* (l.c. 32. 50), and an imperial mint which worked from A.D. 330 to 378. At Sirmium four Arian creeds were drafted (A.D. 347-59). Often in later times the residence of emperors and high officials, Sirmium, which was the most important town of Pannonia, was abandoned c. 400 by the Romans.

M. Fluss, *PW*, s.v.; C. Patsch, *Sitz. Wien*, 209 v (1929); *Strena Buliciana* (1924), 229-32. F. A. W. S.

SISCIA, a town in Pannonia (Superior) where the Colapis joins the Savus. Taken by Octavian (35 B.C.), Siscia developed quickly, and became a *colonia* (Flavia) under Vespasian; Septimius Severus apparently sent there fresh colonists (*colonia Septimia*). Its imperial mint worked from Gallienus till A.D. 387. Important through its natural strength, which was increased by a canal dug by Tiberius, and as a river-harbour, Siscia was a station of the *classis Aegentensium sive secundae Pannonicae* (Not. Dign. Occ. 32. 56), and also a customs-station.

M. Fluss, *PW*, s.v. On the coinage, A. Alföldi, *Siscia* (1931) and *Numizmatikai Közlemények* xxvi/xxvii (1927/8), 14-58. F. A. W. S.

SISENNA, LUCIUS CORNELIUS, the historian, praetor in 78 B.C., defended Verres (70), and was legate to Pompey in 67, dying in Crete. His *Historiae*, in at least twelve books (scarcely the twenty-three of fr. 132), after a reference to Roman origins treated the Social War and Sullan Civil War, certainly from 90 to 82, probably to Sulla's death; it may have continued the work of Sempronius Asellio (q.v.). The composition was literary, not chronological, the style vivid and striking, on the model of Cleitarchus (Cic. *Leg.* 1. 2. 7). This Hellenistic influence appears in his translation of Aristides' *Milesiaca*, associating him with Petronius and Apuleius. His historical authority, however, was recognized by Sallust and Varro. He is not the Plautine commentator of this name.

H. Peter, *HRRel.* 12 (1914), pp. cccxxxiv, 276; A. Schneider, *De Sis. hist. reliquiis* (1882); C. Calvi, 'La vita e le opere di L. Corn. Sisenna', *Studi letterari*, 1898, 93. A. H. McD.

SISPES, see JUNO.

SISYPHUS, in mythology, son of Aeolus (2), (q.v.). In *Od.* 11. 593 ff. he is one of those tormented in Hades, having eternally to roll a rock up a hill, from the top of which it always rolls down again. In *Il.* 6. 154-5 he lives in Ephyre in the Argolid and is grandfather of Bellerophon (q.v.), and 'most crafty of men'. The reason for his damnation is not stated in Homer; others, as Eustathius and the schol. on Homer, ll.cc. (cf. Rose, *Handbk. Gk. Myth.*, pp. 270, 294, and notes), connect it with his offence against Zeus in telling Aesopos where the god had taken his daughter Aegina. For the associated folk-tale of how Sisyphus befuddled Death and Hades see THANATOS. Being clearly the familiar trickster of popular tales, he is naturally brought into association with Autolycus (q.v.); thus, Polyaeus (*Strat.* 6. 52, cf. Hyginus, *Fab.* 201) says Autolycus used to steal his cattle, but Sisyphus stopped him by attaching to their hooves lead tablets with the words 'stolen by Autolycus', whereby he tracked them. He is also father of Odysseus in post-Homeric accounts, cf. ANTICLEA. His name is a not infrequent nickname for cunning persons (see Wilisch in Roscher's *Lex.* iv, 964, 22 ff.). A more serious side of his character is reflected in his shrine, the Sisyphoeion, on the Acroeorinthus (Strabo 8. 6. 21) and his grave on the Isthmus (Paus. 2. 2. 2).

H. J. R.

SITALCES, a Thracian king of the tribe of the Odrysae (in the Hebrus valley), who inherited from his father Teres a dominion over the entire eastern Balkan peninsula up to the Danube. He extended this empire to the middle Strymon. Common enmity against Macedonia brought him into alliance with Athens. In 431 B.C. he delivered to the Athenians some Corinthian and Spartan envoys on the way to Persia. In 429 he made a foray with massed forces into Macedonia, encountering no resistance. But failing to receive assistance as arranged from Athens, he could not capture any strongholds, and so fell back. He was killed in a campaign in the central Balkans (424); his empire broke up soon after.

Thucydides 2. 29. 67, 95-101.

M. C.

SITOPHYLAKES, overseers of the cornmarket in Athens and a few other States. In Athens there were five for the city and five for the Piraeus (after 350 B.C. twenty and fifteen respectively). They supervised the sale of imported corn, wholesale and retail, not only looking after the quality, but controlling prices and the amount bought: no one merchant could purchase more than a certain quantity.

In other more self-supporting States the control was not so strict, and the duties of the *sitophylakes* were performed by the *agoranomoi* (q.v.).

Lysias, *Or.* 22.

A. W. G.

SITTIUS, **PUBLIUS**, a Roman *eques* from Nuceria in Campania, went to Further Spain late in 64 B.C. as a free-lance speculator, thus severing his association with Catiline (so Cicero, *Sull.* 20. 56-9; contrast Sall. *Cat.* 21. 3). Later he established himself as a condottiere in Mauretania, and enjoyed great influence with Boecchus and Bogud. During the Civil War he gave valuable support to Caesar, joining with Boecchus in 46 to create a diversion in Numidia. He was rewarded with part of the territory of Masinissa and Juba, where he settled with his followers (Sittiani). Later he died through treachery.

J. M. C.

SKYTALE, a secret method of communication used by Spartan magistracies, especially between ephors and king or general, during war-time. Each of them had a stick of equal size, so that a message written on a strip of leather wound round the stick of the sender, and then detached, became illegible until the strip was rewound on the stick of the recipient. The skytale is described by Plut. *Lysander* 19, and Gell. 17. 9.

A. Martin, *Dar.-Sag.*, s.v.

V. E.

SLAVERY, LAW OF. I. GREECE. Slaves could belong to the State (*δοῦλοι δημοσίοι*, being employed for public works or subordinate services in public offices), temples (*ιερόδουλοι*), or private persons. Slaves had no legal personality, and generally their master could dispose of them as of the rest of the property. Their legal position was not uniform: slaves living in the master's household were in a worse condition than those who had economic independence with their own lodging and paid only a rent to their master. The former class (*οἰκέται*) could own no property or enter into transactions on behalf of their master. A slave of this class could be sued personally, if he did any damage, but his master would be liable under the judgement. Slaves of the second category (e.g. those who belonged to the State) had larger legal powers: as administrators of large estates or commercial undertakings they acted as their master's representatives, and their declarations were legally binding. It seems that they could be parties to a trial; their position may be characterized as half-free. There were also considerable differences in the laws of particular States; according to the law of Gortyn the distinction between free men and slaves was less sharp. Slaves were not debarred from public religious ceremonies nor from the army and navy; they were protected against cruelty on the part of their master, and they could take refuge in an asylum (see *ASYLUM*) and demand to be sold to another master. Penalties inflicted upon slaves were more severe: where a free man was punished with a pecuniary fine, slaves were flogged.

Slavery arose by birth, capture in war or kidnapping, sale of a free child by his father or of a debtor by the creditor (these two last measures were abolished at Athens by Solon). Release from slavery could be effected by will, by notification before witnesses, in public places or before altars, by consecration or sale to a divinity. By enfranchisement the slave acquired freedom, but not citizenship. His dependence on his master was not entirely abolished: he often remained for some years in the master's household and worked there as before for the master's profit, and he could not marry without his consent. He was obliged to pay him an annual fee, and when he died childless, his estate went to his master.

II. ROMAN. In ancient Rome slaves could not possess any rights, they were considered as objects in the ownership of their master and ranked with *res mancipi* (see *MANCIPATIO*). The development of Roman economic life, to which they contributed considerably, gradually enforced a recognition of their personality. As an instrument of the legal personality of his master the slave

could acquire property and credits for him; by a later development (praetorian reforms) he could also oblige him if he was installed in the management of a commercial undertaking or ship by the master. The custom of entrusting slaves with money for their personal disposal (*peculium*) added to their liberty of trading, because this separate fund served to ensure the fulfilment of the obligations contracted by the slave. The *peculium* was subsequently considered as the slave's own property. This recognition of a restricted legal personality in slaves was accompanied by protective measures against bad treatment by their masters. Slaves who were the property of the State (*servi publici*) enjoyed a privileged condition at Rome too, as in Greece.

Children of a female slave were slaves, even if the father was free. Foreign prisoners of war became slaves of Rome; similarly Roman citizens captured by the enemy fell into slavery (see *POSTLIMINIUM*). According to an ancient rule a Roman could not become a slave on Roman soil, but he could be sold *trans Tiberim* by a magistrate for a penalty, or by a creditor for a default. New methods of enslavement were later recognized, even on Roman soil.

Slaves became free by manumission, which could be effected in various forms: by disposition of the master in his will (later by *fideicommissum*, q.v.); or *vindicta*, a solemn procedure before a magistrate (originally a fictitious claim of liberty); or by entry of the slave with the master's consent into the list of citizens (*census*) by the censors. Informal declarations (by letter of enfranchisement or before witnesses, *inter amicos*) were introduced later. The law of manumission, the effects of which were very various, underwent continual alteration; the Christian State added a new procedure of manumission in *ecclesia*.

A. B.

SLAVES. In general the ancient world assumed slavery and seldom questioned its moral justification or economic utility. The State concerned itself little with slavery as such, though it defined specific rights; literature has little to say directly. In the study of slavery it is important (1) to observe the perpetual implicit conflict between the view that the slave is a chattel and that a slave is also a man, (2) to banish all associations clinging to the word slave from later history, (3) to note the steps in the development of slavery which prove that ultimately slavery paid only in so far as the condition of the slave approximated to that of the free man—which is the negation of slavery.

I. GREEK SLAVES

2. In the Homeric age slaves (*δούλοι*, *δουῶν*; *δοῦλος* only in *Il.* 3. 409, *Od.* 4. 12) were few, even in the richest families. They were acquired in war, though often the men were ransomed and the women and children spared, or by purchase (for prices, see *Il.* 23. 795, *Od.* 1. 430) or by piracy. Much household work was done by the family or free servants (*ἀφέντολοι*, *Od.* 9. 205, though the word does not always imply freedom) and the hard work in the fields by hired labourers (*θήτες*). Women were put to spin and weave; they often became the concubines of their masters, the child of master and slave being free (*Od.* 14. 200 f.). Though the slave was dependent on his master, his lot was not unhappy. There was no distinction between the work of slave and free; the lot of the free

labourer, not the slave, is taken by Odysseus as the less enviable (*Od.* 11. 489).

3. The steps from Homeric to fifth-century slavery are obscure. After the self-sufficing patriarchal economy of the Homeric age, increasing wealth demanded more help in the household; the sale of the produce led to the development of industry and the investment of money in slaves. The cities of Asia Minor developed industry and with it slavery; Chios became a slave market. From such beginnings slavery spread, reaching some States early, others, e.g. Boeotia, Locris, Phocis, about the fourth century, as economic conditions demanded. Periander (c. 600 B.C.) regulated the extent of slavery, probably to prevent the growth of a leisured class. Solon's abolition of the right to sell self or children lasted into later times and was accepted widely outside Athens. The law of Gortyn has extensive legislation on the conditions of slavery.

4. After 500 B.C. the number of slaves greatly increased and their proportion to free men rose. The sources of slavery were (i) birth; (ii) exposure of a child and its rescue; probably few exposed children were saved, though later drama and papyri mention rescue; (iii) piracy; (iv) war and the selling of captives. Phrygia, Lydia, Caria, Paphlagonia, Thrace, Scythia were the chief markets. In a sale in 414 B.C. the prices range from about 70 to 300 *drachmae* (*IG*² i. 329). The usual word for a slave is δούλος; ἀνδράποδον is juristic; οἰκέτης, θεράπων, παῖς, are also loosely used. The number of slaves in Attica c. 430 B.C. has been estimated at 115,000 out of a total population of 315,000, and in Athens and Piraeus at 70,000 out of 155,000 (Gomme; *sec bibl.*). Nicias is said to have had 1,000 slaves (*Xen. Vect.* 4. 14), but about 50 was perhaps the number employed by a rich man. Slaves were employed (i) by the State (δημόσιοι) in Athens and elsewhere, as servants of officials and the βουλή, and as police (δκυθαί or τοξόται); they were paid a daily wage and could move about freely: after manumission they became full citizens; (ii) as ἱεροδούλοι: these were not common in Greece; (iii) as household slaves or as παιδαγωγοί, porters, etc.; (iv) in business or shops, or in professions (doctors, musicians, etc.). Often they were μισθοφοροῦντες or χωρὶς οἰκοῦντες, handing over their profits to their owners or working on a percentage basis; (v) on the land, but these were not as common as (vi) workers in the mines, e.g. at Laurium, where thousands of miners were employed. While healthy conditions were impossible in mines, the slaves were not treated as cruelly as those employed by the Ptolemies in Egypt or in the stone quarries at Syracuse. A miner cost about 180 *drachmae*.

5. After 400 B.C. industrial slaves increased, and their price rose. Employers often shared work with their slaves and factories were not large. Demosthenes' father employed twenty or thirty slaves in an arms factory and twenty in a bed factory.

6. Alexander's conquests did not increase slavery. In the Hellenistic age industry declined in Greece and free labour could perform most of the work, though slaves in industry were numerous in Asia. In Ptolemaic Egypt there was little agricultural slavery, and little domestic slavery except at Alexandria.

7. The Greek slave was not distinguished in dress from the free man (as vase-paintings show). Temples and religious rites were open to him, but not the palaestra or Ecclesia. Attic tragedy and comedy show human and friendly relations between slave and free man. From the third century Stoicism did something to improve the position of the slave through the doctrine of the brotherhood of man.

II. ROMAN SLAVES

8. Roman slavery was more extensive and elaborate than Greek. The chief sources of slaves were: (i) Capture

in war. Prisoners were sold *sub hasta* or *sub corona*, e.g. after the siege of Veii, the northern campaigns of Marius, the Mithridatic wars, and Caesar's Gallic wars. Cicero treated the selling of slaves as a matter of course (*Att.* 5. 20), and in Imperial times enslavement on a large scale was known, as, e.g., of the Jews by Titus and Hadrian. Asiatic slaves probably reached Rome after the campaigns against Antiochus in 189 B.C. (ii) Piracy and brigandage, which became more profitable as wars became rarer and slaves more valuable. (iii) Exposure of children. This is a commonplace of Roman comedy. But the law-books and papyri show it existed; the law was in favour of liberty if free birth could be proved. (iv) Sale of children. Perhaps this was theoretically permitted (*Cic. Caecin.* 34) in the Republic, but the right is denied in Paul. 5. 1. 1. Sale of self was not valid, but might occur. (v) Enslavement for serious crime; *servi poenae* worked in mines and quarries. (vi) Birth. The child of a slave woman was usually a slave. The slave born in the household (*verna*) became increasingly common as the supply of prisoners diminished. But increase in *vernae* implied family life for the slave, and so conditions of slavery were much modified.

9. Slaves were drawn from all nationalities, but chiefly from the east Mediterranean. In the last two centuries of the Republic large slave-markets were established, e.g. at Delos, which distributed numbers of Asiatics, Syrians, Jews, Greeks, Egyptians. Many of the slaves were skilled and educated, often beyond their masters. Slaves captured in the north and west (e.g. Dacia, Moesia, Germany, Gaul) were rougher, and were generally employed in manual work.

10. The prices of slaves varied greatly with the qualifications of the slave and the state of the market. Prices given in Plautus are not easy to evaluate, and in the literature extravagant prices are generally quoted. Columella (3. 3. 8) gives 8,000 sesterces as a reasonable price for a skilled vine-dresser. Other prices include 8,000 sesterces for an accomplished young slave (Horace, *Ep.* 2. 2. 5) and 100,000 for *servi litterati* (Seneca, *Ep.* 27. 5; cf. Martial 1. 58. 1; 2. 63. 1); Horace also cites 500 *drachmae* (c. 2000 sesterces) for a slave. Papyri give various prices.

11. The main types of employment were: (i) In the household (*familia urbana*). In small households two or three performed all the work; in larger houses learned and professional slaves (doctors, etc.) were employed, specialists ministered to every luxury, and large numbers were maintained for display. (ii) In business and industry, sometimes as an extension of household service, sometimes independently. Slaves worked with their craftsman master or were put in charge of shops or workshops, often holding very responsible positions and being correspondingly well rewarded. (iii) On the land (*familia rustica*) as herdsmen, farm labourers, or bailiffs. In Republican Italy gangs of slave herdsmen worked under very primitive conditions: Cato said it was cheaper to work such slaves to death and to replace them than to treat them well. But in farming slavery was gradually found (see, e.g., Columella) to be expensive and inefficient, and it succeeded on the land only when conditions of life for a slave approached those of a free man. The *ergastula* (slave-barracks) therefore became rare and disappeared. (iv) In the public service of the State or town-ship, particularly in the early Empire: such service gave superior social and legal status and carried a salary. The work was such as would now be carried out by some of the higher and all the lower branches of the Civil Service.

12. The number of slaves in Rome is difficult to assess. Modern estimates suggest 520,000 free to 280,000 slave (Beloch), 780,000 to 200,000 (Kahrstedt).

13. In the early days of slavery there was merciless exploitation, and in the early Empire cases of grossest cruelty occur, and the waste of life in the gladiatorial

shows is notorious. But kindness and affection are common. Though Cicero speaks kindly of slaves, there is clearly for him a gulf between slave and free. Pliny was a kindly master (see *Ep.* 1. 4; 2. 6; 2. 17; 8. 16; 8. 24). The literature of the Empire shows a growing humanity towards slaves, while hundreds of inscriptions testify to a very tolerable life for them. Family life for slaves was reckoned on (see *CONTUBERNIUM*) and protection of life and property was assured (see *PECULIUM*). A very extensive body of law testifies to the increasing care for the slave. Even though slavery might be compulsion, it was often an initiation into a higher culture. To this changed attitude Stoicism contributed much (cf. Seneca, *Ep.* 47).

14. Through intermarriage between slaves of different nationality and through marriage of slaves or freedmen with the free population, slavery contributed to the fusion of races, with its attendant mixture of culture and stock; in this some historians have seen a cause of the decay of the Empire.

SMYRNA (Σμύρνα or Ζμύρα), a city on the west coast of Asia Minor at the head of the gulf into which flows the Hermus, the natural outlet of the trade of the Hermus valley and within easy reach of the Maeander valley, for whose trade it competed with Miletus and Ephesus. 'Old' (or 'Aeolian') Smyrna lay at the north-eastern corner of the gulf; it was conquered by Ephesus and Colophon and became a member of the Ionian Confederacy c. B.C. 688. After its capture by Alyattes of Lydia in 627 Smyrna ceased for 300 years to exist as a city; it was refounded on its present site around Mount Pagus by Antigonus and Lysimachus after Alexander's capture of Sardes, and at once became one of the chief cities of Asia. Throughout the Roman period it was famous for its wealth, its fine buildings, and its devotion to science and medicine. It sided with Rome against Mithridates, and in the Imperial period owed much to Roman favour. It was made a 'temple-warden' (τρωκόπος) in the imperial cult by Tiberius and was restored after its destruction by earthquakes in A.D. 178 and 180 by Marcus Aurelius. It was one of the 'Seven Churches' of the Apocalypse.

SOCII. The Roman confederation consisted, apart from Latini (q.v.), of the *socii Italici* and allies from beyond Italy. The Italian peoples—Etruscan, Umbrian, Sabelian, and Greek—were allied to Rome by formal treaties, either *foedus aequum* or *foedus iniquum* (see *ROMUS*). The frequent revolts of the allies led to the common substitution of the latter for the former type. Such allies provided Rome with troops *à formula togatorum*—the

Greeks giving sailors for the fleet—both in defensive and offensive wars, and were bound in general to respect the dignity of Rome. Otherwise they were sovereign peoples, but tended in the second century B.C. to fall under the general supervision of Rome, until their autonomy became in practice limited. The allies sometimes imitated Roman institutions, notably at Bantia in Bruttium, which romanized its constitution (see *MEDDIX*), while Rome occasionally granted them certain privileges of the Latins, chiefly *commercium*, *conubium*, or *ius exsilii*. But generally the *socii Italici* differed from Rome and the Latins in language, custom, and laws, and being less privileged than the Latins felt more deeply the deterioration in the Roman attitude, which led to the Social War. This was fought in the defence of local liberty and personal equality over against the abuse of the unrestricted *imperium* by Roman magistrates, claims finally met by the grant of Roman citizenship under the Julian and Plautian laws of 90-89 B.C. (see *CAESAR* 2; *PLAUTIUS* 1).

From early times Rome had allies outside Italy, notably Carthage and Massilia. After 200 B.C. the number of these *civitates foederatae* rapidly increased. Greek city-states, confederations, and kings became allies, normally by *foedus aequum*. With Rome's rise to world power the position of these *foederati* deteriorated, till they became merely the most highly privileged class of provincial communities, though in theory their rights depended upon a bilateral agreement. They were never included in the *formula togatorum*, although they sometimes provided auxiliary troops, cavalry, or light-armed, nor did they normally receive the social *iura*, except occasionally *ius exsilii*. But they were immune from interference by provincial governors and in internal affairs were in practice freer than the Italian allies, notably in the right of coinage. *Foederati* did not commonly survive in the Western Provinces; for when they rebelled, Rome reduced them to the status either of ordinary provincial communities, *stipendiarii*, or of *civitates liberae*. The latter originally were the Greek States declared free by Flamininus in 196 B.C. Their freedom depended upon a revocable decision of Rome. This 'freedom' later became a substitute for or modification of direct provincialization, as in Macedonia (167 B.C.), and Africa (145). Special conditions added to the declaration secured for Rome the substantial advantages—notably the payment of tribute—without the burden of provincial government. Such free States were also known as *socii*, or *socii et amici populi Romani*, terms also applied to the ordinary provincial subjects of Rome. In the Ciceronian age *socius* came to mean any community which had been received in *fidem populi Romani*.

SOCRATES (469-399 B.C.), son of Sophroniscus and Phacarete, Athenian of the deme of Alopece. His father is said to have been a sculptor or stone-mason and was apparently reasonably well-to-do. At any rate Socrates served in the army as a hoplite, though he was reduced to poverty later. He married late in life Xanthippe, who became notorious in subsequent generations for the stories of her bad temper, though these are very likely to have been exaggerated. There is some indication that this may have been his second marriage.

2. In early life he was interested in the scientific philosophy of his time and was associated with Archelaus the physicist. It is quite likely that he attained considerable distinction in this line, though whether he was ever the head of a definite philosophical school, as has been conjectured, is extremely doubtful. But by the time at which we know most about him he had abandoned these interests and devoted himself to the work of inquiry into the right conduct of life, carried on by the familiar Socratic method of cross-questioning the people with whom he came in contact. This change of interest is probably to be dated some years before the Peloponnesian War and has been plausibly connected with the response made by the Delphic oracle to his friend Chaerephon, to the effect that no one was wiser than Socrates. Of the external events of his life we know comparatively little. He served in the army and we hear of him taking part in the fighting at Potidaea, Amphipolis, and Delium, where he gained a great reputation for courage. He found himself one of the Presidents of the Assembly at the time of the trial of the generals after Arginusae and courageously refused to put the illegal motion to the vote in spite of the fury of the multitude. After the fall of Athens we hear of him defying the orders of the Thirty Tyrants when they tried to implicate him in their misdeeds.

3. In 399 B.C. he was brought to trial before a popular jury on the charge of introducing strange gods and of corrupting the youth. There has been considerable dispute as to the precise significance of this charge. But the available evidence suggests that the accusation of introducing strange gods was never clearly formulated or pressed very hard. It may well have been put in just to create prejudice, while the real gravamen of the charge lay in the accusation of being a subversive influence on the minds of the young men. This was undoubtedly connected, whether avowedly or not, with his known friendship with some of the men who had been most prominent in attacks on democracy in Athens. After a not very conciliatory speech in his defence he was condemned to death. He refused to take advantage of a plan for his escape, made by some of his friends, and thirty days after the condemnation he drank the hemlock.

4. His general appearance and manner of life are probably more familiar to us than any figure in Greek history. He was a man of strong physique and great powers of endurance, and completely indifferent to comfort and luxury. He was remarkable for his unflinching courage, both moral and physical, and his strong sense of duty. Together with this went an extremely genial and kindly temperament and a keen sense of humour, while he was obviously a man of the greatest intellectual ability. It was the combination of these qualities which secured for him a devoted circle of friends of very varied types, from young men of good family looking forward to a public career to serious thinkers who seem to have come to him for light on the problems which interested them. His circle included both Athenians and men from other cities of Greece. Several of them became known later as founders of philosophical schools of their own representing very diverse views. Such were Plato and Antisthenes at Athens, Euclides at Megara and, possibly, Phaedo at Elis.

5. Socrates' religious views have also been the subject of some debate. He was undoubtedly a man of strong religious sense and scrupulous in religious observances. But he is very likely to have applied the dissolvent influence of his critical method to some of the conventional religious beliefs of the time. On the other hand, there is no real evidence of definite membership of any unorthodox religious body or sect. One of the best-known things about him is the experience, which he had at intervals throughout his life, of a divine sign or warning

which determined his action for him from time to time. The exact nature of this has been the subject of much discussion, but still remains a mystery.

6. The precise significance of Socrates' contribution to thought has been a matter of considerable debate in recent times. There are some who ascribe to him a great part of the positive philosophical doctrines usually associated with the name of Plato. But this does not commend itself to the majority of scholars, who accept as the literal truth the statement frequently ascribed to him by the earliest authorities that he had no set of positive doctrines to teach. None the less his influence on subsequent thought was undoubtedly very great. Later authors in ancient times represented him as being the first thinker to turn men's minds towards questions of morality and the conduct of life. This can hardly be literally true, as an interest in these matters seems to have been developing in Greece in the earliest years of his life. But he does seem to have been the first person to apply serious critical and philosophical thought to these questions, and to examine systematically the fundamental assumptions from which current discussions about conduct started. In the course of this he was the first to lay stress on the importance of systematic definition of the general terms used in discussion. In this way he may be regarded as the inspiration for the development, not only of moral philosophy, but also of logic. To understand his influence fully we have to remember both his own striking personality and the intellectual tendencies of the time. He worked in an age of widespread criticism and discussion which was beginning to produce a sceptical attitude about the foundations of morality and the possibility of knowledge alike. And the example of his strong moral sense and devotion to truth combined with his readiness or even eagerness to face squarely any criticism and discussion was what established his influence most firmly among the men of his age.

SODALES, 'companions' or 'associates', members of the minor priesthoods at Rome, which ranked below the *Collegia* (q.v.) and differed from them in that they acted only as a body and not as individuals. The chief of these were the *Fetiales* (q.v.), who had charge of the *ius fetiale* and made treaties (Liv. i. 24) and declared war (Liv. i. 32). Three other *sodalitates* were concerned with annual rites; the *Salii* (q.v.), priests of Mars, active in March and October, at the opening and closing of the campaigning season; the *Luperci*, exsecrants of the ritual of the *Lupercalia* (q.v.) in February; and the *Fratres Arvales* (q.v.), celebrants of agricultural rites, associated later with the cult of the Imperial house. Besides these there were the *Sodales Titii* or *Titenses*, of whom nothing is known but their name; Roman tradition (Tac. *Ann.* i. 54) connected them with the Sabine king Titus Tatius, some recent scholars look to the Etruscan deity Mutinus Titinius and suspect that their ritual was originally phallic. To these ancient *sodalitates* were added after the death of Augustus the *Sodales Augustales*, who were charged with the cult of the two Divi, Julius and Augustus; later Imperial families instituted *Sodales Flaviales*, *Hadrianales*, and *Antoniniani*. C. B.

SOL. The name of the Sun is given to two utterly different deities in Rome. The older is Sol Indiges, of whom we know that he had a sacrifice on 9 Aug. (Augustan calendars for that date: *Soli Indigiti in colle Quirinale*), while calendars for 11 Dec., especially the new Fasti Antiatres, give AG(onium) IND(igetis). Nothing more is known with any certainty; the indication for 11 Dec. is supplemented by Lydus, *Mens.* 4. 155, p. 172. 22 Wuensch, who says that the festival was in honour of Helios. See Koch, *Gestirnwerehrung im alten Italien* (1933), p. 63 ff., against Wissowa, *RRK.* p. 317; but some of Koch's combinations are very hazardous, see Rose in *Harv. Theol. Rev.* xxx (1937), 165 ff. This cult was native, apparently.

Much later and certainly foreign (Syrian) was the worship of Sol Invictus, to give him his most characteristic title. Eastern sun-gods had been making their way in the west, helped no doubt by the current identification of Apollo with Helios (e.g. Horace, *Carm. Saec.* 9), for some time; but the first attempt to make the Sun the chief worship was that of Elagabalus (218-22) (S.H.A. *Vit. Ant. Heliogab.* 6. 7 and 17. 8), who introduced the god of Emesa, whose priest and, apparently, incarnation he was, El Gabal. Elagabalus' excesses and consequent unpopularity and assassination checked the cult, but Aurelian (270-5) reintroduced a similar worship, also Oriental; he was himself the child of a priestess of the Sun (see S.H.A. *Vit. Aurel.* 5. 5 and 35. 3). This remained the chief imperial and official worship till Christianity displaced it, although the cult of the older gods, especially Jupiter, did not cease, but rather the new one was in some sort parallel to it, the Sun's clergy being called *pontifices Solis*, a significant name which was part of a policy of romanizing the Oriental god. Sol had a magnificent temple on the campus Agrippae, see Platner-Ashby, p. 491 ff. Its dedication day (*natalis*) was 25 Dec.

See Wissowa, *op. cit.* 365 ff.; Cumont, *Religions orientales*, 106 ff., and notes. H. J. R.

SOLARIUM, see CLOCKS.

SOLINUS, GAIUS JULIUS, wrote (probably soon after A.D. 200) *Collectanea Rerum Memorabilium*, a geographical summary of parts of the known world, with remarks on origins, history, customs of nations, and products of countries. Almost the whole is taken from Pliny's *Natural History* and Mela without acknowledgement. There is a meagre addition about the British Isles which gives us *Tanatus* (*Thanet*); the stone jet, found abundantly in Britain; and the absence of snakes in Ireland. He introduced the name 'mare Mediterraneum'.

Best edition: Mommsen, 2nd ed. 1895. That of Saumaise, prefixed to his *Plinianae exercitationes* (1689), is still useful. E. H. W.

SOLON (c. 640/635 to soon after 561/560 B.C.), Athenian statesman and poet, was of noble descent but of moderate means. He was prominent in the war with Megara for the possession of Salamis, urging his countrymen to renewed effort when they despaired of success (probably c. 600). In 594-593 (probably) he was appointed 'archon and reconciler' to terminate civil strife at Athens. At this time the nobles not only controlled the State (see *EUPATRIDAE*), but had got nearly all the land into their own hands; the poor were not only politically powerless and deprived of their lands, but many of them actually enslaved—for in hard times they were compelled to borrow from the rich, and soon the only security they could offer was that of their persons. Solon first cancelled all existing debts and mortgages, thereby freeing the peasants and their lands at a blow, and for the future forbade all borrowing on the security of the person. This reform was lasting and made an end of serfdom in Attica. Then by an alteration of the coinage and weights and measures to bring them into line with those of Euboea

and the western Greeks, and by offering citizenship to immigrant craftsmen, he greatly encouraged industry and commerce.

2. Finally he reformed the constitution. He reserved the chief offices (see *ARCHONTES*) and the Areopagus (q.v.) for the members of the highest of the four property-classes (*pentacosiomedimnoi*, *hippeis*, *zeugitai*, *thetes*, qq.v.), of which he was perhaps the author; but in so doing he threw them open to others than the old nobility of birth. He restricted the *thetes* to participation in the Ecclesia and the *Heliaca* (q.v.). But he defined the rights and duties of the Ecclesia for the first time, and, by the institution of a Boule (q.v.) of 400 to prepare business for the Ecclesia, he freed it from the control of the Areopagus. By the right of appeal to the *Heliaca*, he freed the individual from the unfettered power of the magistrates, and gave the people some control over them. He also issued a new and humane code of law, abolishing all Draco's laws except those of homicide, and defining the duties of the several magistrates.

3. Solon's constitutional reforms were not wholly successful: civil strife raged from 589 to 580, and internal peace was not secured till Pisistratus' final triumph. Yet his institutions remained as the basis of the State: the rights of all citizens to some share in the government had been made secure.

4. Solon travelled extensively, to Egypt, Cyprus, and probably Asia Minor, certainly after his archonship, perhaps before as well. His poems are the earliest Athenian literature, and as the work of a great public man they are unique. Though not great literature, they are fresh and direct, and reveal a transparent honesty which justifies his reputation for good faith and wisdom (see below).

Aristotle, *Ath. Pol.*, chs. 1-13; Plutarch, *Solon*. Later tradition about Solon became confused and anecdotic; but Aristotle and Plutarch preserve much good material, especially that derived from Solon's own poems. Chief modern works: F. E. Adcock, *CAH* iv, ch. 2 (with fuller bibliography); I. M. Linforth, *Solon the Athenian* (Univ. of California Publ., vol. vi (1919)); W. J. Woodhouse, *Solon the Liberator* (1938). A. W. G.

5. **SOLON'S POEMS.** Solon expressed his opinions on personal and political matters in poems. He used elegiacs, in which he seems to have been influenced by Tyrtaeus, iambs, and trochaics, the traditional medium for gnomic verse. His fragments may be arranged approximately in chronological order. Frs. 12 and 13 are attributed to his early years and show the traditional aristocratic taste for pleasure. The elegy which summoned the Athenians to capture Salamis, of which eight lines survive, had originally one hundred and was admired by Plutarch (*Sol.* 8); Solon was said to have disguised himself as a herald and recited it in the agora at Athens. In it he certainly adopts a public role which recalls that of Tyrtaeus, and gives first a public warning, then a strong exhortation to the Athenians to fight. Fr. 3 is a long fragment, written before his archonship, in which he analyses the political situation and criticizes the careless presumption of the ruling class, transposes the traditional notion of *εὖπρις* into political life, and praises the virtues of *εὐνομία*. Fr. 4, belonging to the same time, though probably not to the same poem, also attacks the arrogance and avarice of the nobles. Fr. 11, in which the political situation is compared to the sea, may belong to this period. Soon after his archonship he wrote fr. 5, in which he proclaims the impartiality of his actions and his fairness both to rich and to poor. In it he urges the populace to follow their leaders, and warns them against *εὖπρις*. The trochaic fr. 23 is an important defence of himself against critics who said that he should have made himself tyrant. He treats them with contempt and blames the corrupt ambitions of others. The iambs of fr. 24 belong to the same time. In them Solon answers critics who said that he did not go far enough, and claims that his work may be seen in his

settlement of boundary-disputes and his liberation of the serfs. Fr. 7, to Philocyprus, is a poem of farewell to his host in Cyprus, the king of Soli, before going back to Athens (cf. Hdt. 5. 113). Fr. 9 belongs to the years after his return, before Pisistratus had made himself tyrant. Frs. 9 and 10 probably belong to the same poem. Solon foresees the coming of tyranny as a natural phenomenon whose signs are clear in the mad excitement of the people. Fr. 8 was written when this tyranny was a fact, and is addressed to those who after putting Pisistratus into power are now complaining; Solon points out that they have brought their suffering on their own heads because they have been deceived by specious words. Two important pieces are of uncertain date. Fr. 1, the longest extant fragment, is a meditative poem, addressed to the Muses, in which Solon seems to describe the different stages of ignorance in which man lives, from the criminal blindness of the wrongdoer to the deluded hopes of the trader and the partially enlightened state of the professional classes who work under the patronage of the gods. It may belong to his middle years. Fr. 19, on the stages in man's growth and decay, is a curious piece of proverbial wisdom which may belong to his old age. *See also* IAMBIC POETRY, GREEK.

COMMENTARY: I. M. Lintforth, *Solon the Athenian* (U.S.A. 1919), 103-245.

CRITICISM: U. von Wilamowitz-Moellendorf, *Aristoteles und Athen* ii. 303-15; id., *Sappho und Simonides* (1913), 257-75; C. M. Bowra, *Early Greek Elegists* (1938), 73-104; W. Jaeger, *Solons Eunomie*, *Sitz. Preuss. Ak.* 1926; E. Römisch, *Studien zur älteren griechischen Elegie* (1933), 1-48, 60-81. C. M. B.

SOPATER (Σώπατρος) of Paphos, Greek parodist and writer of *philyakes*, flourished from the time of Alexander to that of Ptolemy II. Fr. 19 mentions Thibron, who put Harpalus to death in 324 B.C. S. lived in Alexandria (frs. 1, 13, 24). Fourteen titles of plays survive: three (*Βακχίς*, *Βακχίδος μνηστήρες*, *Βακχίδος γάμος*) seem to form a triad, unless merely varied descriptions of the same piece; *Ἰππόλυτος*, *Νεκυαί*, *Ὀρέστης* are burlesques of mythology or tragedy (cf. MIDDLE COMEDY). From *Γαλάται*, *The Gauls*, fr. 6 (12 vv.)—the longest extant *philyax*-fragment—contains raillery of the Stoics; this passage, far removed from the buffoonery of the original *philyakes*, approaches the spirit and language of Attic Comedy.

SOPHISTIC, SECOND, *see* DECLAMATIO, para. 1.

SOPHISTS. The word *σοφιστής* does not appear to have been in use before the fifth century B.C. In its earliest use it simply means a wise man or a man skilled at any particular kind of activity. From the first there is, however, perhaps some suggestion of a man who made a special job of being wise, and it gradually came to be specially, though never exclusively, applied to members of a particular profession. This was the profession of itinerant teachers who went from city to city giving instruction for a fee. The subjects of instruction varied somewhat in content, but always had a

relation to the art of getting on, or of success in life. Some Sophists, such as Protagoras, claimed to teach 'virtue', which was almost equivalent to efficiency in the conduct of life. Others, like Gorgias and his successors, confined themselves to the teaching of oratory, which in democratic cities was one of the chief roads to success. Instruction in this was, indeed, included in the teaching even of those who made the wider claim. We hear of other aspects of their teaching, such as the system of memory-training ascribed to Hippias, but all have reference to this central practical aim. Their nearest modern parallel is to be found in the numerous institutions at the present day which advertise their ability to train people for success in business, or in life in general. Their activities met a very real demand for higher education, and the leading Sophists enjoyed great success and amassed large fortunes. *See also* EDUCATION, III. 2.

It is important to remember that the Sophists were a profession and not a school of thought, though some of them, such as Protagoras, taught definite philosophic views. But the very nature of the profession tended to produce a certain attitude of mind, which placed emphasis on material success and on the ability to argue for any point of view irrespective of its truth. The general influence of the Sophists was therefore necessarily in the direction of scepticism both about the claims of reasoning to arrive at the truth and about the claims of any moral code to determine one's conduct. At the best they taught no more than uncritical acceptance of the conventional moral code of one's particular society. At the worst, in the teaching, for instance, of men like Antiphon and Thrasymachus, they encouraged a cynical disbelief in all moral restraints on the pursuit of selfish, personal ambitions. Some of the early Sophists were men of high character and unblemished reputation. But others were not so, and there were apparently good grounds in their activities for the undesirable associations which the word came to have and which have passed over into its English derivative.

Under the Roman Empire, particularly from the second century A.D. onwards, the word acquired a more specialized meaning and became restricted to teachers and practitioners of rhetoric, which by this time was tending to become a purely literary exercise practised for its own sake. It was, however, a very popular pursuit, and successful practitioners in it enjoyed a high reputation. It became the most valued part of higher education, and teachers of rhetoric were endowed at many of the great centres of population. In later centuries the movement tended to become specially associated with paganism and died out after the final triumph of Christianity.

SOPHOCLES (1). (*See also* TRAGEDY.)

I. LIFE (c. 496-406 B.C.)

Sophocles, son of Sophilus, a wealthy industrialist, was born in or about 496 B.C. at Colonus (*Marm. Par.* 56 and 64), to the praise of which one of his loveliest odes is dedicated (*OC* 668 ff.). His youthful beauty and his skill in dancing and music attracted attention, and he led the paean of victory after Salamis with his lyre. His master in music was Lamprus, one of the great teachers of the old school (*Life*: cf. Plut. *De mus.* 31). His first victory in tragedy was won in 468 B.C. (*Marm. Par.* 56: *IG*² ii. 2325), when he defeated Aeschylus; Plutarch (*Cim.* 8) says that it was his first appearance as a tragic poet—this has been doubted—and that owing to the excitement of popular feeling the areion entrusted the award of the prize to Cimon and his fellow-generals.

One of his plays on this occasion was probably the *Triptolemus*. In two other early plays he made his mark—as a ball-player in the character of Nausicaa (in the *Πλὺντριαι ἢ Ναυσικάα*) and as a player on the lyre in that of Thamyras (in the play of that name); but the weakness of his voice caused him to give up acting in person (*Life*). His early life coincided with the expansion of the Athenian Empire, and he himself took an honourable share in the duties of citizenship. In 443/442 he was *Hellenotamias* or imperial treasurer (*IG*² i. 202); he was elected general twice at least—in 440, when he was a colleague of Pericles in the suppression of the Samian revolt (*Life*; *Plut. Per.* 8, etc.), and later with Nicias (*Plut. Nic.* 18); and after the Sicilian disaster he was one of the *πρόβουλοι* appointed to deal with the crisis (*Arist. Rh.* 3. 18, etc.). Whether he owed his appointment in 440 to the success of the *Antigone* may be doubted. There is a pleasant record of his conversations with Ion at Chios in the course of the Samian Expedition (*Ath.* 13, p. 603 ff.), and two other friends of Cimon are connected with him in different ways—Polygnotus, who depicted him in the *Stoa Poikile* holding the lyre, and Archelaus the philosopher, to whom he wrote an elegiac poem. He also wrote (about 441 B.C.) a poem to Herodotus, with whom there are a number of points of contact in his work (*Plut. An seni* 3). He was priest of the healing deity Amynos, Alcon, or Halon (the exact name is doubtful) and made his own house a place of worship for Aesclepius until the temple built for him was ready (*Plut. Num.* 3, *Etym. Magn.* s.v. *Δεξιῶν*); in recognition of this he was honoured as a hero with the title *Δεξιῶν* after his death. He also composed a paean to Aesclepius. These and other indications suggest that he accepted the religion of his day without misgivings, just as in other ways he showed himself a healthy minded and normal, as well as a distinguished, Athenian, and he is said to have refused all invitations to leave Athens for the courts of kings (*Life*, cf. fr. 789). His interest in the theory and criticism as well as in the writing of poetry was shown in the composition of a prose work *On the Chorus*, in the story of his discussion of poetical expressions with Ion (*Ath.* loc. cit.), and in his founding of a literary club (the *θίαιος* of the Muses). He seems to have distinguished his own conscious technique from the inspiration which carried Aeschylus away (*ἐλ καὶ τὰ δόιντα ποιεῖς ἀλλ' οὐκ εἰδώς γε ποιεῖς*). He died late in 406, and Aristophanes in the next year summed up his genial and kindly temperament in the line *ὁ δ' εὐκόλος μὲν ἐνθάδ', εὐκόλος δ' ἐκεῖ* (*Ran.* 82). It was characteristic that a few months before his death he appeared with his chorus and actors in mourning for Euripides at the *proagon* (q.v.) before the Great Dionysia. Phrynichus (the Comic poet) spoke of him as *εὐδαίμων ἀνὴρ καὶ δεξιός*, who died a good death and was taken from the evil to come.

He is said to have composed (probably) 123 plays, and with these he won 24 victories, which means that 96 of his plays were successful; in his other contests he was placed second, but never third.

II. WORKS

Sophocles, according to *Plut. De prof. virt.* 7, distinguished three periods in his own style: first the 'bombastic' style (*ὄγκος*) of Aeschylus; secondly, a harsh and artificial style (*πικρὸν καὶ κατὰ τεχνον*) of his own, and thirdly, the best type of style and most suited for the expression of character (*ὑβικώτατον καὶ βέλτιστον*). The extant plays, the earliest of which must fall about twenty-five years after his first appearance, seem all to belong to the third period, though the fragments of some lost early plays recall in matter and vocabulary some of the characteristics of Aeschylus, and some critics have professed to find traces of the second style (whatever *Plutarch's* words may mean) in the *Ajax* and *Antigone*.

The latter was probably produced in 441; the *Ajax* is probably rather earlier; for the *Oedipus Tyrannus* a year soon after 430 seems probable, and the *Trachiniae* may belong to the same period, though the indications are very uncertain. It is disputed whether the *Electra* preceded or followed Euripides' *Electra* (413), and it is variously placed by scholars between 418 and 410. The *Philoctetes* was produced in 409 (*Argum.*), and the *Oedipus Coloneus* posthumously in 401 (*Argum.*). The date of the satyric *Ichneutae* is uncertain (see Powell and Barber, *New Chapters* iii. 93 f.). Of the lost plays, the *Telephoeia*, if it was in fact a Trilogist dealing with the story of Telephus (and consisting perhaps of the *Alcades*, the *Mysi*, and the *Ἀχαιῶν σύλλογος*), is likely to have been an early group (see *ibid.* iii. 68 ff.). More than one-third of the known titles are those of plays taken from the Trojan cycle of legend (including that of the house of Atreus); the remainder cover a wide range; about twenty are those of satyric plays.

III. CHARACTER OF HIS WORK. (See also TRAGEDY.)

1. The chief changes made by Sophocles in the form of tragedy were the discontinuance of composition in trilogies, the increase of the number of the chorus from twelve to fifteen, and the introduction of the third actor and of scene-painting (*Arist. Poet.* 4). The abandonment of the trilogy-form involved a great reduction in the proportion of the play allotted to the chorus, the confinement of long descriptive passages mainly to the messengers' speeches (with which Greek tragedy seldom dispensed), and greater rapidity in the progress of the action.

2. The third actor is not used in the *Ajax* with the same freedom as in the later plays. His introduction went with the increasing concentration of interest upon the persons taking part in the action; the chorus, though intimately concerned and often closely attached to one of these persons, no longer had the same importance as in Aeschylus, and if still a religious, was no longer a dramatic necessity. The poet's thought was mainly brought out by the course of events, though it might also be expressed in the reflections of the chorus. These are generally such as a normal spectator—religious, sympathetic, and right-minded—might make at each turn in the action—never lacking in dramatic appropriateness, but only exceptionally prophetic or philosophical. Sophocles employs a joyful song of the chorus with special skill at moments of relief or expectancy, or before the disaster which it darkens by contrast. The structure of many of the choral odes shows consummate art: that of the great Coloneus ode (*OC* 668 ff.)—to take the most striking instance—is a marvel of intricate symmetry. The language of the odes, where it is continuous and not broken up by dialogue, is always of surpassing beauty.

3. In the non-choral parts of the play Sophocles shows himself absolute master of all the possibilities of dialogue in every variety of tone, though the passages in which he uses the trochaic tetrameter in excited dialogue are very few and brief. In the setting out of the arguments in a dispute he had plainly taken advantage of the rhetorical teaching and practice of his day. Some of his characters such as Odysseus in the *Philoctetes* and Creon in the *Oedipus Coloneus* recall the qualities of the typical 'sophist', as (e.g.) Plato saw him, and the scepticism expressed by others (for instance, Iocasta and Hyllus) in regard to gods and oracles and events was probably fashionable in some intellectual circles, though in Sophocles it shows itself only to be confuted by the course of events. The use of moral and sententious maxims in the *Ajax* and *Antigone* is sometimes criticized as excessive, though it is, as a rule, thoroughly in character; in the later plays the use of such sentiments is as skilful and convincing as that of the other elements in

dialogue. Sophocles is reported to have had his moments of bathos (e.g. [Longinus], *Subl.* 33, etc.), but there is little trace of them in the extant plays.

4. The structure of the plays shows two principal types. The *Ajax*, *Antigone*, and *Trachiniae* fall each into two parts; the fate of the hero or heroine is accomplished in the first; in the second a consequential issue is brought to its conclusion—the honour to be paid to Ajax, the punishment of Creon, the death of Heracles. In the other plays the single plot covers the whole play, though the *Oedipus Coloneus* is perhaps not exactly in the shape in which Sophocles would have left it had he lived. But there is nothing in any play which is (in Aristotle's phrase) 'episodic' or irrelevant. Each stage in the action is linked with what has gone before by what Aristotle calls a necessary or probable connexion, even if the connexion is only revealed by a startling *περιπέτεια* or a recognition-scene, such as Sophocles employs to heighten the 'pity and fear' which his tragedies evoke in the highest degree. It is in keeping with the close relevance of every scene and word that Sophocles almost entirely avoids allusions to contemporary events, though the discussions of the rights of the individual against government and the assertion of a higher law than that of the State may have had a special meaning for his own day. The prologues (which are all in dialogue, with or without a longer opening speech) are all essential to the action, not (as sometimes in Euripides) almost outside it, and the arrangement of scenes and choral odes often shows a symmetry which, though not mathematically exact, is evidently deliberate. The regular alternation of *episodia* and *stasima* (see TRAGEDY) is often varied with good effect. The compression of events off the stage during a choral ode or a scene is never such as to rouse any sense of improbability. In a very few places—the opening speech of Deianeira in the *Trachiniae*, the monody of *Electra* at the beginning of the play, the appearance of Heracles *ex machina* in the *Philoctetes*—Sophocles may owe something to Euripides. The main interest of Sophocles is in the display of noble characters—not faultless, but nearer to the ideal than ordinary men and women, *ὁμοιοὶ ἡμῖν ἀλλὰ καλλίους* (Arist. *Poet.* 25)—confronted with some terrible crisis or subjected to some almost unendurable strain. They suffer out of proportion to any fault in themselves which may have contributed to the disaster, but without losing their nobility. There has generally been some fault—some hastiness or pride or excess of confidence, some breach of *αἰδώς* or *σωφροσύνη*, which makes the suffering, if not deserved, yet explicable and not wholly inappropriate. There may also have been some hereditary doom or some divine anger working itself out (cf. *Ant.* 582 f., 593 ff.), or some oracle which must be fulfilled, but Sophocles is never greatly concerned about the justification of such influences; he accepts them as part of the story or of the universal order, and throws his whole attention on to the characters affected by them, showing how they meet and surmount the suffering brought upon them. The tragedy of each character lies almost wholly within human life, and is not viewed, as by Aeschylus, against an ever-present background of divine and demoniacal influences; nor has he any doubt of human free-will. His view of life was that of the normal healthy-minded Athenian. He assumed the justice of the gods—the upholders of human piety and morality, and the veracity of the oracles (which could no more be questioned than are laws of nature to-day) and of the seers who revealed the divine will; but he also saw that life contained much unhappiness, falling often upon men and women relatively innocent, and this, too, he accepted as a fact. Sophocles expresses as few poets have done the sadness of the suffering incidental to the life of man; he even depicts men falling by an irony of fate into the very calamity which they are striving to avoid and bringing about the

exact reverse of their good intentions. Yet he is no pessimist. For either (1) the suffering, even if in excess of what is called guilt, may yet be the fulfilment of a law, whether it is brought about by some *ἄβυσος* or excess, as with Ajax and Heracles (and even with Oedipus), or is the consequence of something in the past which cannot be undone; or (2) the man who suffers in this way is not a whit the worse man for it; Ajax is still worthy of honour; Oedipus in the *Coloneus* is righteous still; or (3) the suffering when accomplished is seen to have been worth while; Antigone vindicates the higher law for which she dies; the character of Oedipus has been subdued and purified; Philoctetes is made the means of a great deliverance. The agony has seldom been wasted, and when it is possible to see law, reason, and purpose, there is no pessimism.

5. The qualities inherent in each character are drawn out in a series of scenes in which they are confronted with characters of varying types, often contrasting sharply with their own and reacting quite differently to events. Their moods may change as the situation changes, but there is nowhere any real inconsistency. Not only the heroes, but all the persons of the drama, are drawn with the same perfect art; they are real persons, not mere types, but not more minutely analysed than the part they have to play demands. Perhaps the characters who come nearest to being merely typical are the Creons of the *Antigone* and the *Oedipus Coloneus*—the 'tyrant' as he was conventionally regarded—but even these are strongly individualized; both contrast strongly with the balanced reasonableness of Creon in the *Oedipus Tyrannus*.

6. In language Sophocles allows himself much freedom. He uses more words and forms taken from living literary Ionic than Aeschylus, and fewer Aeolic and merely archaic forms. It is said that 1,296 words appear first in his works, though it cannot be assumed that they were all coined by him. He employs a large number of slight variations of the ordinary forms of words and many unusual constructions, and he has a few mannerisms (e.g. certain kinds of redundant expression); his metaphors and other figures show perhaps less imagination, but also less obscurity, than are sometimes found in Aeschylus. It is seldom that his meaning is not perfectly clear or his expression anything but adequate and beautiful. He employs with almost terrifying effect what is called irony, whereby words used by a speaker in their ordinary and obvious meaning are charged with a more sinister meaning for those who know what the speaker cannot know.

7. It is a commonplace of both ancient and modern critics to liken Sophocles to Homer, on account not only of his choice of many subjects from the Trojan cycle, but also of his adherence to Homer in the character-drawing of his heroes and in some of their speeches, in his use of very many expressions and favourite idioms borrowed from or clearly modelled on the Homeric, and above all in the spirit of his work, in which the story is presented, as in Homer, for its own sake and for its human interest, not as the vehicle of a theory (see M. Lechner, *De Sophocle poeta* 'Ομηρικωτάτω, 1859).

SOPHOCLES (2) the younger, son of Ariston and grandson of the great Sophocles, produced his grandfather's *Oedipus Coloneus* in 401 B.C., and plays of his own from 396 onwards. The numbers of his plays and victories are uncertain (Suidas s.v., Arg. Soph. OC).

SOPHONISBA (*Sophoniba* Livy; Σοφωνίβα Appian; the correct name is Saphanba'al), daughter of Hasdrubal (q.v. 3); she married Syphax, whom she thus won over to the Carthaginian cause. When Masinissa and Laelius overthrew Syphax (203 B.C.) Sophonisba took poison which according to the romantic story (Livy 30. 12-15) was sent to her by Masinissa, now enamoured of her and unable by any other means to save her from captivity at Rome. Details of her story (e.g. that before her marriage to Syphax she had been betrothed to Masinissa) may be false, but the outline need not be questioned.

H. H. S.

SOPHRON (Σώφρων) (c. 470-400 B.C.), Syracusan writer of mimes. His mimes were divided according to subject-matter into *ἀνδρείοι* and *γυναικεῖοι*. Some 170 short fragments remain, mostly cited by grammarians to illustrate the Doric dialect. Of the *ἀνδρείοι* may be mentioned *Θυννοθήρας* ('The Tunny-fisher') and *Ὠλιεύς* (i.e. ὁ ἄλιεύς) τὸν ἀγρῶταν (possibly a dispute between a fisherman and a farmer); of the *γυναικεῖοι* — *Ἀκείστριαι* ('The Sempstresses'), *Συναριστώσαι* ('Women at breakfast'), *Ταὶ γυναῖκες αἱ τὰν θεῶν* (i.e. Hekate) *φαντι ἐξελάν* (i.e. 'The Sorceresses'). S.'s mimes were written in some kind of rhythmical prose (schol. Greg. Naz. (in Kaibel, CGF 153) *ῥυθμοῖς τισι καὶ κώλοισι ἐχρήσατο*). Their subject-matter was the events of everyday life. S., who was probably the first writer to give literary form to the mime, was greatly admired by Plato (Ath. 11. 504 b; cf. Pl. Resp. 5. 451 c). Herodas possibly and Theocritus certainly owed much to him—a schol. on Theoc. 2 says that Theocritus adapted (*μεταφέρει*) one of S.'s mimes.

SORANUS of Ephesus, physician under Trajan and Hadrian (98-138), studied in Alexandria and practised in Rome. He was one of the greatest physicians, a man of erudition, of objective judgement, full of love for his native Greece, critical towards the Romans of the world metropolis.

Of his books, almost twenty in number, dealing with history of medicine, terminological problems, and medicine proper, there are preserved in Greek: I. *Γυναικεία* I-IV (I. Hygiene of midwife, conception, etc.); II. *Childbed*, care of the infant; III and IV. *Pathology*. 2. *Π. σημείων καταγμάτων* and *Π. ἐπιδέρμων*, fragments of a surgical treatise.

Soranus restored the Methodical school by moderating its exaggerations in the spirit of the new classical era and by harmonizing it with the tradition. Though believing in general symptoms, he did not neglect individual factors, distinguished the different forms of diseases, and observed accurately the course of an illness. A terse but excellent author, his books in Latin translations or adaptations were widely read in the Occident. See ANATOMY AND PHYSIOLOGY, para. 11.

TEXT: J. Ilberg, CMG iv (1927). The *βίος Ἱπποκράτους* spurious, L. Edelstein, PW Suppl. vi. 1293, s.v. 'Hippokrates'. Latin translations, Caelius Aurelianus, *De morbis acutis et chronicis* (cf. Ilberg, Sitz. Ber. (1923)); Muscio, *Gynaecia*. Ps.-Soran., see Rose, *Antidote Græca* ii.

SORANUS, see also VALERIUS (11).

Sortes Biblicae, Homericae, Vergilianae, see DIVINATION, para. 6.

Sortition (κλήρωσις), election by lot, a method of appointing officials in Greek city-states, especially in democracies. It was based on the idea of equality. Little is known of its use except at Athens. It remains uncertain when sortition was introduced there, perhaps as early as Solon. From 487/6 B.C. the archons were appointed by lot out of nominated candidates (*πρόκριτοι*); later, this nonsensically became a double sortition. Since the archons were elected by lot, they lost political leadership. But all ordinary magistrates, a few excepted, were thus appointed; also the Council (a Prytany of fifty from each *phyle*) and the juries (by a very complicated procedure). Lot decided very many questions in political and social life. Politically, sortition entailed rotation in office, and electoral contests were avoided by it; moreover, the power of magistrates was reduced, and thus the sovereignty of the popular assembly was guaranteed. Sortition was practicable, as almost every citizen had a minimum of political experience, and nobody could be elected without having presented himself. Only oligarchs were opposed to sortition, but, except by a few critics like Socrates, it was never discussed on principle. It was, indeed, a necessary and fundamental element of the democratic Polis. But military officers and some technical (especially financial) magistracies were always appointed by voting. In later times sortition was gradually restricted.

Arist., *Ath. Pol.* T. W. Headlam, *Election by Lot at Athens* (1891, 2nd ed. 1933); V. Ehrenberg, *PW*, s.v. 'Losung'. V. E.

SOSIBIUS of Laedaeon. In the reign of Ptolemy I (323-283 B.C.) he went to Egypt and became closely associated with the Alexandrian school. He is probably to be identified with the grammarian Sosibius ὁ λυτικός. Important for his studies in the history of Sparta (*Περὶ τῶν ἐν Λακεδαίμονι θυσίων* and *Χρόνων ἀναγραφὴ*).

FHG ii. 625.

G. L. B.

SOSICRATES, Rhodian biographer, date uncertain. Works (FHG iv. 500-3): (1) *Φιλοσόφων διαδοχή*, a biographical study of various philosophers, following the teacher-pupil relation. S. used Hermippus and perhaps Satyrus. Whether he used Apollodorus is disputed: if a common source in Eratosthenes explains similarities, S. perhaps wrote the (2) *Κρητικά* (Ath. 6. 264 a; Diod. Sic. 5. 80. 4), which Apollodorus used. If S. is the Sosicrates mentioned in Timachidas (*Lind. Temp. Chron.* p. 317, Blinkenberg), he flourished 150-130 B.C.: but the identification is uncertain. F. W. W.

SOSIGENES, astronomer, earlier confused with a Stoic and a Peripatetic of the same name, was Caesar's astronomical expert in his introduction of the Julian calendar, in 47 B.C.

PW iii A. 1153.

SOSII. The Sosii are twice mentioned by Horace (*Epp.* 1. 20. 2; *A.P.* 345) as booksellers of his day; according to the scholiasts on these passages, they were two brothers.

Books (q.v.) were originally multiplied by individuals (or their slaves) making copies for private use, and this procedure remained common throughout antiquity (at no time was there any law of copyright). How far the professional production and sale of books had developed in fifth-century Athens is uncertain: Plato (*Apol.* 26 d) makes Socrates say that a copy of Anaxagoras could sometimes be bought from the Orchestra (presumably that in the Agora) for a drachma at most, and Eupolis (*Fr.* 304, Kock) mentions a place 'where books are for sale'. In Hellenistic times the foundation of the great Library (see LIBRARIES) at Alexandria must have encouraged the

development of the book-trade. At Rome professional booksellers (*librarii*, which also means 'copyists'; later *bibliopolae*), with staffs of copyists, are first mentioned in Cicero's day; many of Cicero's own works were published by Attieus, who kept a large number of slaves trained in all the operations of book-production. In Imperial times there are more frequent references in literature to professional booksellers (apparently often freedmen); e.g. Martial (1. 117. 11) describes the bookshop owned by one Atrectus in the Argiletum as having its *postes* covered with advertisements of books. There are few indications of the price of books: Book 13 of Martial was sold by the bookseller Tryphon for 4 sesterces (13. 3. 2); a handsome copy of another of his books was sold by Atrectus for 20 sesterces (1. 117. 17).

Th. Birt, *Das antike Buchwesen* (1882), Index, s.v. 'Buchhandel'; also *Kritik und Hermeneutik nebst Abriss des antiken Buchwesens* (1913), 307 ff.; Dziatzko in *PW* iii. 973 ff. (s.v. 'Buchhandel'); W. Schubart, *Das Buch bei den Griechen und Römern* (1921), 146 ff. W. S. W.

SOSIPATER (Σωσίπατρος), Greek comic poet: fr. 1, cookery—a sublime science. Apparently among the earlier writers of the New Comedy (v. 11 Chariades is named as living, whereas in Euphron fr. 1. 7 he appears to be dead).

FCG iv. 482 ff.; *CAF* iii. 314 ff.

SOSIPHANES of Syracuse, tragic poet, flourished about the last third of the fourth century B.C., though some date him later and there may have been two poets of the name. He is credited with seventy-three tragedies (Suidas, s.v.), and seven victories. He is included in some lists of the *Pleiad* (see *TRAGEDY*). A short but striking fragment on the transitoriness of human happiness survives.

TGF, 819-20.

A. W. P.-C.

SOSITHEUS, of Alexandria Troas, lived in Athens, Syracuse, and Alexandria, was a member of the *Pleiad* (see *TRAGEDY*), and wrote tragedies and satyric plays, including a *Daphnis* or *Lityerses*, in which a sarcastic reference to the Stoic Cleanthes occurred; 20 lines of this play survive, as well as a laudatory epigram on the poet by Dioscorides (*Anth. Pal.* 7. 707).

TGF, 821-4.

A. W. P.-C.

SOSIUS, GAIUS, quaestor to Antony c. 40 B.C., was appointed governor of Syria and Cilicia in 38 and captured Jerusalem in the interest of Herod in 37. Consul in 32, he joined Antony before the outbreak of war, was defeated by Agrippa in a naval engagement (31), and commanded the left wing of Antony's fleet at Actium. He was subsequently pardoned by Octavian. Sosius rebuilt the temple of Apollo near the theatre of Marcellus and took part as *quindecimvir sacris faciundis* in the Ludi Saeculares in 17 B.C.

Velleius 2.85-6; Josephus, *Ant.* 14. 15-16; Dio Cassius 49. 22-51. 2. G. W. R.

SOSIUS SENECIO, QUINTUS (*cos. ord.* A.D. 99, *II ord.* 107), is revealed by the convergence of casual evidence as one of the most important members of the governmental oligarchy under Trajan. Of his origin, family, and official career before the consulate nothing is recorded. The link with an influential consular (Sex. Julius Frontinus was his father-in-law) and the friendship of the new emperor explain his conspicuous advancement; Sosius and Cornelius Palma are the first pair of *consules ordinarii* appointed by Trajan. The date of his second consulate, held with the great Licinius Sura as colleague, and the honour of a public statue (Dio Cass. 68. 12. 2), support the conjecture that he held a high command in the Second Dacian War (A.D. 105-6). Sympathetic, like others of his class and rank (for example, C. Minicius Fundanus, *cos.*

suff. 107), to the pursuits of philosophy and letters, Sosius might be claimed for a representative figure in a 'proto-Antonine' period of imperial civilization—Plutarch of Chaeronea enjoyed his friendship and commemorated it by the dedication of several works.

Sosius did not leave a son to perpetuate the family, but his daughter married Q. Pompeius Falco (*cos. suff.* 108), and that line is prominent in the Antonine aristocracy, with manifold connexions and a much-advertised pedigree, as witness the polyonymous consul of A.D. 169 (Dessau, *ILS* 1104), who has thirty-four names, apart from *praenomina*.

PIR, S 560; E. Groag, *PW* iii A. 1180 ff.

R. S.

SOSPITA, see JUNO.

SOSTRATUS, surgeon and zoologist, probably practised in Alexandria after 30 B.C. His medical works dealt chiefly with gynaecology. In zoology he perhaps ranks next after Aristotle among the Greeks. Works: *Περὶ ζῴων* or *Περὶ φύσεως ζῴων*; *Περὶ βλητῶν καὶ δακέτων*. Aelian and the scholia to Nicander preserve much information about his zoological works.

PW iii A. 1203.

W. D. R.

SOSUS of Pergamum, an artist of the Hellenistic period, was memorable for two mosaic pavements: the *asarotos oikos*, which represented a floor strewn with the unswept débris of a banquet; and a panel (*emblema*) depicting birds drinking from a wine-cup. Roman copies of these two works have been recognized among mosaic pavements preserved in Italian museums.

Pliny, *HN* 36. 184; E. Pfuhl, *Malerei und Zeichnung der Griechen* (1923), §§ 862, 864. F. N. P.

SOSYLUS of Lacedaemon, a freedman of Hannibal who wrote a methodical and impartial history of the latter (*Περὶ Αννιβίου πράξεων*) towards the end of the third century B.C. One of the more important sources of Polybius, whose harsh verdict on him (Polyb. 3. 20. 1-5) must be toned down in the light of a recent papyrus fragment from his fourth book.

FGH 176; *PHG* iii. 99.

G. L. B.

SOTADES (1), Middle Comedy poet, about the time of Demosthenes. In fr. 1 a cook magnifies his skill in preparing fish for table. Fr. 3 refers to the orator Hegesippus (under his nickname Crobylus). A new fragment (Dcmiańczuk, *Suppl. Com.*, p. 83) makes play upon *παθεῖν*, *μαθεῖν* (cf. Aesch. *Ag.* 177).

FCG iii. 585 ff.; *CAF* ii. 447 ff.

W. G. W.

SOTADES (2), Iambic poet, of Maronea, lived in the time of Ptolemy Philadelphus, of whose marriage with Arsinoë he disapproved strongly (Ath. 621 a, fr. 1 Powell). He invented the *versus sotadeus*, a minor ionic metre which allowed great variations. Some fragments of his work survive, notably from his transcription of the *Iliad* into sotadeans (frs. 4 a-c), and lines to the flute-player Theodorus (fr. 2). The sotadeans preserved by Stobaeus (frs. 6-14) are commonly thought not to be his, and may be moralizing verses composed for the education of Greek children in Egypt. See *IAMBIC POETRY*, GREEK.

Text: E. Diehl, *Anth. Lyr. Graec.* ii. 286-94; J. U. Powell, *Collectanea Alexandrina*, 238-45. C. M. B.

SOTER (Σωτήρ), fem. **SOTEIRA** (Σώτειρα), a title of several deities, expressing their power to save their worshippers from dangers. It has no Latin equivalent (Cicero, *Verr.* 2. 2. 154), unless it be Juno's epithet Sispes or Sospita. It is used, for example, of Zeus (as Xenophon, *An.* 1. 8. 16, and often) and of Kore (Ar. *Ran.*, 379, cf. Farnell, *Cults* iii. 198). In Hellenistic times

it comes to be used of men, especially kings, often implying some measure of deification; Antigonos Doson was called Euergetes in life, Soter after his death (Polybius 5. 9. 10). The most famous holder of the title was perhaps Ptolemy I. Like all such titles, it was later cheapened, being given, for instance, to the notorious Verres (Cicero, loc. cit.). Its transcendental use is Christian, cf. A. D. Nock in *Essays on the Trinity and the Incarnation* (ed. A. E. J. Rawlinson, 1928), 87 ff. H. J. R.

SOTERIA. The term σωτήρια was appropriate for any sacrifice(s), with or without attendant agonies, etc., performed either once or several times in commemoration, or in hope, of the deliverance of one man or a group from oppression, sickness, or danger. Commonly Σωτήρια designated certain more or less elaborate city or national festivals celebrated at regular intervals to commemorate major events. (Compare the (older) ἑλευθερία, at Plataea, Syracuse, Samos; a third usage consisted in naming festivals in honour of the deliverer himself, e.g. the Diogeneia at Athens after 230/29 B.C.). The known Soteria, some sixteen in all (PIV, s.v.) are Hellenistic (or later), part of the efflorescence of festivals at that time. The Soteria at Delphi, to commemorate the defeat of Brennus and his Celts in winter 279/8 B.C., are best known: inscriptions furnish a considerable body of detail (as yet not synthesized) about the performances, and data important for third-century chronology. Soon after the departure of the Gauls, the Amphictiones founded annual Soteria. It was not until 243/2 that the Aetolians re-founded the same festival: the positive dating in that year of the Athenian archon Polyuctus has settled a controversy (*Hesperia* vii (1938), p. 121, no. 24; for the whole problem, R. Flacelière, *Les Aitolien à Delphes*, 1937).

SOTERICHIUS (c. A.D. 300), epic poet, author of Greek poems on Dionysus, Alexander, and other subjects (Suid.).

SOTION (1) of Alexandria, Peripatetic, wrote (? between 200 and 170 B.C.) (1) a Διαδοχὴ τῶν φιλοσόφων in thirteen books, in which each philosopher is treated as the definite successor of another; (2) a book on Timon's Σύλλοι. The former work is a main though not a direct source of Diogenes Laertius' information. Sotion seems to have introduced the ultra-simple division of the philosophical successions into Ionian and Italian.

PIV iii A. 1235.

W. D. R.

SOTION (2), Peripatetic, not earlier than the reign of Tiberius (A.D. 14-37). Works: *Κέρας Ἀμαλθείας*; *Strange Stories* (ed. A. Westermann, in *Παραδοξογραφοί*, 1839, p. 183), about rivers, springs, and pools; Diolecan Disputations (against Epicurus); a commentary on the *Topics*.

PIV iii A. 1237.

W. D. R.

SOUL. Apart from philosophic doctrines concerning the soul, there are traces in vocabulary and usage of comparatively primitive ideas surviving in both Greece and Italy. S. J. Halliwell-Phillips (1867) believe that a man has several souls (cf. *Philosophy*, 27, 80); now in Greek, notably in Homer, there are several words which mean something like 'soul' and seem to refer to parts of a man having different functions. Ψυχή, to judge by its etymology, means the breath-soul, which corresponds to the unsubstantial nature of departed ψυχαί as phantoms, εἰδωλα (*Od.* 11. 51, cf. 83; *Il.* 23. 104). Such phantoms have no φρένες, midriff and the parts adjacent, vitals; to give them more than a faint semblance of life they need to drink blood. It seems not improbable that the θυμός, the 'hot' or 'recking' part, is the blood-soul; to kill is to take away the θυμός, to save the θυμός is to save life (*Il.* 22. 68 and often; *Od.* 11. 105). In Latin the evidence is less strong, partly no doubt because early documents are lacking; *animus* and *animus* correspond rather to later, philosophical uses respectively of ψυχή and θυμός than

to the above meanings. But we may note the existence of *umbra* in the sense of ghost, suggesting belief in a shadow-soul; cf. Lucretius' insistence (4. 364 ff.), on the true nature of shadows. See, further, AFTER-LIFE, GENIUS, PSYCHE.

Rose in *Actes du congrès international d'histoire des religions tenu à Paris en octobre 1923* (1925), ii. 138 ff. H. J. R.

SPAIN. 1. PREHISTORY. The story of prehistoric man in Spain is one of frequent intrusions from Africa and from continental Europe. Yet cultural development appears to have been gradual, without catastrophic change from palaeolithic times to the late Bronze Age. Noteworthy among prehistoric remains are the late palaeolithic cave-paintings (*Altamira*), megalithic structures (probably the first in Europe), and bronze utensils (Spain's gift to western Europe, possibly even to Italy). Writers of antiquity noted among the emerging culture-groups the Ligures, Iberi, and Celti. From them they named the peninsula Liguria, Iberia, or Celtica. The name Hispania, of unknown origin, prevailed.

2. PHOENICIANS AND GREEKS. Traders from Tyre discovered on the Atlantic coast the kingdom of Tartessus (q.v.), wealthy in silver and tin, and founded on its borders the colony of Gades (q.v.). Phoenicians also sought the rewards of trade through their colony Mainake (near modern *Malaga*) founded in the seventh century B.C. The subsequent rise of Carthage was followed by the absorption of Tartessus into her empire and the expulsion of the Phoenicians from Mainake and their ports of call, Dianium (*Denia*) and Ebusus (*Iviza*). Greek influence was thereby limited to the north-eastern corner of the peninsula, where Enporiae (*Ampurias*) and Rhodae (*Rosàs*) had been established by Massilia c. 600 B.C. After the First Punic War Carthaginian influence was extended by arms and diplomacy to the east and north, with Carthago Nova (q.v.) as civil and military centre. A quarrel with Rome over Saguntum (q.v.) brought on the Second Punic War, which deprived Carthage of all her Spanish possessions and gave to Rome titular claim to the entire peninsula.

3. ROMAN SPAIN: REPUBLIC. For almost two centuries the Romans fought to impose their rule on the Spanish tribes. The most difficult to conquer were the Celtiberians, Astures, and Cantabri (qq.v.). Probably one half-million troops were used by the Romans before 133 B.C., when the fall of Numantia (q.v.) marked the end of organized resistance. Three serious wars were subsequently fought against Sertorius, leader of the Marian faction (78-72 B.C.), against the legions and the sons of Pompey (49-45 B.C.), and against the natives of Asturia and Cantabria (26-19 B.C.). Most famous among the generals sent out to aid in pacification were Scipio Africanus Major (210), Cato the Censor (196), Tiberius Sempronius Gracchus (179), Scipio Aemilianus (134), Pompey (77), Julius Caesar (61), and M. Agrippa (26). In 197 B.C. Spain was organized into two provinces whose boundaries for some time remained ill defined. Hispania Citerior centred in the hellenized district of the lower Ebro valley, with Tarraco (q.v.) as headquarters. Hispania Ulterior was based on the Bætis (*Guadulquivir*) valley, long pacified by the Carthaginians. Its chief cities were Corduba (q.v.) and Hispalis (*Seville*). A regulatory administrative act (*lex provinciae*) was drawn up for each province in 133 B.C. The tribute demanded was one-twentieth of the annual crops. The rich mines were confiscated, worked directly by the State up to 178, and then leased to *publicani*. The novelty of administering an unorganized area led to many experiments, as the account of Roman municipal settlements well illustrates. Gracchus in 179 was probably the first to be named after its founder. Carcia, about 170, settled by sons of mixed marriages, was granted the status of a Latin colony by senatorial decree. Valentia (q.v.) and Urso (q.v.) also had

unusual features. Caesar's liberal extension of citizenship and his policy of extra-Italian colonization added thirty new towns to the sixteen established by his predecessors.

4. **EARLY EMPIRE.** The reorganization of Spain by Augustus was a recognition of past progress and an encouragement to further advance. The less urban portion of Hispania Ulterior was organized as the province Lusitania (q.v.). The wealthier and completely romanized remainder became a senatorial province, Baetica (q.v.). Hispania Citerior retained its unity; its multiple administrative problems were controlled by a governor and three *legati*. Three legions, stationed in the restless north-west, remained there until Vespasian's reign. Existing municipal foundations were doubled by Augustus; this brought the total to about one hundred. A comprehensive plan of road-building, an 'encircling system', bound the parts of the peninsula to one another and to Rome. The rapid growth of the imperial cult, in which the State, citizen, and subject were equally enthusiastic, proves the success of Augustus' reorganization. The fruits of Caesar's generous planting and Augustus' careful cultivation were reaped by Vespasian, who extended the Latin Right to all the municipalized units of Spain (see MALACA). He also reorganized the State-owned mines. Details of his measures have been preserved in two fragments of later date (*Lex Metallī Vipascensis*, see Bruns, *Fontes Iuris Romani*⁷, 289-93). Trajan and Hadrian, although of Spanish origin, were not unduly generous to their native province. Under the latter the road system reached its peak and the mining regulations were revised. Spain as a whole, and especially Baetica, became 'more Roman than the Romans'. Many senators of Rome, including three emperors, Trajan, Hadrian, and Theodosius I, were from Spain. Among Spanish men of letters were M. Porcius Latro, Hyginus, the two Senecas, Lucan, Pomponius Mela, Columella, Quintilian, Martial, Prudentius, and Orosius. Exports included gold, silver, lead, iron, cinnabar, wheat, oil, wine, and many other items. Spain contributed numerous recruits to the Roman imperial forces; the Spanish sword was introduced into the Roman army by Scipio Africanus. The best-known extant monuments are the bridge at Alcantara and the aqueduct at Segovia.

5. **LATER EMPIRE.** The assimilation of Roman institutions is clearly proved by later Spanish history. It was Christian Spain that furnished the first extant record of a Church Council (Elvira). The greatest exponent of Latin culture in the sixth-seventh centuries was Isidore of Seville. Roman law and Roman orthodoxy were transmitted to the Visigothic conquerors. The language of Spain resembles most closely of all the derivatives the Latin mother tongue.

BIBLIOGRAPHY

CLASSICAL SOURCES: *Fontes Hispaniae Antiquae* i-v (1922-40), edited by A. Schulten, P. Bosch Gimpera, and L. Péricot, contain texts with commentary and Spanish translation of all literary references prior to Caesar (i, ii), and for the wars in Spain, 237-154 B.C. (iii), 154-72 B.C. SPARTA. 1. NAME AND SITUATION. *Σπάρτη* is more probably derived from the prevalence of the plant *σπάρτος* ('Spanish broom' = *Spartium iunceum*) than from *σπαρτή*, meaning either 'the sown land' or 'the place of scattered settlements'. Whilst *Σπάρτη* and *Λακεδαίμων* are used indifferently in Homer for the dwelling-place of Menelaus, the latter is the official name in historic times, *Σπάρτη* having poetic or patriotic associations and never being used as an alternative to *Λακεδαίμων* to describe the territory as contrasted with the city. Sparta is situated on low hills and level ground c. 650-700 feet above sea-level on the west bank of the Eurotas, between two tributaries which flow from the slopes of Taygetus, and covered a roughly elliptical area measuring c. 2 miles (north to south) by 1½, with the Acropolis slightly north of the centre. Though it received partial defences before the end of the fourth century, it was not surrounded with a continuous wall until the early second century B.C. The walls, described by Livy (34. 38) at the time of Flaminius' attack in 195 as defending the level places only, were destroyed in 188 but rebuilt, and the whole circuit (48 stades according to Polybius) completed in 184 (Livy 38. 34; Paus. 7. 8. 5). This figure agrees closely with the conclusions drawn from the surviving remains discovered in 1906. As a result of these and subsequent excavations several landmarks of Spartan topography have also been identified, including the sanctuary of Athena Chalkioikos on the Acropolis overlooking the vast theatre of early Imperial date which replaced a smaller Hellenistic structure; the sanctuary of Artemis Orthia, where the Spartan boys were flogged, in the 'Contest of the Whips', on the bank of the Eurotas, which fixes the position of the quarter 'Limnai'; the quarter of 'Pitane' to the north-west of the Acropolis; and, most probably, the Agora south-east of the theatre. The position of the other two quarters Kynosura and Mesoa remains uncertain, but with the data obtained, Pausanias' account of the topography of the city becomes much more intelligible.

2. **HISTORY.** No certain remains of pre-Dorian occupation have been found on the site of Sparta except a handful of Mycenaean potsherds from the Acropolis; but at Therapne (q.v.) across the Eurotas a modest Late-Helladic dwelling has been uncovered, and at Amyclae (q.v.) some four miles down-stream a prehistoric site of the same period, preceded by an earlier settlement dating back to 2000 B.C. at least, underlay the sanctuary of Apollo Amyclaeus; and a short distance farther south was the beehive tomb of Vaphio which yielded the famous gold cups and other valuable finds. Sparta was thus essentially a settlement of the Dorian invaders, and preserved throughout its history the appearance and the tradition of the villages of the earliest settlers (cf. Thuc. 1. 10). The synoecism of these villages, which is the most probable explanation of the dual kingship, made possible the conquest of the Eurotas valley and the subsequent expansion of Spartan rule over the rest of Laconia. The reduction of the conquered population, consisting of Achaeans and other pre-Dorian stocks, to the status either of *Perioikoi* who retained partial independence subject to the obligation to serve in Sparta in war, or of helots who were serfs bound to the soil which they cultivated for their Spartan masters, belongs to this stage of her expansion. Whether the reforms of Lycurgus (q.v.), recognizing the existence of the two kings, the Gerousia, and the Apella, and the organization into Tribes and Obes should all be dated to the same period is much less certain.

3. The Messenian Wars, of which the dates are likewise much disputed (I. c. 725-705 (?); II. 685-668, or as late as c. 640-620?) and the details obscured by the more or less legendary exploits of Aristodemus and Aristomenes (qq.v.), furnished a valuable addition to the number of land-lots required to support the growing citizen-population. After the conquest of Messenia no fresh territory was annexed, and in the sixth century a new policy marks Sparta's foreign relations, Tegea (q.v.), which was finally overcome after a disastrous Spartan defeat, being allowed to retain her land and her independence. This policy, perhaps to be associated with the ephor Chilon (q.v.), culminated in the organization of the Peloponnesian Confederacy under Spartan hegemony, which attained its maximum of activity, if not success, in the reign of Cleomenes (q.v. 1).

4. Sparta's leadership in Greek affairs, which she maintained with increased credit in the invasion of Xerxes, began to decline soon after 479, partly as a result of the excesses of Pausanias (q.v. 1), the disgrace and exile of Leotychides (q.v.), the anti-Spartan activities of Themistocles, and, above all, the growth of the Delian Confederacy under Athens; and it was more seriously impaired by the loss of life in the earthquake of 464 B.C. and the strain of the Third Messenian War (c. 464-460). Owing, however, to the collapse of the Athenian land-empire and the defection of Megara, recognized by the Thirty Years' Peace, Sparta could face with revived confidence the prospects of the Peloponnesian War. The pre-eminence which she regained by the overthrow of Athens was nevertheless precariously based on a dwindling citizen-population, on the individualist ambitions of Lysander and Agesilaus (qq.v.), and on an increasing disregard for the traditional equality of possessions and for the prohibition of monied wealth and of the alienation of land-lots; and it is not surprising that she never recovered her strength after the disaster of Leuctra and the restoration of Messenian independence.

5. During the next hundred years or more the number of her citizens and her political importance were steadily declining. The deadening effects of her conservative régime were realized, far too late, in 242 B.C. by Agis III, whose proposals to revive the strictness of the Lycurgan training and to admit *Perioikoi* and foreigners to the citizen-body were obstructed by the ephors and the few remaining *Spartiatatai*; and, after his violent death, by Cleomenes III, who by revolutionary methods abolished the ephorate and raised the number of citizens to 4,000, but, ruling as a tyrant, was opposed and overthrown by the Achaean League and Antigonos Doson at Sellasia (222 or 221). Of the various tyrants who followed him, Nabis, who styled himself king, was the most successful, but was defeated by Flamininus in 195, and Sparta was compelled to join the Achaean League and finally incorporated as a *civitas foederata* in the province of Achaia. A remarkable revival of prosperity under the Roman Empire, especially in the second century, is attested by inscriptions and architectural remains, and a revival of the Lycurgan régime is a picturesque, if unconvincing, feature of the age of Septimius Severus. Surviving the destructive raid of the Heruli in A.D. 267, Sparta finally succumbed in ruins at the hands of the Goths under Alaric in 395.

For the Spartan Constitution see EPHORS, HELLOTS, LYCURGUS, PERIOIKOI; see also XENOPHON for his *Polity of the Lacedaemonians*. For the Spartan army see ARMIES, GREEK, para. 3.

BIBLIOGRAPHY

ANCIENT SOURCES: (a) Documents: IG v. 1 (1913); BSA xvi-xxx (1920-25). Public documents prior to Hellenistic times are extremely scarce, and the great majority of surviving inscriptions are statues-bases and lists of magistrates of the Imperial age.

(b) Authors. Poets: see ALMAN and TYRANNUS; Homer, esp. *Od.* in Prose: Hdt. 1. 65 ff.; Bks. 3-6 passim (Cleomenes); Bks. 7-9

(Persian Wars). Thuc. 1. 10, 18, 89 ff., 101-3, 128 ff. (Pausanias); Bks. 2-8 passim (Peloponnesian War). Xenophon, *Hell.* (passim), *Lac.*; Aristotle, *Pol.* 2. 9; 5. 7 and passim. Plutarch, *Lycurgus*, *Lysander*, *Agesilaus*, *Agis* (III), *Cleomenes* (III), *Apophthegmata Laconica*. For topography, Strabo, 8. 4-6 (Laconia); Pausanias, 3. 11-20 (Sparta).

MODERN WORKS: K. O. Müller, *Dorians* (Engl. Transl. 1830) is still valuable and suggestive. On the Spartan Constitution, G. Gilbert, *Constitutional Antiquities* (E.T. 1895); A. H. J. Greenidge, *Handbook of Gk. Const. Hist.*; G. Busolt-H. Swoboda, *Gr. Staatskunde* (1926), 634 ff. (sound and cautious); U. Kahrstedt, *Gr. Staatsrecht* i (1922) (fully documented but often misleading); Ed. Meyer, *Forschungen* i. 269 ff. (Lycurgus). The article 'Sparta' in *PW* is a valuable summary, with exhaustive accounts of topography (E. Böhe), Constitution and History (V. Ehrenberg), Religion and Art (L. Ziehen).

MARS: *Graecia Antiqua* (Frazer and Van Buren, 1930), pl. xxxv. A. M. W.

SPARTA, CULTS AND MYTHS. The former are well discussed in general by Ziehen in *PW*, 2° Reihe III, art. 'Sparta', 1453 ff. Prominent among them were those of Apollo at Amyclae (Hyacinthia, see HYACINTHUS; his throne and archaic statue there were famous, Paus. 3. 19. 1 ff.); of Artemis, who became identified with a Dorian goddess, Orthia (the name has various forms, see 'Artemis Orthia', *JHS*, Supplement vol. v, 1929, especially pp. 399 ff.); Athena, whose principal temple was the Bronze House, hence her epithet Chalkioikos; Aphrodite, here worshipped as an armed goddess, Arcia or *ὠπλισμένη*; Enyalios, apparently regarded as separate from Ares, with some interesting ritual, including sacrifice of puppies and a sham-fight; Zeus, who in Hellenistic times had (*inter alia*) the title of Agamemnon, a curious blend of the cults of a god and a hero, if the somewhat doubtful evidence is correct. Of heroes and heroines, the Dioscuri (q.v.), were prominent, often in connexion with Helen (q.v.); see F. Chapouthier, *Les Dioscures au service d'une déesse* (1935), especially pp. 143 ff. Helen herself was worshipped in a way indicating that she is more goddess than heroine. The Leucippides also (see DIOSCURI) had a cult. Of festivals, one of the most prominent was the Carneia (q.v.).

Really Spartan myths are quite uncommon, most of the fabulous history of the place representing attempts to attach pre-Dorian mythology to the Dorians. The Pelopidae, including Agamemnon, who is killed at Amyclae as early as Pindar, *Pyth.* 11. 31, the hint being taken from *Od.* 4. 514, are claimed as a kind of Spartans, and Heracles has a series of adventures there and is made out to be an ancestor, though he had little cult. H. J. R.

SPARTACUS, Thracian gladiator who led a revolt at Capua in 73 B.C. Numerous Thracian, Celtic, and German renegades quickly joined him. Spartacus defeated two Roman armies, then devastated southern Italy, continually attracting additional fugitives; ultimately his army numbered 90,000. In 72, after losing his Celtic associate Crixus, he defeated three Roman armies and reached Cisalpine Gaul whence, he hoped, his followers would disperse to their homes. They, however, preferred to plunder Italy. Spartacus accordingly marched south again, conquered two more Roman armies, desolated Lucania, and would have invaded Sicily, had not piratical transports failed him. In 71 Crassus, after unsuccessfully attempting to corner Spartacus in the 'toe' of Italy, finally caught and destroyed him in Lucania, subsequently crucifying any rebels he captured. Pompey, returning from Spain, annihilated the few who escaped. Spartacus quickly became a legend; he was competent, brave, physically powerful, and apparently humane.

Ancient Literature: the primary source was apparently Sallust's *Historiae* (see extant fragments in Maurenbrecher's edition). Plutarch (*Crass.* 8 f.; *Pomp.* 21) and Appian (*BC* 1. 116 f.) give continuous, but not wholly trustworthy, accounts, the writers who follow Livy (*Ug.* 67 f.; *Florus* 2. 8; *Eutrop.* 6. 7; *Oros.* 5. 24) sketchier versions. Modern Literature: T. Rice Holmes, *Roman Republic* (1923), i. 256 f. (for topography); H. Last, *CAM* ix, 129 f. (with bibliography). E. T. S.

SPARTOCIDS, a dynasty which established itself at Panticapaeum in 438 B.C., and ruled most of the Crimea and the Taman peninsula until c. 110 B.C. It was called after its founder, Spartocus I, and two later kings of like name. The Spartocids were probably of Thracian origin, but soon became hellenized. The earlier members of the dynasty avoided regal style and were known simply as *ἀρχοντες Βοσπόρου*; but they kept a mercenary force and probably owned most of the Crimean land. From the time of Spartocus III (304–284) they bore the title of kings. They so developed the cultivation of wheat in their dominions as to become the greatest exporters of grain to Greece. In the fifth century they probably conceded a right of pre-emption to Athens; in the next two centuries they still cultivated the Athenian market, but dealt freely with other Aegean cities. Their wealth is attested by their magnificently furnished rock-tombs near Panticapaeum. In the second and first centuries the Spartocids suffered from Scythian and Sarmatian invasions of the Crimea, and c. 110 they were displaced by Mithridates VI of Pontus. A daughter of Mithridates' son Pharnaces, Queen Dynamis, founded a new dynasty, which survived under Roman protectorate until the fourth century A.D.

M. Rostovtzeff, *CAH* viii, ch. 18.

M. C.

SPARTOI, see CADMUS. Their descendants had a birth-mark in the shape of a spear-head, Arist. *Poet.* 1454^b22 (from Euripides' *Antigone?*), by which they could be known.

SPATHA, see ARMS AND ARMOUR, ROMAN.

SPES, a *res expetenda* rather than an actual 'virtue'. A temple was built to her by A. Atilius Calatinus in the First Punic War. Burnt down in 31 B.C., it was restored by Germanicus in A.D. 17. 'Spes P.R.' is the rising generation, the hope of the race, 'Spes Augusta' imperial promise centred in the princes (cf. *supplicatio Spei et Iuuentuti*, 18 Oct., for the *toga uirilis* of Augustus). She bears an opening flower and catches up her skirt as if in haste.

G. Wissowa, *RK*, 263, 329f.

H. M.

SPEUSIPPUS, son of Eurymedon and Potone, a sister of Plato. He was associated in the Academy with Plato, went with him to Syracuse on his last visit, and succeeded him as head of the Academy from 347 to 339 B.C. He appears to have been a man of considerably less austere character than Plato, though doubtless the stories in later writers of his bad temper and proneness to physical pleasures are exaggerated. We also hear of him as an agreeable companion in social intercourse.

He was a prolific author, but only a few stray fragments of his work survive. From these, and from references in later authors, we get the impression that his interests turned largely to the empirical side of knowledge. He seems to have emphasized the observable differences and resemblances of phenomena and deprecated attempts to reduce them to a common first principle. He was interested in biological investigation, and wrote a book, of which a few fragments survive, in which he attempted to classify the different species of animals and plants by their resemblances to each other. He also contributed to mathematical theory and to ethics. In the latter connexion he is mentioned by Aristotle as advocating the view that pleasure is in itself bad: he held, apparently, that the intermediate state between pleasure and pain was the sole good.

SPHAERA BARBARICA, GRAECANICA, see CONSTELLATIONS, para. 10.

SPHAERUS of Borysthenes (b. c. 285 or 265, lived at least to 221 B.C.), a pupil first of Zeno, then of Cleanthes; friend and adviser of the Spartan reformer Cleomenes. His numerous writings dealt with all branches of philosophy (especially with morals and politics) and with certain of the older philosophers. His definitions were highly esteemed in the Stoic school.

Testimonia in von Arnim, *SVF* i. 139–42. *PW* iii A. 1683.

W. D. R.

SPHAIRAI (σφαῖραι), see BOXING.

SPHINX, a mythological monster, with human head and the body of a lion. Originating in Egypt, probably as a type of the king, the Sphinx became known early to Syrians, Phoenicians, and Mycenaean Greeks. Already in the Near East it was transformed into a female being and remained female in Greek literature, although in art bearded male Sphinxes are known in the archaic period (H. Payne, *Necrocorinthia*, 1931, p. 89). Sphinxes were at first adopted by the Greek artists as a type of ghost-like monsters who carry off boys or youths and are present at fatal combats. Like many other monsters, the Sphinx acquired an apotropaic significance and was placed on tombs (Diog. Laert. i. 89) and depicted on shields (Aesch. *Sept.* 522). In Boeotia, the native land of Hesiod's great mythological system, the Sphinx became a central figure of the native cycle concerned with the mythical dynasty of the Labdacidae. In an early version the Sphinx, sent by Hera to Thebes, asked the Thebans the riddle about the three ages of men (Apollod. 3. 5. 7 f.; a piece of folk-lore). They failed to solve it, and after each effort the Sphinx carried away and devoured one of them, including Haemon, son of Creon (E. Haspels, *Attic Black-Fig. Lekythoi*, 1938, p. 131), until Oedipus (q.v.) solved the riddle. The Sphinx committed suicide, or was killed by Oedipus (Corinna in schol. Eur. *Phoen.* 26). Later accounts, attesting the growth of Delphic religion, make Apollo send the Sphinx. These versions were used by Sophocles (*OT*) and Euripides (*Phoen.*).

In art sphinxes appear in great abundance in the 'animal friezes' of the orientalizing period; marble statues of Sphinxes, such as the Sphinx of the Naxians in Delphi, are given as votives to Apollo (Ch. Picard, *Mannet d'archéol.* i, p. 570, fig. 197), or guard the tombs of Attica. In Classical art the Sphinx is humanized. The Sphinx from Aegina and those of later Attic vases have beautiful serious faces, sometimes female breasts. Instead of the Hesiodic monster, the child of Echidna and Orthros (*Theog.* 326), the Sphinx becomes the wise, enigmatic, and musical messenger of divine justice; the tragic poets call her 'the wise virgin' and say that she sang her riddle (Eur. *Phoen.* 48, 1507).

J. Ilberg in Roscher, *Lex.*, s.v.; H. J. Rose, *Handbook of Greek Mythol.*, pp. 188 and 297; P. Wolters, *Gnomon* 1925, 46.

SPHONDULOMANCY, see DIVINATION, para. 6.

SPICULUM, see ARMS AND ARMOUR, ROMAN.

SPINA, a city of eastern Italy, near one of the southern estuaries of the river Po, and probably to be identified with an excavation-site near the Lago di Comacchio, where graves have been discovered with a rich furniture of Greek pottery and metal-ware, mostly of the sixth century. Ancient writers describe Spina as a Greek city, and mention that it had a treasure-house at Delphi. Its principal trade was probably with the Etruscans at Felsina (Bononia), but its Greek nationality need not be denied. With the decline of Etruscan power in the fourth century and the recession of the coastline Spina became decrepit.

Strabo 5. 214. S. Aurigemma, *Il Regio Museo di Spina* (1936).

SPINA, see CIRCUS.

SPINNING. In an ancient household a large amount of a woman's time was spent in wool-work; and on the tomb of a virtuous Roman matron the crowning words of praise were 'Lanam fecit'. The fleeces were brought into the house in their rough state and had first to be washed. The wool was then teased and pulled into fluff before being treated by an instrument called *epinetron* which separated the fibres and arranged them lengthways, making them ready for spinning. The spindle—*κλωστήρ*, *fusus*—was a straight piece of reed, wood, or metal about 12 inches long; the whorl was a disk of clay, wood, or ivory attached to the end of the spindle; and the operation of spinning was as follows. The wool was placed on the distaff (*ῥακάτη*, *colus*), and from it a little was drawn, twisted, and fixed to a hook at the top of the spindle. With the help of the whorl the spindle was spun round, and as it spun more wool was paid out from the distaff and twisted into yarn.

H. Blümner, *Technologie der Griechen und Römer*² (1912) i. 120 ff. F. A. W.

SPINTHER, see **LIENTULUS** (5).

SPOLIA OPIMA were spoils offered by a Roman general who had slain an enemy leader in single combat. Three kinds are distinguished, *prima*, *secunda*, and *tertia* according to the rank of the winner. *Prima spolia* were dedicated in the temple of Jupiter Feretrius. These were traditionally won on three occasions. Romulus' victory, however, was obviously invented to credit him with the building of the temple of Jupiter Feretrius and the institution of the custom. But the historicity of the victories of A. Cornelius Cossus (q.v.) over Tolumnius (c. 428) and of M. Claudius Marcellus (q.v.) over Viridomarus (222 B.C.) is attested by epigraphical and literary evidence.

SPONSALIA, see **MARRIAGE**, LAW OF, para. 6, and **RETORTIAL**.

SPONSIO, see **STIPULATIO**.

SPORTULA, see **CLIENS**.

SPRINGS, SACRED. The worship of springs (or wells), a phenomenon of the highest antiquity and widespread all over the world, is in essential points similar to that of rivers (see **RIVER-GODS**). Flowing water, especially when bubbling up from the interior of the earth, was to the primitive mind animate and divine, and the plastic creative imagination of the Greeks personified such spirits of fountains as nymphs (see **NYMPHS**). Fountains with extraordinary qualities gained special significance and acquired corresponding myths—warm healing fountains were attached to the cult of Hephaestus (and Heracles, sometimes Artemis). Mantic springs brought into existence the most famous oracles of antiquity, as those of Apollo at Branchidae near Miletus and at Delphi (Cassotis); cf. the spring at Claros, that of Daphne near Antioch, and that in the Troad near the grave of the Sibyl. Poseidon was said to have caused fountains to spring up (e.g. the salty fountain on the Athenian Acropolis, in the Erechtheum); so also Dionysus (thus a fountain near Haliartus reminded men of the wine-god and his nurses because of the ruddy colour of its waters: Plut. *Lys.* 28. 7). The fountain on the summit of the Boeotian Helicon, Hippocrene, was brought forth by a blow of the hoof of Pegasus, said to have been the horse of Poseidon. Fountains were also named after heroes, as Achilles and Aramemnon; those that disappear into the earth were considered as entrances to Hades (as Styx in Arcadia, Asterion in Argos, Cassotis near Delphi). A number of myths (cf. **ANYMON**, **SEMELE**, **DIOCE**) and cults (cf. the nymphs of the spring) clearly show how

strong a fascination springs exercised on Greek minds. The Roman festival Fontinalia (13 Oct.), when flowers were thrown into the fountains, was important. The Romans also threw coins into the wells (Plin. *Ep.* 8. 8. 2). Horace sacrifices a kid to the Bandusian spring, *Carm.* 3. 13. 3.

O. Gruppe, *Gr. Mythologie und Rel. Gesch.* (1906), Index, s.v. 'Quelle' (p. 1913); E. Michon, J. A. Hild, 'Fons' in *Dar.-Sag.* S. E.

SPURINNA, see **VESTRICIUS**.

STABERIUS EROS, a scholar, originally a slave, who taught the children of the Sullan *proscripti* free. Brutus and Cassius were his pupils (Plin. *HN* 35. 199; Suet. *Gram.* 13).

STADIUM. The Greek *στάδιον*, the running-track, was a long parallelogram, about 200 yards long and 30 yards wide. In the sprint race (also known as *στάδιον*) the competitors ran the length of the track; in the longer events they went up and down the straight, turning sharply round pillars at the end. When possible the stadium lay between two hills with an embankment at the two ends which were either left square or rounded in a half-circle, for the convenience of the spectators. The four best-known extant stadia are those at Delphi, Olympia, Epidaurus, and Athens. At Delphi the present structure, dating from the second century A.D., is largely due to Herodes Atticus, who also rebuilt the stadium at Athens with forty-six rows of marble seats holding some 50,000 people. In all four stadia the start and finish are marked with pillars and stone slabs divided into sections, one for each runner. At Epidaurus there are also small pillars every hundred feet on each side of the track, and a stone channel with basins at intervals to provide the spectators with water.

E. N. Gardiner, *Athletics of the Ancient World* (1930), 128 ff. F. A. W.

STAGIRUS (later Stagira) (Στάγειρος, Στάγειρα), see **ARISTOTLE**.

STANDARDS, CULT OF. Every permanent station of a Roman military unit, especially a legion, and every camp regularly constructed contained a chapel, which, at least in Imperial times (Vegetius, *De re mil.* 2. 6), was under the charge of the first cohort, or headquarters company. In this were kept, besides the statues of gods worshipped by the troops and of the emperors, the standards of the unit and its component parts. These, from an unknown date (Pliny, *HN* 13. 23; our information does not go back to Republican times), received divine or quasi-divine honours. They were anointed and otherwise tended on feast-days (Pliny, *ibid.*, cf. **ROSALIA**). A suppliant might take refuge at them (Tacitus, *Ann.* 1. 39. 7); an altar was on occasion dedicated at least partly to them, or at all events to the most important, the eagle of the legion (*CIL* iii. 7591; no. 14 v. Domaszewski); the *natalis* of the eagle, presumably the anniversary of the day when the unit was first commissioned, was celebrated (*CIL* ii. 6183; no. 3 v. Domaszewski); sacrifice was made to them particularly on the occasion of a victory (Josephus, *Bj* 6. 316, where the troops who took Jerusalem make offerings to their ensigns in the Temple, not in their camp). Tertullian even says with rhetorical exaggeration that the soldiers venerated them beyond all gods (*Apol.* 16). They are not precisely gods, but are associated with *genius* and *virtus* (*CIL* iii. 7591, above), and are 'propria legionum numina' (Tac. *Ann.* 2. 17. 2). This perhaps goes to the heart of the matter; they are the embodiment of the luck or power of the unit to which they belong, and hence worthy of respect and to be kept sacredly.

A. von Domaszewski, *Die Religion des Römischen Heeres* (Westdeutsche Zeitschrift xiv, 1923), pp. 9 ff. H. J. R.

STAPHYLUS (1), personification of the grape-cluster, *σταφύλη*. He is vaguely attached to Dionysus, as his son by Ariadne (q.v.; Plutarch, *Thes.* 20); his favourite (schol. *Ar. Plut.* 1021); an Assyrian king who welcomes him during his Indian campaign (Nonnus, *Dionys.* 18. 5 ff.). Or he discovered the vine and informed Oeneus (q.v.; 'Probus' on Verg. *G.* 1. 9).

H. J. R.

STAPHYLUS (2) of Naucratis, an Alexandrian to whom are assigned histories of Athens and Thessaly (*Περὶ Ἀθηνῶν* and *Θεσσαλικά*). Perhaps c. 300 B.C.

FHG. iv. 505.

STAR-MYTHS, see ANDROMEDA.

STASEAS of Naples, the first Peripatetic philosopher known to have settled in Rome. M. Calpurnius Piso became his pupil c. 92 B.C. He is frequently mentioned by Cicero. He seems to have occupied himself particularly with the problem of the normal length of human life.

PW iii A. 2153.

STATARIA, sc. *fabula*: one of the three types of play according to Euanthius' division, *motoria* (lively), *stataria* (quiet), *mixta* (blended): see FABULA.

STATERA, see WEIGHING-INSTRUMENTS.

STATHMOS (σταθμός), see WEIGHING-INSTRUMENTS.

STATILIA, see MESSALINA.

STATILIUS TAURUS, TITUS (cos. suff. 37 B.C., cos. II 26 B.C.), the greatest Augustan marshal after Agrippa. Of uncertain origin (perhaps Lucanian), by military talent and steadfast loyalty he rose to wealth and honours; he was thrice acclaimed imperator by the legions and held several priesthoods (*ILS* 893; 893 a). His earliest recorded service for Octavian was as an admiral in the *Bellum Siculum* (36). After the conquest of Sicily he crossed to Africa and secured that province, holding a triumph in 34 (the amphitheatre erected in commemoration on the Campus Martius was completed in 30). He also fought in Illyricum (34-33), commanded the land army in the campaign of Actium (31), and conducted operations in Spain (29). After his second consulate (26) the only record of him is that he was put in charge of Rome as *praefectus urbi* in 16 when Augustus departed to the provinces of the West (Dio Cass. 54. 19. 6; Tac. *Ann.* 6. 11). He probably died not long after.

R. Syme, *Roman Revolution* (1939), see Index.

R. S.

STATIUS, PUBLIUS PAPINIUS (c. A.D. 45-96), was born at Naples, where his father, himself a poet, was a school-master. From his father, whom he eulogizes in *Silvae* 5. 3, he learned much of the poetic technique he was afterwards to develop. Settling in Rome, he established there his fame and popularity as a poet. From his *Silvae* we learn that he recited his works to fashionable audiences (cf. Juv. 7. 82-6), that he became intimately acquainted with several of the leading men of his day, and that he was admitted to the court of Domitian, to whose good graces he owed the running water in an estate he acquired at Alba (3. 1. 61 ff.), where his father was buried (5. 3. 35-40). He won the prize, probably in 89, at the annual festival instituted by Domitian at Alba, but was, much to his chagrin, unsuccessful at the quinquennial Capitoline contest, probably in 94. To his wife Claudia he pays graceful compliments (3. 5). They had no children, though Claudia had a daughter by a previous marriage

and Statius adopted a son who died young (5. 5). Statius' health was not robust, and we hear of one serious illness through which he was nursed by his wife. Towards the end of his life he retired to his native city, where he died, seemingly before the murder of Domitian (Sept. 96). He appears to have been of an amiable disposition, deeply attached to his relations and capable of warm friendship. Though not of great wealth, he was probably in easy circumstances, at any rate during his later years. Real hardship does not seem ever to have fallen to his lot and, generally speaking, it is only of the pleasant sides of life that we have glimpses in his poems. The least pleasing aspect of his nature is to be seen in the extravagant flattery lavished on Domitian (e.g. *Silv.* 4. 1-3), which may be partially extenuated by the conditions of the age.

2. **WORKS.** A poem on Domitian's German wars and the *Agave*, a libretto for a pantomimus mentioned by Juvenal 7. 87, have perished. The epic *Thebais*, published about 91, took twelve years to complete and tells in twelve books the story of the quarrel between Eteocles (q.v.) and Polynices. The *Achilleis*, brought to a conclusion in the second book by the poet's death, deals with the education of Achilles under the Centaur Chiron, his disguise as a girl during his sojourn at the court of Lycomedes in Scyros, his amour with Deidameia, his detection by Ulysses and Diomedes, and his departure for Troy. The *Silvae* in five books published at different times from 92 onwards, the fifth being posthumous, consist of thirty-two occasional poems addressed to the poet's friends celebrating their marriages, villas, baths, *objets d'art*, or public benefactions, offering congratulations on recovery from illness, the birth of an heir, or attainment of high office, or consolations on the loss of relatives, and sometimes dealing with lighter subjects. The most famous is the short address to Sleep (5. 4). These poems are mostly in hexameters, though four are in hendecasyllables, one in sapphics, and one in alcaics. They were lost in medieval times till Poggio discovered a manuscript containing them at Constance in 1417.

3. Statius' verse is fluent and highly polished, even in the hastily composed *Silvae*. The *Thebais* requires episodic treatment and lacks a real hero. There are frequent imitations of Virgil in word and thought, and the gods take part in the action. Excessive use of hyperbole is perhaps the chief fault in taste. But the various episodes, highly coloured and rhetorical though they be, are generally successful regarded as separate wholes, the descriptive passages striking, and the narrative lively. The sentiment rarely reaches sublimity, but telling effects are achieved in 'pathetic' passages. The epics were much admired throughout medieval times, and Statius, regarded by Dante as a Christian, is an important character in the *Purgatorio*. He was a favourite also of Chaucer's. See also EPIC POETRY.

STELLA, ARRUNTIUS, see ARRUNTIUS.

STENOGRAPHY, see TACHYGRAPHY.

STENTOR, a man who could shout as loudly as fifty ordinary people (*Iliad* 5. 785-6). He is evidently known to Homer, but no later author has anything worth quoting to say of him.

STEPTERIA, see *APOLLO*, para. 4.

STEROPE or **ASTEROPE**, (1) one of the Pleiads, wife of Oenomaus (q.v.; Paus. 5. 10. 6). (2) daughter of Cepheus king of Tegea (Apollod. 2. 144). Heracles gave her (in Paus. 8. 47. 5, Athena gave Cepheus) some of the hair of Medusa, bidding her lift it thrice above the city wall, to put attackers to flight.

H. J. R.

STERTINIUS, in the Augustan Age, turned Stoic tenets into Latin verse and, according to Aero (ad Hor. *Epist.* 1. 12. 20), wrote 220 books.

STESICHORUS, lyric poet, said to have been born at Maturus (Steph. Byz. s.v. *Μάταυρος*) and to have lived at Himera (Pl. *Phdr.* 244 a, Arist. *Rh.* 1393^b). His real name was said to be Teisias (Suidas s.v. *Στησίχορος*), and it is quite possible that *Στησίχορος* was a title. His dates are confused by *Marm. Par.* 50, which places his arrival in Greece in 485 B.C. This seems a mistake, and there can be little doubt that he was alive in the first half of the sixth century, since he is connected with Phalaris (Arist. *Rh.* 1393^b) and Suidas places his birth at 632-629 B.C. and his death 556-553 B.C. His works were collected in twenty-six books, and seem to have been lyrical poems composed on a big scale, in which the narrative element was strong. Titles of several poems survive and indicate that he told stories gathered from widely different epic sources. It is not known what type of poems he composed, though it is possible that some were Dithyrambs, since narrative predominated in this type, and Stesichorus may have been influenced by the voyage of Arion in the West. Though the fragments are scanty, something may be learned of his work. In his *Funeral-games of Pelias* he drew on the Argonautic saga and described the games in some detail (frs. 1-3). His *Geryoneis* told of Heracles' quest of the cattle of Geryon, and was remarkable for its knowledge of the silver-mines of Tartessus (fr. 4), its conception of Heracles as a great drinker (fr. 5), its account of the Sun's magic cup which Heracles borrowed for his voyage (fr. 6), and for the notion that Geryon was winged (schol. Hes. *Th.* 287), which was soon popularized by painters. His *Boar-hunters* (fr. 7) seems to have been about the Calydonian boar-hunt, and his *Eriphyle* (fr. 8) dealt with a famous Theban legend. His *Illypersis* drew on the epic, and was interesting for its account of Epeus who made the Wooden Horse (fr. 9), though attempts to connect it with the legend of Aeneas remain unproved. In his *Helen* he seems to have told the conventional story in a first version, which contained an account of her marriage to Menelaus (fr. 10). But legend (Pl. *Phdr.* 243 a) told that he was blinded for this and did not recover until he recanted in a second poem, his famous *Palinode*, in which he denied that Helen ever went to Troy (fr. 11). Perhaps the truth behind this is that Stesichorus outraged opinion which regarded Helen as a goddess, as it did in Sparta. His *Oresteia* in two books seems also to have been sung at Sparta at a spring festival (frs. 13-14), and differed from Homer in placing the death of Agamemnon in Laedaemon. It contained an account of Clytemnestra's dream (fr. 15), and gave some part to the nurse of Orestes (schol. Aesch. *Cho.* 733). The *Rhadine*, attributed to him, seems more likely to be a later, romantic work by another poet, perhaps of the same name (cf. *Marm. Par.* 73). The fragments show that he wrote in the traditional language of choral lyric, used a kind of 'dactylo-epitrite' metre, and was an ingenious inventor of episodes later very popular, such as the birth of Athens in full armour from the head of Zeus (*Elym. Magn.* 772. 49). He was admired for his dignity (Quint. *Inst.* 10. 1. 62) and grandeur in plot and character (Dion. Hal. *Vell. Gent.* 2. 27). See also PASTORAL POETRY, GREEK.

STHENNO, see *GORGIO*.

STICHOMETRY. (1) GREEK. *Στίχος* means primarily a line of verse, and metrical texts were naturally measured by the number of their verses; but for bibliographical purposes the equivalent of a hexameter line was taken as a unit of measurement for prose works also. For this purpose the hexameter line was reckoned as approximately 16 syllables or 36 letters (Galen, *De placitis Hippocratis et Platonis* 8. 1, p. 655). This does not mean that prose works were habitually written in lines of this length. On the contrary, the evidence of papyri found in Egypt shows that the lines in prose manuscripts were usually not much more than half of this. The *στίχος* was simply a unit of measurement indicating the extent of the book, or of portions of a work, and serving to fix the remuneration of the copyist. Thus Josephus (*AJ* 20. 11. 3) states that his work consists of twenty books and 60,000 *στίχοι*, and according to Diogenes Laertius the works of Aristotle comprised 445,270 *στίχοι*; while the Edict of Diocletian fixes a scribe's wage at 25 or 20 *denarii* per 100 *στίχοι*. Callimachus, in his catalogue (*πύνακες*) of the Alexandrian Library, recorded the number of *στίχοι* in each work. Many extant manuscripts contain notes of the number of *στίχοι* (see Ritschl, op. cit. infra), e.g. several of the Herculanum rolls, the Chester Beatty papyrus and the Codex Claromontanus of the Pauline Epistles, the Laurentian manuscripts of Herodotus and Sophocles, etc. A few manuscripts have a marginal numeration by *στίχοι* in hundreds.

(2) LATIN. In Latin manuscripts the same system was in force, the unit being the Virgilian line of 16 syllables. This is stated explicitly in Philipps MS. 12266 at Cheltenham, where the writer, in order to check the dishonesty of copyists, states that he had calculated on this basis the number of lines in the books of the Bible and the writings of Cyprian. Stichometrical notes are, however, not common in Latin manuscripts.

Stichometry, a purely mechanical device, is distinct from colometry, the method of dividing texts according to sense-lines. This, according to Jerome (pref. to Isaiah) was common in manuscripts of Demosthenes and Cicero, and was adopted in his Vulgate version of the Prophets. There is no trace of it in extant Greek papyri, but it is found in bilingual manuscripts (where its utility is obvious), and in some later Vulgate manuscripts.

F. G. K.

STICHOMYTHIA (*στίχομυθία*, Poll. 4. 113, τὸ παρ' ἐν ἑαυτοῖς ἀντιλέγειν) is a form of dramatic dialogue in which two characters speak a single line each for a considerable stretch (cf. Henry VI, III. iii. 2). Sometimes they speak two lines each with similar regularity (Eur.

Bacch. 935 ff.). As Gross shows, Aeschylus was less strict in his use of stichomythia in later plays than in earlier, whereas Euripides grew more strict. Sophocles, avoiding in this as in other respects stiffness in the structure of his iambic verse, is far freer than either; and in comedy, with its naturalistic technique of dialogue and ready tolerance of *antilabe* (breaking of a line between speakers), there is hardly a trace of stichomythia (*Ar. Ach.* 1097 ff., a special case; 305 ff., pairs; *Plut.* 163 ff.). Stichomythia can be highly effective, as in the tensely concentrated dialogue between Orestes and his mother (*Aesch. Cho.* 908 ff.), and that between Oedipus and the Herdsman (*Soph. OT* 1147 ff.); but it tends to involve the introduction of padding (e.g. *Soph. OT* 559, *Eur. Ion* 1002). Even in a long and otherwise regular series stichomythia is sometimes broken, particularly towards the end. Editors occasionally emend needlessly through a mistaken desire for symmetry.

A. Gross, *Die Stichomythie in d. griech. Trag. u. Kom.* (1905). J. D. D.

STILO PRAECONINUS, LUCIUS AELIUS (Suet. *Gram.* 3; *Plin. HN* 33. 29), the first great Roman scholar, born at Lanuvium about 150 B.C., of equestrian rank, and a Stoic by training. He interested himself in literary criticism, antiquities, grammar, and etymologies; though not an orator, he composed speeches for others. Amongst his pupils he numbered Varro and Cicero (*Brutus* 205-7), and his aims and methods profoundly influenced his own and succeeding generations. His work on literature included interpretations of the *carmina Saliorum*, comments on the language of the XII Tables, critical editions of Ennius and Lucilius, and the establishing of a canon of twenty-five plays of Plautus, whose language he rated highly (*Quintil.* 10. 1. 99). It is difficult to estimate his debt to Greek grammarians, but his treatise on sentences (*De proloquiis*; *Gell.* 16. 8. 1) was probably inspired by the *ἱερί ἀνωμαλίων* of Chrysippus.

Cf. G. Funaioli, *Gramm. Rom. Frag.*, pp. 57-76; Teuffel, § 148; Schanz-Hosius, § 76 a. J. F. M.

STILPON (c. 380-300 B.C.), third head of the Megarian school, may have studied under Diogenes the Cynic, as well as under Euclides the founder of the Megarian school. During his headship the school was the most popular in Greece; *inter alios* the originally Platonic school of Eretria came under its influence, and Zeno, the founder of Stoicism, acquired from Stilpon his skill in dialectic. Stilpon is said to have written at least twenty dialogues, and the names of some are preserved. In metaphysics he maintained the monism characteristic of the Megarian school, denied the Platonic distinction between universals and individuals, and asserted the wrongness of all assertion that was not tautologous; in ethics, under Cynic influence, he extolled the virtue of *ἀπάθεια*, but did not press the doctrine to such extremes as the Cynics. His influence, largely due to personality rather than to originality of view, soon passed away.

PW iii A. 2525.

W. D. R.

STIMULA, Roman goddess of unknown functions. She had a grove (*Livy* 39. 12. 4, cf. *Ovid, Fasti* 6. 503), where the Bacchanals met in 186 B.C.; hence identified with Semele (q.v.). *Ovid* (*ibid.*; *August. De civ. D.* 4. 11) derives her name 'de stimulis quibus . . . homo impellitur'.

H. J. R.

STIPENDIUM has two meanings: (a) years of military service and (b) pay.

(a) In the Republican period liability for military service was at first reckoned in terms of campaigns, and eligible citizens might be called upon to serve either 16 or 20. With the extension of Rome's military commitments the equivalent years of service came to be substituted for the number of campaigns. The following

regulations were made by Augustus in 13 B.C.: (1) legionary, 16 years+4 as a veteran; (2) praetorian, 12 years; (3) auxiliary, 25 years. In A.D. 5 legionary service was increased to 20 years+5 with the veterans, and praetorian to 16, although the former were often kept with the colours for 30 or 40 years. Under the Flavians legionaries served *sub aquila* for the same number of years as the auxiliary.

(b) M. Camillus (q.v.) is said to have introduced pay, but its origin may be earlier. It was probably a reimbursement of the soldier for his expenses upon equipment and commissariat. In the second century the legionaries received 120 *denarii* yearly, against which stoppages were made for food and clothing. After the Marian reforms, when soldiering became a profession, and higher wages were a necessity, Caesar doubled the pay, fixing it at 10 *asses* daily or 225 *denarii* yearly. This rate for the legions was maintained by Augustus, who fixed the praetorian scale at 750 *denarii* yearly, i.e. more than three times that of the legionary. The pay given to the auxiliaries is uncertain, but may have been 75 *denarii* yearly. The following table shows the rising scale under later emperors in *denarii*.

	Legionary	Legionary Centurion	Primi Ordines	Praetorian
Augustus . .	225	3,750	7,500	750
Domitian . .	300	5,000	10,000	1,000
Commodus . .	375 }	6,250	12,500	1,250
Severus . .	500 }			1,850
Caracalla . .	750	12,500	25,000	2,500

STIPULATIO, a formal contract concluded verbally in the form of question (made by the future creditor, *stipulator*: 'centum dare spondes?'), and answer (by the future debtor: 'spondeo'). From the use of the verb *spondeo* it derived the alternative name of *sponsio* (for this identification in the time of the XII Tables see the new fragment of Gaius, 4. 17 a). *Stipulatio* was one of the oldest institutions of Roman private law, and it gradually developed into a 'fulcrum' of the whole Roman system of obligations. Originally restricted to a fixed sum of money, it was subsequently extended to any specified article (*certa res*), and eventually to any legal transaction, and its use was thrown open to non-citizens. Thus it became a general and, indeed, the most usual mode of creating any kind of obligation. Other verbs (*promittere*, *dare*, *facere*, and Greek equivalents) were now permissible, but the classical law always required oral proceedings, the personal presence of the parties, and an immediate answer substantially appropriate to the question. Every obligation concluded in another form could be confirmed and transferred into stipulation. Its simple and elastic form admitted its use for accessory obligations (*sureties*) by which the creditor was guaranteed against insolvency or failure of the principal debtor. The surety (*sponsor*) obliged himself to the creditor by a new *stipulatio*, called *sponsio* (in a narrower sense), to undertake the same obligation as the promisor of the first *stipulatio*. Since *sponsio* was open only to *cives* another form of *stipulatio*, *fidepromissio*, was created for non-citizens, whereby the verb *fidepromitto* obliged the surety. If the principal debt did not arise from a *stipulatio*, the stipulation for suretyship had to be in the form of *fideiussio*.

Stipulatio was largely applied in civil proceedings, e.g. to oblige a defendant or his representative to fulfil a judgement (*judicatum solvi*); representatives of the plaintiff assured the ratification of their action by a *cantio de rato*. In many cases a *stipulatio* could be ordered by a magistrate, especially by the praetor (*stipulationes praetoriae*), both in order to make more stringent an already existing obligation, and to create a new obligation

for the protection of an interest otherwise not protected, for lack of *ius civile* (e.g. in case of usufruct, legacy, guardianship, or damage threatened to a neighbour's property by the dangerous condition of a building, etc.).

Since *stipulatio* took place without witnesses, it soon became usual to draw up a written note (*instrumentum, cautio*) to provide evidence of its conclusion. By a post-classical development the document was deemed sufficient, *stipulatio* being taken for granted. The requirement of oral form was thus considerably relaxed, if not abandoned, and a later imperial rescript abolished the necessity of solemn words. Under Justinian the simultaneous presence of the parties was the only surviving requirement, and this was assumed if the parties had been in the same place on the day mentioned in the document.

STIPULATIO AQUILIANA, *see* AQUILIUS (4).

STOA, *see* PORTICO.

STOA, philosophical school or sect, founded by Zeno of Citium in about 300 B.C., named after the Stoa Poikile, a public hall in Athens, in which Zeno and his successors used to teach. Though the school was probably less strictly organized than the Academy and the Peripatos, it had a continuous succession of official heads (*προσπάται*) from Zeno to at least A.D. 260 (the latest date known) and probably some time later. But it had faded out long before Justinian closed the last philosophical schools at Athens in A.D. 529.

The history of the school is usually divided into three periods: (I) The Early Stoa (from Zeno to the first half of the second century B.C.); (II) the Middle Stoa (second and first centuries B.C.); (III) The Late Stoa (time of the Roman Empire).

I. The *Early Stoa* is represented by: (1) Zeno (until 263); (2) disciples of Zeno: Cleanthes (*προσπάτης* from 263 to 232), Ariston of Chios, Herillus of Carthage, Dionysius 'ὁ Μεταθέμερος', Persaeus, Aratus of Soli; (3) disciples of Cleanthes: Chrysippus (*προσπάτης* from 232 to 207) and Sphaerus; (4) disciples of Chrysippus: Zeno of Tarsus and Diogenes the Babylonian, who followed Zeno of Tarsus as *προσπάτης* (exact date unknown); (5) disciples of Diogenes: Antipater of Tarsus (*προσπάτης* from c. 150 to 129 B.C.), Archedemus of Tarsus, and Boethus of Sidon.

Zeno was the author of all the fundamental doctrines of the Early Stoa. His system was taken over in its entirety by Cleanthes—while Ariston and Herillus developed doctrines of their own and were later considered heretics—and it was elaborated and corrected by Chrysippus. The philosophy of Chrysippus became later so much identified with Stoic orthodoxy that it superseded the Zenonian system in the mind of posterity. This makes it difficult to determine exactly in what respects Chrysippus differed from his predecessors, since neither his nor their works have survived.

The system of the Early Stoics was divided into three parts: (a) τὸ λογικόν (comprising theory of knowledge, logic, rhetoric); (b) τὸ φυσικόν (ontology, physics, theology); (c) τὸ ἠθικόν (ethics). Their main doctrines were the following:

(1) Virtue is based on knowledge. Only the wise man who not only knows the truth but also knows with certainty that he knows it can be really virtuous. Since knowledge is the agreement of one's mental conceptions with reality, the wisdom of the wise man consists in his having such mental conceptions as are caused by real things, correspond exactly to (or are accurate images of) these things, and could not have been produced by other causes. Conceptions of this kind are called *καταληπτικαί*

φαντασίαι. In the first part of their system (τὸ λογικόν) the Stoics tried to prove that such conceptions are possible and discussed how they are acquired, how they differ from other conceptions, and how they can be expressed in language.

(2) It is the aim of the philosopher to live in harmony (Zeno), or, as Chrysippus added, in harmony with nature (*ὁμολογουμένως φύσει ζῆν*). The formative and guiding principle in nature is the λόγος (reason), which is identified with God and manifests itself as *εἰμαρμένη* (fate, necessity) and *πρόνοια* (divine providence). In a special way it manifests itself in human reason. Among the elements fire is most closely related to the λόγος. The universe is periodically consumed by fire, from which in due course a new world arises.

(3) To be virtuous, that is to live in harmony with reason, is the only good, not to be virtuous the only evil. Everything else is indifferent (*ἀδιάφορον*). But the orthodox Stoics—in contrast to heretics like Ariston—admitted that there were also *προηγμένα* (for instance: self-preservation, health) which the wise man chooses and *ἀποπροηγμένα* (death, illness, pain, etc.) which he avoids if he can do so without acting unvirtuously. Yet their presence or absence does not affect his happiness. For since he always acts in harmony with reason he is always possessed of the only real good and therefore completely independent of the vicissitudes of fortune. He is also absolutely brave, since he knows that pain and death are no evils; absolutely continent, since he knows that pleasure is not a good; and absolutely just, since he is not influenced by prejudice or favour.

II. The *Middle Stoa* is chiefly represented by Panaetius, Diogenes the Babylonian's successor as *προσπάτης*, and by his disciples Posidonius and Hecaton.

Zeno of Tarsus and his disciples had begun to doubt some special doctrines of their predecessors, for instance the doctrine of a periodical world conflagration (*ἐκπύρωσις*). Panaetius was the first to reject this doctrine altogether and to undertake a thorough revision of the whole Stoic system of philosophy, partly under the influence of Platonic and Aristotelian ideas. In ethics he rejected the belief that only the absolutely wise man can be virtuous. He considered it the duty of the philosopher to help those who without aspiring to absolute wisdom are making progress in wisdom and virtue (*προκόποντες*). He tried to adapt Stoic ethics to the needs of active statesmen and soldiers. It was through him that Stoicism became so important an element in the life of the best representatives of Roman nobility. His ethical views had great influence on P. Scipio Aemilianus, in whose company he spent some years of his life, and on Scipio's friends P. Rutilius Rufus, C. Laelius, Q. Aelius Tubero, Q. Mucius Scaevola the augur, Q. Mucius Scaevola the pontifex and famous jurist, etc. Through his writings he influenced the younger Cato, Brutus, and Cicero, though the latter professed himself an Academic. His disciple Hecaton created a system of moral casuistry, discussing in detail how the virtuous man would act under certain circumstances, especially when there is a seeming conflict of duties. Posidonius subjected the system of the Early Stoics to an even more thorough revision than Panaetius. He was the author of a new natural philosophy comprising all sciences. Mainly through him Stoicism influenced many scientists, like the astronomers Geminus and Cleomedes, the geographer Strabo, and many others.

III. During the latest period in the history of the Stoa purely theoretical questions, though still discussed (cf. Seneca's *Quaestiones Naturales*, and, in the second century, the dispute between Academics, Peripatetics, and Stoics over the categories), receded into the background, giving way to a philosophy which was almost exclusively concerned with ethical questions.

Most important among the Stoic philosophers of the

first century after Christ were L. Annaeus Seneca, L. Annaeus Cornutus, C. Musonius Rufus, and, towards the end of the century, Epictetus. At the same time Stoicism gave a philosophical foundation for the aristocratic opposition to those of the emperors who tried to rule without or against the Senate. Helvidius Priscus, Paeetus Thrasea, Rubellius Plautus, the famous opponents of Nero, and Junius Rusticus, who was condemned to death under Domitian, professed Stoicism.

The most important representative of Stoicism in the second century was the Emperor M. Aurelius. The names of a great many Stoic philosophers of minor importance who lived at that time have come down to us. None of the important representatives of the school taught in Athens during that period.

From the third century onward the school gradually faded out. But Stoic doctrine had an important influence on later Neoplatonism and on the philosophy of some of the Fathers of the Christian Church. While the Stoic school ceased to exist, Stoicism spread far beyond the ranks of professional philosophers, and continued to exercise an important influence on the life and thought of many.

STOA OF EUMENES, see ACROPOLIS.

STOBÆUS (*Ἰωάννης Στοβæύς*), author of an anthology of excerpts from poets and prose-writers, intended in the first instance for the instruction of his son Septimius. The work was probably composed in the fifth century A.D.; it consisted originally of four books, which came to be grouped later under the titles *Ἐκλογαί* and *Ἀνθολόγιον*, though subject-matter and treatment are essentially homogeneous. It deals with a variety of topics, from metaphysics to household economy; from bk. 2 onwards it is concerned chiefly with ethical questions. The illustrative extracts, which S. probably owed in large measure to earlier collectors, are arranged under successive headings, being grouped generally in the same order, beginning with the poets. Photius (9th c.) commends the work for its usefulness, especially to writers and speakers. Its value for us consists in the large number of citations from earlier literature, which not only supplement our knowledge of classical authors, but often throw light upon difficulties in the regular manuscript tradition.

Suidas (s.v. *Ἰωάννης*); Photius, *Bibl.*, cod. 167. Editions: T. Gaisford (1822, 1850); C. Wachsmuth and O. Hense (1884-1912). Criticism: A. Elter, *De Joh. St. cod. Phot.* (1880); id., *De gnom. graec. hist. et orig.* (1893).

W. M. E.

STOLA, see DRESS, para. 3.

STOLO, GAIUS LICINIUS, and L. Sextius Lateranus, traditionally tribunes of the plebs from 376 to 367 B.C., were celebrated as the authors of the law that opened the consulship to the plebs, by enacting that one consul might be a plebeian. L. Sextius was in all likelihood the first plebeian consul and he may have been appointed in 366; but the details of the long struggle, which preceded the passing of the Licinian-Sextian laws, and most of the laws themselves, must be rejected either as anticipating events of the Gracchan Age, or as inventions of Licinius Maccr designed to glorify his family. By the enactment which increased from two to ten the number of the officials who superintended various religious ceremonies, the plebeians secured an equal representation. The existence of a law on debts and usury, providing that

interest should be deducted from the principal and the balance paid in three equal annual instalments, is sometimes denied. By far the most disputed measure is that which limited tenancies of public land; even if Stolo took some such step to meet the economic crisis of his time, the details are obviously borrowed from the agrarian policy of the Gracchan Age, especially from the law carried by the tribune of 145, with which Licinius Maccr is likely to have credited his ancestor.

P. T.

STONES, SACRED. The Greeks (and Romans) preserved many survivals of religious primitivism, some of which may be due to the pre-Greek (and the pre-Roman) culture (especially where there was no clear explanation or legend). Good specimens are the many stones (and rocks) that because of their remarkable appearance or mysterious efficacy were regarded as holy, possessing unusual power (or *mana*), in fact fetishes (cf. the Greek *baitylos*). Unhewn stones were the Eros of Thespias, the Charites of Orchomenus, the healing 'Heracles' at Hyettus (characteristically all Boeotian cults), the 'Zeus Descender' (Καππότας) at Gythium (probably a meteorite); at Delphi was shown the very stone which Kronos swallowed in place of the new-born Zeus, and oil was daily poured on it. Here they also possessed the much revered Omphalos, q.v. (presumably a relic from the previous Gaea-cult at Delphi). Thirty squared stones were revered at Pharae and had individual divine names; an obelisk at Megara was named Apollon Karinos, and the small stone columns which commonly stood before the doors of Athenian houses were called by the name of Apollo Agyieus. At Pheneus in Arcadia solemn oaths were taken by the *petroma* of Demeter, which was 'two great stones joined to one another' (Paus. 8. 15. 1). We know of representations of Zeus as a pillar (Tarentum) (pillar-cult was well known to the Cretans of pre-Greek times), as a pyramid (Sicyon), and as an omphalos (on Mount Casius). Herms were extremely popular—square columns with human heads and a *membrum virile*. From the Near East we may adduce the black stone (a meteorite) belonging to the Mother of the Gods at Pessinus, the white conical stone of Aphrodite at Paphos, and the cones and pyramids which often occur on coins from Asia Minor.

At Rome an ancient boundary-stone on the Capitol passed as the Jupiter Terminus, who here followed on the old god Terminus. The Romans also swore on 'Jupiter the stone', cf. E. Harrison, *Essays in Ridgeway*, 92 ff.; and the *lapis manalis*, which was carried from the Porta Capena by the pontifices and over which water was probably poured, was important as a rain charm.

M. W. de Visser, *Die nicht menschengestaltigen Götter der Griechen* (1903).

S. E.

STRABO (1), GNAEUS POMPEIUS (cos. 89 B.C.), a vigorous commander with a reputation for cruelty, avarice, and perfidy. In the Social War, as legate of P. Rutilius Lupus, he was defeated by Afranius (Lafrenius) in 90 B.C.; was besieged at Firmum in Picenum where he had estates; and, after its relief, himself besieged Asculum. In 89, as consul, he introduced a law admitting the Transpadanes to the Latin Right; he defeated the Italians on the Adriatic coast, and then in the regions north of Samnium, which he thus isolated; finally, he took Asculum. In 88 the Senate relieved him of his command; he handed over his army, but was believed to have instigated the murder of his successor, Q. Pompeius Rufus (cos. 88). In 87, when the Marians attacked Rome, he moved so slowly that he was held to have betrayed the cause of the Optimates when it could have been saved. After an indecisive battle

with Cinna and Sertorius outside the Colline Gate, he was saved from assassination by his son's prudence and vigour; but he was killed by lightning or died of disease soon afterwards.

On his grant of franchise to some Spanish horsemen, see Dessau, *ILS* 8838 and cf. G. H. Stevenson, *JRS* 1919, 95 ff. M. H.

STRABO (2) (64/63 B.C.—A.D. 21 at least), historian and geographer, a Greek (partly Asiatic in descent) of Amaseia, Pontus. He studied grammar under Aristodemus, and, later, geography under Tyrannion, philosophy under Xenarchus, and knew Posidonius. He was in Rome in 44–35, c. 31, and 7 B.C.; in Egypt 25–c. 19 B.C. (collecting geographical material); and in Amaseia c. 7 B.C. to his death. A Peripatetic, S. became a Stoic, with some contempt for religion, and admired the Romans and their empire; independent but no great traveller, he knew various parts of Asia Minor and Egypt, but little of Greece or Italy, and probably wrote for persons in political positions (he emphasizes the use of geography in public affairs—1. 1. 16–18), but whether at Rome for Romans or at Amaseia or Alexandria for Greeks is disputed. Apparent ignorance and omissions do point to some special purpose.

His *Historical Sketches* (*Ἱστορικά ὑπομνήματα*), forty-seven books excluding the era covered by Polybius, are lost; his *Geography* (*Γεωγραφία*), seventeen books, has survived. Books 1–2: introductory. 1. Homer; Eratosthenes criticized. 2. Mathematical geography; criticism of Eratosthenes and Polybius, examination of Posidonius (especially zones); Eudoxus' voyages. S.'s opinions on the earth; cartography on sphere and plane. 3. Spain, Sicilies. 4. Gaul, Britain, etc. 5–6. Italy, Sicily; the Roman Empire. 7. North and east Europe, north Balkans (some is lost). 8–10. Greece (very antiquarian and mythological). 11. *Euxine-Caspian, etc., Taurus, Armenia*. 12–14. Asia Minor (some mythology and history). 15. India, Persia. 16. Mesopotamia, Palestine, Ethiopian coasts, Arabia. 17. Egypt, Ethiopia, north Africa.

Strabo brings Eratosthenes more up to date. On a geocentric sphere, the one land-mass is ocean-girt. S. knows Mediterranean lands, Egypt, Asia Minor; little of British Isles; nothing of northernmost Europe and Asia; Caspian by Alexander's writers and Megasthenes; Africa is a triangle north of the equator. S. gives geographical and historical information readably, without details except where interesting or important. Having moderate (and not up-to-date) mathematical and astronomical knowledge, S. underestimates both; latitudes, longitudes, and 'climata' he treats lightly, and is inadequate in physical geography and phenomena, being predisposed towards his own ideas of what is important. He reveres Homer, undervalues Herodotus, scorns Pytheas. He adds Roman to Greek authorities, despising (rightly?) Roman geographers. But his work is a storehouse of information, an historical geography, and a philosophy of geography.

Text, translation, and full bibliographies in H. L. Jones, *The Geog. of S. (Loeb)*. E. H. W.

STRABO, GAIUS JULIUS 'VOPISCUS' CAESAR, see CAESAR (8) STRABO.

STRATEGI (*στρατηγοί*), a general term for commanders of armies or fleets, but also for magistrates with mainly military duties; *strategi* are found in most Greek States, varying in number according to the size and organization of the State. In Athens they formed a college of ten, first instituted (probably) in 501–500, one from each *phyle*, each to command the hoplite regiment of his *phyle*, and together to form a council of war to the polemarch (q.v.). Like all officials of whom technical skill was required, they were elected by vote by the Assembly, for one year, and could be re-elected any number of times.

In 487, when the polemarch ceased to command the army, the *strategi* became the highest military officers, their regimental commands devolving upon a new body, the ten *taxiarchoi*. Like all other Athenian officials, they were subject to *euthyna* (q.v.), and might be suspended by the Ecclesia to stand immediate trial for misconduct. When they were re-elected their *euthyna* was postponed.

2. Since 487 the *strategi* were the most important magistrates at Athens. They were responsible for the garrison of Attica, the fleet, the protection of commerce against piracy. In war they were appointed to take single or joint command in particular campaigns; if several were appointed, one *strategus* might be given supreme command. They sometimes received power to conclude treaties or terms of surrender or to decide the size of an expeditionary force (*στρατηγοὶ αὐτοκράτορες*), subject only to the usual *euthyna* when they left office. In the field *strategi* had special disciplinary powers; and like other magistrates they had judicial duties within their own sphere—i.e. they introduced to the dicastery and presided over the trial of military offences (desertion, cowardice, etc.). At home, they alone of magistrates had the right of sitting with the Boule, and could ask it to summon a special meeting of the Ecclesia; but they had no special powers in the Ecclesia.

3. In the fifth century most of the leading politicians were elected *strategi* and led armies and navies (though some *strategi* were not politicians). In the fourth, when specialization of military functions went farther, *strategi* and politicians were seldom the same men; only Phocion tried (unsuccessfully) to combine the two duties. Circa 350 B.C. the functions of individual *strategi* began to be specialized: one *strategus* was elected to command at home, two in the Piraeus (these three as well to have control of the *Ephebi*, q.v.), one for service abroad, and one for administrative services in connexion with the trierarchy (see TRIERARCHY and SYMMORIAT). Later, one was appointed for the navy and one for foreign troops.

4. Some outstanding *strategi* obtained frequent re-election (as Cimon, Pericles—often between 460 and 445, and every year from 443 to 429,—Phocion, 40 times). This led to the relaxation and (c. 330) to the abolition of the rule requiring all the *phylai* to be represented on the board of the *strategi*.

5. In most other States the position of the *strategi* was, as far as we know, similar to that in Athens. An exception was the single *strategus*, the highest magistrate with both military and political powers, in the Achaean and Aetolian Leagues (qq.v.).

6. In the territorial monarchies of the Hellenistic age the *strategi* were district governors. They maintained order within their province and exercised administrative jurisdiction.

Aristotle, *Ath. Pol.* ch. 61.

A. W. G.

STRATOCLES (c. 350–292 B.C.) was one of Demosthenes' accusers in the Harpalus trial (324–323). He became the agent of Demetrius Poliorcetes in Athens from 307 and directed the immoderate adulation shown to him. In 303 his authority was upheld by Demetrius against an attempted revolt by the party of Cassander, but was shattered after Demetrius' defeat at Ipsus (301). In 294 he was reinstated by Demetrius, but had to share his power with more moderate politicians. His main characteristic was unscrupulous demagoguery.

W. B. Dinsmoor, *Athens of Athens* (1931).

F. W. W.

STRATON (1) (*Στράτων*) of Lampascus (d. 270–265 B.C.; Apollod. ap. Diog. Laert. 5. 58), son of Arcesilaus, Peripatetic philosopher. He was a pupil of Theophrastus. For some time he acted as teacher to Ptolemy Philadelphus in Alexandria (i.e. cf. 37). After Theophrastus' death in 283–286 he became president of the school, which he governed for eighteen years up to his death (i.e.).

In spite of the logical, ethical, and historical treatises he wrote (D.L. 58 f.), S. was a specialized physicist. He transformed the Aristotelian philosophy into a materialistic science. Of the greatest influence on ancient mechanics and medicine was his theory of space. S. showed that the Democritean 'empty space' does not exist as a 'continuum' under natural conditions, but only as intermittent discontinuous reality within bodies. Whenever by artificial conditions a continuous empty space is created, the molecular parts of the bodies try to close it at once (Diels, *Dox. Graec.* Index, s.v.; Simpl. in Arist. *Phys.*, Index, s.v.; Heron, *Spiritualia*, Introd.).

K. O. B.

STRATON (2), New Comedy poet. The only extant fragment (for which see Guéraud and Jougnot, *Livre d'écolier*, 1938, 35 ff.) is a skit upon the glossomania of the time, in which a bombastic cook describes common things in obsolete poetical words and phrases, and causes his patron to call him 'ex-slave of some kind of rhapsode' (ῥαψωδοποιούτου τινὸς | δοῦλος γεγονός), and therefore filled with Homeric vocables. The play *Phoenixides* (*Phoenix*, according to Suidas) is dated c. 300 B.C. by the reference (v. 43) to the work of Philetas of Cos.

FCG iv. 545 f.; *CAF* iii. 361 f.

W. G. W.

STRATON (3) of Sardis (fl. A.D. 125) is the author of about 100 epigrams in the *Greek Anthology*, the core of bk. 12. Almost all deal with homosexual love, using the erotic conventions elaborated by Alexandrian poets; but they are usually either coarse or mawkish, and are neither sociologically nor aesthetically interesting.

J. Geffcken in *PW*, s.v.

G. H.

STRATONICUS (fl. c. 410–360 B.C.), of Athens, musician and wit, contemporary of Timotheus and Polyeidus (Ath. 8. 352 a–b) and of the actor Simycas (ibid. 348 a). His witticisms, *Εὐτράπελοι λόγοι*, were well known soon after his death and excerpts made of them (Ath. 350 d). Characteristic examples are: 'Who is more barbarous—the Boeotians or the Thessalians?' 'The Eleans' (ibid. 350 b); and on a small city: *αὕτη οὐ πόλις ἐστίν, ἀλλὰ μόλις* (ibid. 352 a).

C. M. B.

STRATTIS, writer of Athenian comedy; dramatic activity c. 409–375 B.C. Suidas lists seventeen comedies, mainly mythological burlesques (e.g. *Ἀταλάντη*; *Ἀνθρωπορέστης*), parodies (e.g. *Μῆδεια*; *Φιλοκτήτης*; *Μυρμιδόνες*), and personal attacks (e.g. *Κινησίας*; *Μακεδόνες ἡ Πανσανίας*).

FCG ii. 763 ff.; *CAF* i. 711 ff.; Demianczuk, *Suppl. Com.* 84 ff. M. P.

STRENAE. This name was given by the Romans to the luck-bringing twigs which at the New Year were brought from the grove of the goddess Strenia and were exchanged by way of gift as bearers of luck and blessing. This oldest form of *strenae* was preserved in cult, since on the old New Year's Day (1 March) the old laurel branches before the doors of the *rex sacrorum*, the great *flamines*, the *Curiae*, and the temple of Vesta were replaced by new branches. The *strena* is a Spring ceremony and is related to the German May tree. Later it came to be a gift, usually money, but twigs retained an aspect of luck in popular usage. The fact that the use involved an omen led to the word *strena* receiving the meaning 'omen' as early as Plautus.

L. Deubner, *Glossa* iii (1912), 34 ff.; M. P. Nilsson, *PW* iv A. 351 ff.; U. Wilcken, *Arch. Pap.* xi. 297.

STROPHIC RESPONSION, see METRE, GREEK, V.

STYX, a river of Arcadia, which plunges from a snow-fed spring on the north-east side of Mt. Chelmos, down a black rock to a depth of 600 feet, and flows through a wild gorge to join the Crathis. Its water was thought poisonous. It was one of the nine rivers of the underworld; the gods in Homer, and the Arcadians in fact, took oath by it (Hdt. 6. 74).

Hesiod, *Theog.* 775 ff.; Paus. 8. 17–18, and Frazer ad loc.

T. J. D.

SUASORIA, one of the two main exercises in *declamatio* (q.v.), was the rhetorical speech of advice imagined as applicable to a crisis in the career of some eminent figure in history, e.g. Juvenal's school exercise (1. 16) supposed to urge abdication on the dictator Sulla. Though a less advanced exercise than the *controversia* (q.v.), it involved for success historical knowledge, psychological penetration, and dramatic ability. In the elder Seneca's collection, now imperfect, seven examples remain, argued in detail; e.g. 'Alexander deliberates whether he should sail the Ocean', 'Cicero deliberates whether he should beg Antony to spare his life'. As in the *controversiae*, and with similar rhetorical devices, Seneca's method is to recall briefly but dexterously the mode of treatment of such themes followed by prominent rhetors of the time of Augustus and Tiberius. In this he displays a marvellous memory for the general line taken, and a Boswellian gift for reproducing the style of different speakers on the same problem. The *suasoria* was the exercise in which Ovid as a student excelled: the *controversia* did not appeal to his genius ('molesta illi erat omnis argumentatio', Sen. *Controv.* 2. 2. 12). See also EDUCATION, III. 3.

Edward, *The Suasoriae of Seneca the Elder* (introd., text, Engl. Transl., notes; 1928). For fuller bibliogr., Wight Duff's *Lit. Hist. of Rome in Silver Age*, p. 42. See also DECLAMATIO, RHETORIC, SENECA THE ELDER.

J. W. D.

SUBSCRIPTIONES. (1) GREEK. In rolls of the classical period (so far as extant evidence goes) information as to the contents of a manuscript is appended at the end (like the colophons in early printed books), not prefixed. This information was principally the name of the author and title of the work. This seems to suggest that when a roll had been read, it was put back on the shelf with the end of the roll outside, leaving to the next person who wished to read it the task of rolling it backwards to the beginning (*JTS* xl. 56). In extant papyri the subscriptions are of this simplest type. In one of the earliest Biblical papyrus codices (Chester Beatty Pap. II, of the Pauline Epistles), the number of *στίχοι* in each epistle has been added, but in a different hand.

Medieval codices often add more information, such as the name of the scribe, the fact that the text has been corrected, or the date of writing. Thus the *Codex Sinaiticus* has notes at the end of Esdras and Esther recording the correction of the text from a manuscript by Pamphilus. In later times prayers for faithfulness in transcription, or curses against inaccuracy or theft, are sometimes added.

(2) LATIN. Early Latin classical manuscripts not infrequently have subscriptions recording the name of a corrector, often a man of considerable standing; e.g. the Medicean codex of Virgil, 'Turcius Rufius Apronianus Astcrius . . . legi et distincti codicem fratris Macharii'. Astcrius, who was consul in 494, also revised Sedulius. Other subscriptions are: (Martial) 'Ego Torquatus Gennadii emendavi felieiter'; (Apuleius) 'Ego Crispus Sallustius emendavi Romae felix' (with dates = 395 and 397); (Persius) 'Flavius Julius temptavi emendare sine antigrapho' (A.D. 402). These belong to the time when educated Romans, finding no outlet in public life, retired to their country houses and literature.

In some cases these revisions affected the textual tradition; e.g. nearly all the manuscripts of Terence contain the text as revised by Calliopius, and all manuscripts but one of the first decade of Livy bear the subscriptions of Nicomachus Flavianus, his son Nicomachus Dexter, and of Victorianus, all men of senatorial rank about A.D. 400.

V. Gardthausen, *Gr. Palaeographie* ii (1913), 425; Jahn, 'Die Subscriptionen in den Handschriften römischer Klassiker', in *Sitzb. Sachs. Gesellsch. d. Wissenschaften* 1851, 327. F. G. K.

SUBURA, the valley between the Viminal and Esquiline Hills of Rome, opening out of the Argiletum and Forum Transitorium. The district was notorious for its bustle, noise, dirt, and shady morality. Its reputable traders sold provisions and delicacies, and manufacturing trades are also known (*CIL* vi. 1953, 9284, 9399, 9491, 33862). Here lay a Jewish synagogue (*GIG* 6447). Distinguished residents included Julius Caesar.

See Juv. 11. 51. 141; Martial 2. 17; 5. 22. 5-9; 7. 31; 10. 94. 56; 12. 18. 2; Pers. 5. 32. I. A. R.

SUEBI, an important Germanic people (including the Semnones, Hermunduri, Marcomanni, Quadi, Naristi, Vangiones, Nemetes, Triboci) which began to expand south-westwards from its home in the Mark of Brandenburg and Mecklenburg-Strelitz during the second century B.C., the various tribal divisions becoming differentiated during the process. The Semnones remained in Brandenburg; they were regarded as the parent stem and controlled a sanctuary venerated by all Suebic tribes. Soon after 100 B.C. the Suebi reached the Rhine; after the campaigns of Ariovistus (q.v.) the Vangiones, Nemetes, and Triboci were left where they had settled in the Palatinate and Alsace. The Suebi who occasioned Caesar's passage of the Rhine were probably the Quadi. Drusus marched against the Transrhene Suebi in 9 B.C., and this led to their migration, the Quadi going to Moravia, the Marcomanni to Bohemia. A few remained behind (e.g. the Suebi Nieretes around Ladenburg). The Marcomannic kingdom of Maroboduus (q.v.) encouraged Roman traders and had a wide influence on German culture. The advance of the Goths upset the Suebi, and the Marcomannic War (168-79) resulted. About the same time the Semnones began to migrate south-westwards, and later, as the Alamanni (q.v.), became dangerous foes of the Empire.

L. Schmidt, *Geschichte der deutschen Stämme, Die Westgermanen* (1938), 128 ff. Tacitus, *Germania*, ed. Anderson (1938), 178 ff.

O. B.

SUEIUS, a pedantic writer of rural idylls. Ribbeck identifies him with Scius, a friend of Cicero and of Varro.

Bachr. *FPR* 285; Morel, *FPL* 53.

SUETONIUS (1) PAULINUS, GAIUS, as ex-praetor in A.D. 41, commanded against the Mauretanians and was the first Roman to cross the Atlas mountains, of which he wrote a description (Pliny, *HN* 5. 14). He was probably *consul suffectus* c. 42. In 59 he was appointed governor of Britain and at once began a forward movement reaching the Irish Sea and subduing Mona (Anglesey), a stronghold of Druidism. During the campaign he learnt of Boudicca's revolt (61) and swiftly returned with his advance-guard, but unable to concentrate an adequate force was compelled to abandon Londinium and Verulamium to sack. Retreating (along Watling Street) to his main force, he routed Boudicca's attack. His severity towards the rebels led to discords with the *procurator* Classicianus and his own recall (61). In 69 he supported Otho, and took a leading part in the campaign of Bedriacum, after which he came to terms with Vitellius.

PIR, S 278; *PIV* iv A. 391-3; Collingwood-Myres, *Roman Britain*, 95-104. C. E. S.

SUETONIUS (2) TRANQUILLUS, GAIUS (c. A.D. 69-c. 140), born probably in Rome (Macé, *Essai sur Suet.* 33), of equestrian rank, son of Suet. Lactus, tribune in a legion at Bedriacum (*Otho* 10). He practised law for a time; took no part in political life; and, when made a military tribune through Pliny's influence, had the post transferred to a relative (Plin. *Epist.* 3. 8). That he was a teacher lacks evidence. He received from Trajan the *in trimum liberorum*, but without fulfilling its conditions (Plin. *Ep.* 10. 94 and 95). He was secretary (*ab epistulis*) to Hadrian, probably while Septicius Clarus was Praetorian Prefect (119-21 or 122). Both were dismissed by the Emperor, apparently for some breach of court etiquette (*S.H.A. Hadr.* 11). After that we hear no more of S.; he seems to have passed his remaining life in retirement and literary work.

WORKS

1. *De viris illustribus*, composed 106-13, biographies of literary men, of which we have *De grammaticis et rhetoribus* (p. 98 f. Reiff.) and a few Lives of Roman writers, differing in the extent of their abridgement and interpolation. Jerome lists thirty-three from *De poetis*, of which Terence, Horace, and Lucan are generally regarded as Suetonian; Virgil, Tibullus (greatly abridged), and Persius are accepted by many, although the last-named is directly attributed to Valerius Probus (q.v.) of Berytus (*Jl.* c. A.D. 56-80), who edited the earlier writers with biographies of the Alexandrian type as introductions (Suet. *Gram.* 24; p. 118 Reiff.). Of Jerome's list of fifteen from *De oratoribus* (p. 80 Re) we have a brief abstract of the *Life of Passienus Crispus* (p. 88 Re) and of his list of six from *De historicis* (p. 91 Re) the *Life of Pliny the Elder*.

2. *De vita Caesarum* (published c. 121), biographies of Julius to Domitian, complete except for the first few chapters of *Julius*, apparently lost between the sixth and eighth centuries.

3. *Lost Works* in Greek and Latin, catalogued by Suidas, s.v. Τράγκυλλος, preserved only in fragments, differently arranged by various scholars: *On Famous Courtesans* (Joh. Lydus 3. 64, Suet. *Rel.* Reiff., p. 349); *On the Kings* (Auson. *Epist.* 23, p. 267 Peiper; *Epist.* 19, Suet. *Rel.* Reiff., p. 315); *On Public Offices* (Macé, op. cit., pp. 300 ff.; Suet. *Rel.* Reiff., p. 346); *Roma* (pp. 147 ff. Re); *The Games of the Greeks* (part of *Ludicra Historia*, Gell. 9. 7. 3; p. 322 Re); *On Cicero, De Re Publica* (p. 352 Re); *Pratum or Prata* (Prise. *Gramm. Lat.* 2. 387. 24 Keil; Suet. *Rel.* Reiff., pp. 147 ff.); *On Terms of Abuse in Greek* (p. 273 Re); *De rebus variis* (Charisius, *Gramm.* 2. 236. 17 Keil; p. 353 Re); *On Critical Marks in Books* (pp. 137 ff. Re); *Historia*, title uncertain (Gell. 15. 4. 4; p. 354 Reiff.). How many of these were separate books is doubtful; of his miscellany, *Pratum*, ten books are cited, of which eight may be on various topics antiquarian and scientific.

The importance of Suetonius is due to his surviving works, because of their intrinsic interest, their place in the history of biography, and their influence on historiography, which took a biographic turn from Tacitus to Ammianus. His influence extended to the Christian writers, and through Einhard's *Life of Charles the Great* to Petrarch and the Renaissance. His place in the history of biography is important. Although he credited Varro with introducing Roman biography after Greek models, he was not dependent on these, since, clearly, long before the days of book biography the Romans had moulded for themselves a prose form devoted to the history and appreciation of a person (Stuart, p. 219; see bibliog. inf.). Furthermore, the Lives are in accord with his mental and literary processes. A grammarian, he collected and classified his data about his human subjects as he would have done in a work on grammar (Macé, op. cit., p. 54). S. had successors in Marius Maximus and

Aelius Junius Cordus, whose works exist only in fragments; after his time Roman biography rapidly degenerated, reaching its lowest ebb in the *Scriptores Historiae Augustae*. Suetonius' style has generally been underestimated; Mackail's too severe verdict (*Lat. Lit.* p. 231) was directly contradicted (in advance) by Nettleship (*Anc. Lives of Virgil*, p. 29); see also J. D. Duff, *Journ. Phil.* xxxiii. 165. He is often charged with scandal-mongery and prurience, but he conscientiously collected material of every kind and presented it with the same judicial coldness. (See Peck's edn. of *Jul. and Aug.*, Pref.) He does not give a fair estimate of the emperors, since he drew indiscriminately on their friends and their enemies; but the lives are of absorbing interest, with a wealth of varied information (see Mackail, op. cit., p. 230).

SUFFECTIO was the procedure by which a substitute (*suffectus*) was appointed, whenever a magistrate resigned or died during his term of office. It was employed to fill vacancies even of very short duration: there are examples of *suffecti* who exercised their power only for a few hours. Under the Empire, when the consulship ceased to be a yearly magistracy, the consuls appointed after the original pair were also called *suffecti*. No *suffectus* ever gave his name to the year, although he kept the rank and title of an ex-magistrate (e.g. *vir consularis*, *praetorius*, *quaestorius*, etc.).

Mommsen, *Röm. Staatsr.* i³. 592; B. Kübler, *PW*, s.v. P. T.

SUFFETES, see CARTHAGE, SYRIA.

SUDAS (correctly, ὁ Σοῦδα) is the name of a lexicon, not an author: the word is borrowed from Latin and means *Fortress* or *Stronghold*: see F. Dölger, *Der Titel d. S.* (reviewed, *Gnomon* xiii (1937), 575), who instances other fanciful names of such collections, e.g. Pamphilus' *Λεξικόν*. The lexicon was compiled about the end of the tenth century A.D. Texts (with scholia) of Homer, Sophocles, Aristophanes, and the *Anth. Pal.* were directly consulted; otherwise, the work is mainly based not on copies of the writings of authors or commentators but on abridgements and selections from these made by late hands, e.g. the *Συναγωγή* (see LEXICA SEGUERIANA), Harpoeration, and Diogenianus (qq.v.). The historians are quoted from the *Excerptis* of Constantine Porphyrogenitus; biography comes mainly from Hesychius of Miletus; Babrius and Athenaeus are among the other authors consulted. The work is marred by contradictions and other ineptitudes. Many of its sources were already corrupt, and like most works of its kind it has suffered from interpolation. Nevertheless, it is of the highest importance, since it preserves (however imperfectly)

much that is ultimately derived from the earliest or best authorities in ancient scholarship, and includes topics from many departments of Greek learning and civilization.

SULLIUS RUFUS, PUBLIUS, was half-brother to Corbulo and to Caesonia, wife of the Emperor Gaius. Banished by Tiberius, he was allowed to return to Rome by Gaius. He became consul and, under Claudius, won a sinister series of successes as prosecutor. He returned to banishment during the reign of Nero. J. P. B.

SULLA (1), LUCIUS CORNELIUS (138-78 B.C.), born of an obscure patrician family, followed a tardy senatorial career undistinguished save for the part which he played in the arrest of Jugurtha when quaestor in 107, until he won a considerable military reputation in the Social War. This gained him, late in life, the consulship of 88 and the command of the impending war against Mithridates. He now married his fourth wife, Caccilia Metella, widow of Aemilius Scaurus (q.v.)—an important political alliance. The legislative activity of the tribune Sulpicius drew him for the first time into party politics as an opponent of the *populares*, to prevent the proposed transfer of his military command to Marius. When the proposal was passed, Sulla, with a disregard for the constitution which shocked *optimates* as well as *populares*, inaugurated the period of military dictatorships by marching on Rome with his legions. He reversed the legislation of Sulpicius, who perished while his supporters fled, and left for the East without taking any serious steps to muzzle the *populares*. There he was later joined by the opponents of the Cinnan régime, and so formed a closer connexion with the *optimates*. After the sack of Athens and the victories of Chaeronea and Orehomenus, Sulla, eager to return to Italy, granted Mithridates fairly favourable terms. By the Peace of Dardanus, August 85, Mithridates surrendered his fleet, paid an indemnity, and regained his former kingdom. The client kings were restored, the supporters of Mithridates punished, and the province of Asia reorganized. Having secured the loyalty of his troops by generous rewards and a relaxation of older standards of discipline, Sulla and his optimate friends returned to Italy (83) to settle with the Cinnan government, which had declared him a public enemy. Civil war ensued, the strength of the *populares* coming from the irreconcilable Samnites and the newly enfranchised *populi Italici*, who for a time believed that Sulla proposed to upset their privileges. The victory of the Colline Gate (82) left Sulla master of Rome and Italy. By a special law (81) he secured himself a special dictatorship with extraordinary powers, assumed the cognomen Felix, and, after persecuting the remnants of the popular leaders with proscriptions whose object was largely financial, set about reconstructing the Roman Constitution. The Senate was to be the seat of supreme authority. The censorship fell into abeyance and with it censorial control of the personnel of the Senate. By closing the senatorial career to future tribunes the political importance of the tribunate was annihilated. In addition, the tribunes' powers of legislation and veto were limited, and their judicial powers were transferred to the senatorial *quaestiones*. Thus the divided sovereignty which had rent Rome since the Graeci was suppressed. Closer control over magistrates and pro-magistrates was secured by legislation that defined and limited their powers and duties, and prescribed penalties for provincial governors guilty of treasonable conduct. Office was confined to older men by amendments of the *Lex Villia annalis*: men were prevented from commencing a senatorial career before the age of thirty, while the ten years' interval between iteration of office was re-enforced. The Senate

was to be regularly recruited from the quaestors, whose numbers were raised to twenty, and its sources enlarged. The development of the pro-magistracy as the normal method of provincial government was encouraged, especially by an increase in the number of praetors, designed to provide, with the two proconsuls, a yearly supply of new pro-magistrates for the regular provinces. Sulla thus constructed a self-sufficient governmental machine which, while it would enable the Senate to control the Roman State, was far from favourable to the ambitions of individual *optimates*. He also supplemented the administration of criminal law, where the judicial machinery was inadequate, by the creation of new *quaestiones*, making seven in all: this was the most enduring feature of Sulla's reforms. Membership of the juries was transferred back to the senatorial order. In Italy, by the harsh treatment of those municipalities which had opposed him, notably in Etruria, and by the settlement of his veterans in colonies amid the vanquished, Sulla prepared future discontents, and even in his own time was unable to establish perfect discipline (cf. OFELLA). The quasi-regal character of Sulla's dictatorship, unlimited in power and duration, set the model for the undisguised monarchies of Caesar and the second Triumvirate, while the memory of the Sullan régime, especially of its cruelty, clouded the atmosphere of the next generation.

Sulla probably derived his political ideas from the group of moderate *optimates* earlier headed by Aemilius Scaurus and including the Caecilii Metelli and the Lutatii Catuli, with which he was doubly allied by marriage. But he was not the servant of this or any clique, and as dictator held an independent, autocratic position, often criticized by his closest allies. The deposition of the dictatorship (79) was not the end of his authority, and may have been due either to knowledge that his serious work was done, combined with a dislike of routine administration and a hankering for the leisured life (both of which traits are evident in his early career), or possibly to consciousness of the disease of which he died suddenly in Campania the year following (78 B.C.). He was buried with spectacular public ceremonies in the Campus Martius.

ANCIENT SOURCES: Appian, *BCiv.* bk. 1; Plutarch, *Sulla*; Sallust, *Historiae* (fragments) and *Jug.* (early career); Cicero, *Pro Roscio Amerino* (contemporary, 80 B.C., partly satirical). Scattered references in Greenidge and Clay, *Sources for Roman History*, 133-70 B.C.

MODERN: J. Carcopino, *Sulla* (1931, an incomplete monarchy); H. M. Last, *CAH* ix, ch. 6 (the constitution); M. A. Levi, *Sulla* (Milan, 1924); Mommsen, *History of Rome* (hammer of the *optimates*). Also H. Hill (on recruitment of senators), *CQ* 1932.

A. N. S.-W.

SULLA (2) **PUBLIUS CORNELIUS**, a wealthy nephew of the dictator, was elected consul for 65 B.C. with P. Autronius Paetus; but both were found guilty of bribery and were deprived of office. Sulla was almost certainly implicated in the abortive conspiracy to murder the new consuls which Catiline and Autronius set on foot, but he took no active part in it. In 62 he was accused of complicity in Catiline's second conspiracy. Cicero himself undertook his defence and he was acquitted. He acted as a lieutenant of Caesar in the Civil War (Caesar, *BCiv.* 3. 51. 89). He died in 45 B.C.

See Cicero, *Pro Sulla* (ed. J. S. Reid, 1882).

J. M. C.

SULLA (3), **FAUSTUS CORNELIUS**, son of the dictator by Caecilia Metella, and husband of Pompeia, Pompey's daughter, was Pompey's follower. In 63 B.C. he was the first to mount the walls of the temple of Jerusalem. In 52 he received the charge to rebuild the Curia Hostilia, henceforward Curia Cornelia. After Thapsus (46) he was captured and killed.

F. Monier, *PIV* iv, 1315.

A. M.

SULPICIA (1), daughter of Servius Sulpicius Rufus, and ward of Valerius (q.v. 15) Messalla Corvinus, is not to be confused with her namesake celebrated by Martial (10. 35 and 38). She composed six short elegies incorporated in the Tibullus collection (4. 7-12), in which with unique frankness and rare warmth she passionately avows her love for Cerinthus, a young gentleman of her own sphere, not a freedman or the Cornutus mentioned by Tibullus (2. 2 and 3). Though Sulpicia's literary remains amount to only forty lines and show traces of amateurishness, they nevertheless completely lack conventionality and affectation and constitute a splendid human document. Here is the first poetry we have written by a *docta puella*, and it throws light on certain social tendencies of the Augustan Age. See also *ELEGIAC POETRY*.

Text in editions of Tibullus; commentaries in editions of K. F. Smith and Postgate (see *TIBULLUS*). In chronological order, G. Némethy, *Tibulli Carmina, Acc. Sulpiciae Elegidia* (1925). Cf. 'Sulpicia (114)' in *PIV*; Schanz-Hosius, *Gesch. röm. Lit.* ii (1935). J. H.

SULPICIA (2), wife of Calenus, in Martial's time, and by him praised as authoress of poetry of honourable love (10. 35 and 38). A 'satira' of 70 lines is questionably ascribed to her.

Text in O. Jahn's ed. of Persius and Juvenal. See J. W. Duff, *Roman Satire*, 1937.

SULPICIUS (1) **BLITHO** (1st c. B.C.), one of Nepos' sources (*Hannibal* 13. 1). For confusion with Sulpicius Galba, grandfather of the Emperor Galba, see Schanz-Hosius i, § 112. 6; Peter, *IRRel.*, p. cccxxxix.

SULPICIUS (2), **SERVIVS**, author of love-poems, mentioned by Horace (*Sat.* 1. 10. 86) and Ovid (*Tr.* 2. 441).

SULPICIUS (3) **CAMERINUS**, **QUINTVS**, epic poet (Ovid, *Pont.* 4. 16. 19) and possibly same as consul of A.D. 9.

SULPICIUS (4) **APOLLINARIS** (2nd c. A.D.), scholar, the teacher of Aulus Gellius and the Emperor Pertinax. He wrote learned letters (*epistolicae quaestiones*, now lost), verse summaries of the *Aeneid* (6 hexameters for each book; see Baehrens, *Poet. Lat. Min.* iv. 169), and metrical summaries of the plays of Terence (cf. e.g. W. M. Lindsay's ed. of Ter.).

Cf. Teuffel, § 357; Schanz-Hosius, § 597.

J. F. M.

SULPICIUS, see **GALBA**, **GALLUS**, **QUIRINIUS**, **RUFUS**, **SEVERUS**.

SUMMANUS, perhaps originally an epithet of Jupiter (q.v.), as 'dweller in the most high places'; but distinguished from him (Festus, p. 254. 3) as the god who sends nocturnal thunderbolts. He had a temple founded during the war with Pyrrhus (Platner-Ashby, p. 502), and wheel-shaped cakes called *summanalia* were offered to him (Festus, p. 474. 17). His identification with Pluto (Martialianus Capella, 2. 161) is fanciful.

See Wissowa, *RR* 135.

H. J. R.

SUNIUM, a bold promontory at the south apex of Attica. It was crowned by a marble temple of Poseidon, built in the late fifth century on the foundations of a temple destroyed by the Persians before completion. There was also an Ionic temple of Athena. A mass of Egyptian objects found here testifies to Athens' early overseas trade (Pendlebury, *Aegyptiaca*, 82 ff.). Sunium was fortified in 413 for the security of the Athenian cornships; the circuit of the walls and the boat-houses are well preserved.

R. Erdos, *7th Century* (1923); *Arch. Ed.* 1900, 133 ff.; 1917, 146 ff. W. Wrede, *Attische Mauer* (1933), p. 43 ff. T. J. D.

SUPERSTITION. The word 'superstition' is relative, for it may be taken to mean indulgence in beliefs or practices which have been abandoned by general, or at least by educated opinion of the time. For instance, the Emperor Tiberius cannot be called superstitious for believing in astrology, but a modern could be, since its falsity is now well known. It is doubtful whether a Greek or Latin word exists for superstition, since *δεισιδαιμονία* (cf. RELIGION), when derogatory, as it most often is, means rather excessive pietism or religiosity, whereas *superstitio* itself is implied by Virgil to be unenlightened and meaningless worship ('uana superstitio ueterumque ignara deorum', *Aen.* 8. 187, see W. Warde Fowler, *Aeneas at the Site of Rome*, 1918, p. 57), perhaps with reference especially to Oriental cults of the poet's day. It is hardly possible here to do more than give examples of the existence of magico-religious rites or beliefs known to have been condemned by the more enlightened people of the time.

Whereas Homer evidently writes for a remarkably free-thinking public, he has traces of a state nearer the primitive. For example, although his Achaeans characters regard fish merely as very poor food, he speaks of one as *ἱερός*, holy or tabu (*Il.* 16. 407). This plainly refers to some belief like that of the Syrians with regard to the holy fish of their goddess (Hyg. *Fab.* 197). Hesiod, writing some time later but from a peasant environment, is full of scruples which a Homeric hero would laugh at, e.g. *Op.* 750, against a boy of twelve years or twelve months sitting on a tomb; 753, against a man using a woman's bath, besides the elaborate observation of certain days of the month, 765 ff., if that is really Hesiodic.

The prevalent use of amulets (q.v.) was evidently regarded as superstitious by the more enlightened minds of the fifth and fourth centuries B.C.; hence the point of the story in Theophrastus, ap. Plut. *Pericles* 38, that that statesman during his last illness apologized to a friend for having one about his neck, put there by the women of his household, saying that he must be very low to submit to such folly. A similar contempt is expressed by Plato, *Resp.* 2. 364 b ff., for practitioners of magic (q.v.), and some of the lower forms of purificatory rites which clung to the fringes of Orphism (q.v.). The former of these gained ground with the degeneracy of natural science, as may be seen by comparing the earlier works on medicine, e.g. the Hippocratic corpus, above all *De morbo sacro*, which protests against the unscientific ascription of diseases to supernatural agencies, with some of the later productions, especially the extraordinary mixture of traditional remedies and conjuring which has come down to us from Marcellus of Bordeaux.

In Rome one of the most frequently denounced forms of superstition is the adoption of fragments of foreign ritual, especially the more spectacular kinds. Thus Juvenal's women consult all manner of foreign diviners, indulge in extraordinary orgiastic rites, and perform more or less Egyptian penances (*Sat.* 6. 314 ff., 511 ff.). A fairly common form of this seems to have been the observance of some Jewish rites, especially the Sabbath, by those who were neither Jews nor proselytes (*Juv.* 14. 96, cf. *Hor. Sat.* 1. 9. 69).

With the coming of Christianity, many who were superstitiously inclined developed two new forms of their aberration. One was the retention, despite all the Doctors of the Church could say, of purely pagan beliefs; e.g. St. Augustine complains, *Expos. epist. ad Galat.* 35, of Christians who tell him 'to his face' that they will not start on a journey the day after the Kalends, which in pagan Roman belief was *religiosus* (cf. Plut. *Quaest. Rom.* 25). The other was the employment of Christian names, holy books, etc., for magic, as the Christian charms, Preisendanz ii. 189 ff., and cf. the strictures of St. Augustine (in *Iohan. evang. tract.* vii. 12) against those who use a Gospel as a remedy for headache. Similar

uses had long been made of Jewish formulae, etc., see, e.g., M. Rist in *Journ. Bib. Lit.* lvii (1938), 289 ff.

There is no comprehensive and authoritative work, but material will be found in all large treatises on ancient religion, especially those dealing with the earliest and latest periods. H. J. R.

SUPPLICATIONES. On the occasion of a great national calamity (as after the battle of Lake Trasimene, Livy 22. 10. 8) or success (as after the crushing of Vercingetorix' revolt, Caesar, *B Gall.* 7. 90. 8) it was the custom at Rome and elsewhere, cf. *ILS* 108 (Cumae), to give opportunity for general adoration of the gods, or certain of them, by providing access to their statues or other emblems, often at least placed on *pulvinaria* (q.v.). This was known as a *supplicatio*, from the kneeling or prostrations of the worshippers (commoner in Italy than Greece, C. Sittl, *Gebärden*, 177-8, but cf. H. Bolkestein, *Theophrastos' Charakter der Deisidaimonia*, 23 ff.). It was at least on occasion associated with a *lectisternium* (q.v.), as in Livy, loc. cit., but is to be distinguished from it, as Livy there does. It is apparently a genuinely Roman procedure, older than the foreign use of statues to represent the gods. That it is often said to have taken place *ad (circa) omnia pulvinaria* is held by Wissowa, *RK* 424, to indicate, along with the fact that it generally followed a consultation of the Sibylline Books, that in the form familiar from our authorities it was fully hellenized; but see A. K. Lake in *Quantulacumque* (1937), 243 ff.

H. J. R.

SURA, LUCIUS LICINIUS, born in Hispania Tarracensis, after pursuing a senatorial career, commanded Legio I Minervia at Bonn (c. A.D. 93-7), became governor of Gallia Belgica (97), and consul. A fellow countryman of Trajan and, like him, versed in frontier-defence, he became his intimate, and possibly influenced Nerva in the adoption of Trajan. Governor of Lower Germany, and *cos. II (ordinarius)* in 102, he served with distinction on Trajan's staff in both Dacian Wars, became *cos. III (ordinarius)* in 107—a rare honour—and died soon after 110. Rich and cultured, he wielded immense influence. Pliny in one letter submits a physical problem to him (*Ep.* 4. 30), and in another a psychic one (*ibid.* 7. 27). He was a patron of Martial (6. 64. 12-13), who admired the old-fashioned ring of his oratory (7. 47. 1-2). It is recorded that he composed speeches for Trajan (*S.H.A. Hadr.* 3. 11).

E. Grogg, *PW*, s.v. 'Licinius (167)'; *PIR*, L 174.

C. H. V. S. and J. W. D.

SURA, see LENTULUS (4), PALFURIUS.

SURENAS, i.e. the Suren. The Suren, one of the seven great Parthian families, ruled Seistan as vassals of the Arsacids, with their capital at Alexandria-Prophthasia. Surenas, whose personal name is unknown, was a tall foppish young man with ideas; he thought that the long-range weapon, the bow, would be irresistible if sufficiently munitioned and mobile, and therefore formed a highly trained professional army of 10,000 horse-archers, with 1,000 swift Arabian camels carrying a huge reserve of arrows. With this force he overthrew Mithridates III and restored Orodes II to his throne, and then defeated Crassus' invasion (see CARRHAE). For a moment his genius had made the horse-archer, the common man who had won Carrhae, potential master of the world; but the Parthian nobles were jealous, and Orodes put to death his too brilliant vassal.

W. W. Tarn, *CAH* ix. 606 ff.; E. Herzfeld, *Sakastan* (1932), 70 ff. W. W. T.

SURGERY. I. BEFORE 300 B.C.

I. In the Homeric poems references to surgery are mainly in the *Iliad* and concerned with the 147 wounds there recorded. The wound is cleaned; blood squeezed or sucked out; edges united by bandaging; and an analgesic of dried herbs rubbed in and applied as an

air-tight pad. The only wound-spell is in the *Odyssey* (19. 457-8 ἐπαοιδῆ, cf. Pindar, *Pyth.* 3. 45 ff.). Homeric treatment resembles the best Egyptian practice. Moreover, instruments early in Greek use, notably the trephine, closely resemble Mesopotamian finds. Thus there is presumption that Greek surgery drew on the traditions of both these civilizations. The first historic Greek practitioner after Aesclepius and his sons (*Il.* 2. 731-2; 4. 194; 11. 518 and 614, etc., and Hesiod, *Epic Cycle, Sack of Ilium*, 5) was Democedes of Croton. He treated King Darius surgically and had certainly Persian contacts (*Hdt.* 3. 125, 129, 137).

2. The surgical part of the Hippocratic Collection is in confusion. *Fractures, Dislocations* (i.e. ἀρρῶν, of joints), and *Wounds of the head* are of about 400 B.C., the two former being parts of a larger work. *The nature of bones* is of about 350 B.C. *On surgery* and *Mochlicon* (= *Instruments of reduction*) are later abbreviations of earlier works, but the introductory chapter of *Mochlicon* is the displaced first part of *The nature of bones*. Treatises covering the whole medical field were, Galen indicates, commonly called 'Concerning the things of surgery'. Some idea of such a work is gained by reading the above works in the following order: *On Surgery*, being a greatly abbreviated introduction to the whole; introductory chapter of *Mochlicon*, being descriptions of the bones; *The nature of bones*, a sketch of theoretical anatomy for the surgeon, omitting bones (despite title); *Fractures, Dislocations*; remaining chapters of *Mochlicon*; *Wounds of the head*. It must be remembered that the parts differ greatly in age and state and that there is repetition and overlapping.

3. Startlingly modern are the minute directions for preparation of the operating room, and such points as the management of light—both artificial and natural—scrupulous cleanliness of hands, care and use of instruments with special precautions for those of iron, decencies of the operating chamber, modes of dressing wounds, use of splints, and need for tidiness, cleanliness, after-care, and nursing. The directions for bandaging and for diagnosis and treatment of dislocations and fractures, especially of depressed fractures of the skull, are very impressive. In *Fractures* and *Dislocations* certain procedures for reduction are identical with those now in use, but other passages are incompatible with the facts of anatomy. *Wounds of the head* has a special place in the history of surgery. It is a practical work by a highly skilled craftsman, and every sentence suggests experience. Although its treatment of depressed fractures has been criticized from an early date, the book was in current use until the middle of the eighteenth century. It introduces technical terms, two of which, *bregma* and *diploc*, survive in modern usage.

4. Among instruments described is the 'bench of Hippocrates', a bed for reducing dislocations, especially of the hip. The form is so ancient as to antedate the screw as a mechanical power. Lever, crank, windlass, and pulley are employed. With minor changes it was in continuous use for at least 2,000 years. There is no reason to associate it with Hippocrates; it may well be more ancient than he, but the name is late.

II. ALEXANDRIA AND THE EMPIRE

5. After 300 B.C. anatomical knowledge enters surgery from the Alexandrian school. Thus *Dislocations* has an obvious interpolation (on the anatomy of the shoulder-joint) of at least a century later than the main text. Similarly the surgeon Hergetor can be approximately dated from a fragment of his work (preserved by Apollonius of Citium) describing the anatomy of the hip joint in a way only discoverable by dissection. We have no complete surgical work of Alexandrian origin.

6. Passing by the stories of Pliny, the first professed surgeon at Rome of whom we have news is Mæcæ of

Sidon early in the first century A.D. Heliodorus soon after gave the first account of ligation and torsion of blood-vessels, treated stricture by internal section, performed radical cures for hernias, and was especially skilled in skull operations. Amputations were fully described by Archigenes of Apamea. Antyllus treated cataracts surgically and removed aneurysms by applying two ligatures and cutting down between them—an operation still known by his name alternatively with that of John Hunter (1728-93). These Roman operators of the first and second centuries A.D. acted with resource and confidence. The fragments of their works have the authentic tang of experience.

7. The standard account of Roman surgery of the first century A.D. is the seventh book of *De medicina* of Aulus Cornelius Celsus. The professional standing of Celsus—whether lay or professional, bond or free—and the character of his book—whether translated from a Greek text, or product of personal experience, or a compilation—are disputed, but it is certain from the articulation of the book that its author or compiler had practical surgical experience. He gives details of the very dangerous operations for extirpating a goitre and for cutting for stone, and describes well what might be thought to be the modern operation for removing tonsils and for other procedures on the face and mouth and for the removal of polypus from the nose. He gives the first account of dental practice, which includes wiring of loose teeth and use of a dental mirror. His attitude and line of treatment are sensible and humane.

8. Galen was no surgeon but his works include accounts of his surgical predecessors. Useful details are also preserved in the works of later Greek writers, notably Oribasius and Paul of Aegina. (For organization of the surgical service in the Imperial army see MEDICINE.)

9. Graphic representations have a place in the history of surgery. The most important are: (a) A kylix of about 490 B.C., painted by Sosias, of Achilles bandaging Patroclus. The drawing is excellent, but the bandaging execrable. (b) A vase-painting of about 400 B.C. of a surgeon treating patients in his surgery. (c) A few votives, murals, memorial slabs, etc., showing instruments for operations. The best is a tablet of instruments from the Aesclepeum at Athens. (Details of (a), (b), and (c) are discussed by Charles Singer, *Greek Medicine and Greek Biology*, 1922.) (d) Surgical instruments. The best collection is from Pompeii, where over 200 have been found. (e) Trajan's column shows an advanced dressing-station of a legion. (f) A Laurentian manuscript of about 900, copied from one of the first century B.C., contains illustrations of Soranus of Ephesus *On bandaging* and *On the uterus* and of Apollonius of Citium *On reduction of dislocations*. (For references to (d), (e), and (f) see bibliography of MEDICINE.)

10. There was interest in veterinary surgery, especially under the Empire. The army had hospitals for animals (Hyginus, *Liber de munitionibus castrorum* 21. 22). Much can be gleaned from agricultural writings, but there was also a considerable veterinary literature. The *Mulo-medicina Chironis* of about A.D. 100 survives in a philologically curious Latin version of about A.D. 300. It formed the basis for the larger *Digesta artis mulomedicinae* of Publius Vegetius Renatus (383-450), unexpectedly scientific and well arranged, which long remained in use. Abstracts of a collection of ancient works called *Hippiatrica*, said to have been made for Constantine Porphyrogenitus (905-59), have been in use ever since his time.

BIBLIOGRAPHY

* The surgical works of 'Hippocrates' are mostly in vol. II of the Loeb *Hippocrates* by E. T. Whittaker (1917). Two other works of permanent importance are: J. E. Petrequan, *Chirurgia d'Hippocrate* (2 vols., 1877-8), product of 30 years' study by an accomplished surgeon; and Francis Adams, *The Genuine Works of Hippocrates* (2 vols., 1849), by the last great Greek scholar who practiced under almost the circumstances of an ancient surgeon. For Celsus the

Loeb edition of W. G. Spencer (3 vols., 1936-8) covers most needs. M. Wellmann, *Celsus, eine Quellenuntersuchung* (1913), is important. For texts, H. Kühlewein, *Hippocratis Opera Omnia* (2 vols., 1894-1902); F. Marx, *Celsi opera quae supersunt* (1915); U. C. Bussemaker and C. Daremberg, *Oeuvres d'Oribase* (6 vols., 1851-76). The notes and comments of Francis Adams, *The Seven Books of Paulus Aegineta* (3 vols., 1844-7), are without rival. Werner R. Lewek, 'Die Bank des Hippokrates', *Janus* xl (1936) is exhaustive.

Veterinary Surgery: Sir Frederic Smith, *Early History of Veterinary Literature* (1919); E. Lommatzsch, *P. Vegeti Renati Mulomedicina Chironis* (1903); H. Ahlquist, *Studien zur Mulomedicina Chironis* (1909). C. S.

SURVIVAL after death, see AFTER-LIFE.

SUSA, the 'city of lilies', was the capital of Elam, and afterwards of the Achaemenids, where Darius I built his palace (Apadāna). Under Seleucids and Parthians its name was Seleucia-on-the-Eulaeus; the excavations have furnished numerous Greek inscriptions. In A.D. 1 there were still Greek cleruchs in charge of the citadel, i.e. some early Seleucid had planted a military colony there; probably it became a *polis* under Antiochus III. In A.D. 21 it was still a full Greek city, with a Council, Assembly, and elected magistrates whose qualifications were scrutinized; it could send embassies, and was therefore a State; though subject to Parthia, it had more than local autonomy. Beside Greeks, other peoples can be traced—Persians, Syrians, Jews, Anatolians, Babylonians, Elymaeans; its city-goddess was the Elamite Nanaia, renamed Artemis, in whose temple Greeks manumitted their slaves. Four Greek poems are known, one a lyric ode (1st c. B.C.) addressed to Apollo by a Syrian title, Mara (Lord); it belongs to a known class of acrostic poems, and that and the forms of decrees and manumissions show that Susa was well within the Greek culture-sphere.

W. W. T.

SUSARION, inventor (? mythical) of Comedy, first mentioned in the Parian Marble (c. 260 B.C.) under some year between 581 and 560 as an Athenian. But the name is doubtfully Attic and another tradition says he was a Megarian. The one recorded fragment, however, is written in Attic and contains the definitely Attic word *δημόται*. If he existed, we may regard Susarion as one of those who wrote the words for the primitive Attic *κῶμος*-comedy (see COMEDY, OLD). It is possible, however, that no such man existed and that the non-Attic name was invented to square with the tradition of the Megarian origin of comedy.

SYBARIS (Σύβαρις), an Achaean-Troezcnian foundation (c. 720 B.C.) near a similarly named river on the Gulf of Tarentum, near the modern *Sibari*, an area formerly fertile, now derelict. By expanding its territory, dispatching colonies (Laus, Scidrus, Posidonia-Paestum), and monopolizing Etruscan trade Sybaris became powerful; her wealthy luxuriousness was proverbial. But in 510 internal dissensions enabled Croton to obliterate Sybaris. Sybarite exiles, after twice unsuccessfully attempting to refound Sybaris, joined the Athenian foundation at Thurii (q.v.) (443). Thurii quickly expelled them, whereupon they established a new Sybaris on the river Traeis, never an important place.

E. T. S.

SYCOPHANTS (συκοφάνται). Athens had no public prosecutors in the modern sense. Solon permitted citizens to prosecute any wrongdoers. Inducements were offered to volunteers in certain cases (γραφὴ ξενίας, φάσις, ἀπογραφὴ) by granting them a liberal share of fines and moneys recovered for the treasury. The system

worked: there was no lack of prosecutors. But c. 450 B.C. abuses appeared. Men began to make a profession of prosecutions for personal, political, and financial reasons. These were called sycophants.

In spite of constant references by Aristophanes and the orators, there survives no legal definition of a sycophant. Among the direct measures taken against sycophancy were γραφὴ συκοφαντίας, εἰσαγγελία, and προβολή. The only known law under which sycophants could be prosecuted was the law against those who deceived a court by promises. The procedure in this case was εἰσαγγελία. Provision was also made by law for the annual presentation (προβολή) of not more than six alleged sycophants—three citizens and three metics. A προβολή was not a formal indictment but a general charge of sycophancy. The vote was not a verdict. If it was hostile, the Ecclesia could try the case itself or turn it over to a dicastery.

The most dangerous type of sycophant was the black-mailer who extorted money, so that the guilty escaped punishment and the innocent paid blackmail. An indirect check on blackmail was a law providing a penalty of 1,000 drachmas for dropping a suit once it was started. But often money was extorted by the mere threat of litigation. The means of relief from this form of extortion were ineffectual, for blackmail was not in itself a crime. A different way of checking sycophants was the law providing that a prosecutor who failed to obtain one fifth of the votes should be fined 1,000 drachmas and deprived of the right to bring a similar type of suit in the future.

Freedom of prosecution was one of the corner-stones of democracy. There was always the danger that honest volunteers might be discouraged. This explains why no ancient writer ever suggested the repeal or modification of Solon's law.

R. J. B.

SYENE (*Assuan*), on the southern frontier of ancient Egypt, on the right bank of the Nile, just below the First Cataract. It was a trading town, and from its quarries came the valuable 'syenite' stone. Under the Ptolemies it replaced Elephantine as the frontier outpost; in 25 B.C. it was freed from Ethiopian invaders by the Romans, who established a garrison there. The fact that the sun's rays fell vertically at Syene in midsummer was utilized by Eratosthenes (q.v.) to make a remarkable calculation of the earth's circumference.

E. H. W.

SYLE (ἡ σύλη, τὸ σῦλον) was (1) robbery, cattle-reiving in general; (2) an act of reprisal by an injured person or his kinsmen for a deed of violence or a default on a debt. In early Greece this was often the only means of obtaining satisfaction from members of another tribe or city, and was therefore sanctioned by custom. In time of war *syle* was permitted against all enemy traders. From the sixth century it was gradually circumscribed by commercial treaties and by grants of *asylia* (q.v.) to certain individuals, cities, or sanctuaries. But even in Hellenistic times belligerent States still licensed privateering, and *syle* did not disappear until the Roman era.

H. A. Ormerod, *Piracy in the Ancient World* (1924), ch. 2. M. C.

SYMBOLON. With the growth of commerce in Greece, it became increasingly important that there should be some guarantee of security for the person and property of a merchant in foreign ports. This was accomplished by judicial treaties known as *σύμβολα*. Over half a dozen treaties negotiated between cities on the coast and islands of the Aegean are extant.

In the earlier treaties only immunity from forcible seizure of goods and restriction upon reprisals were secured. Out of these simple treaties grew the more elaborate *σύμβολα* of the period of the Confederacy of

Delos. Suits tried under the provisions of these treaties were called *δίκαι ἀπὸ συμβόλων*. It was the common practice to avoid using the commercial codes of the contracting cities, either by providing for the use of the code of a third city, or by including in the treaty a commercial code and procedure involving, no doubt, all the elements common to the codes of the contracting parties. Where Athens was concerned, naturally her commercial code would be dominant. The place of trial was the home of the defendant.

In Athens these treaties were ratified by a Heliastic court. After the formation of the Confederacy of Delos the judicial treaties concluded between Athens and her allies continued in force even when the allies had been reduced to subjection.

J. H. Lipsius, *Das Antike Recht* (1915), pp. 965 ff.; H. Grant Robertson, 'The Administration of Justice in the Athenian Empire', *University of Toronto Studies, History and Economics* iv. 2, 1924.

R. J. B.

SYMMACHIA (*συμμαχία*, 'fellowship in fighting') was used with several meanings: informal co-operation in war, a treaty of alliance, and a confederacy of allies. Treaties of alliance, of which the earliest Greek example preserved dates from the sixth century, could be of two kinds: defensive (*epimachia*) or offensive and defensive. The latter generally included a clause pledging the signatories to have the same friends and enemies. In such treaties the contracting States frequently had equal rights, but the clause could be so expanded as to subordinate one partner to the other. Thus in 404 B.C. Athens promised to have the same friends and enemies as the Laedaeamoniens and follow their leadership. *Symmachia* has been used in a special sense as the name for a confederacy of allies under the *hegemonia* (leadership) of one State. The *hegemonia* included command in war and generally also the presidency of the assembly of the allies. Such leagues were not federal States but recognized the freedom of their members and could continue to exist even under the King's Peace. The Peloponnesian and Delian Leagues are described in separate articles. More advanced was the Second Athenian League organized c. 378 B.C., when a congress or constitutional convention of allies of Athens met and adopted by decrees (*δόγματα*) the principles or constitution of the League, which was ratified by treaties between Athens and the members. Athens next in the spring of 377 issued a decree inviting States to join on the terms of freedom, self-government, and exemption from garrisons and the payment of tribute. Other documents show that the entire war-policy of members was controlled by the League. Athens held the *hegemonia*, and the members of the assembly (*syndrion*) of the allies, in which each State cast one vote, remained permanently in Athens so that meetings could be called on short notice. The policy of 'the Athenians and their Allies' was determined by agreement between the *syndrion* and the Athenian Ecclesia. The *syndrion* also exercised some judicial authority. The guarantee against tribute (*φόρος*) did not prevent the collection of contributions (*συντάξεις*) from members. The League finally was dissolved in 338 B.C. A special variety of *symmachia* is constituted by the Hellenic Leagues of Philip II, Antigonos Monophthalmus, and Antigonos Doson, in which the *hegemonia* was held by kings, while a committee selected from its members presided over the assembly.

J. A. O. L.

SYMMACHUS (1) (*fl.* c. A.D. 100) wrote a commentary with *ὑποθέσεις* on Aristophanes which owed much to Didymus and was one of the main sources of the oldest scholia to Aristophanes. He probably produced the first edition of the latter's select plays.

SYMMACHUS (2), QUINTUS AURELIUS (c. A.D. 340-c. 402), belonged to a distinguished family. Trained by a Gallic rhetor, he became the greatest orator of his day, and thus attained the highest positions in the State. In 369 he was sent on deputation to Gaul and there won the close friendship of Ausonius (q.v.). In 373 he was appointed proconsul of Africa. Holding fast to the pagan religion, he proved the most prominent opponent of Christianity in his time. The influence of Julian had in part re-established paganism, and a storm arose over an altar of Victory in the senate-house at Rome, when Gratian in 382 forbade pagan worship. The pagan party struggled for supremacy, especially when Symmachus was *prae-fectus urbi* (384, 385), but was defeated especially through the efforts of Ambrose (q.v.). Symmachus nevertheless attained the consulship in 391 and lived till about 402.

During this last period he wrote the greater part of the numerous letters that have come down to us. Fragments of his carefully composed speeches are also preserved. The letters, in ten books, are addressed to leading persons of the day; their arrangement imitates that of the younger Pliny, nine books private, one official correspondence.

Ed. O. Seeck (1883).

SYMMORIA. An official group of taxpayers in Athens in the fourth century B.C., which performed certain public services as a corporate body. The law of Periander (357-356 B.C.) introduced a reform of the *trierarchy*, which was later improved by Demosthenes. It divided the twelve hundred wealthiest citizens into twenty equal *symmoriai*. The upkeep of a number of ships was allotted to them on a proportional basis. Their *epimeletai*, who were, perhaps, identical with the *symmoriarchai*, the wealthiest members of a *symmorion*, divided the *symmorion* into *synteleiai* of members according to their wealth, so that each *synteleia* found one ship.

Earlier in date than Periander's law were the *symmoriai* created in 378-377 in connexion with the reform of the *eisphora* (q.v.). These included practically all Athenian taxpayers and special *symmoriai* of *metoikoi*. They seem to have been organized in the same way as the trierarchie *symmoriai*. Outside Athens, in Teos and possibly Nysa, the term meant bodies analogous to the Attic *γένη*, and in later antiquity private clubs. See *EISPHORA*; *LITURGY*; *TRIERARCHY*.

F. M. H.

SYMPHOSIUS (or **SYMPOSIUS**), CAELIUS FIRMIANUS (4th-5th c. A.D.), the reputed author of a series of a hundred riddles, each consisting of three hexameter lines, which according to the prologue to the work were composed for use at the Saturnalia. Two other short poems are erroneously attributed to him, *De fortuna*, in fifteen choriambic tetrameters, and *De lixte*, in twenty-five hendecasyllables.

See BACHER, *PLM* iv. 364 ff.

A. L. P.

SYMPLEGADES (*Συμπληγάδες*, sc. *πέτραι*), the Clashing Rocks through which the Argonauts (q.v.) had to pass into the Hellespont. The story is essentially the same as that of the Planctae (*Πλῆγεται*, *Odyssey* 12. 59 ff.), i.e. the Wandering Rocks, which not even the doves which carry ambrosia to Zeus can get through without losing one of their number; these, however, are not definitely located. The Argo is said there to have passed them, whence it seems that Planctae is the older

name, though later authors (as Apoll. Rhod. 4. 860 ff.) suppose two sets of clashing or moving rocks, one to the east and the other to the west of the Mediterranean. There is no need to seek a rationalizing explanation of either, see J. Bacon, *Voyage of the Argonauts*, p. 79.

H. J. R.

SYMPOLITEIA (the sharing of citizenship or political life) is employed—as it was by Polybius—as a descriptive name for a federal State, while the word used in documents as a part of the name was *koinon* (commonwealth). In English these federal States are called leagues but must be distinguished from *symmachiai* (q.v.), for which the same word is used. Characteristic is a division of power between the central and local governments and a double citizenship and allegiance, local and federal, symbolized at times by such identifications as 'an Aetolian from Naupactus'. To the federal government belonged foreign affairs, the army, and jurisdiction in cases of treason; in local government and institutions there was a tendency to uniformity. While a citizen normally could exercise political rights only in one community, he apparently possessed civil rights, including the right to acquire real property (*enctesis*), in all communities within the league. Exceptions were the Thessalian League organized by Flaminius and other leagues founded under Roman influence. (For accounts of the chief *sympoliteiai*, see ACHAEAN LEAGUE, AETOLIAN LEAGUE, and FEDERAL STATES.) *Sympoliteia* is applicable also to any merging of citizenship, and the related verb is used in a Phocian inscription of the second century B.C. referring to the absorption of the city of Medeon by Stiris. Similar expressions are common in connexion with the union of cities in Asia Minor.

ANCIENT SOURCES: *Koinon* in League names: SIG 653, 'Aetolian from Naupactus': ibid. 380 and 500; Stiris-Medeon: ibid. 647 (cf. 546 B).

MODERN LITERATURE: E. Szanto, *Das griechische Bürgerrecht* (1892), ch. 3; G. Busolt, *Griechische Staatskunde* (1920), i. 156 ff.; W. Schwahn, *PfW*, s.v. The nature of federal citizenship is discussed by W. Kolbe in *Sav. Zeitschr.* 1929; Anatolian *sympoliteiai*, by L. Robert, *Villes d'Asie Mineure* (1935), 54–65. J. A. O. L.

SYMPOSIUM (συμπόσιον). Nominally a symposium was a drinking-party, but actually at Athens drinking was the least important part of the entertainment. The Romans and the Macedonians were fond of an occasional drinking-bout, but at Athens moderation both in drinking and eating was the rule. Wine was seldom drunk neat, and the proportions of wine and water in the mixing-bowl—*crater*—were often one to three. Music by flute-girls, performances by hired entertainers, songs by the guests, impromptu verse and riddles—these were the ordinary diversions; but above all there was conversation and discussion of every sort of subject.

Plato, *Symposium*; Xenophon, *Symposium*; Aristophanes, *Wasps*, 1174–1325. F. A. W.

SYMPOSIUM LITERATURE. Banquets bulked large in Greek life and hence also in literature from Homer (*Il.* 2. 402, *Od.* 9. 1, etc.) onwards. After the meal the company would turn to drinking and general conversation, sometimes on set themes. Such discussions gave rise to a minor literary genre. They suggested to Plato the setting for his *Symposium* (drinking-party), which with Xenophon's *Symp.* (probably later than Plato's) supplied later writers with stock methods, characters (e.g. the unbidden guest), and incidents, serving as a framework for dialogues on literary, philosophical, and many other topics. The dialogue-form, the mixture of grave and gay, characterization, historical interest—these were the marks of the 'Soeratic' symposium, a type which includes Plutarch's *Symp.* and *Quaest. conv.* and the *Deipnosophists* of Athenaeus, though here the artistry is lacking, and the post-classical tendency to substitute miscellaneous learning for philosophical thought is much in evidence. Lost works of this

type include Aristotle's *Symp.* (Ath. 674 f.), perhaps concerned with Homeric questions and resembling the later 'grammatical' symposia, such as Herodian's, rather than Xenophon; Epieurus also wrote a symposium (criticized by Ath. 186 e).

A different but related type is the satirical, initiated by Menippus and exemplified for us by Lucian (and in Latin by Horace, *Sat.* 2. 8, and Petronius). Unlike the 'Soeratic' symposia, Lucian's contains nothing serious (save the moral drawn by the narrator); and the dialogue is secondary to the description of the farcical incidents.

The *Saturnalia* of Macrobius (q.v.) furnishes a Latin example of the serious literary symposium influenced by Gellius; it is supposed to be held among learned guests at the house of Vettius Praetextatus.

Descriptive works with little or no dialogue were strictly *Δείπνα* rather than *συμπόσια*. To this class belong the *δειπνητικά ἐπιστολαί* of Hippolochus and Lynceus (Ath. 128 a), concerned with the food and displays of magnificence; and the *Symp.* of Heraclides of Tarentum (Ath. 120 b). (Philosophy is not necessarily excluded by such works any more than gastronomy by Athenaeus.) There were also verse-symposia in this group; some were descriptive or didactic (on diet and cookery), others were parodies, like the mock-epic of Matron (quoted by Ath. 134 d).

J. Martin, *Symposium*, 1931 (useful but often fantastic), and literature there cited. J. T.

SYMPOSIUS, see SYMPHOSIUS.

SYNCOPE, see METRE, GREEK, III (1).

SYNCRETISM, a word with a curious history, for which see J. Moffatt in Hastings, *ERE*, s.v. It is now used to denote a phenomenon very common in the later stages of ancient religion. While in the earlier periods the theory of the identity of the gods of different nations (cf. INTERPRETATIO ROMANA) was prevalent, in practice each community normally continued to worship its own deities, or if it imported those of another, regarded them as foreign and often gave them a more or less foreign cult. But from about the generation after Alexander it became more and more usual to identify gods of various nations in practice, thus producing cults of a mixed nature, and also to blend together deities of the same racial or national origin but different functions. Perhaps the earliest example of the former process is the Alexandrian cult of Sarapis (q.v.). Here we have an Egyptian god, Usar-Api, i.e. Osiris-Apis, himself no doubt the result of a certain amount of blending of native worships. But his cult-legend represents him as coming from the Black Sea, the foundation of his Alexandrian ritual was partly due to the Eumolpid Timotheus, the initiative in the matter was taken by Ptolemy I, the god was variously identified with Aesclepius, Zeus, and Pluto (Tac. *Hist.* 4. 83 f.), and the statue was a Greek work, a Hades with some attributes foreign to him on Greek soil. All this was a State cult, intended perhaps to reconcile Greek and Egyptian elements in the mixed Ptolemaic kingdom. It does not appear to have excited any opposition or nationalistic feeling, at all events among Greeks, if only because earlier movements had tended somewhat in the same direction (see O. Kern, *Relig. d. Griech.* iii. 145 ff.). Certainly the spread of similar mixed cults was rapid, and current theological speculation at least kept pace with the facts of actual worship. At once an example of these movements and an instance of syncretism involving comparatively little but the blending of native elements is the very common Hellenistic identification of Apollo (q.v.) with Helios, and hence with various non-Greek sun-gods.

Naturally, syncretism is most conspicuous in those worships which never had been national within the classical area, for instance that of Isis. The *locus classicus*

for this is Apuleius, *Met.* 11. 5, where a long speech put into the goddess's mouth identifies her with ten different figures of Mediterranean or Anatolian cult. Mithraism (q.v.) manifestly had syncretistic elements; indeed, solar religions seem to have lent themselves especially to it, see, e.g., the long and fantastic list of identifications of the 'Heraclēs' of Tyre, Nonnus, *Dion.* 40. 369 ff., while theoretically the tendency in late times to identify all gods with the sun (Macrob. *Sat.* 1. 17. 2) worked in the same direction. Two incidental results were the occasional formation of compound names for deities, as *Κουραφφοδίτη* (Proclus, *Hymn* 5. 1), and the not uncommon occurrence of late statues showing one god with the attributes of one or several others. Syncretism is perhaps especially characteristic of magic (q.v.): see S. Eitrem in *Symb. Oslo.* 19 (1939), 57 ff.

Literature. No one important work is devoted to the subject, but all treatises on Hellenistic and Imperial cults have chapters or sections dealing with it. H. J. R.

SYNOECISMUS (*συνοικισμός*), the joining of several communities into one city-state (see *POLIS*). According to the common Greek opinion it was a single act, performed by a single person, as in the case of the most famous synoecismus, that of Athens by Theseus. In fact, the unification of Attica into one State was produced by a long-continued development, and so it may have been in many other instances. There were different kinds of synoecismus. (1) Several towns of a district effected a political union, the government being centred in one of them, or in a newly founded city. (2) In districts containing only one town the rural population was gathered into this as the only fortified place. (3) Two cities were amalgamated into one, perhaps by the will of some superior authority, e.g. a Hellenistic king. (4) In a tribal State a city was founded as a political centre for the districts occupied by villages and farms. In the second and third type of synoecismus the population was actually transplanted; in most cases the synoecismus was a merely political act (cf. Thuc. 2. 15).

U. Kahrstedt, *PIB*, s.v. 'Synoikismos'.

V. E.

SYNTHESIS (garment), see *DRESS*, para. 3.

SYPHAX (Σόφαξ), chief of a Numidian tribe, the Masasyles, in north Africa, with capitals at Siga and Cirta. He wore a diadem like a Hellenistic monarch, while Phoenician, not Berber, was his official court language. In a war against Carthage (ending in 212 B.C.), he received some support from the Scipios in Spain. He overran part of the territory of his neighbour Masinissa (q.v.) and tried to retain the friendship of both Rome and Carthage, but was won over to the latter by Sophonisba (q.v.). He fought against the Roman expeditionary force under Scipio, who burnt his camp. Defeated at Campi Magni, he fled to his kingdom where he was beaten in battle and captured by Laelius and Masinissa (203). He died in imprisonment in Italy.

For coinage see L. Charrier, *Description des Monnaies de la Numidie* (1912).

H. H. S.

SYRACUSE, a Corinthian colony founded c. 734 B.C. (Thuc. 6. 3). The colony was soon prosperous in trade and agriculture; c. 598 it founded Camarina. Its first known government was an aristocracy of landlords (*γαμπροί*), who had reduced the natives to serfdom (*καλλέριοι*). A constitution was attributed to the hero Diocles (q.v.). The Demes and serfs expelled the landlords (c. 485); the latter received the help of Gelon (q.v.) who became tyrant and forcibly transported the population of neighbouring Greek cities to Syracuse. The old double city on the isle (Ortygia) and on the mainland (Achradina) became insufficient: new quarters were built, Tyche and Temenites (later called Neapolis). Gelon defeated the Carthaginians at Himera (480) and made Syra-

cuse the most important city of the Western World after Carthage. His successor Hieron I (q.v.) extended its influence to south Italy, and gave it a cultural splendour second only to that of Athens. After his death (467) Syracuse lost her empire. The moderate democracy worked through an Assembly and Senate (*βουλή*): two other councils, the *σύνκλητος*, perhaps an extraordinary assembly, and the *ἐσκλητος* are not clearly known. The yearly *strategi* (in variable number) were heads of the State. The People had a *προστάτης τοῦ δήμου*, probably an unofficial spokesman. The first years of the new Government were difficult. The new citizens of Gelon were expelled. A procedure of ostracism (*πεταλισμός*) was temporarily introduced. But Syracuse won the war against Ducetius (q.v.) and Acragas. Two Athenian attempts to intervene in Sicily (427-424; 415-413) were repulsed by Syracuse, and Hierocles' (q.v.) policy of intervention in the affairs of Greece led to his banishment and constitutional changes: the presidency of the popular assembly was probably transferred from the *strategi* to archons chosen by lot.

2. In face of another Carthaginian attack and subsequent complications Syracuse submitted to the tyranny of Dionysius I (q.v.). The troubled period of Dionysius II (367-344) was interrupted by a long exile (357-347), in which the two Academics Dion and Callippus and two other sons of Dionysius I treacherously replaced one another. Timoleon (q.v.), to save the supremacy of Syracuse in Sicily, introduced new colonists, and a new democratic constitution. The senate of 600 members gradually developed into an oligarchy of which the leaders were later banished. But the democratic leader Agathocles (q.v.) carried out a revolution by which he became *στρατηγὸς αὐτοκράτωρ* (317) and king (304). With his death (289) the last great period of Greek expansion in Italy passed away.

3. A new tyrant, Hieretas (288-278 B.C.) was beaten by the Carthaginians. The Carthaginians besieged Syracuse, but Pyrrhus (q.v.), who drove them back, was not able to renew the State of Dionysius and Agathocles. Hieron II (q.v.) defeated the Mamertines, but indirectly provoked the intervention of the Romans whose honoured vassal he became. His nephew Hieronymus (215-214 B.C.) did not follow his policy. After his murder, the struggle between a pro-Roman aristocratic party and a pro-Carthaginian party led to the Roman siege. Despite a heroic defence, in which Archimedes played his part, Marcellus mastered Ortygia by treachery and Achradina by surrender (211). In the Roman province, Syracuse was a *civitas decumana*, but remained a beautiful city, the residence of the governor. Settlers were sent by Augustus in 21 B.C.: Syracuse became a colony. In A.D. 280 it was plundered by the Franks. Famous catacombs show the development of Christianity.

SYRIA. This country (often called by the Greeks Coele Syria, to distinguish it from 'Syria between the rivers' or Mesopotamia) was a satrapy ('Beyond the River') of the Persian Empire till in 332 B.C. it was conquered by Alexander. On his death (323) it was assigned to Laomedon, who was in 319-318 ejected by Ptolemy I. Thereafter it was disputed between Ptolemy and Antigonos, till on the latter's death in 301 it was partitioned between Seleucus I, who occupied the north (Syria Seleucia), and Ptolemy I, who retained the south, to which the name Coele Syria was now restricted; the boundary was the river Eleutherus. Despite the three Syrian wars this arrangement remained substantially unchanged till in 201 Antiochus III conquered Coele Syria. During this

period the four Phoenician dynasties which had ruled most of the coast were suppressed, and the maritime towns became republics, governed by *suffetes*. The Seleucids, especially Seleucus I, colonized their area intensively, founding at least eight cities and six military colonies of Macedonians. The Ptolemies seem to have founded no colonies and governed the interior on a bureaucratic system like the Egyptian. Antiochus IV (175-163) encouraged the hellenization of the upper classes, which had already made some progress, and its corollary, civic autonomy. He allowed both the principal Greek colonies and the chief Phoenician towns to issue their own coins, and granted civic charters to many native towns in the interior.

2. After Antiochus IV's death the Selcucid power gradually declined owing to constant wars between rival claimants to the throne, complicated by Ptolemaic interventions. Taking advantage of the weakness of the central Government, many of the cities asserted their freedom, and scores of local chiefs carved out principalities for themselves, while four native dynasties, those of Commagene, the Ituraeans, the Jews, and the Nabataeans (q.v.), built up considerable kingdoms. The two branches of the Seleucid house were gradually pushed back to Antioch and to Damascus and its neighbourhood, to which the term Coele Syria was now restricted. Finally, in 83, Tigranes of Armenia occupied the country, and on his defeat Pompey made Syria a Roman province (64-63). Pompey re-established a number of cities which had been subdued or destroyed by dynasts, notably those subject to the Jewish kingdom, but in general confirmed the existing situation. The province of Syria thus comprised besides the cities, a few of which were free, the client kingdoms of Commagene and Arabia, the ethnarchy of the Jews, the tetrarchy of the Ituraeans, and many minor tetrarchies in the north. The Parthians invaded Syria in 40 and were ejected by Ventidius in 39. Antony gave to Cleopatra the Ituraean tetrarchy, the coast up to the Eleutherus (except Tyre and Sidon), Damascus and Coele Syria, and parts of the Jewish and Nabataean kingdoms.

3. Syria (which probably included Cilicia Pedias from c. 44 B.C. to A.D. 72) was under the Principate an important military command; its legate, a consular, had down to A.D. 70 normally four legions at his disposal. The client kingdoms were gradually annexed. Commagene (q.v.) was finally incorporated in the province in A.D. 72, Ituraea partly in 24 B.C., partly (Agrippa II's kingdom) c. A.D. 93. Judaea, at first governed by procurators, became in A.D. 70 a regular province ruled by a praetorian legate, who commanded a legion withdrawn from Syria; under Hadrian the province, henceforth usually known as Syria Palaestina, became consular, a second legion being added. The Nabataean kingdom became in A.D. 105 the province of Arabia, ruled by a praetorian legate with one legion. Septimius Severus divided Syria into a northern province with two legions (Syria Coele) and a southern with one legion (Syria Phoenice). Urbanization made little progress under the Empire. Commagene and Arabia were on annexation partitioned into cities, but much of Ituraea was added to the territories of Berytus, Sidon, and Damascus, and in the rest the villages became the units of government. In Judaea the centralized bureaucracy established by the Ptolemies and maintained by the Seleucids, Maccabees, and Herodians survived in some areas throughout the Principate; in others cities were founded by Vespasian, Hadrian, and the Severan emperors. Of the minor

principalities some, such as Chalcis ad Belum, Emisa, and Arca, became cities, but most seem to have been incorporated in the territories of existing towns. Cities being so scarce, Syria remained a predominantly rural country—hence its importance as a recruiting-ground both for the local legions and for many auxiliary units—and only superficially hellenized: not only the peasants of the wide city territories but even the proletariat of the towns always continued to speak Aramaic.

4. Wine was grown for export in many parts, chiefly along the coast. Other agricultural products of commercial importance were nuts, various fruits, such as the plums of Damascus or the dates of Jericho, and vegetables, e.g. Ascalonite onions. The principal industries were linen-weaving (at Laodicea and in several Phoenician and north Palestinian towns), wool-weaving (at Damascus), purple-dyeing (on the Phoenician and Palestinian coast), and glass-blowing (at Sidon). The country was also enriched by the transit trade from Babylonia, Arabia Felix, and the Far East, much of which passed by caravan over the Arabian desert to such emporia as Palmyra, Damascus, Bostra, and Petra, and thence to the coastal ports.

SYRINX (Σύριγγ), a nymph loved by Pan (q.v.). She ran away from him and begged the earth, or the river-nymphs, to help her; she became a reed-bed, from which Pan made his pipe (σύριγγ).

Ovid, *Met.* i. 689 ff.; Servius on Verg. *Ecl.* 2. 31.

SYRINX, see MUSIC, § 9 (ii).

SYRTES, the shallow waters lying between Tunisia, Tripolitania, and Cyrenaica. The Greater Syrtis (*Gulf of Sidra*) formed the south-east corner of this ill-reputed Mediterranean bay, the Lesser Syrtis (*Gulf of Gabès*) the south-west. Legends, possibly propagated to protect Phoenician trade-monopoly, exaggerated the dangers of the Syrtic Sea, which failed to hamper the commerce of the Phoenician Tripolis to the south or the Greek Pentapolis to the west; to the west Meninx (*Djerba*), the mythical island of the Lotus-eaters, did a prosperous trade in purple dye, and Tacape (*Gabès*) and Taparura (*Sfax*) were flourishing ports. W. N. W.

SYRUS, see PUBLILIUS (3).

SYSSITIA (συσσιτία; also known as ἀνδρεῖα or φιδῖτια) were mess-companies, among which the citizen body was apportioned at Sparta and in the cities of Cræte. At Sparta each mess was about fifteen strong. Membership (which was obtained by co-optation) was a necessary qualification for full citizenship, and each mess-mate was bound to provide from his estate a fixed minimum ration of food on pain of disfranchisement. The Cretan *syssitia* were formed by voluntary grouping round a leader of good family; their upkeep was at State cost. According to Aristotle (*Pol.* 1272^b33) *syssitia* also existed at Carthage. These probably were confined to the aristocracy.

Plutarch, *Lycurgus* 12; Strabo 10. 480, 483.

T

TABELLAE, see BOOKS, II. 3.

TABELLARI were freedmen or slaves employed as couriers, and formed part of the *familia* of every individual or company with correspondents in the provinces. Their services were shared by groups of friends. During Caesar's Gallic campaigns Oppius arranged for the sending of letters to him and his officers (Cic. *QFr.* 3. 1. 8). In the Civil Wars *tabellarii* were often stopped and their letters read (Cic. *Fam.* 12. 12. 1). In the Principate private *tabellarii* were still required, as the Public Post carried no private correspondence (see POSTAL SERVICE). The imperial *tabellarii* (ILS 1701-11) were organized in groups under *praepositi* and *optiones*. *Tabellarii* had to travel on foot unless provided with a *diploma* entitling them to the use of the *cursus publicus* (Plin. *Ep.* 10. 64).

G. H. S.

TABERNARIA, sc. *fabula*, see **FABULA**.

TABULA BANTINA, a bronze tablet, found at Bantia in 1793, and now at Naples. On it is inscribed in the Latin alphabet an Oscan inscription containing a series of municipal regulations for the town of Bantia. A Latin inscription (*CIL* i². 582) on the other side dates it c. 125 B.C. It is of vital importance for the study of Oscan.

C. D. Buck, *A Grammar of Oscan and Umbrian*² (texts, glossary, bibliography; 1928).

P. S. N.

TABULA PONTIFICUM, a whitened board set up yearly by the Pontifex Maximus in the Regia, with the magistrates' names, recorded by the day events in which the pontifical college took ceremonial action, e.g. dedications, festivals, triumphs, eclipses, famines, prodigies; political events entered solely in their sacral connexion. From the first full registration of prodigies in Livy (296-295 B.C.), the first recorded eclipse (if this is dated 13 June 288, reading 'quadragesimo' in Cicero, *Rep.* 1. 16. 25), and the first regular accuracy of the *fasti* (q.v.), it appears to have begun about 300 B.C., presumably on the Ogulnian reform of the pontifical college. It formed the basis for the composition of the *annales maximi* (c. 123 B.C.), with the incorporation of fuller political records.

Cicero, *De Or.* 2. 12. 52; Servius ad Verg. *Aen.* 1. 373; Cato *Origines*, bk. 4, fr. 77 (Peter). O. Seeck, *Die Kalendartafel der Pontifices* (1885); L. Cantarelli, *Riv. fil.* 1898, 209; De Sanctis, *Stor. Rom.* 1. 16; K. J. Beloch, *Röm. Geschichte*, 86; J. E. A. Crake, *CPhil.* 1940.

A. H. McD.

TABULAE IGUVINAE. At Gubbio, the ancient Iguvium (Umbria), there were discovered in 1444 nine bronze tablets of varying sizes (the largest now surviving measures 33 by 22 in., the smallest 16 by 12), engraved on one or both sides partly in the native, partly in the Latin alphabet. Two of them were taken to Venice in 1540 and lost; the remaining seven are still at Gubbio. These are the famous Iguvine Tables. The oldest was written c. 400 B.C., and the latest not later than 90 B.C. The text contains the proceedings and liturgy of a brotherhood of priests, the *frater atietur* ('Fratres Atiedii', apparently in origin a *nomen gentilicium*), not unlike the Roman Arval brethren, viz.: regulations for the lustration of Iguvium, for an assembly of the *populus* (Umb. *puplum* acc. sing.) of Iguvium (presumably in connexion with the *lustrum*), *cunctulum* sacrifice of the lustrum on behalf of the Brotherhood, an optional sacrifice of a dog to the infernal deity *Hontus*, assembly and sacrifices at the 'decurial' festivals of federated clans (ten in number), directions for sacrifice to Jupiter, Pomponus (called

puprike dat. sing., quasi **Pubi-dicus* and connected with initiation-rites?), Vesuna, and other deities on stated occasions, and various administrative resolutions of the Brotherhood. Among the other deities worshipped were *Trebus*, *Tefer* (connected with burnt offerings?), *Torra* (all three designated *Iovius* or *Iovia*), *Praestita* (called *Cerria*), *Cerrus Martius*, *Mars Hodiis*, *Hule* (an infernal deity), *Mars Grabovius* ('the oak-tree', an epithet of Illyrian associations or origin), *Firius* and *Fisovius*, *Picu(u)ius Martius*, *Coredius*, *Vofio* ('hearer of vows'?), *Tursa* (a goddess of dread), *Purtupite* (the recipient of offerings). In scope, content, and antiquity the Iguvine Tables surpass all other documents for the study of Italic religion. See LUSTRATION. They are also the main source of our knowledge of Umbrian.

F. Buecheler, *Umbria* (1883), is still important. C. D. Buck, *A Grammar of Oscan and Umbrian*² (1928; texts and glossary); A. von Blumenthal, *Die iguvinischen Tafeln* (1931), discusses numerous details, but is prone to dubious conjecture; G. Devoto, *Tabulae Iguviniae* (1937), gives much attention to matters of religion; I. Rosenzweig, *Ritual and Cults of Pre-Roman Iguvium* (1937), is a usable compilation. See also the bibliography to the article RELIGION, ITALIC.

J. W.

TABULARIUM. (1) The record-office at Rome, probably serving chiefly the adjacent *acerarium Saturni*, built by Q. Lutatius Catulus in 78 B.C. Its rear façade, standing upon a huge substructure, masked the ridge between the two summits of the Capitol and closed the west end of Sulla's forum, overshadowing the temples of Concord and Saturn. A stairway from the Forum climbed through the ground-floor of the substructure to the front hall of the building. The first floor contained a service corridor, leading from the top of the *Porticus Deorum Consentium* to two floors of eastern strong-rooms. The façade is formed by an arcade with shops or offices, and masks two inaccessible vaulted undercrofts suggestive of two large asymmetrical halls, now vanished, at the level of the upper Corinthian façade, a Flavian restoration.

See Delbrueck, *Hellenistische Bauten in Latium i* (1907), 23-46.

(2) Other *tabularia* in Rome were the Aventine *Templum Cereris*, for plebiscites and *senatus consulta*; *Atrium Libertatis*, the censors' registry of punishments and citizen-rolls; *Aedes Nympharum*, the censors' tax-registry; *Tabularium Caesaris*, for cadastral records; *Tabularium castrense*, for the Imperial household.

(3) Taxation sub-offices (*CIL* vi. 8431).

(4) *Tabularium Caesaris* in provinces for Imperial rescripts, etc. (*CIL* x. 7852).

(5) *Tabularium Caesaris* in provincial capitals for tax-returns, census, imperial domain-land, birth-registration (S.H.A. *Vit. Marc.* 6).

(6) Military *tabularia* in legionary fortresses and frontier forts (*CIL* viii. 2852; vi. 3196).

(7) *Tabularia civitatum* for municipal or cantonal records and local taxation.

See for (2)-(7) O. Hirschfeld, *Die kaiserlichen Verwaltungsbeamten*² (1905), 59 ff., 325; J. Marquardt, *Römische Staatsverwaltung*,² i, ii (1881-4); Mommsen, *Geist. Schrift.* v. 327.

I. A. R.

TACFARINAS, a Numidian, formerly an auxiliary trooper, took to brigandage and stirred up a serious insurrection in Africa (A.D. 17). Despite victories won by three proconsuls in succession, Furius Camillus, L. Apronius, and Q. Junius Blaesus (the last of whom was acclaimed *imperator* by the troops), the elusive enemy prosecuted his depredations until trapped and killed at Auzia by P. Cornelius Dolabella (24).

H. S.

TACHYGRAPHY. (1) GREEK. Diogenes Laertius (*Vit. Xen.* 2. 48) says that Xenophon was the first to use signs to represent spoken words (πρῶτος ὑποσημειώσας τὰ λεγόμενα); but whether this represents anything like systematic tachygraphy is quite uncertain. The same may be said of the word ὀχυγράφος in the LXX version of Ps. xlv. 2. Nothing is really known of Greek shorthand except from papyri and wax-tablets found in Egypt, which give specimens of tachygraphy from the second century A.D. onwards, and portions of manuals from the end of the third century. These show a fully organized system, composed of a syllabary and a (so-called) Commentary, consisting of groups of words, arranged in fours or occasionally eights, with a sign attached to each, which had to be memorized. The tetrads include some element of association (e.g. one sign represents Γανυμήδης, οἶνοχοεῖ, νέκταρ, μισοβάρβαρος), but oftener it is not discernible. Such a system is referred to in Basil. *De Virg.* 31 (Migne, *PG* xxx. 733). The British Museum has a portion of two manuals (Papp. 2561, 2562), and a wax-tablet book with exercises; and this material is supplemented by papyri from Antinoë and elsewhere.

(2) LATIN. According to Plutarch (*Cato Mi.* 23), Cicero introduced shorthand at Rome, and as he refers to it by a Greek name (διὰ σημείων, *Att.* 13. 32) he probably derived it from Greece. The Latin system, which shows affinity with the Greek, is associated with the name of Cicero's freedman, Tiro, and the lists of symbols which have come down to us are known as *notae Tiromianae*, but the medieval representations of them have been elaborated to an extent that would make them useless for actual reporting. They are sometimes used for scholia.

In the ancient systems of shorthand, as in the modern, one sign may have several interpretations, and in order to interpret shorthand records it is necessary to have a clue to the subject, and (often) to remember something of what was said. Thus stock phrases such as ὦ ἄνδρες Ἀθηναῖοι or τί δέῃ μακρολογεῖν were represented by single signs.

The recently discovered material is in H. J. M. Milne, *Greek Shorthand Manuals* (1934); the earlier literature in C. Wessely, *Ein System altgriechischer Tachygraphie* (1895); A. Mentz in *Arch. Pap.* viii. 34; F. W. G. Foat in *JHS.* xxi. 238; V. Gardthausen, *Griechische Palaeographie* (1913), ii. 270-84; E. M. Thompson, *Introduct. to Gr. and Lat. Palaeography* (1912), 71-4. F. G. K.

TACITUS (1), CORNELIUS. We do not know exactly the parentage, year of birth and death, or even *praenomen*, of Tacitus. He was born c. A.D. 55, possibly of North Italian stock, and began his official career under Vespasian. He married Agricola's daughter in 77, and became *praetor* and *XVvir sacris faciundis* in 88 (*Agr.* 9; *Hist.* 1. 1; *Ann.* 11. 11). Away from Rome when Agricola died in 93, he returned to witness three deadening years of Domitian's savagery (*Agr.* 2 and 44). *Consul suffectus* in 97, he pronounced the funeral oration over Verginius Rufus (q.v.), and in 100 led Pliny in prosecuting Marius Priscus for extortion; famous by now for eloquence, he attracted students 'ex admiratione ingenii' (Pliny, *Ep.* 4. 13). He was proconsul of Asia, probably in 112-13 (*AJArch.* xl (1936), 71); a passage in *Ann.* 2. 61 must have been written after 115. That is all.

2. The *Dialogus*, now after much controversy regarded as Tacitan by most scholars, takes rank as his earliest work, composed c. A.D. 80. Purporting to be a discussion on reasons for the decline of oratory, it is written with great charm, skill in characterization, and with some foretaste of T.'s later style. Then came silence till Domitian's death. The *De vita Iulii Agricolae*, published in 98, describes the life of his father-in-law, the larger part being devoted to the scene of Agricola's greatest achievements, Britain. It belongs to a well-known genre, and is frankly laudatory towards its subject and critical of his

jealous master, Domitian. Military and topographical details are subordinated to the depicting of Agricola's character; 'bonum uirum facile crederes, magnum libenter'.

3. To 98, too, belongs the *De origine et situ Germanorum*, a description of the various tribes inhabiting the regions north of Rhine and Danube. Again Tacitus employs a familiar genre, though probably more than one motive impelled him to write. Considering its sources, the account appears careful and reliable. Throughout there is a contrast, sometimes open, sometimes implied, between the robust simplicity of a vast and virile nation and the immorality and corruption of the over-civilized empire threatened by it; 'tam diu Germania uincitur'.

4. These are short monographs. Two longer works narrate imperial history from A.D. 14-96. The first has no manuscript title, but is usually called the *Historiae*: beginning in 69, it presumably ended with Domitian's assassination. Four books and twenty-six chapters of the fifth alone survive, but they give a comprehensive picture of Civil War, containing an extraordinary gallery of ambitious intriguers and incompetent rulers, with one emperor who 'changed for the better', Vespasian. What Tacitus related of Domitian may be gauged from the *Agricola*, and from the portrait of him in 70—'nondum ad curas intentus, sed stupris et adulteriis filium principis agebat' (*Hist.* 4. 2).

5. The second is the *Annals*, a conventional title (cf. *Ann.* 4. 32), for in the First Medicean manuscript the heading is 'ab excessu diui Augusti'. We know of sixteen books, though 7-10 are completely missing, and book 16 breaks off in A.D. 66, before Nero's death. Indeed, the exact number of books in *Historiae* and *Annals* is uncertain: St. Jerome writes as though there were thirty (*Comment. in Zachariam*, 3. 14), but scholars cannot decide whether the *Annals* contained eighteen books and the *Historiae* twelve, or sixteen and fourteen. For each year Tacitus makes a division into affairs concerning the Princes and his provinces, and affairs concerning the Senate and its provinces. Occasionally, for artistic or historical clarity, he oversteps the year's limit, but the reason alleged is characteristic, 'quo requiesceret animus a domesticis malis' (*Ann.* 6. 38). Attempts, by Ross in 1878 and Hocht in 1890, to prove the *Annals* a Renaissance forgery, are easily refuted; we possess in them the genuine Tacitus at the height of his powers.

6. What of the man himself? In composing these works Tacitus could draw partly on previous authors, now non-existent (Aufidius Bassus, Cluvius Rufus, Fabius Rusticus, or Vipstanus Messalla), partly on his own experience. He quotes and chooses between conflicting accounts (*Hist.* 3. 28; *Ann.* 13. 20; 14. 2), and we need not doubt his thoroughness and care (Pliny, *Ep.* 7. 33). Fabia's thesis, that Tacitus always slavishly copied one source, is both unlikely and unacceptable.

7. But his view is also coloured by his own experience. Reacting against the Principate, Tacitus looks back longingly on the 'free' institutions of the Republic ('libertatem et consulatum', *Ann.* 1. 1; cf. 4. 63); the Principate may have benefited the provinces and secured peace (*Ann.* 1. 2; *Hist.* 1. 1), but the overwhelming power thus centred in one man blunted the moral sense of even experienced rulers (*Ann.* 6. 48), and rapidly reduced the ruled to servility and flattery. Thus the Principate tended towards *regnum*, where T. found 'fugas ciuium, urbium eursiones, fratrum coniugum parentum necesse aliaque solita regibus' (*Hist.* 5. 8; cf. *Ann.* 6. 1, and 12. 66) and even Augustus is damned with faint praise, or belauded only for contrast with his worse successors (e.g. *Ann.* 1. 46; 3. 5; 13. 3). Roman *virtus* had stagnated into an inactive and inglorious temper; Augustus had lured citizens into the Principate 'dulcedine otii'; *pax* merely cloaked *ignavia*. The emperors had neglected military glory: Tiberius preferred diplomacy to arms

(*Ann.* 2. 64 and 4. 32); Caligula's campaigns were a farce (*Germ.* 37 and *Hist.* 4. 15); Claudius had merely reconquered Britain (*Agr.* 13); and Nero's crimes had alienated the soldiery (*Ann.* 15. 67). Domitian had been warlike, but in the wrong way, and Tacitus shrinks from enumerating the Roman lives he lost (*Orosius* 7. 10. 4).

8. Nor was the vaunted *pax Augusta* fruitful or prosperous, at least in Rome (*Hist.* 1. 1; *Ann.* 1. 10); what galls Tacitus is the lack of independence and courage among those who should most have shown it. While lower ranks provided shining examples of loyalty and heroism (*Ann.* 13. 44 and 15. 57), most nobles and senators could only cringe to a despot, 'homines ad servitutem paratos' (*Ann.* 3. 65; cf. 14. 13), and though L. Silanus did put up a fight (*Ann.* 16. 9), the 'patientia servilis' of Nero's victims rouses Tacitus' scornful pity (*Ann.* 16. 16). Yet he disapproves the Stoic-minded and their theatrical gestures: his ideal was the prudence of *Agricola* (*Agr.* 42) or of L. Piso (*Ann.* 6. 10).

9. Throughout those eighty odd years, T. discerns the wrath of the gods working, gods more eager to punish than to save (*Hist.* 1. 3; *Ann.* 4. 1; 16. 16). His task is gloomy, to record the suspicions of Tiberius, played upon by informers; Claudius the helpless tool of freedmen or wives; the vanity and vice of Nero—all resulting in baseless accusations and judicial murders. 'Primum facinus novi principatus' (*Ann.* 1. 6) is echoed by 'prima nouo principatu mors' (*Ann.* 13. 1) for the reign of Nero. Given the opportunity of recounting victories won by Germanicus or Corbulo, Tacitus can expand indeed (*Ann.* 2. 18; 13. 39); otherwise he feels a painful contrast with Republican historians—'nobis in arto et inglorius labor' (*Ann.* 4. 32). Better times undeniably had come with Nerva (*Agr.* 3; *Hist.* 1. 1), but he fears that the past century, in his account, will seem a sombre period (*Ann.* 4. 33).

10. To dissipate this feeling of monotony and rivet the reader's attention T. marshals all his resources, forming a style unique and perfectly adapted to purpose. He keeps us continually on the alert. His vocabulary is large and varied: note the different phrases for dying or committing suicide or for 'evening was approaching'. To the classical word Tacitus prefers an older, a simple verb to the usual compound, new forms to hackneyed. Echoes of poetry, subtle reminiscences of Virgil, *Gracisms*, all make their appeal. Words are left uncoupled, grouped in strange and striking order ('tamen' pushed to the end; *Ann.* 2. 57), or thrust into violent prominence.

11. Though Tacitus can elaborate sentences of length and complexity, he prefers (like Sallust) rapidity and shortness; periodic structure is deliberately abandoned. Gone are the temporal clauses of Livy, gone the superlatives of Cicero. Instead we have intensity and brevity, gained by skilful use of Historic Infinitives, or adjectives that become practically Active Past Participles ('gnarus', 'certus', 'dubius'), by omission of verbs, by compression. Doublings or treblings are rare: every noun, every adjective holds its last drop of meaning. So intensely personal is his style that he rarely quotes, save for damning effect—a phrase revealing Tiberius' tortured soul, a brutal joke of Nero, a tribune's bluntness (*Ann.* 6. 6; 14. 59; 15. 67; 16. 4).

12. Throughout shines the quality Pliny noted in Tacitus' speeches, elevation. Tacitus believes in the dignity and moral effect of history (*Ann.* 3. 65). He will not chronicle petty events (*Ann.* 13. 31); his unwillingness to mention spades and shovels (*Ann.* 1. 65), or a garden-cart (*Ann.* 11. 32) leads to circumlocutions recalling French tragedy, but he never drops into mere pomposity; he knows history is a great theme, to be adorned by *fides* and *eloquentia* worthy of it (*Ann.* 4. 34). This consciousness informs his whole manner, whether in comment on nobles who competed at Nero's bidding, 'quos fatis perfunctos ne nominatim tradam, maioribus

eorum tribuendum puto' (*Ann.* 14. 14), or sad reflection on the 'ludibria rerum mortalium cunctis in negotiis' (*Ann.* 3. 18).

13. The style, indeed, is inescapable, making its effect sometimes by long passages, sometimes by sentences, sometimes by one phrase of psychological insight. We may instance Agrippina's murder by her son (*Ann.* 14. 1-9), or the rise and collapse of the Pisonian conspiracy (*Ann.* 15. 48-71); Vitellians and Vespasianists fighting ferociously in the heart of Rome, while onlookers applaud (*Hist.* 3. 82-3), or Germanicus' visit to the Varian camp (*Ann.* 1. 61-2), or the terrible picture of Tiberius' end (*Ann.* 6. 50-1). Great and fatal characters stalk across the stage—Tiberius, Sejanus, the younger Agrippina, Nero—and these are drawn at length, but Tacitus can in a phrase sum up person or situation: Galba, 'capax imperii nisi imperasset' (*Hist.* 1. 49); Vitellius, 'principatum ei detulere qui ipsum non nouerant' (*Hist.* 3. 86); Claudius Sanctus, pusillanimous leader of disgraced troops, 'effosso oculo dirus ore, ingenio debilius' (*Hist.* 4. 62).

14. Always the irony remains keen—'proprium humani ingenii est odisse quem laeseris' (*Agr.* 42), 'accrima proximorum odia' (*Hist.* 4. 70), 'obliuione magis quam clementia' (*Ann.* 6. 14)—or we have Nero's admiral advising him to destroy Agrippina; and after?—'additurum principem defunctae templum et aras et cetera ostendendae pietati' (*Ann.* 14. 3).

15. His bias against the dynastic system is plain; yet his accuracy, though severely probed by modern criticism, can rarely be impugned. Though sometimes an unfavourable interpreter of his facts, he will not blacken even Tiberius or Nero by crediting stupid rumours about them (*Ann.* 4. 11; 16. 6). His picture of capital and court is terrible, but its general truth is incontestable. His gaze is focused upon Rome; when he looks farther he approves the sturdy simplicity of North Italy and the provinces (*Ann.* 16. 5), and can pen a moving appeal for the preservation of the Empire (*Hist.* 4. 74). Though mistrustful of 'civilization' and of its debilitating effects, he never despairs of human nature: even the Civil War produced examples of heroism, loyalty, and friendship (*Hist.* 1. 3), and virtue is not confined to past ages (*Ann.* 3. 55). Napoleon called Tacitus a 'traducer of humanity': from one who spent his powers in annihilating humanity this verdict is interesting, but simply untrue. In independent research and judgement, in essential truth, in the dramatic power and nobility of an enthralling style, Tacitus claims his place among the greatest historians.

16. Yet his survival hangs upon a slender thread. He was little read in succeeding centuries; later, *Orosius* (q.v.) and *Sidonius* (q.v.) appear to know him, and *Iordanes* paraphrases a passage from the *Agricola*. Then darkness falls, though in the ninth century monks at Fulda apparently possessed the early *Annals*, and the *Germania*. Even now we are dependent upon one manuscript (discovered about 1510) for *Annals* 1-6, and upon one manuscript (the Second Medicean, discovered about 1430) for *Annals* 11-16 and *Historiae* 1-5. So near came Tacitus to mortality. See also LITERARY CRITICISM, LATIN, para. 5.

M. P. C.

TACITUS (2), MARCUS CLAUDIUS, was chosen by the Senate to succeed Aurelian in September A.D. 275, being then an elderly senator, already twice consul. Consul for the third time in 276, he marched East, against Persia (?), gained a victory, through Florian, over the Goths in Pontus, but succumbed to murder, or the threat of it, from his own troops at Tyana (c. March). The misgovernment of his kinsman, Maximinus, as governor of Syria, had brought discredit on his rule.

A senator himself of high character and reputation, Tacitus certainly favoured the Senate, but he did not effectively restore its authority or give back to it the commands in the army. After Tacitus and his half-brother, Florian (q.v.), the 'militaris potentia conualuit' under Probus. Tacitus was probably responsible for some salutary reforms, such as forbidding the debasement of metals at the mint, but it was only the hopeful fancy of later historians that painted his reign as a late summer of constitutional government under the Senate.

CAH xii. 311 ff.; Parker, *Roman World*, 212 ff.

H. M.

TAENARUM (Ταίναρον, more rarely Ταίναρος). (1) The central peninsula of south Peloponnesus and its terminal cape, near which stood a Temple of Poseidon. Near the temple, of which scanty traces remain, is a cave, through which Heracles traditionally dragged up Cerberus from Hades. The sanctuary enjoyed a right of asylum (cf. the adventure of Pausanias, *Thuc.* i. 133), and private slaves were manumitted there, before an ephor (*IG* v. 1, 1228 ff.). In the later fourth century the Taenarum district was an important headquarters for mercenaries.

(2) A city on the west coast of the above peninsula, probably founded by Augustus, and a member of the Eleutherolaconian League.

A. M. W.

TAGES, an important figure of Etruscan mythology, child-like in appearance but of divine wisdom. T. was uncarved by a peasant in the fields near Tarquinia and revealed the Etruscan discipline (*libri Tagetici*) to the twelve *lucumones* of Etruria.

Cf. A. S. Pease on *Cic. Div.* 2. 50.

G. M. A. H.

TAGUS (ταγός), the title of the Thessalian head-magistrates, who were elected intermittently to deal with an emergency involving the whole country. In practice, *tagi* usually retained their office till their death, thus securing an advantage over the leaders of rival baronial families. The term *tagus* is avoided by historians apart from Xenophon, but the principal leaders, such as Thorax the Aleud who negotiated the submission to Xerxes, certainly held the *tageia*. Jason (q.v. 2) revived the office in 374 B.C. to legalize his control of Thessaly, but Alexander (5), who claimed the *tageia*, cannot have been legitimately elected. When a new Thessalian League was formed under Theban influence (c. 369), the federal *tageia* ceased to exist, and the principal magistrate was an ἀρχων. A municipal *tageia*, as is attested by inscriptions, survived until Roman times.

E. Meyer, *Theopompus Hellenika* (1909), 218-49; A. Momigliano, *Athenaeum* 1932, 51-3.

H. D. W.

TALOS (Τάλως, Τάλος), perhaps originally a god (ταλῶς is the Sun and Talaïos a Cretan title of Zeus, Hesych. s.vv.), but in mythology the guardian of Crete (originally

of Europa, Ap. Rhod., infra). He is generally said to have been made of bronze by Hephaestus, but animated; for other accounts see Roscher's *Lex.*, s.v. He kept strangers off by throwing stones (Ap. Rhod.), or burned them (Simonides in schol. Plat. *Resp.* 337 a), or heated himself red-hot and then clasped them in his arms (Eustathius on Homer, p. 1893. 6). His vital fluid was kept in by a membrane in his foot; Medea (q.v.) cast him into a magic sleep and cut the membrane, thus killing him.

See Ap. Rhod. *Argon.* 4. 1638 ff., the most circumstantial account, and A. B. Cook, *Zeus* i. 719 ff.

H. J. R.

TALTHYBIUS, Agamemnon's, herald (*Iliad* i. 320). For some reason his name remains familiar in later writings, while his comrade Eurybates (*ibid.*) is forgotten. He was the eponym of a herald-clan at Sparta, the Talthybiadae (see Hdt. 7. 134. 1).

TANAGRA, the chief town of east Boeotia; with a territory extending to the sea, was more closely bound with Attica, with which it had easy connexions, than was the rest of Boeotia (cf. Hdt. 5. 57). It was an early rival to Thebes; after the Persian Wars it probably stood at the head of the Boeotian League (Hcad, *Historia Numorum*, p. 348). In 457 the Athenians were defeated here by the Spartans and their allies, and the battles of Oenophyta and Delium were also fought in this district. In the fourth century Tanagra declined in importance, contributing only one boeotarch to the League, but it flourished in Hellenistic and Roman times (Strabo, p. 403). It is now best known for the lively little Hellenistic terracotta figures, women and groups from daily life, found in its graves. It was the birthplace of the poetess Corinna. The walls are preserved, but little else. See also FEDERAL STATES, para. 3.

Paus. 9. 20, and Frazer, ad loc.

T. J. D.

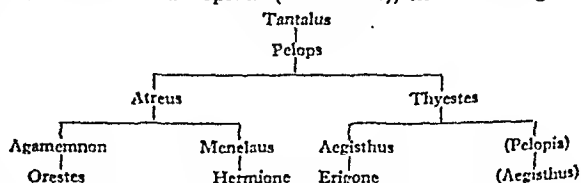

TANAÏS, the river Don, and a city at its estuary. The river was usually regarded as the boundary between Europe and Asia. A trade route to Central Asia, by which Ural gold came to the Black Sea, and Greek textiles were carried as far as Mongolia, probably followed the Tanaïs valley. But the Greeks knew little of the river: Aristotle and Alexander mistook it for a branch of the Jaxartes (q.v.).

The city of Tanaïs was probably founded by Panticapaeum c. 500 B.C. (to judge by the fairly rich finds beginning at that date). In the first century A.D. it was rebuilt higher up the river, near modern Rostov, but it lost its former prosperity.

E. H. Minns, *Scythians and Greeks* (1913), 566-9.

M. C.

TANTALUS (Τάνταλος), in mythology, king of Sipylus and the neighbourhood in Lydia, son of Zeus and Plutō (*Πλουτώ*), Hyginus, *Fab.* 82. 1; the name is variously corrupted in sundry authors, see Scheuer in Roscher's *Lexikon* v. 75. 26 ff. Plutō being a minor being of the same kind as Plutus (q.v.), this would seem one of the numerous variants of a union of the sky-father with the earth-mother. It is natural, therefore, that their child should be proverbially wealthy (Ταντάλου τάλαντα, Anacreon in Photius, s.v., is an older equivalent of 'the riches of Croesus') and king of a fertile district. He is the ancestor of the Pelopidae (see PELOPS), the line being

and also father of Niobe (q.v.). His chief legends deal with his crime and its punishment. For one form of the former see PELOPS; there are various others, one of the

best known being that he stole the food of the gods, to whose society he had been admitted, and gave it to mortals (Pindar, *Ol.* 1. 60 ff.). All agree that in some way he abused the privileges which he had been granted. But he was immortal (Pindar, *ibid.*), having eaten divine food, and so his penalty must be everlasting, for he could not be killed. In Homer (*Od.* 11. 582 ff.) and in most authors (it became almost proverbial for 'tantalizing' in our sense, see Plato, *Prt.* 315 c) he is hungry and thirsty; he stands in water up to his chin, with fruit-laden trees over his head, but when he tries to drink, the water disappears, and if he reaches for the fruit, the wind blows it away. Pindar (*ibid.* 57 ff.) says a great stone is hung over his head, always threatening to fall, so that the penalty is everlasting fear. Euripides (*Or.* 4 ff.) follows this version, putting Tantalus in the air, not, as usual, in Tartarus.

H. J. R.

TANUSIUS GEMINUS, historian mentioned in Suet. *Iul.* 9, and for his 'ponderosi' *Annales* in Sen. *Ep.* 93. 11, where 'seis . . . quid uocentur' supports the identification of T. with Catullus' 'Volusius' from Padua (36. 1 and 18-20; 95. 7). He may have written *Annales* in verse before his *historia*.

Peter, *HRRel.* 49 ff.

J. W. D.

TAPROBANE (also **Palacesimundu**; later **Salice** and **Sielediba**), Ceylon. First described by Onesicritus and Megasthenes (c. 325-300 B.C.) as an island south of India, it was believed by many to be a large land-mass projecting towards Africa (Strabo 15. 690-1; *Peripl. M. Rubr.* 61). It was rediscovered by accident c. A.D. 50 (Plin. *HN* 6. 84 ff.); Ceylonese envoys visited Rome, and Greek traders henceforth frequented the island. Yet Ptolemy (*Geog.* 7. 4. 1 ff.), while giving considerable detail and the correct shape, made it fourteen times too large. Many Roman coins, dating from the third century, have been found in Ceylon, though western trade was now conducted immediately through the Asumites.

Warmington, *Indian Commerce*, esp. 117 ff.; H. Codrington, *Ceylon Coins* (1924); Still, *Journ. R. Asiatic Soc.*, Ceylon Branch xix.

E. H. W.

TARAXIPPOS, see **GLAUCUS** (3).

TARCHON, founder of Tarquinia and, according to some authorities, of the Etruscan dodecapolis. T. is the son of Tyrrhenus, the legendary leader of the Etruscans on their migration from Lydia (Strabo 5, p. 219), and an ally of Evander (Verg. *Aen.* 8. 506). He is shown on an Etruscan mirror in Florence, watching the examination of a liver for omens (E. Q. Giglioli, *Arte etrusca*, 1934, pl. 299).

G. M. A. H.

TARENTINI LUDI, see **SECULAR GAMES**.

TARENTUM (*Tápas*), a leading city of south Italy. Situated on an isthmus between a sheltered bay and a tidal lagoon, it was the first port of call for westward-bound ships from Greece, and it derived wealth from the fisheries and the purple-mussels of the lagoon. Its coast was good orchard country, and its hinterland provided the best sheep-downs in Italy.

Mycenaean and geometric pottery on the site prove unbroken intercourse with Greece from c. 1200 B.C. The first permanent Greek settlement was made c. 700, when refugees from Sparta, the Partheniae, founded a colony. Although of Spartan origin, Tarentum had a normal constitutional development. Its early aristocracy gave way (c. 475) to a long-lived democracy, in which the fishermen played a predominant part. The territorial expansion of Tarentum was long delayed by the resistance of the Messapian tribes; c. 475 a Tarentine army suffered a resounding defeat at their hands. But the decline of Croton after 450 gave Tarentum ascendancy among the Greeks of south Italy; in

433-432 it founded a colony at Heraclaea (q.v. 1), which became the seat of a league of Italiote Greeks. Under the administration of the philosopher Archytas (q.v.) Tarentum reached the height of its prosperity in the fourth century. Its textile industry was now supplemented by ceramic manufactures of Attic style, and finds of Tarentine coins in the Po valley prove the growth of its trade in the Adriatic. Its wealth was reflected in a magnificent series of gold coins. But after Archytas' death the democracy became engrossed in its festivities, and it relied increasingly on mercenary captains who served it indifferently. King Archidamus II of Sparta was defeated by the Lucanians (338); Alexander I of Epirus overcame the Lucanians, but quarrelled with his employers (334); Cleonymus of Sparta sustained defeat and quarrelled into the bargain (303); finally, Pyrrhus of Epirus abandoned Tarentum to the Romans.

The Tarentines, concerned at the advance of the Romans into south Italy and towards the Adriatic, had pledged them by treaty (334 B.C.?) not to send warships into the Gulf of Otranto. In 282, when Rome assumed protectorate over the city of Thurii and sent a fleet into Tarentine waters, they forced on a war, relying upon assistance from Pyrrhus. The latter, after some early victories over Rome, retired from Italy in 275 and withdrew his garrison in 272. Tarentum obtained a lenient treaty from Rome, and one of its war captives, Livius Andronicus (q.v.), became the founder of Latin literature. In 213 the city fell to Hannibal by treachery; recaptured by Rome in 209, it was thoroughly plundered. This disaster, and the foundation of a Latin colony at the rival port of Brundisium, led to its decay. Attempts by Gaius Gracchus and by Nero to revive it with Italian settlers merely led to its transformation into an Italian town. In 37 B.C. Antony and Octavian renewed the Second Triumvirate at Tarentum. Little is heard of the city thereafter.

Strabo 6. 279-82. E. Cicotti, *Storia della Magna Grecia* (1927-8), i, ch. 4, ii, ch. 8; A. J. Evans, *The Horsemen of Tarentum* (1889; coinage); P. Willeumier, *Tarente, Des Origines à la conquête romaine* (1939).

M. C.

TARPEIAN ROCK. The site of this famous cliff (*rupes*), whence murderers and traitors were thrown, is located by Dionysius (7. 35. 4; 8. 78. 5) as overhanging the Roman forum, while Varro (*Ling.* 5. 41) and others, equating *saxum Tarpeium* with *rupes*, place it close to the temple of Jupiter Capitolinus. Lucan (3. 154) connects it with the temple of Saturn. This leads to the conclusion that the cliff was at the south-west corner of the Capitol.

See H. Jordan, *Topographie der Stadt Rom*, i. 2 (1871), 127-31.

I. A. R.

TARQUINII was the oldest of Etruscan cities and head of the Confederation of Twelve. Its name is derived from the family of Tarchon (q.v.) which gave two kings to Rome. Situated in the Tuscan Maremma about sixty miles from Rome, the city stood on a high plateau, five miles from its port, Graviscae. The extensive cemeteries, though looted for generations, have yet furnished a valuable local museum. But the glory of Tarquinii is its series of painted tombs, illustrating Etruscan life and religion. Often at war with Rome (e.g. 359-351 and 310-308), Tarquinii lost its independence in the third century B.C.

M. Pallottino, *Tarquinii* (1937).

D. R. MacL.

TARQUINIUS (1) PRISCUS according to tradition was the fifth king of Rome (616-579 B.C.) and the son of Demaratus of Corinth, who is said to have settled at Tarquinii in Etruria. Tarquinii was probably an historical figure, though the stories of his relations with his wife Tanaquil and with Graia Caecilia, of his Greek descent, and of his coming to Rome from Tarquinii are probably late inventions. His Etruscan origins, however,

are indirectly proved by the story of Mastarna (q.v.), and confirmed by the Roman belief that Tarquin brought to Rome Etruscan customs, cults, and craftsmen. The foundation of the temple of the Capitoline Triad and other public works are attributed to Tarquin, and undoubtedly this building activity belongs to the period when he is said to have been king. His wars against neighbouring States also are probably historical, but they betray so much similarity with those fought by Tarquinius Superbus as to suggest that Priscus and Superbus are merely duplicate names for the same king.

H. Last, *CAH* vii. 387 ff.; F. Schachermeyr, *PIV*, s.v.; A. Blake-way, 'Demaratus', *JRS* 1935, 129 ff. P. T.

TARQUINIUS (2) SUPERBUS. The historicity of the last king of Rome (traditionally 534-510 B.C.) is probably proved by the treaty between Rome and Gabii ascribed to him, which survived in the temple of Semo Sancus till the time of Augustus—(the forgery of such a document would be unintelligible). But, as the name 'Superbus' would not appear in its text, the treaty proves only that a King Tarquinius existed, thereby confirming the suggestion that the two Tarquins are merely a duplication of the same king. The records of the Tarquinian sovereignty were later embellished by tradition in order to justify the surname of *Superbus* and to explain the fall of monarchy, popular legends (e.g. of Lucretia, q.v.) being combined with tales of probable or indisputable Greek origin, such as Tarquinius' conspiracy against Servius Tullius and the decapitation of the tallest poppies at Gabii. For the story of his fall see *LUCRETIA*, *BRUTUS* (1).

H. Last, *CAH* vii. 393 ff.; F. Schachermeyr, *PIV*, s.v. P. T.

TARQUINIUS (3) COLLATINUS, LUCIUS, was traditionally the husband of Lucretia (q.v.). When her story was connected with the fall of the monarchy, Collatinus was regarded as a founder of the Republic, and one of the first consuls (509 B.C.). The legend of his consulship also served to harmonize the double tradition about the dedication of the temple of the Capitoline Triad, which was associated both with a Tarquin and with the beginning of the Republic: a consul Tarquinius replaced his royal namesake.

P. T.

TARQUITIUS PRISCUS is known to us only from a few scattered references. He is mentioned by Pliny, together with Caecina, as one of his sources for 'Etruscan lore', though it is not certain that Pliny had direct access to his writings. Macrobius (e.g. *Sat.* 3. 7. 3) quotes from a book of his, *Ostentarium*, a translation of an Etruscan work on prognostication, and from his *Prognostication from Trees*. The evidence seems to indicate that he was an important intermediary for the transmission of Etruscan learning to the Romans.

A. L. P.

TARRACO (nowadays *Tarragona*) was an Iberian settlement, perhaps the port of, or settled by, the neighbouring Cissa (cf. Cesse on coins). It was used as headquarters for the Scipios in 218 B.C. The phrase 'opus Scipionum' (Pliny, *HN* 3. 21) applies to the second layer of the town walls, but this may be Iberian. Overshadowed at first by Carthago Nova, Tarraco later became the first city of Roman Spain. Caesar or Augustus, following his wishes, gave it colonial rank (Colonia Victrix Triumphalis Iulia) and it became the capital of Hispania Tarraconensis. An altar to Augustus and a temple to *divus* Augustus indicate its support of the provincial imperial cult. After its sack by the Franks in A.D. 264 Tarraco was refortified, and survived into the Visigothic period. Coins, objects of art, numerous inscriptions, some 200 yards of aqueduct, and the so-called 'Tomb of the Scipios' remain, but only traces of villas, temples, and buildings. Tarraco, situated at the junction of the military highway (Via Augusta) from north to south and

the road to Ilerda, was primarily a military and administrative centre, with no extensive economic interests, though its wine was famed for its quality.

S. M. de Navaseués, *Tarragona* (1929); A. Fick, in *Arch. Anz.* 1933, on the walls; G. S. Vilaro, *Rivista di Archeologia Cristiana*, 1937, on extensive necropolis. J. J. van N.

TARSUS. Though Tarsus later claimed Triptolemus, Perseus, or Heracles as its founder, it was probably a native Cilician town. It was the capital of the Cilician kings and of the Persian satraps, but the Greek coins which it issued during the fifth and fourth centuries B.C. show that it was early hellenized and autonomous. It was renamed 'Antioch on the Cydnus' by Selcucus I or Antiochus I and issued municipal coins under this name from Antiochus IV's reign; on its later autonomous coins it used its old name. Annexed by Pompey in 66 it was granted freedom and immunity by Antony; it was the capital of the province of Cilicia from c. A.D. 72. Its constitution was timocratic, a fee of 500 drachmas being charged for admission to citizen rights. This disfranchised the mass of the population, the workers in the linen industry, on which the city's prosperity was based. During the first century B.C. Tarsus was the seat of a celebrated philosophical school.

W. Ruge, *PIV* iv A (1932), 2413-39.

A. H. M. J.

TARTESSUS, a region of south Spain, round the middle and lower Baetis (*Guadalquivir*). The name was also given to the river and to a town at its mouth. Probably visited by the Minoans, it was temporarily occupied by the Phoenicians. C. 650 B.C. the Samian Colaeus was driven there; c. 600 Phoenicians came, making friends with the Tartessian ruler. The trade of Tartessus with Phoenicians and Carthaginians and (in tin) with Brittany and south-west Britain made it proverbially wealthy. C. 500 the town was probably destroyed by the Carthaginians. Geographic writers confused it with Gades. Later poets used Tartessus of all Spain or all west Europe. Tartessus was probably the Biblical Tarshish.

Hdt. i. 163, 4. 152, 196; Strabo 3. 148-51; Mela i. 2. 6; Avienus, *Ora Maritima* 224 ff. A. Schulten, *Tartessos* (1922), and in *PIV*, s.v. E. H. W.

TATIUS, TITRUS, a Sabine king, who after the Romans had carried off the Sabine women is said to have captured the Capitol; after the women had effected a reconciliation, Tatius and Romulus ruled jointly over the two peoples. Tatius probably was a king of Rome, as there is evidence that he enlarged the city and established several cults. The suggestions that he was the eponymus of the Roman tribe Titienses, or that his connexion with Romulus was invented as a precedent for collegiate magistracy are equally uncertain.

P. T.

TAURISCUS (1), an anomalist grammarian, pupil of Crates (q.v. 3) of Mallos, first used *τρόπος* (trope) as contrasted with *κυριολεξία*: cf. Sext. Emp. *Math.* i. 248 f.

TAURISCUS (2) (1st c. B.C.), sculptor, son of Artemidorus, of Tralles. Works (owned by Asinius Pollio): 1. Hermecrotes, probably a pair of herms with bodies and heads of Erotes. 2 (with his brother, Apollonius). Marble group from Rhodes of Zethus, Amphion, Dirce, and the bull, inspired by a painting and by earlier sculpture. The Farnese bull from the baths of Caracalla (Winter, *KB* 357. 1) is a copy with the added figure of Antiope, etc.

T. B. L. W.

TAUROBOLIUM, see CYBELE.

TAUROMENIUM (*Ταυρομένιον*: nowadays *Taormina* with beautiful ancient theatre), was founded in eastern Sicily c. 403 B.C., allegedly by Siculi, on a hill overlooking Naxos (q.v.), which Dionysius had destroyed. Dionysius'

mercenaries soon expelled the Siculi; also Naxian refugees settled here (358) (reputedly led by Andromachus, whose role his historian son Timaeus has doubtless exaggerated). Becoming thus a Greek city, Tauromenium quickly prospered. Its successive masters were Timoleon, Agathocles (who exiled Timaeus), Tyn-darion, and Hieron of Syracuse. When Hieron died during the Second Punic War, Tauromenium submitted to Rome and became a favoured *civitas foederata*. The Servile War (c. 133) and Sextus Pompeius' operations (36) damaged it severely; but becoming an Augustan *colonia* it flourished under the Empire.

Diod. bks. 14-16; Strabo p. 268 (confused); Cic. *Verr.* 2. 160; 3. 13; 5. 49; App. *Sic.* 5; *BCiv.* 5. 103, 105, 109, 116. J. Bérard, *Bibliogr. topogr.* (1941), 111. E. T. S.

TAURUS MONS, properly the mostly well-wooded heights (average 7,000 feet) beginning in south-west Asia Minor, and continuing along the Lycian coast and through Pisidia and Isauria to the borders of Cilicia and Lycaonia. It then divides into: (i) Antitaurus, apparently the heights going north-east through Cappadocia (Mons Argaeus) and Armenia (Mons Capotes) towards the Caucasus; (ii) Abus or Macis (Massis), through Armenia towards the Caspian, keeping the name Taurus and sending southwards Mons Amanus (q.v.) and (beyond the Euphrates) Mons Masius. There were subsidiary ranges south of the Euphrates, and Mt. Zagrus separating Media from Assyria and Babylonia. The name Taurus was extended to include not only the heights of north Iran, but also the Paropamisus (*Hindu Kush*) and Emodus or Imaus (*Himalayas*); and was continued by hearsay to the Eastern Ocean at 'Tamus Headland'. The whole range was regarded as the backbone of Asia, and along it Diacarchus (c. 300 B.C.) fixed for geographers a parallel or median in cartography, dividing the land mass into the cool and warm regions. E. H. W.

TAXES, *see* FINANCE, GREEK, and FINANCE, ROMAN.

TAXILES, i.e. 'king Taxila', his personal name being Omphis (Āmbhi), king of the country between the Indus and the Jhelum with his capital at Taxila. From fear of his neighbour Porus he welcomed Alexander; Taxila became Alexander's advanced base, and Taxiles fought for him against Porus. At first Taxiles was subjected to the Macedonian satrap Philippos; after Philippos' murder he ruled nominally as Alexander's governor but soon in complete independence. By 312 B.C. at latest the Taxila kingdom had become part of Chandragupta's empire. W. W. T.

TE DEUM LAUDAMUS, *see* NICETA OF REMESIANA.

TECHNOPAIGNIA, poems intended to show the author's skill, especially by the shape which they make on the page. This art was popular at the beginning of the third century B.C., which produced Simmias' *Axe*, *Wings*, and *Egg*, Theocritus' *Pipe*, and Dosiadas' *Altar*. C. M. B.

TEGEA lay in the south-east Arcadian plain, across the roads from Sparta to the Argolid and the Isthmus. In this exposed position it developed politically before the other Arcadian towns. C. 550 B.C. Sparta came to terms with Tegea after a long war; and for two centuries it followed the Spartan lead, though at times unwillingly, for the Tegeans were tough fighters (cf. Hdt. 9. 26). It was a favourite place of residence for Spartans and other exiles (Leotyehidas; Micythus of Rhegium; King Pausanias). C. 471 Tegea revolted and joined Argos, but submitted after a defeat (*Anth. Pal.* 7. 512; Hdt. 9. 35). Later, out of hostility to Mantinea (q.v.), Tegea was pro-Spartan. She looked unfavourably on the foundation of Megalopolis.

The temple of Athena Alca, burnt down in 395, was rebuilt with great magnificence, with Scopas as architect and sculptor (Paus. 8. 45. 5).

Ancient authorities: *IG* v. 2, 1 ff. V. Bérard, 'Tegée et la Tégéatide', *BCH* 1892, 529 ff.; 1893, 1 ff.; Hiller von Gaertringen, *PIV*, s.v. 'Tegea'; C. Dugas and others, *Sanctuaire d'Alca Athéna à Tegée* (1924); *BCH* 1921, 335 ff. (older temple). T. J. D.

TEIRESIAS, *see* TIRESIAS.

TELAMON, in mythology, brother of Peleus (q.v.). On his banishment he settled in Salamis, and as a reward for helping Heracles against Troy received Hesione (q.v.) as his slave-concubine. He was a stern father to her son Teucer (q.v.), and on the latter returning from Troy without Aias (q.v.), Telamon banished him (Eur. *Helena*, 91 ff.). For his hero-cult see, e.g., Herodotus 8. 64. 2. H. J. R.

TELCHINES (*Τελχίνες*), semi-divine beings living in Rhodes and skilled in all manner of metal-work, therefore also in magic and consequently dangerous, mischievous, and having the Evil Eye. Our accounts of them are late and contradictory, but agree more or less in the above points, and also that they were finally destroyed by one of the greater gods, Zeus, Poseidon, or Apollo, or at least driven from Rhodes. They have a certain resemblance to the dwarfs or gnomes of northern European mythology.

See especially Strabo 14. 2. 7, pp. 653-4; Eustathius ad *Iliad*. p. 771. 55 ff. (from Strabo and Suetonius); Suidas, s.v.; more in Friedländer in Roseher, s.v., with literature; Herter in *PIV*, s.v. *See also* MAGIC, 4. H. J. R.

TELECLIDES (fl. c. 450-420 B.C.), writer of Athenian comedy, won eight victories. His *Ἀμφικτύονες* depicts the Golden Age, the *Πρυτάνεις* the peace and luxury of the period succeeding the Persian Wars. He attacked Pericles (frs. 42-4).

FCG ii. 361 ff.; *CAF* i. 209 ff.; Demiańczuk, *Suppl. Com.* 86. M. P.

TELEGONIA, *see* EPIC CYCLE.

TELEMACHUS (*Τηλέμαχος*), son of Odysseus and Penelope (qq.v.). He is prominent in the *Odyssey*, where his character develops throughout those parts of the poem in which he appears. At first he is an untried youth, a good and dutiful son but timid and unenterprising. At the behest of Athena he bids his mother's suitors depart, and when they will not, still with her help he takes ship, goes to the mainland, and then inquires after his father, first from Nestor and then from Menelaus (*Od.* 1-4). Athena warns him to return home and sail by a different route, since the one by which he came is beset by the suitors, who plan to kill him. He does so, and on the way takes the fugitive prophet Theoclymenus aboard. He shows from now on more energy and resource, even before meeting his father (*Od.* 15-16. 153); and, having met him, acts as an intelligent and even enterprising helper, astonishing his mother by taking command of the house (21. 343 ff.) and fighting valiantly against the suitors (22. 91 ff.).

Outside Homer he appears in a few episodes. Palamedes, to detect Odysseus' feigned madness, put Telemachus, then a baby, in the road of his father's plough (Hyginus, *Fab.* 95. 2). After his father's death he married Circe (q.v.), *Telegonia* (in Proclus). H. J. R.

TELEMUS (*Τήλεμος*), in mythology, a prophet who foretold to Polyphemus the Cyclops that Odysseus (q.v.) should one day blind him; *Od.* 9. 507 ff.

TELEPHUS (1) (*Τηλέφος*), in mythology, son of Heracles (q.v.) and Auge, daughter of King Alceus, the eponym of Alca in Arcadia. She bore him in a shrine of Athena; a pestilence ensued, and Alceus when he

discovered the matter had the child exposed and gave Auge to be sold overseas. She came into the possession of Teuthras, king and eponym of Teuthrania in Mysia, who married her; the child was suckled by a hind and picked up by shepherds, who called him Telephus (as if from *θηλάν*, to suckle, and *ελαφος*, a deer or hind; Apollod. 2. 146). In the version preserved by Hyginus (*Fab.* 99. 3) Auge was adopted by Teuthras, who was childless. For some reason (accounts vary in different authors) Telephus when he grew up went to Mysia; here, according to Hyginus' story (very doubtfully traced to Sophocles), Auge was given him in marriage, and they discovered their relationship at the last moment. At all events he became king of Mysia, and here joins with the Epic tradition (post-Homerie), the first part of his story being apparently Tragic. In the *Cypria* the Greeks on their way to Troy mistook Teuthrania for it; Telephus resisted them and was wounded by Achilles. The wound would not heal, and he (at least according to Euripides, *Telephus*) made his way to the Greek camp at Aulis and in accordance with an oracle asked Achilles to cure him; this was done by applying the rust of the spear, for the oracle had said that the wounder should be the healer. He then guided the Greeks to Troy. See further Schmidt in Roscher, s.v. H. J. R.

TELEPHUS (2) of Pergamum (2nd c. A.D.), a Stoic grammarian, teacher of Verus, wrote on Homer, on the history of literature and of scholarship, on bibliography and antiquities, and on *Attic Syntax* (5 books); he compiled an alphabetical lexicon of things in common use, and an *Ὠκυπόκιον* (in 10 books) of adjectives for the aid of writers and orators. His works are lost. P. B. R. F.

TELES (*Τέλης*) (*fl.* c. 235 B.C.), Cynic philosopher, probably of Megara, is the oldest of the many authors of Cynic or Stoic *διατριβαί* (short ethical discussions), frs. of whose works have been preserved (in his case, in the pages of Stobaeus). His *διατριβαί* have no claim to philosophical distinction; they simply commend the Cynic way of life in popular language; but he is interesting because of his references to earlier writers like Bion of Borysthenes, Stilpon, and Crates the Cynic.

Ed. O. Hense² (1909). *PW* v A. 375.

W. D. R.

TELESILLA (*Τελέσιλλα*), Argive poetess of the fifth century B.C., famous for arming the women of Argos after its defeat by Cleomenes (*Hdt.* 6. 76 ff., *Polyaen.* 8. 33). Nine fragments of her work survive, and seem to come from Hymns, especially to Apollo and Artemis, with whom six are concerned. The Telesilleion (see *METRE*, GREEK, III (9)) or accephalous glyconic is called after her. She seems to have written mainly for women (*Paus.* 2. 20. 8). An Epidaurian Hymn to the Mother of the Gods ascribed to her seems to be a later imitation.

FRAGMENTS: E. Diehl, *Anth. Lyr. Graec.* ii. 61; J. M. Edmonds, *Lyra Graeca* ii. 236-45.

CRITICISM: U. von Wilamowitz-Moellendorf, *Textg. d. gr. Lyr.* (1900), 76; P. Maas, *Epidaurische Hymnen* (1933), 134-41.

C. M. B.

TELESILLEION, see *METRE*, GREEK, III (9).

TELESINUS, see *PONTIUS*.

TELESPHORUS (*Τελεσφόρος*), a child-god associated with Aselepius (q.v.). He is commonly shown in art, but seldom mentioned in literature; his name occurs on several inscriptions in his honour, however.

See Schmidt in Roscher, s.v.; Schwen in *PW*, s.v.

H. J. R.

TELESTES, dithyrambic poet of Selinus (*Ath.* 616 f, *Diod. Sic.* 46. 6), won victory at Athens 402/1 B.C. (*Marm. Par.* 79). Titles of his Dithyrambs are *Argo*, *Asclepius*, and *Hymenaeus*, of which in all four fragments survive. The comedian Theopompus referred to him (*Ath.* 501 f).

In style and music he resembled Timotheus and Philoxenus (*Dion. Hal. Comp.* 132). Alexander read him (*Plut. Alex.* 8), and the tyrant Aristarchus of Sicily put up a statue to him (*Plin. HN* 35. 109).

E. Diehl, *Anth. Lyr. Graec.* ii. 153.

C. M. B.

TELETE (*τελετή*). Being related to *τελεῖν* as, for instance, *ταφή* to *θάπτειν*, this word properly means no more than 'accomplishment', 'performance', which suits its very rare non-sacral use (perhaps only *Batrachom.* 303, where it is equivalent to the usual Epic *τέλος*). But from a comparatively early date it was specialized (it does not occur in any sense earlier than Pindar) to mean the accomplishment of a religious or quasi-religious ceremony. So Pindar, *Ol.* 10. 52, uses it of the first celebration of the Olympic Games by Heracles; *Pyth.* 9. 97 and *Nem.* 10. 34, of Athenian festivals including athletic contests; *Ol.* 3. 40, of the celebration of *theoxenia* (q.v.). Only in the last case is the rite purely religious. In Euripides (*Aeschylus* and *Sophocles* use only *τέλος*) it repeatedly means a rite, and perhaps especially one somewhat out of the ordinary, as those of Dionysus, *Bacch.* 22, or any orgiastic ceremonies, *ibid.* 73. Aristophanes uses it for rites of any kind, as *Pax* 418-20. But there seems to have been a growing tendency about this time to use it especially of mystic ceremonies; thus, Herodotus employs it in speaking of those of Demeter and Dionysus, Andocides (1. 111) of the Eleusinian Mysteries, while it is a favourite word of Plato to signify an initiation. After Alexander this tendency is accentuated, the word very frequently meaning a rite supposed to contain some hidden philosophic or gnostic meaning. It also can signify a magical or supernatural action or even force. This finally develops, especially in Philon of Alexandria, into the sense of 'inner meaning', even 'allegorical interpretation'.

C. Zijdeveld, *Τελετή; Bijdragen tot de kennis der religieuze terminologie in het Grieksch* (1934).

H. J. R.

TELLUS, the Roman earth-goddess, probably very old, though her temple dates only from 268 B.C. (Platner-Ashby, p. 511). For the question of Greek influence on her ritual see F. Altheim, *Terra Mater* (1931); St. Weinstock in *PW*, s.v. 'Terra Mater'. She is associated in cult with Tellumo (Varro in August. *De civ. D.* 7. 23); with Altor ('Feeder') and Rusor ('Ploughman?'), *ibid.*; perhaps with the doubtful Tellurus (Mart. Capella 1. 49). No festival is named after her and she has no flame; but she is the deity concerned in the *feriae sementivae* (Ovid, *Fasti* 1. 657 ff., whereon see Frazer); the *Fordicidia* of 15 April (*ibid.* 4. 629 ff., whereon see Frazer); the offering, a cow in calf, is typical for powers of fertility; and the sacrifice of the *porca praecidaneae* (Varro in Nonius, p. 163 M., Gellius 4. 6. 8, who adds Ceres), a sin-offering for neglect of rites, especially those of the dead.

See further Weinstock, *loc. cit.*

H. J. R.

TEMENOS (*τέμενος*), in Homeric usage, signifies either a king's or a god's domain, an area marked off and assigned to his use. In later times it is nearly always used of a god's domain.

In the narrower sense it is the sanctuary (*ιερόν*) or precinct (*περίβολος*), the consecrated and enclosed area surrounding the god's altar, which was the centre of worship and the only indispensable cult structure. It usually included a temple also, whose primary purpose was to house the image and votive offerings. Larger precincts, like Apollo's at Delphi, or the Altis at Olympia, also enclosed the treasuries built to house the offerings of a single city, sacred groves, statues, theatres, and the temples of associated deities. The rules governing the sanctity of precincts varied from cult to cult; entrance was sometimes forbidden except to certain persons at

certain times. In most cults whoever entered the precinct had to be purified first. The Roman *fanum* or *templum* (in the original sense) corresponds to *temenos* in this narrower meaning.

In the broader sense the *temenos* is all the land that belongs to a god's cult. Some cults owned large areas of forest, pasture, cultivable land, and even factories and fisheries, from which they received revenues. Though sometimes cultivation of the god's domain was forbidden, it was usually worked either by the god's slaves or by contractors.

ANCIENT SOURCES: see *SIG* 977-94, and many of the inscriptions in Prott-Ziehen, *Leges Græcorum sacræ e titulis collectæ* (1896-1906) for cult-laws relating to this subject. Modern Literature: P. Stengel, *Griechische Kultusaltertümer* (1920), 17-21; A. Fairbanks, *Handbook of Greek religion* (1910), 65-74. For Roman religion see G. Wissowa, *RE* 467-79. J. E. F.

TEMENUS (Τήμενος), (1) king of Stymphalus, founder of the cult of Hera as Maid, Wife, and Widow, see *HERA*, *ARCADIA*; Paus. 8. 22. 2. (2) Son of Phegeus king of Psophis; he and his brother Axion murdered Alcmaeon (q.v.), Paus. 8. 24. 10. (3) One of the Heraclidae (q.v.; exact genealogy uncertain). After taking a prominent part in the Return of the Heraclidae, he got Argos for his portion of the conquered land. He had a daughter Hyrnetho, and favoured her husband Deiphontes (q.v.) above his own sons, who therefore murdered their father. The people then decided that Deiphontes and Hymetho should be king and queen (see *Apollod.* 2. 172 ff.). One of Temenus' sons (Perdiccas, according to *Hdt.* 8. 137; Archelaus, *Hyginus, Fab.* 219; the latter account is somehow connected with Euripides, *Archelaus*) founded the royal house of Macedonia.

See further O. Waser in *Roscher's Lex.*, art. 'Temenos'. H. J. R.

TEMPE, a narrow valley, nearly five miles in length, in northern Thessaly, through which the Peneus flows between the massifs of Olympus and Ossa. The gorge, which was caused by erosion and not, as Greek tradition maintained, by an earthquake, was strategically important, since the principal route to Macedonia could here be closed by a very small force. In 480 B.C. the Greeks sent troops to hold Tempe against Xerxes, but they evacuated it owing to distrust of the Thessalians. Tempe was the scene of operations in 336, when Alexander overcame Thessalian opposition, and in the Third Macedonian War.

H. D. W.

TEMPLE. Greek temples, except circular ones (usually dedicated to Asclepius), were primarily of uniform type, a rectangular chamber (*naos*, *cella*) containing the image of the deity, with doorway at east end and porch (*pronaos*) produced by thrusting forward the side walls of the cella; there was sometimes a rear porch (*opisthodomos*, *posticum*) in addition. This type of building, considerably elongated, and having a surrounding verandah of columns (*peripteros*, *pteron*, peristyle) has been traced back to c. the tenth century B.C. By second quarter of sixth century (Heraeum at Olympia even earlier) it became established, and in that century one Doric and two Ionic temples attained an area of over 60,000 sq. ft. Most small temples were non-peripteral, the cella being exposed, with a porch at one end or both. Usual varieties of porch arrangement are (a) 'Distyle-in-antis' (2 columns between ends—*antae*—of side walls); (b) 'Prostyle-tetrastyle' (4 columns standing clear of *antae*); (c) 'Prostyle-hexastyle' (6 columns do. do.). The great majority of peripteral temples were hexastyle, with 6 columns at each end and 12 to 14 on flanks.

As roof support was the chief structural problem, the larger temples had a single or (usually) double row of columns in the cella, but some of the largest temples may have been 'hypæthral', i.e. with an unroofed (or partially unroofed) cella. The larger Ionic temples of Asia Minor were usually 'dipteral', with a double row

of columns in the peristyle; 'pseudo-dipteral' temples (e.g. Artemis, Magnesia) having a similar position for the outer row of columns and the inner row omitted. At Ephesus, Samos, Sardes, and Didyma the entrance end was further emphasized by increasing the depth of the porch and providing an avenue of columns. The peripteral plan greatly increased the size of the form common to all temples and unified the noble simplicity of the main idea—an unbroken rectangle having a simple low-pitched roof and a gable (pediment) at each end, the whole governed by the strong horizontal lines of stylobate and entablature (see *ARCHITECTURE*). No original example of a normal Greek Ionic temple exists; there are several fairly complete Doric ones, but the marble roof slabs, the decorations (*acroteria*) above the pediments, the doors or grilles which closed the entrance, and the colouring of the entire structure—chiefly concentrated on the frieze, the cresting (*simā*) of the cornice, and the ceilings—must be imagined. The Temple of Poseidon, Paestum, and the Theseum, Athens, give the best complete impression. Buildings which contained such masterpieces as the Athena Parthenos and the Zeus at Olympia must have been magnificent inside: the flat ceilings of marble or wood panels probably admitted light, borrowed from special roof slabs in prepared positions.

Roman temples closely resembled Greek ones in external form and treatment, but the Corinthian Order, with steeper pediments and richly carved friezes, was generally used. The temple floor was on a raised platform enclosed by a wall-base (plinth) and this was thrust forward beyond the porch—which was given great importance—to enclose the entrance stepway; ideas probably borrowed from non-peripteral Etruscan temples in Italy, and Roman temples were often non-peripteral, or pseudo-peripteral (i.e. with engaged columns on the flanks). Internally, the architectural treatment sometimes given to the west end of the cella (e.g. in the Temple of Bacchus, Baalbek) is significant in its resemblance to the sanctuary element of the Christian church.

See also *ARCHITECTURE*.

TEMPLE OFFICIALS. A priest (q.v.) presided over every temple and sanctuary in the Greek and Italian States. No other official was needed in the numerous small cults. But at the larger shrines the priest received the assistance of minor officials.

In the administration of the cult and the performance of ritual he was assisted by *hieropoioi* (*ιεροποιοί*), who likewise received, as their due, portions of the sacrifices and other honours and perquisites. In Athens two boards of *hieropoioi* of ten each were chosen by lot: one (*οἱ ἐπὶ τὰ ἐκθύματα*) to perform all sacrifices appointed by oracle, the other (*οἱ κατ' ἐταυρόν*) to administer the four-yearly festivals except the Panathenaea (*Arist. Ath. Pol.* 54). Directly charged with the offering of sacrifices were *thytai*, among whom a higher rank was sometimes distinguished, the *ιεροθύται* or *ἀρχιεροθύται*. The larger and more important the cult, the more attendants were necessary at the sacrifices. We find mention of sacred heralds (*ιεροκήρυκες*), libation-pourers (*όνοχοοί*), overseers (*ἐπιμεληταί*).

In the care and management of the temple and precinct the priest was assisted by *ναοφύλακες*, *νεωποιοί*, or *νεωκόροι*. They guarded the sanctuary, kept it clean, and purified entrants.

In the administration of cult-finance, sacred treasures, votive offerings, and the revenue-producing parts of the god's domain, the priest was assisted by treasurers or stewards (*ιεροταμίαι*). In some cities, as Miletus, a

board of *ἱεροπαῖται* was appointed that looked after the properties of all State-cults.

Since there was no fixed hierarchy in Greek religion, and each State, even each cult, was a law to itself, the evidence shows great variety of practice and much overlapping of the functions of the three principal types of subordinate cult-official. There were also such minor functionaries as cantors (*δοῖδοι*), musicians, and *agonothetai*, who supervised the sacred games. See also AEDITUUS.

ANCIENT SOURCES: for inscriptions concerning Greek temple officials see SIG³ 1002-54; C. Michel, *Recueil d'Inscriptions grecques* (1897-1927), 669-735, 810-39, 857-78; many inscriptions in von Prott-Ziehen, *Leges Graecorum sacrae e titulis collectae* (1896-1906).

TEMPLUM, see AUGURES, DIVINATION, TEMENOS.

TENES (*Τένης*), the eponym of Tenedos, for whose story, probably not very early, see Plutarch, *Quaest. Graec.* 28 (*Mor.* 350 d-f), with Halliday there and in *CQ* 21 (1927), 37 ff. He was son of Apollo, but nominally of Cynus king of Coloni; his step-mother accused him as Potiphar's wife did Joseph, and Cynus set him and his sister Hemitheia adrift in a chest which landed at Tenedos. Later, Cynus discovered the truth and tried to be reconciled, but Tenes with an axe cut the moorings of his boat when Cynus visited Tenedos, hence the proverb 'Tenedian axe' for a rash deed. Tenes was finally killed by Achilles in defending Hemitheia; hence at his hero-shrine Achilles may not be named nor a flute-player enter, because a flute-player bore false witness against him to Cynus. H. J. R.

TEPIDARIUM, see BATHS.

TEREBRA, see SIEGECRAFT, ROMAN.

TERENCE (PUBLIUS TERENTIUS AFER, ? 195-159 B.C.), is said by Suetonius to have been born in Carthage of Libyan stock, and to have come to Rome as a slave in the household of the senator Terentius Lucanus, who gave the handsome, gifted boy a good education, and set him free; his talents obtained for him entry into a circle of noble Romans interested in literature. Encouraged by them, he entered, somewhat as an outsider, on his dramatic career, which we may perhaps reconstruct as follows. In 166 he produced his first play, the *Andria* (which, according to one story, he had previously read to Caccilius). This play was based on the *Andria* of Menander, but differed from it in certain respects (see below); the elderly dramatist Luscius Lanuvinus and his friends seized on these differences as a means of discrediting a possible rival; Terence consequently found himself compelled, contrary to his intention, to write a prologue, not to explain the plot (a procedure which he detested) but to reply to the charge of 'contamination' and ask for a fair hearing. Apparently he tried to produce the *Hecyra* in 165 without a prologue, but failed because of a rumour of more interesting side-shows such as rope-dancing. In 163 came the *Heautontimorumenos*, the prologue to which was spoken (contrary to custom) by the chief actor, Ambivivus Turpio, who managed by his prestige to secure a hearing for the play. In 161, at the Ludi Megalenses, came the *Eumuchus*, the success of which probably led to the production of the *Phormio* at the Ludi Romani of the same year. In 160, at the funeral games of Aemilius Paulus, Terence produced the *Adelphi*, but again failed with the *Hecyra*; this play was finally produced at the Ludi Romani of the same year, the prologue being delivered by Ambivivus. In 159 Terence is said to have visited Greece, a journey from which he never returned. He left some property as a dowry to his daughter, who married a senator: such biographical

details, however, were a subject of controversy even in ancient times.

2. The *didascaliae* inform us that all Terence's plays were produced by Ambivivus Turpio, and that the music was composed by Flaccus, slave of Claudius. Our other information is mainly derived from the commentary of Donatus.

3. In his prologues Terence replies to the charges that he 'contaminated' or 'spoilt' his originals, stole characters and scenes from plays already translated, derived help from his noble friends, and lacked ability; he asserts that earlier dramatists also took liberties with their originals—the liberty to which he himself confesses being his practice of combining parts of different plays—and that he is innocent of intentional plagiarism from *Latin* dramatists. Politeness forbade him to do more than evade the charge of receiving help from his friends; for the rest, he taunts Lanuvinus with being 'a good translator but a bad writer'. Donatus' commentary leads us to suspect that many of the alterations introduced by Terence were due to his own invention, his motives being to introduce effective dialogues and interesting contrasts in character.

4. A brief summary of two of the plays will serve to illustrate some of Terence's departures from his Greek originals.

(1) *Andria* ('The Girl from Andros'). Simo has forced his son Pamphilus to become engaged to the daughter of Chremes; Chremes, learning that Pamphilus is in love with the supposed orphan Glycerium, wishes to break off the engagement; Simo pretends to Pamphilus that it still holds; Pamphilus, on the advice of his slave Davus, tries to out-manoeuvre Simo by feigning submission, but finds himself cornered when Simo persuades Chremes to withdraw his refusal. Glycerium bears a child; Davus lets Chremes see it; Chremes definitely refuses to let his daughter marry Pamphilus. Finally it transpires that Glycerium is also the child of Chremes; she can now marry Pamphilus, while Chremes' other daughter is given to her faithful lover Charinus.

Sources (according to the prologue): Menander's *Ἀνδρία* and *Περνθία*. Terence, according to Donatus, changed the opening monologue of the *Ἀνδρία* into a dialogue by introducing the slave Sosia, who appears only in this scene (*πρόσωπον προτακτόν*); he also added the second lover, Charinus, with his slave—apparently out of free invention ('non sunt apud Menandrum')—in order, we may presume, to provide foils to Pamphilus and Davus. Donatus fails to indicate convincingly Terence's debt to the *Περνθία*.

(2) *Adelphi* ('The Brothers'). Demea has two sons; the younger, Ctesipho, he brings up strictly; the elder, Aeschinus, he entrusts to his easy-going brother Micio. Both boys go astray; Aeschinus, reckless if generous, seduces Pamphila and, on his timid brother's behalf, kidnaps a music-girl, to Pamphila's alarm. After a tardy confession to Micio he is allowed to marry Pamphila; meanwhile Demea, disappointed with the results of his own methods, decides to court popularity by a show of affability, and thus turns the tables on Micio. Original by Menander; the kidnapping scene borrowed from Diphilus' *Συναποθηήσκοιτες*. Most modern and perhaps finest of Terence's plays.

5. Apart from the *Adelphi*, the only clear example of borrowing from a second original is the addition to the Menandrian framework of the *Eumuchus* (his liveliest and most popular play) of two characters, Thraso and the parasite, from Menander's *Κόλαξ*. On the other hand, Donatus points out several instances of alteration made by Terence which owed nothing to any Greek original. It seems possible that this was the real charge against Terence, and that he tried to evade it by concentrating on the minor point of his occasional borrowings from secondary Greek originals.

6. Of his other plays it is useful to indicate the primary Greek original. *Hecyra* ('The Mother-in-law') had for its source Apollodorus' *Ἑκυρά*, and is an excellent example of the *comédie larmoyante*, with no unlikeable characters. *Heautontimorumenos* ('The Self-tormentor') was derived from Menander: its opening scene is famous and its intrigue complicated. *Phormio* was based on Apollodorus' *Ἐπιδικαζόμενος*, and its lively intrigue was imitated by Molière in *Les Fourberies de Scapin*.

7. Julius Caesar praised Terence as a polished dramatist, who lacked only *vis comica*. His polish is apparent not only in his unequalled style but also in the urbane and humanitarian tone of his plays. He gives us kindly masters, faithful slaves, affectionate parents and children, even generous courtesans; behaviour may be lax, but is seldom brutal. Lacking Plautus' metrical gift and power to excite laughter, he was nevertheless an original dramatic artist, deeply interested in the complexities of life and the contrasts of character.

W. B.

TERENTIA was Cicero's wife. Her family was wealthy. Since her half-sister, Fabia, a Vestal, was suspected of intercourse with Catiline, the encouragement Cicero had from Terentia in acting against him might have family motives. She was often, especially in the trial of Clodius, suspected of influencing her husband. Firm and careful, she sustained him in exile and always helped him in his financial difficulties. After his return a growing coldness between them resulted in divorce (46 B.C.). Cicero immediately married Publilia, and it is uncertain whether Terentia ever got back her property. It is related that she afterwards married Sallust the historian, and then Messalla Corvinus, and that she died aged 103. Cicero had by her a daughter, Tullia, and a son, Marcus.

L. Neubauer, *Wiener Studien* 1910, p. 271; St. Weinstock, *PW* v A. 710.

A. M.

TERENTIANUS MAURUS (late 2nd c. A.D.), grammarian and metrist. His *De litteris syllabis et metris Horatii* (ed. Keil, *Gramm. Lat.* vi. 325-413) is written entirely in verse (2,981 lines).

See also SCHOLARSHIP, LATIN, and cf. Teuffel, § 373 a; Schanz-Hosius, § 514.

J. F. M.

TERENTIUS (1) **AFER**, **PUBLIUS**, see **TERENCE**.

TERENTIUS (2) **SCAURUS**, **QUINTUS** (early 2nd c. A.D.), grammarian. His *Ars grammatica* and his commentary (in at least ten books) on Horace are lost. The *Liber de orthographia* (ed. Keil, *Gramm. Lat.* vii. 11-33) attributed to him is probably genuine.

Cf. Teuffel, § 352. 2; Schanz-Hosius, §§ 594-5.

J. F. M.

TERENTIUS, see also **CULLEO**, **VARRO**.

TERMINUS, a boundary-mark; in Roman religion, especially the *numen* of such marks, which were set up with ceremony, sacrifice being made and blood and other offerings, with the ashes of the fire, put into the hole which was to contain the *terminus* (Siculus Flaccus in *Gromat. Lat.* 141. 4 ff. Lachmann). This filling of the mark with power was reinforced by a yearly sacrifice and feast (Ovid, *Fasti* 2. 638 ff.) by the neighbours, on 23 Feb. (Terminalia). It is therefore not remarkable that there was a god *Terminus*, a kind of concentration of the *numen* of all the boundary-marks. Traditionally, the *Terminus* on the Capitol had been there before the temple of Jupiter Optimus Maximus was built, and refused to move; he therefore was left inside the temple, with an opening in the roof above, as he must be under the open sky (Ovid, *ibid.* 669 ff.).

See Wissowa, *RR* 136 ff.; Frazer on Ovid, *loc. cit.*

H. J. R.

TERPANDER (*Τέρπανδρος*) (fl. 647 B.C. Hieron.-Eus., 645 B.C. *Marm. Par.* 34), musician and poet, of Antissa in Lesbos (Timoth. *Pers.* 240), but worked in Sparta (Ath. 635 d) in the middle of the seventh century. He is said to have written: (1) *Nomes*, in which he set his own or Homer's lines to lyre-music (Plut. *Demost.* 3); (2) *Προοίμια* or Preludes, which may have been of the same genre as the Homeric Hymns (*ibid.*); (3) *scolia* (*ibid.* 28). It is doubtful whether any of the fragments ascribed to him are genuine. Fr. 1 is a libation-song, but indicates a later date in its use of pure spondee, its theology, and its play on the word ἀρχά. Fr. 4 seems to be an adaptation of Pind. *Ol.* 13. 22-3. Fr. 2 and fr. 3 have been less disputed. But it may be doubted whether his works were known at Alexandria. See also **MUSC**, § 10.

Diehl, *Anth. Lyr. Graec.* ii. 3-5; Wilamowitz, *Timotheos* (1903), 92-3.

C. M. B.

TERRACOTTAS. Sculpture on a large scale in terracotta was rare in Greece, except in primitive times. In Etruria terracotta long remained the favourite material for temple sculpture, often on a colossal scale. Cyprus has also yielded many large votive terracotta statues.

2. Clay figurines (*kopai*, *sigillaria*) are found from the earliest periods; Minoan examples of the second millennium B.C. already show elaborate detail of costume. In Greece they become common from the seventh century. They served as votive offerings, as funeral furniture, as toys, and, later, as house-ornaments. Figurines of the archaic period are hieratic in character, types of seated or standing goddesses being most popular. From the fourth century the art is secular in feeling, as exemplified in the figurines of women in everyday garb from Tanagra, Myrina in Aeolis, etc. Production fell off after A.D. 100.

3. Relief work other than architectural is rare and mainly confined to votive tablets. The series of 'Melian reliefs' with mythological scenes belongs to the early fifth century.

4. For sepulchral purposes chests (*λαρνάκες*) and jars (*πίθοι*) were used in Bronze-Age Crete. Large painted sarcophagi are found in Clazomenae and Rhodes at the end of the sixth century. Sarcophagi with reclining figures modelled on the lids were used in Etruria during late archaic and Hellenistic times, and small reproductions of these were used for urns in cremations.

5. In architecture sun-dried bricks (*πλήθροι ὠμαί*, *lateres crudi*), the universal primitive building-material, were largely replaced in the Hellenistic period by baked bricks (*πλήθροι ὀπταί κέραμοι*, *lateres cotti*, *testae*). As a result of the abundance of stone, brick construction was rarer in Greece than in Rome, where it remained the principal material of Republican and Imperial buildings. The gable-roofs of early Greek temples were generally composed of flat terracotta tiles (*στεγαστήρες*, *σωλήνες*, *tegulae*), rounded covering-tiles (*καλυπτήρες*, *imbrices*), finial ornaments (*ἀκρωτήρια*, *antefixae*), and gutters with lion-head spouts (*κεραμίδες λεοντοκέφαλοι*, *leontochasmata*); and wooden framing was frequently covered with terracotta slabs, painted or moulded. In Greece, after the archaic period, these features were usually translated into stone, but in Italy the use of terracotta long persisted. Moulded terracotta slabs were employed in Imperial times to decorate Roman house interiors.

Burr, *Terracottas from Myrina in Boeotia* (Vienna, 1914); P. Jacobsthal, *Die Melischen Reliefs* (1931); D. S. Robertson, *Handbook of Greek and Roman Architecture* (1920), 349.

F. N. P.

TERRA SIGILLATA, pottery made in moulds; by modern archaeologists the term is restricted to the fine red-glazed table-ware in general use over the Roman Empire, and formerly known as Samian Ware (q.v.). In this sense it includes not only the decorated vases

produced from moulds, but also the plain wheel-made varieties. *Terra sigillata* imitates metal-ware in its embossed decoration and in its forms, which are standardized, some shapes being regularly decorated, others invariably plain; they are of moderate size, mainly handleless drinking-bowls and plates. The origin of the ware is to be sought in the Eastern Mediterranean, where moulded relief-ware was popular from the late fourth century (see POTTERY), and experiments in red glaze began in the third century. Precise information, such as has been obtained in the West from study of the actual pottery sites, is not yet available for the East, and the place and date of the appearance of the bright sigillata glaze are still unknown; some excavators' reports set the date as high as 150 B.C. In any case the Eastern *sigillata* never equalled the Western in artistic and technical quality, being limited to plain forms; and the bulk of it is subsequent to, and influenced by, the spread of Arretine ware.

2. The western fabrics are better known. That of Arretium in Etruria began shortly after 30 B.C.; some of the early potters bear Oriental names. Here was developed the decorated *sigillata*, bowls surrounded with designs taken from the repertory of Neo-Attic art. Arretine ware, plain and decorated, was widely exported, and about the beginning of the Christian era, to lessen cost of transport, branch potteries for the production of plain ware were established round the Mediterranean. Those in South Gaul commenced about A.D. 20 to produce independently decorated ware, and before their competition the Arretine potteries lost ground, though production did not cease until Flavian times. In their turn the South Gaulish potteries (of which La Graufesenque was the largest centre) were replaced after the first century by others nearer the frontiers (Lezoux in the Auvergne; Rheinzabern, Trier, etc., in Germany). In the second century manufacture extended to Aquincum in Pannonia and Colchester in Britain. The wars of the mid-third century proved disastrous to the industry, and production ceased for a time.

3. In the Roman East several fabrics, all of plain ware, have been distinguished. One pottery-site has been located, near Pergamum, of Tiberio-Claudian times; and it is surmised from Pliny (*HN* 35. 60) that Samos was a centre of production. The period of greatest activity was the early first century, after which the pottery falls off in quantity and quality. On present evidence it would appear that the East used little decorated ware, and what has been found is Western import.

4. The fourth century witnessed a revival, both in the East (where Egypt may have led the way) and in the West (potteries in the district of the Marne). This late ware is characterized by the use of stamped decoration, a technique which survived into Coptic and Frankish times.

F. N. P.

TERREMARE. A Terramara has been aptly described as 'a Lake-dwelling on land'. But it is a 'lake-dwelling' of unique shape and kind, trapezoidal in outline, enclosed by a rampart of earth and surrounded by a moat fed from a stream. Such constructions are known only in the eastern half of the Po valley, particularly around Parma and Modena. The word is derived from Italian country-speech and its plural is Terremare. Chronologically the Terremare belong to the Bronze Age and begin at the

earliest stages of that period. Discoveries in the Po valley began in 1862. In 1900 Pigorini launched his theory, which has found its way into every text-book but has lately been subjected to criticism long overdue. The theory maintains that (1) at the end of the Neolithic Age a new race appeared in Italy; which, unlike the Neolithics, cremated its dead. These newcomers came from the Danube valley. They were the direct ancestors of all the Italic tribes. At the end of the Bronze Age they left the Po valley and occupied the whole of Italy. (2) This people introduced the use of bronze and should be regarded as leading the whole civilization of Italy in its day.

2. In the first controversies which arose it was undoubtedly established (a), as against Brizio, that the Terramaricoli were not indigenous but immigrants, and (b), as against Sergi, that their structures were not Roman camps misunderstood by the excavators. But what was never proved was the postulated archaeological connexion between Bronze-Age Terramaricoli and Iron-Age Villanovans (q.v.).

3. The few cemeteries which are intermediate in date are not demonstrably intermediate in quality. The supposed pedigree, therefore, passing from Terramaricoli through Villanovans to Romans is weak at its most crucial point. That the Terramaricoli were the ancestors of the Italici becomes merely a pious opinion. Much of Pigorini's theory appears now as a somewhat rash prophecy which it was assumed that the future would confirm with more material. Only a more recent and complete regional survey could disprove Colini's over-statement that the whole Iron Age in Italy was uniform and its several phases the 'dialects of a common language'. It has required the experience of nearly thirty years since then to show that Villanovan culture was definitely restricted in its area and could never be made to cover more than a fraction of the Italici, though perhaps the most interesting fraction. If the supposed march of the Terramaricoli from the Po to the heel of Italy is not wholly a myth, as some critics maintain, there are at any rate no clear traces of it. Probably few still believe in the outlying Terramara at Taranto.

4. Yet though the first part of Pigorini's theory can no longer be held to be convincing there is no sufficient reason for the present to consider the second part of it unsound. The importance of the Terramaricoli will still be considerable if they can safely be regarded as the pioneers and introducers of the Bronze Age. This claim has recently been attacked because there is an important Bronze-Age culture on many sites unrelated to Terremare—a fact suddenly emphasized by recent discoveries. The 'extra-terramaricoli', as Rellini terms them, are certainly more important than the world supposed. But the orthodox opinion still holds good that the Italian Bronze Age is the legitimate child of Central Europe. If, therefore, the Terramaricoli lived originally somewhere near Bohemia and Hungary, they may well have brought in the knowledge of bronze-working from those regions.

The best account is still T. E. Peet, *The Stone and Bronze Ages in Italy* (1909). For the 'Extra-terramaricoli' see *Mon. Ant.* 34 (1932). The whole Terramara culture is pictorially illustrated by O. Montelius, *La Civilisation primitive en Italie* (plates 12, 26). G. Säflund, *Le Terremare* (Lund, 1939), is an important statement of recent research.

D. R.-MaeL.

TERTULLIAN (QUINTUS SEPTIMIUS FLORENS TERTULLIANUS) (c. A.D. 160-c. 225), a native of the Roman province Africa of pagan parentage, received a thorough training as a lawyer. Most of his life was spent at Carthage. His ardent yet sarcastic temperament persisted after his conversion, when, though apparently remaining a layman, he devoted his pen to the furtherance of the Christian religion, as he understood it. His later writings are more markedly ascetic, due to his devotion to the Montanistic sect. He wrote both in Latin and in

Greek, but none of his Greek works has survived. There can be no doubt that he had read the leading Greek and Latin pagan authors, of whom Herodotus and Varro may be named. He is the earliest writer known to us to formulate the doctrine of the Trinity, and, as a creator of Latin Christian terminology his importance is capital. Of all Latin prose writers he is perhaps the most difficult to master.

Of his surviving works, over thirty in number, the following may be considered the most important: *Ad nationes* (A.D. 197), *Apologeticus* (*Ἀπολογητικός* [*sc. λόγος*], 197), *De testimonio animae* (197–200), *De spectaculis* (200), *De praescriptione haereticorum* (200), *De oratione*, *De baptismo*, *Adversus Iudaeos* (these between 200 and 206), *Adversus Marcionem* (207–11), *De pallio* (209), *De anima*, *De carnis resurrectione* (208–11), *De corona* (211), and *Adversus Praxean* (after 213).

The *Apology* has been styled 'the noblest oration among all which antiquity has left us'. It was addressed to Roman governors and naturally avoids Christian technicalities. But the author knows the history and character of persecution as well as he knows Roman law. He successfully rebuts all the charges made against Christians and also shows clearly what Christianity is within the Roman Empire.

Ed. F. Oehler (Lipsiae, 1853); *Apology*, ed. J. E. B. Mayor (tr. A. Souter) (1917), T. R. Glover (Loeb, 1931), H. Hloppe (1939).

A. S.

TESSERA, a ticket or token, used in Rome, as in all ages, for a great variety of purposes, and represented by small pieces, often circular, of lead, bronze, terracotta, bone, etc.

The *tesserae nummulariae*, formerly known erroneously as *tesserae gladiatoriae*, were tabs attached to bags of silver denarii, to show that they had been tested for genuineness (*specto*). The surviving examples belong to the last century of the Republic.

Under the Empire there were *tesserae frumentariae*, for the recipients of free corn, *tesserae* for games and public shows, and *tesserae* given in largesse by the Emperor and exchangeable for various presents. Many of these *tesserae* bear types, similar to those of coins, but less often legends, and are often of lead. One series of bronze *tesserae* shows imperial heads on the obverse and numbers on the reverse. The attribution of *tesserae* to their particular uses is largely conjectural, but the principles of classification have been determined by Rostovtzeff.

Tesserae were, of course, used in private, as well as in public life. Among private *tesserae* may be mentioned the *tesserae hospitales*, which established the claim of the bearer to hospitality on his travels abroad, and *tesserae lusoriae*, used for games.

K. Repling, *PIB*, s.v.; M. Rostovtzeff, 'Römische Bleitesserae', *Klio*, Beiheft 3, 1905.

TESTA, *see* **TREDATIUS**.

TESTAMENTUM, *see* **INHERITANCE**.

TESTAMENTUM PORCELLI, a satiric parody (3rd or 4th c. A.D.) of a will imagined to be by a pig, Grunnius Corocotta, just before being killed. It is mentioned by Jerome (praef. *Comment. in Isaiam*) as causing amusement in boys' schools.

Text at end of Bücheler's ed. of Petronius.

J. W. D.

TESTIMONIUM signifies in its widest sense all types of evidence (Gai. 3. 131; Cic. *Top.* 19. 73); the term *instrumentum* was later used in the same sense (Dig. 22. 4. 1). In a narrower sense the term signifies the testimony of a witness (*testis*), which was in ancient times the only evidence in legal proceedings. It maintained its importance also in the classical period, though documentary proof gained more and more ground. In the

oldest law we already find another activity of witnesses: some solemn legal transactions and acts required for their validity the presence of witnesses, e.g. *mancipatio* and other transactions *per aes et libram* (five witnesses), *confarreatio* (ten), also some important acts in civil procedure (as *in ius vocatio*, *litis contestatio*) and such legal acts as the opening of a will. When a crime (e.g. of *furtum*) was being investigated, some processes open to the parties to the case required the participation of witnesses. But the widest field of their activity was in testamentary law, because in all forms of will their presence was necessary for the validity of the act. The two functions were closely connected, for presence at a legal transaction entailed an obligation on the witness to give evidence if there was litigation. Refusal of testimony made a man *intestabilis*, i.e. incapable of being a witness or calling a witness, and hence also of making a will.

2. In course of time various forms of written evidence (*instrumenta*, *documenta*) were developed. On the one hand, a transaction may itself be made in writing and attested by witnesses; on the other, some event or act may be recorded in writing and the truth of the record attested by persons who have been present at the occurrence; or again, a person may make some statement and other persons simply attest the identity of the deponent and the fact that he made the statement. The object of this last process is to make the evidence available in subsequent court proceedings, when it can be read aloud in the absence of the witness himself.

3. Some persons were generally excluded from testimony: slaves, *impuberes*, women (only from transactions), *intestabiles*, persons convicted of crimes, and those who followed an infamous profession. In particular cases all persons connected by a bond of kinship or moral obligation with a party interested in the lawsuit or in the transaction (*testimonium domesticum*) were excluded. Capacity to witness a will was regulated by special rules.

4. The deposition of a witness was made personally and usually under oath. Recitation of a written *testatio*, which became the later practice, carried less conviction. Apart from witnesses to legal transactions, persons could not be forced to give evidence except in criminal proceedings. Citation of a witness was called *denuntiatio*. In post-classical law, under the influence of the Hellenistic East, documents acquired greater evidentiary value than the evidence of witnesses, which became more and more distrusted. The testimony of one witness had no value at all.

5. False witness was severely punished (*Lex Cornelia testamentaria*); according to some laws even with death (XII Tables: 'deicere e saxo Tarpeio'; *Lex Cornelia de sicariis*).

TESTUDO, *see* **SIEGECRAFT**, **ROMAN**.

TETHYS (*Τηθύς*), in mythology, daughter of Earth and Heaven, sister of Ocean (Hesiod, *Theog.* 136); becomes the consort of Ocean and bears the Rivers, also the three thousand Oceanids, whose work it is to aid the rivers and Apollo to bring young men to their prime, and Styx, chief of them all (*ibid.* 337 ff.).

H. J. R.

TETRALOGY, *see* **TRAGEDY**, para. 12.

TETRARCHY (*τετραρχία*, i.e. the fourth part of an *ἐπαρχή*) was first used to denote one of the four political divisions of Thessaly ('tetrad' being a purely geographical term). The tetrarchies—Thessaliotis, Hestiaeotis, Pelasgiotis, and Phthiotis—may have formed separate tribal States before Thessaly became a single *κοινὸν*. After this union they continued to exist for purposes of local

government, but the rapid development of cities towards the end of the fifth century, together with the decay of the *κοινόν*, caused them to lose much of their importance. In 342 B.C. Philip of Macedon, now Archon of Thessaly, revived the tetrarchies in order to overcome the resistance of the cities through tetrarchs who were his partisans. How long this system lasted is unknown.

The term found its way to the Hellenistic East and was applied to the four divisions into which each of the three tribes of the Galatians was subdivided. In Roman times many hellenized princes in Syria and Palestine were styled 'tetrarch', but the number of tetrarchies in any political organization ceased to be necessarily four, the term denoting merely the realm of a subordinate dynast.

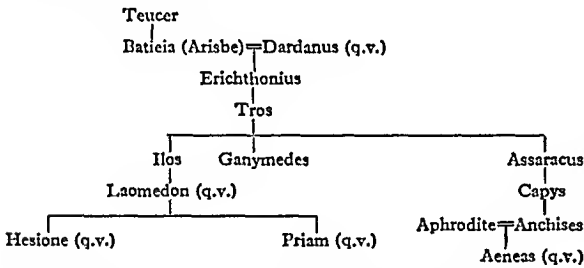

A. Momigliano, *Athenaeum* 1932, 47-51; W. Schwahn, *PIW*, s.v. 'Tetrarch'.

H. D. W.

TETRICUS, GAIUS PIUS ESUVIUS, governor of Aquitania, was made Emperor on the death of Victorinus by Victorinus' mother, Victoria. Ruling from A.D. 270 to 274 he suffered much from his disorderly troops and an insubordinate governor, Faustinus. Despairing of his Empire, he made no move against Rome and, finally, appealed to Aurelian, 'eripe me his, inuicte, malis', and, when Aurelian invaded Gaul, deserted his army at the battle of Châlons. Lcd in triumph, he was afterwards appointed 'corrector Lucaniae'. His son, Tetricus II, shared his fortunes as Caesar, then for a short time as Augustus, and again as a senator of Rome.

H. M.

TEUCER (1) (*Τεύκρος*), (1) ancestor of the Trojan kings, the genealogy being

For authorities, see Schmidt in Roscher, v. 406. Ramsay, *Asiatic Elements*, 225, identifies him with the Hittite god Tarku. (2) Son of Telamon (q.v.) by Hesione. Throughout the *Iliad* he is a valiant archer, and faithful comrade of his half-brother, the greater Aias. This character is maintained in later works, e.g. the *Ajax* of Sophocles. He was absent at the time of Aias' suicide (*Ajax*, 342-3), but returned (974) in time to take a leading part in the struggle to secure him honourable burial. After his banishment (see TELAMON) he founded Salamis in Cyprus (Horace, *Carm.* 1. 7. 27 ff., and often). There is no consistent tradition of the manner or place of his death.

H. J. R.

TEUCER (3) of Cyzicus (1st c. B.C.) wrote on the Mithridatic Wars, Tyre, the Arabs, Jewish history, Byzantium, and Cyzicus, his work covering Pompey's settlement of the East, and reflecting the part played by Cyzicus at this time. His *Περὶ χρυσοφόρου γῆς* does not necessarily identify him with Teucer of Babylon (q.v.).

FHG iv. 508.

A. H. McD.

TEUCER (4) of Babylon (probably the Babylon in Egypt), astrologer, is conjectured to belong to the first century A.D. He expounded the traditional astrology of Egypt and united with it Oriental and Greek elements. He had a great influence on Arabian and medieval astrology, through his description of the constellations. Frs. of his works have been preserved.

Ed. F. Boll, *Sphaera* (1903), pp. 16, 31; *PIW* v A. 1132.

W. D. R.

TEUTA, Illyrian queen and regent after Agron's death in 231 B.C., followed up his victory over the Aetolians at Medeon by aggression against Epirus, and directed Illyrian piracy against Italian commerce with Greece. She refused Rome satisfaction for the murder of Italian merchants in 230 and even for an attack on the Roman envoys. In 229 she took Corcyra, defeating the Achaeans, and was besieging Issa and Dyrrhachium when Rome intervened, in the First Illyrian War, and forced her to withdraw and submit.

Polyb. 2. 2-12. M. Holleaux, *CAH* vii. 827.

A. H. McD.

TEUTHRAS, see TELEPHUS.

TEUTOBURGIENSIS, SALTUS, the district where, in A.D. 9, the army of P. Quinctilius Varus (q.v.) was destroyed on the march from summer to winter quarters, by the Cheruscan prince Arminius (q.v.). Despite much discussion, the *Saltus Teutoburgiensis* has not been located, neither is it certain whether *saltus* here means a forest or a mountain pass. The Teutoburger Wald of modern maps is an archaizing name given in the seventeenth century. The site of the disaster must lie somewhere between the middle Weser and the upper Ems, between the Lippe and the Dümmer See.

A. Franke, s.v. 'Teut. Saltus' in *PIW* v A. 1166-71.

O. B.

TEUTONES, a German tribe, first encountered by Pytheas (c. 325 B.C.) on the Holstein coast; Thy, in north Jutland (NW. of Limfjorden), preserves their name. They wandered forth with the Cimbri (q.v.) and after many vicissitudes were annihilated by Marius at Aquae Sextiae (*Aix-en-Provence*) in 102 B.C. With them were the Ambrones, who are thought to have come from the Frisian islands. The name Teuton became a synonym for German, and poets of the Empire still wrote of the 'furor teutonicus' long after the disappearance of the tribe, but for a small group near Miltenberg (if this is a correct deduction from *ILS* 9377) and elements among the Aduatuci of Gaul (Caes. *B Gall.* 2. 29).

O. B.

TEXTUAL CRITICISM. 'Textual criticism, a general term given to the skilled and methodical application of human judgement to the settlement of texts. . . . The aim of the "textual critic" may then be defined as the restoration of the text, as far as possible, to its original form if by "original form" we understand the form intended by its author' (J. P. Postgate in *Enc. Brit.*¹⁴). More briefly: it is the branch of knowledge concerned with the genuineness of texts.

Textual criticism may be divided into (A) statement showing what is the 'transmitted text' (*recensio*); (B) examination of this text concerning its genuineness (*examinatio*); (C) conjectural restoration, as far as possible, of the original text, where the transmitted text is insufficient.

A. *Recensio* may be divided into: (i) collection of witnesses (including extracts, translations, quotations, imitations, etc.); and (ii) statement of the interrelationship between these witnesses ('stemmatics').

B. *Examinatio* may be divided into: (i) choice (*selectio*) between variants, i.e. between two or more readings which have been proved by the recensio to be transmitted ('substantive', 'authoritative'); and (ii) localization of corruptions.

C. Conjectural restoration may be divided into (i) emendation of corrupt passages; and (ii) supplementing of passages that have suffered physical damage.

Some important particular methods and notions may now be explained.

(1) There are several methods of stemmatics (A. ii). The most commonly used is that of 'significant errors' (*errores significativi*), which are either *separative* (i.e. showing that one witness is independent of another),

or *conjunctive* (showing that two witnesses are more closely connected each with the other than with any third witness).

The different types of interrelationship which can be ascertained by 'significant errors' are 3 if 2 witnesses are extant; 22 if 3; 250 if 4; about 4,000 if 5; and so on!

If of two witnesses (*A* and *B*), *A* contains no separative error when compared with *B*, while *B* contains one or more separative errors when compared with *A*, then *B* can, and in longer texts must, be regarded as derived from *A*, and in consequence must be eliminated from the substantive witnesses.

(2) Where one witness depends on two or more other witnesses, i.e. where the transmission is 'contaminated' and the stemma 'convergent', it is seldom possible to ascertain the type of interrelationship by stemmatics.

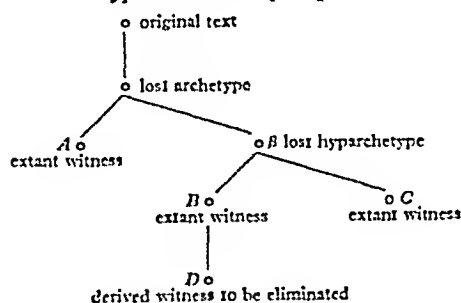

(3) In a split transmission the lost witness with which the splitting of the transmission begins is called the *archetype*. Lost derivatives of the archetype which are represented by two or more extant witnesses are conveniently called *hyparchetypes*. An extant witness which proves to be the source of all the others is called *testis unicus*.

(4) *Selectio* (*B* i) depends (a) on the intrinsic value of the variants; (b) on the degree of probability that one of them has originated from the other. The same principles apply *mutatis mutandis* to the choice between conjectural emendations (*C* i).

(5) The period during which the corruption must be shown to have been possible is, in the case of variants, that between the archetype and the witness for the rejected variant; in the case of conjectures, that between the original text and the archetype or the *testis unicus*. For this reason it is important to know as much as can be known about the history of the transmission.

(6) Modern critical editions represent the results of textual criticism by varying systems of terms, signs, and arrangements, which are often confusing. There is a tendency towards uniformity in this technique which should be encouraged by all editors.

Typical stemma of a split transmission

With such a stemmatic type, neither the age of the witnesses *A*, *B*, and *C*, nor their quality (in so far as it depends on the number and gravity of the corruptions in each of them) is of decisive importance for the *selectio*.

BIBLIOGRAPHY

The most comprehensive recent books are: L. Havet, *Manuel de critique verbale appliquée aux textes latins*, 1911; F. W. Hall, *Comparison to Classical Texts*, 1913; G. Pasquali, *Storia della tradizione e critica del testo*, 1934.

Havet hides his valuable theoretical remarks among too many examples of doubtful aptness. Hall gives much useful technical help and well-chosen examples. Pasquali treats predominantly the problems of abnormal transmission.

There are, besides, three modern condensed accounts by writers who think independently: J. P. Postgate, in *Er. Phil.* 14 (1929), x.v. 'Textual Criticism'; P. Maas, *Textkritik*, in Gercke-Norden, *Einleitung in die Altertumswissenschaft*, i, Heft 2 (1927); G. Pasquali, in *Enciclopedia Italiana* (1932), s.v. 'Edizione critica'.

The textual criticism of Shakespeare offers many similar problems relating to choice between variants, conjectures, history of trans-

mission, etc.: see especially the relevant work of A. W. Pollard and W. W. Greg.

The following is a selection of studies and examples in the different branches of the subject:

A i. (Collection of witnesses.) For the infinite variety of problems, see the prefaces of modern critical editions. Among catalogues of MSS, outstanding examples are: *Codices Vaticani graeci rec.*, I. Mercati et P. Franchi de Cavalieri I (1923); and (for technical details) *Handbuch der griechischen Paläographie*, ed. W. Dittenhofer (1839-57); *Greek Tragedy*, by A. Nauck² (1891); the *Presocratics*, by H. Diels and W. Kranz² (1934-8); *Greek Historians*, by F. Jacoby (1923-).

A ii. (Stemmatics): P. Maas, 'Leitfehler und stemmatische Typen', *Byz. Zeitschr.* 1937, 289.

B i. (Principles of choice between variants): A. E. Housman, ed. of Manilius I (1903), praef. ch. iv.

C ii. (Texts which are physically damaged): E. Lobel, editions of papyri of Sappho (1925), Alcaeus (1927), Callimachus (*Hiermes* 1934, 1935), *POxy.* col. 18 (1941).

HISTORY OF TRANSMISSION: U. von Wilamowitz-Moellendorf, *Herakles*¹ (1889), reprinted as *Einleitung in die Griechische Tragödie*. Classics in medieval times, *Greek*: P. Maas in Gercke-Norden, op. cit. i, *Anhang* (1927), cf. *Byz. Zeitschr.* 1938, 409; *Latin*: E. Norden in Gercke-Norden, op. cit. i, Heft 4 (1927), 93.

CORRUPTION: (a) *Interpolations*: G. Jachmann, 'Binneninterpolation', in *Nachrichten Gött. Ges. Wiss. Fachgruppe i*, Bd. i (1936), 123, 185. On the additional verses in Juvenal, *Sat.* 6, see U. Knoche, *Philologus* xciii (1938), 106. (b) *Omission of lines in prose*: A. C. Clark, *Detect of MSS.* (1918). (c) *Medieval conjectures*: P. Maas, 'Eustathios als Konjekturenkritiker', *Byz. Zeitschr.* 1935, 1936.

CONTAMINATED TRANSMISSION: Examples of this desperate case are Homer, *Iliad* (most complete ed. T. W. Allen (1936)); and the Greek New Testament (most complete ed. H. von Soden (1913); *Ev. Marc.* and *Ev. Mat.*, ed. S. C. E. Legg (1935 and 1940); for an important new reading of *Ev. Matt.* 6, 28, see T. C. Skeat in *Zeitschr. für Neuere Wiss.* 1938, 211).

TECHNIQUE OF CRITICAL EDITIONS: O. Stählin, *Editionstechnik*² (1914); Union Académique Internationale, J. Bidez et A. B. Drachmann, *Emploi des signes critiques*² (1938). Edition of a text with complicated transmission: *Codex Theodosianus*, ed. Th. Mommsen (1906); of fragments with compendious apparatus: *Anthologia lyrica graeca*, ed. E. Diehl, i² (1933-7), ii² (1942).

HISTORY OF TEXTUAL CRITICISM: see SCHOLARSHIP IN ANTIQUITY and SCHOLARSHIP IN MODERN TIMES under Aristarchus, Eustathius of Thessalonika, Bentley, Porson, G. Hermann, Lachmann, Wilamowitz-Moellendorf, A. E. Housman.

P. M.

THALES of Miletus was universally accounted one of the Seven Sages and author of numerous aphorisms. As statesman he advised the Ionians to resist Persian aggression by establishing a federal council at Teos. As scientist he predicted to within a year, probably from knowledge of Babylonian calendars, the solar eclipse which occurred during the Battle of the Halys on 28 May 585 B.C. He is further reliably said (though he wrote nothing) to have introduced into Greece and generalized Egyptian methods of mensuration (thus founding 'geometry') and to have connected the Nile-floods with the Etesian winds. His view that the world not only originates from but consists of and returns to water, on which the earth floats, marks the beginning of physical science. See also ASTRONOMY.

Diels, *Vorles.* i. 67-81; Burnet, *Early Greek Philosophy*, 40-50; *Phil.* v A. 1210; Zeller-Mondolfo, *La filosofia dei Greci* i. 2 (1938), 100-34.

A. H. C.

THALETAS, of Gortyn in Crete (Paus. i. 14. 4), worked at Sparta in the seventh century B.C. (Plut. *De mus.* 9). He wrote songs which exhorted to law-abidingness (Plut. *Lyc.* 4) and paeans (Plut. *De mus.* 10, but cf. 42). Nothing of his work survives. He used paeonic and cretic rhythms (Plut. *De mus.* 10).

C. M. B.

THALLUS published a chronological work in three books, from the Trojan War to Ol. 167 (112-109 B.C.) according to Eusebius; but on the evidence of the fragments, from Belus to at least the death of Christ. If Eusebius is right, 'Thallus' work must have been later extended. Euhemeristic in character, it was used by the Christian apologists. He may, perhaps, be the Samaritan Thallus, Augustus' secretary or Tiberius' freedman.

FGH ii, n. 1156; no. 535.

A. H. M. D.

THALYSIA (Θαλυσία), see FIRST FRUITS.

THAMUGADI (modern *Timgad*), an agricultural settlement in Numidia twenty miles east of Lambaesis (q.v.). Founded in A.D. 100 by Trajan as a colony (*ILS* 6841), the original town was designed on camp lines; *cardo* and *decumanus* intersected at right angles, *curia*, basilica, and forum were placed at this intersection, and smaller streets ran parallel to the two main roads. Tharnugadi had many public baths and a theatre, and public-spirited citizens gave it a library and a market-place. When it outgrew its original rectangle, an enormous Capitoline temple was built outside the walls.

The fertile country-side brought great prosperity under the Septimian dynasty; but later its fortunes declined owing to blood-stained religious quarrels. Saharan raiders sacked and burnt it; the Byzantines built a protecting fortress, but it fell to the first Arab invasion.

Excepting Leptis, Timgad has the most complete Roman remains in Africa. Its forum commemorates the African sportsman's ideal: 'uenari, lauare, ludere, ridere, occ est uiuere' (*CIL* viii, *Suppl.* 17938).

A. Ballu, *Les Ruines de Timgad*² (1904); R. Cagnat, *Carthage, Timgad, etc.*² (1909).

THAMYRIS (Θάμυρις) or **THAMYRAS** (Θαμύρας), a bard, who boasted that he would win a contest even if the Muses opposed him, whereat they blinded him and made him forget his skill (*Iliad* 2. 594 ff.). Later authors attribute a multitude of musical inventions to him and add some unimportant tales; see Höfer in Roscher, s.v. H. J. R.

THANATOS. Death, as a person, hardly rises to the level of a mythological figure, belonging rather to folklore or poetical fancy. Thus he is a healer (Eur. *Hipp.* 1373, i.e. only death will ease Hippolytus' pain); he keeps Polybus in the grave (Soph. *OT.* 942); he begat the poison which kills Heracles (Soph. *Trach.* 833); he is the only god who loves not gifts (Aesch. in Ar. *Ran.* 1392, i.e. death is inexorable, and, incidentally, is not worshipped as a god). In Epic he is a little more concrete; he is the brother of Sleep, and the two carry away the body of Sarpedon (*Iliad* 14. 231; 16. 671 ff.). Cf. Hesiod, *Theog.* 212 (Death, son of Night), 764 (he is iron-hearted, hated even by gods).

In Eur. *Alceste* he is a clearly defined figure, the 'dark-robed lord of the dead' (843), armed with a sword (76), and Euripides borrows him from Phrynichus (Serv. Dan. on *Aen.* 4. 694), who very likely had him from popular belief. Heracles rescues Alceste (q.v.) by literal physical wrestling with Thanatos. Except for its successful issue, this is not unlike the modern Greek stories of a hero contending with Charos.

A merry tale of Sisyphus (q.v.) is preserved from Phrynichus (fr. 119 Jacoby) by schol. *Iliad* 6. 153. Sisyphus told Asopus what had become of Aegina (q.v.), and Zcus therefore sent Thanatos against him; but Sisyphus bound Thanatos, so no one died until Ares rescued him and gave Sisyphus to him. Before dying, Sisyphus bade his wife Merope give him no funeral dues; she obeyed, and he got permission from Hades to re-ascend to earth and remonstrate. He neglected to return till he died of old age, and Hades set him to roll the rock to keep him from running away again.

For Thanatos in art see O. Waser in Roscher's *Lex.*, s.v.

H. J. R.

THARGELIA, an Ionian festival attributed to Apollo and celebrated the 7th Thargelion (May-June), also known from Asia Minor (Hipponax), Abdera, Massilia. The most discussed rite took place the day before. A man (the *φάρμακός*) was fed, led around in the town, flogged with green plants, driven out, and sometimes stoned or killed. He is certainly a scapegoat, absorbing all evil and then removed. On the other hand, certain

rites point to the conception of a spirit of vegetation whose power is to be reinforced. The festival is named after the *θάργῃλα* which were brought on the chief day, first fruits of the still-unripe crops cooked in a pot; the word signifies also the first bread baked of the new crop. The mixing of the two mentioned motifs is explained by the fact that the Thargelia were celebrated a little before the harvest, partly to protect and partly to promote the crops. The *θάργῃλα* rite has been interpreted as the breaking of the tabu on the unripe crops.

L. Deubner, *Attische Feste*, 179 ff.; M. P. Nilsson, *Griech. Feste*, 105 ff.; J. E. Harrison, *Proleg. to the Study of Greek Religion*, 77 ff.; the *pharmakos* is much discussed, e.g. Frazer, *GB*³ ix; Nilsson, *Gesch. d. griech. Religion* i. 97 ff. M. P. N.

THASOS, an island of the north Aegean, colonized from Paros, probably c. 680 B.C. From the gold-mines in its soil (the first exploitation of which Herodotus ascribed, probably without good reason, to the Phoenicians), and from others on the mainland under Mt. Pangaeus, it derived a revenue rising to 2-300 talents. A dispute with Athens about the mainland mines led to its secession from the Delian League (465), followed by its reduction (463). If we may judge by the fluctuations in the tribute of Thasos (3 talents in 454, and 30 in 446), it was deprived of the mainland mines in 463, but recovered them soon after. Despite a massacre of its Athenian partisans by Lysander (404), it again allied with Athens in 389 and was a permanent member of Athens' Second Confederacy. In 340 it was subdued by Philip, and it remained a Macedonian dependency until freed by the Romans in 196. After 300 its waning revenues from the mines were supplemented by the profits of a carefully regulated export of wine. The volume of this trade is attested by widely distributed finds of wine-jars (identified by an official stamp) in the Balkan lands, where Thasian coinage also circulated freely.

Thasos had a flourishing school of sculpture from the seventh to the sixth century, and it was the home of the painter Polygnotus. It preserves impressive remains of its fifth-century walls.

S. Casson, *Macedonia, Thrace and Illyria* (1926), passim; F. v. Hiller in *PIW*, s.v. M. C.

THEAETETUS (c. 414-369 B.C.) of Athens, mathematician, friend and pupil of Plato in philosophy and of Theodorus of Cyrene in mathematics, contributed much to the foundations (a) of Euc. bk. 10, by investigating the various species of irrationals (cf. Pl. *Thet.* 147 d-148 b), and (b) of Euc. bk. 13, by constructing theoretically the five regular solids and discovering the methods of inscribing them in spheres.

PIW v A. 1351.

W. D. R.

THEAGENES (1) of Megara slaughtered the flocks and herds of the wealthy, secured a bodyguard, and made himself tyrant; constructed a tunnelled conduit and pillared fountain; married his daughter to Cylon of Athens, and supported Cylon's unsuccessful attempt to make himself tyrant. He was himself subsequently banished from Megara. The date of Theagenes' tyranny depends on that of Cylon (victor Olymp. XXXV, coup before Draco), and in spite of recent questionings is probably to be put between 640 and 620 B.C.

Aristotle, *Politics* 1305 a, *Rhetoric* 1. 2; Pausanias 1. 28, 40, 41; Thucydides 1. 126; Plutarch, *Quaest. Graec.* 18. B. Dunkley, *BSA* xxxvi. 145 f. P. N. U.

THEAGENES (2) of Rhegium (fl. c. 525 B.C.), contemporary of Cambyses, was the first scholar to attempt an allegorical interpretation of Homer by suggesting that the names of the gods represented either human faculties or natural elements (see ALLEGORY).

Diels, *Vorsokr.*² i. 51 f.; F. Wehrli, *Zur Geschichte der allegorischen Deutung Homers im Altertum* (1928). J. F. L.

THEAGES, pupil of Socrates. Plato refers in the *Republic* (496 b) to 'the bridle of Theages', the bad health which kept him out of politics and saved him for philosophy. On the basis of this reference an imitator of Plato wrote a *Theages* dealing with the relation between philosophy and politics, and this is included in the corpus of Plato's works.

PIV v A. 1350.

W. D. R.

THEANO is said to have been the wife of Pythagoras, but another tradition describes her as being among his pupils, and the wife of his disciple Brotinus or Brontinus. Several apocryphal books were ascribed to her in antiquity. Seven apocryphal letters are to be seen in R. Hercher, *Epistolographi*, 603-7.

PIV v A. 1379.

W. D. R.

THEATRES, STRUCTURE OF. Greek and Hellenistic theatres were unroofed and placed where natural ground-slope assisted seating, thus reducing substructures to a minimum. The auditorium or *cavea* was rather more than a semicircle on plan, and seating was of stone or marble slabs, unless natural rock was cut to shape and wooden seats were added. Narrow stepways were arranged radially. The lowest seat tier was sometimes a special one with continuous backs, or even separate armchairs, finely shaped and finished in marble (Dionysus Theatre, Athens, and Priene, Asia Minor), and separated by a gangway from the seats above; in larger theatres there was a similar concentric gangway half-way up. In the centre of the *cavea* was the orchestra or chorus space, usually a complete circle. Stepped raking and balustraded walls closed each end of the *cavea* and formed one side of wing-passages (*paradoi*), the front of the stage being set back the width of the passage at least. The stage (*skene*) was probably of wood in earlier examples. Theatres of late fourth century had built loggias (*proskenia*) in front, and it is therefore assumed that their stages were raised considerably. The theatre at Epidaurus (c. 330 B.C.) is over 360 ft. across the *cavea* and must have seated well over 7,000; owing to the favourable conformation of the ground its natural acoustic properties are unsurpassed; that at Syracuse (c. 400 B.C.), in excellent preservation, has fine evidences of balustraded backs to its upper concentric gangway.

Roman theatres conformed to a type which made a complete building, though, in larger examples, the auditorium—a semicircle—was probably only partly roofed. The stage, certainly roofed and close to the semicircular 'orchestra', was a wide and fairly deep raised platform, backed by a wall (*scenae frons*) as high as the top of the *cavea*, treated as an elaborate front towards the stage, with columns, niches, etc. Substructures of *cavea* and stage consisted of vaulted passages, etc., with staircases, and the outer walls enclosing the back of the *cavea*, sometimes squared, were of arched construction in tiers, with order treatments. Good examples are at Pompeii (small theatre, early, partly Greek, c. 80 B.C.), Orange, Aspendus, Athens (Odeon), Miletus, Taormina, and Dougga (N. Africa).

D. S. Robertson, op. cit. under ARCHITECTURE, pp. 164 and 271.
T. F.

THEATRICAL PRODUCTION (1) GREEK, *see* TRAGEDY, COMEDY; (2) ROMAN, *see* DRAMA, para. 7.

THEBAIS, *see* EPIC CYCLE.

THEBES (1), on the south edge of the east plain of Boeotia, was the chief Mycenaean city in Central Greece (the Phoenician origin of Cadmus, the founder of its dynasty, is no longer credited). The gruesome fates of its princes were, next to the tale of Troy, the favoured material of Greek epic and tragedy. It was destroyed by the Argives, and lay waste (the Catalogue of Ships names

only 'Υποβίβαί; II. 2. 505). After the Boeotian invasion Thebes outstripped the other Boeotian towns, but was never strong enough to combine them into a unitary State. It was friendly with the Pisistratids (Hipparchus made a dedication to Apollo Ptoos, BCH 1920, 237 ff.); its hostility to Athens dates from the Athenian reception of the Plataeans (q.v.) in 509 B.C. As a punishment for the support which it gave to the Persians in 480-479, Thebes lost its predominant position in the Boeotian League, and recovered it only in 446. During the Peloponnesian War it grew at the expense of its small neighbours. Its territory, with subject towns, was nearly half Boeotia, and it elected four of eleven boeotarchs (Hell. Oxy. xii. 3). Dissatisfied with the Spartan peace in 404, Thebes joined Athens and Argos in the Corinthian War. The peace of 387 enabled the Spartans to detach the other Boeotian towns from Thebes, and in 382 they garrisoned the citadel. The Thebans retook it in 378, and at Leuctra in 371 drove the Spartans out of Central Greece. For a brief period Thebes, led by Epaminondas (q.v.) was the chief power of Greece; but its hegemony did not survive him. Thebes joined Athens in resisting Philip; it was punished by destruction for a revolt against Alexander, and though refounded was never again a great city. Thebes was a pleasant place, with trees and fresh water ([Dicaearchus] 1. 12 ff. in FHG ii. 258). The temple of Ismenian Apollo and the prehistoric city and palace have been excavated. *See also* FEDERAL STATES (third paragraph).

L. Ziehen, PIV, s.v. 'Thebai'; A. W. Gomme, BSA 17. 29 ff. (topography).
T. J. D.

THEBES (2), formerly capital of Egypt, was still an important city at the Greek conquest, but suffered considerably during revolts in 206 and 88 B.C. of which it was the centre. It was sacked by Cornelius Gallus in 30 or 29 B.C.; Strabo found it a group of villages. The temples prospered under the Ptolemies: building was done on the east bank, and the temple of Deir-el-Medineh on the west was begun under Philopator. Occasional records of works occur till c. A.D. 150. Thebes had then become a tourist centre, the great attractions, as shown by graffiti, being the statue of 'Memnon' and the Pharaonic tombs. Papyri and numerous ostraca have been found there, almost all dealing with finance or taxation.

The fullest account of the buildings is in Baedeker's *Egypt* (1929).
J. G. M.

THEIAS, *see* CINYRAS.

THEMIS, a goddess originally akin to or even identical with Gaia (Aesch. *Eum.* 2; PV 209-10). In the former passage the oracle at Delphi was once hers; in the latter, she is still a prophetess, and warns her son Prometheus of the future. The same powers are shown in Pindar, *Isthm.* 8. 34 ff., cf. *THEIAS*. In all probability, her name means 'steadfast' (root *θε*). In Hesiod, *Theog.* 135 she is a daughter of Earth; *ibid.* 901 ff. she is Zeus' second consort, mother of the Horae and Moerae. But, as her name is used also to mean 'firmly established custom or law, justice', she tends to become an abstraction, Justice or Righteousness. For example, Medea, when betrayed, invokes her as guardian of oaths (*Eur. Med.* 160 ff.); Plato, *Laws*, 936 c, suggests an oath by Zeus, Apollo, and Themis. Her several cults may be supposed to have originated with her earlier nature for the most part; *see* further, Weniger in Roscher, s.v.
H. J. R.

THEMISON of Laodicea, pupil of Asclepiades and precursor of Thessalus of Tralles, lived in Rome under Augustus (31 B.C.-A.D. 14). His views being most inconsistent, his system is no unity. He agreed with Asclepiades in the theory of corpuscles. On the other hand, he introduced into medicine the conception of the *communio* ('status strictus, fluens, et mixtus'), referring to

excretion which is either too much or too little, or too much from one part, too little from another. This defect, which he probably thought to hinder the free movement of the atoms, he tried to remedy by an alteration of the state of the body as the physician finds it. Moreover, he was the first to study methodically the problem of chronic diseases and to encourage their treatment by physicians.

TEXT. Fragments, not collected. Π. τῶν δέξων καὶ χροῦσαν νοσημάτων (R. Fuchs, *Rh. Mus.* 1903) not Themison but Herodotus, M. Wellman, *Hermes* 1905, 1913.

LITERATURE. General survey, K. Deichgräber, *PW* v A. 1632. Th. Meyer-Steinck, 'Das medizinische System d. Methodiker', *Jenaer med.-hist. Beiträge* 1916. Themison not the founder of the Methodical school, L. Edelstein, *PW*, Suppl. vi, 358, s.v. 'Methodiker'. L. E.

THEMISTO, name of several heroines, the only one of importance being the daughter of Hypseus (Nonnus, *Dionys.* 9. 305 f.), wife of Athamas (q.v.). Herodorus, in schol. Ap. Rhod. 2. 1144, makes her his first wife and mother of several children, including Phrixus and Helle.

See Höfer in Roscher, s.v.

H. J. R.

THEMISTOCLES (c. 528–c. 462 B.C.), Athenian statesman, of the poor but noble family of the Lycomids. He held a wardenship of aqueducts, and in 493–492, when he was eponymous archon, he secured the transformation of the Piraeus into a fortified port, and advocated an increase in the Athenian navy against the menace from Aegina and from Persia. At the time of Marathon he was eclipsed by Miltiades (q.v.), who checked Themistocles' policy of naval expansion. After Miltiades' death (489) Themistocles obtained supremacy in Athens by having his rivals ostracized. In 483, when the necessity for a powerful fleet had been brought home to the Athenians in an unsuccessful war against Aegina, Themistocles persuaded the Athenians to build at least 100 new warships with the proceeds of some new silver-mines at Laurium (q.v.), thus breaking with the custom of distributing surpluses of revenue. Henceforth the future of Athens lay on the sea, and the poorer classes, from whom the seafaring population was drawn, came to play a decisive part in Athenian politics. As a champion of national unity in 480 he had the Athenian exiles recalled, and took joint direction of the Persian war with his former antagonist Aristides (q.v.). He held the Persians at Artemisium; after the disaster at Thermopylae he secured the evacuation of Athens, and he persuaded the Spartan admiral-in-chief Eurybiades (q.v.) to fight a decisive battle at Salamis. The stories that he enticed Xerxes to fight by a confidential message, and that he suggested the cutting of the Hellespont bridges, are of doubtful value.

No sooner had the Persians withdrawn from Greece than Themistocles effected the reconstruction of the walls of Athens in the face of Spartan opposition, and to check possible retaliation by Sparta he sponsored democratic movements in Peloponnesus. He probably sounded Pausanias (q.v.) for a revolution at Sparta, and through him he perhaps established contact with Xerxes. At Athens he lost ground to the party of Cimon (q.v.), which stood for friendship with Sparta and vigorous prosecution of the Persian War, and c. 470 he was ostracized and retired to Argos. After an abortive attempt to foment revolts against Sparta in Peloponnesus he was denounced by Sparta as an accomplice of Pausanias in mediocrism and was condemned to death by the Athenians in default (c. 468). He escaped to Asia after an adventurous flight by way of Corcyra, Epirus, and Macedonia, and was appointed by the Persian king Artaxerxes I as overlord of Magnesia ad-Macandrum, Lampsacus, and Myus (since Lampsacus and Myus were in the Dorian League, his lordship over these towns was purely nominal). He died at Magnesia c. 462. The fable of his

suicide, known to Aristophanes (*Eq.* 83), was disproved by Thucydides. The story that he played a part in the overthrow of the Areopagus (Aristotle, *Ath. Pol.* 25) is now generally discredited.

Themistocles had a bad reputation for vanity and acquisitiveness, but his strategic genius was widely recognized. He was the chief architect of the Greek victory over Persia, and though he cannot be connected with any democratic reforms at Athens, his naval policy was rightly regarded by ancient writers as the foundation of the radical Athenian democracy. See also PERSIAN WARS.

P. T.

THEMISTOGENES of Syracuse, quoted by Xenophon (*Hell.* 3. 1. 2) as the author of an *Anabasis* of Cyrus. Suidas' vague notice accepts this statement, but it is unlikely that there was a third account of the expedition in addition to those of Xenophon and Sophocles. Themistogenes was probably the pseudonym under which Xenophon published his *Anabasis*.

G. L. B.

THEOCRITUS, of Syracuse, son of Praxagoras and Philina. The alternative tradition that T. was a Coan is to be rejected. Arg. e, *Id.* IV puts T.'s *flourit* at 284–280 B.C., but the evidence of the poems suggests this is at least ten years too early. XVI is dated c. 276–275 by its references to Hieron and was written in Sicily. It is probably the earliest extant poem. Soon after 276–275 T. went to Cos (Arg. b, *Id.* VII) and joined Philetas' circle. But his stay there cannot have been long, since XV and XVII (both composed in Egypt) were written before June 270 (death of Arsinoë), cf. 15. 24, 109 ff.; 17. 128 ff., where reference is made to the queen as still alive. Later T. seems to have left Alexandria and returned to Cos or at any rate the Eastern Aegean. His life may have covered c. 310–250. The dating of the poems, apart from those mentioned above, is very controversial.

2. XI and XIII are addressed to Nicias, a doctor (Arg. e, *Id.* XI makes him a schoolfellow of the famous Erasistratus), who also wrote verse. T. apparently made his acquaintance on his first visit to Cos, and XI at any rate was probably composed then. Later Nicias married Theuigenis and practised at Miletus. T. visited his friends there (XXVIII; *Ep.* 8), but this was after his stay in Egypt, since XXVIII goes naturally with the other Aeolic, XXIX, XXX, XXXI (*PAntin.* p. 59) and in XXIX T. describes himself as growing old. XVIII, which has echoes of Sappho, may belong to the same period, as also may XII. In Egypt T. composed XV, XVII, probably the lost *Berenice* (*Ath.* 7. 284 a), and possibly the Hymns XXII and XXIV (cf. now *PAntin.* p. 55), as also the epyllion XIII, despite the dedication to Nicias. XIV seems post-Egyptian, as does II. The scene of both is perhaps Rhodes. Of the remaining pieces VIII is possibly and IX certainly not by T. IV and V, if not composed while T. was still in the West, belong to the first stay in Cos. VII must have been written in Cos, but probably after the Egyptian visit, cf. 45–8 (T. sides with Callimachus in the literary controversy), 93 (? an allusion to Philadelphus' patronage). I, III, VI, and X were probably written in Cos, VI and X perhaps before, I and III after, the stay in Alexandria. The dating of the Epigrams is uncertain. *Ep.* 18, apparently intended for a statue of Epicharmus in Syracuse, may have been written there: others (17, 19, 21–2) were probably composed in the East.

3. So far as any conclusions are possible, T.'s poetic development seems as follows. His first poem (XVI)

adapts to hexameters themes made familiar by the classical Lyric Poets. One of these, Stesichorus, may have introduced him to Daphnis, the hero of Greek Bucolic. But it is in Cos that T. becomes a pastoralist, influenced by Philetas and his associates, but also reacting against them. In Egypt XVII shows him as a formal panegyrist, but in XV he adapts a Mime of Sophron to compliment the Court and continues this experiment in XIV and II, the latter poem, which has no ulterior purpose, marking his highest achievement in pure art. XIII, XXII, and XXIV are tributes to the Alexandrian fashion, but the Bucolic interest survives and I and VII show it enriched by the new contacts. Finally, as he grows older, T. takes up the Lesbian poets and produces the Aeolica and kindred pieces.

4. Of the other poems included in the Bucolic Corpus only XXI, XXV, and XXVI have any claim to be by T., and the claim can scarcely be admitted even in the case of XXV, a poem of considerable merit. Various other works ascribed to T. by Suidas, e.g. *Proctides*, *Elpides*, *Epikedeia*, *Elegies*, *Iambi*, are now lost.

5. Theocritus was an accomplished craftsman who succeeded in nearly every genre that he chose to handle. Modern scholarship has emphasized the element of parody, *pastiche*, and topical allusion in nearly all the Bucolics. The criticism is just, though disguised references to individuals are unproved except for VII, but, while T. was led to Pastoral by literary influences and remained subject to those influences all his life, his combination of realism and romanticism in this sphere is what gives his verse its unique charm. In his manipulation of the hexameter T. eschews the refinements of Callimachus, but varies the metrical form according to the subject, sometimes even in the same poem—compare XV, 1-99 with 100-44. The literary Doric which he uses for most of his pieces probably came naturally to him, but the employment in other poems of the Epic, Ionic, and Aeolic dialects, if not equally successful, at least shows an adaptability only surpassed by Callimachus. See also PASTORAL POETRY, GREEK, and EPYLLION.

THEODAISIA, see THEOXENIA.

THEODECTES (c. 375-334 B.C.), born at Phaselis (in Lycia), probably lived mainly at Athens, where he studied under Plato, Isocrates, and Aristotle and won fame as an orator (Cicero, *Orat.* 5. 1, praises his polished style), a writer on rhetorical subjects, and a composer of popular riddles in verse. As a tragic poet he composed 50 plays and in 13 competitions won 8 victories (Suidas, s.v.), of which 7 were at the Great Dionysia (IG² ii. 2325). He died at the age of 41 and was buried on the way to Eleusis ([Plut.] *X Orat.* 837 d, Steph. Byz. s.v. *Φασηλίας*); his monument at Phaselis was honoured by Alexander the Great, his fellow student under Aristotle (Plut. *Alex.* 17). His plays included a *Lyncus* (the crisis of which is praised by Aristotle, *Poet.* 11), a *Mausolus* (in honour of the late king of Caria, but the treatment is unknown), and a *Philoctetes* (Aristotle, *Eth. Nic.* 7. 8, refers to the hero's brave resistance to pain; his hand, not, as in Sophocles, his foot, had been bitten by the serpent). The fragments consist mainly of rather commonplace but well-expressed reflections, and suggest that the poet was in the Euripidean tradition (TGF 801-7).

A. W. P.-C.

THEODOREANS (*Theodores*), followers of Theodorus (q.v.) from Gadara, who taught Tiberius rhetoric ('Tiberius ipse Theodorus', Sen. *Suas.* 3. 7; Suet. *Tib.* 57; Quint. *Inst.* 2. 11. 2; 3. 1. 17-18; 3. 11. 26; 4. 2. 32). Their *τέχνη* represented a broader Attic school than that of the Apollodoreans (q.v.).

Piderit, *De Apoll. Pergameno et Theod. Gadarensi rhetoribus*, diss. Marb., 1842; *PIR*, T 119.

J. W. D.

THEODORIDAS (second half of 3rd c. B.C.), Syracusan poet, wrote poems against his contemporaries in the form of sepulchral epigrams, against Mnasaëtes (*Anth. Pal.* 13. 21), and Euphron (ibid. 7. 406). Also genuine epitaphs (ibid. 7. 282, 439, 527, 528) and dedications (ibid. 6. 155, 156). Also Poem to Eros (Ath. 475 f), dithyramb *The Centaur* (id. 699 c), iambic and hexameter poems (id. 229 b, 302 c), cinaedic songs (Suid., s.v. 'Sotades').

Cf. F. Susemihl, *Gesch. gr. Litt. Alex.* (1891), i. 246. 24, ii. 541 ff. C. M. B.

THEODORUS (1), of Samos, a Greek artist of c. 550 B.C. He made a silver bowl for Croesus, and an emerald seal for Polycrates. He was said to have invented the line, rule, lathe, and lever, and to have been associated with Rhoeceus in inventing, or introducing into Samos, the arts of modelling in clay and of casting images in bronze and iron. Pliny describes a bronze self-portrait by him, and includes him in his list of notable painters. Athenagoras (*Legatio*, ch. 17) says that he and Telecles made the Pythian Apollo at Samos; and Diodorus (1. 98) that they brought back the canon of proportion for the human figure from Egypt. Pausanias mentions a building called 'Scias' at Sparta, apparently an assembly hall, which was attributed to him; and Vitruvius cites a book by him on the Heraeum at Samos which (according to Herodotus) was built for Croesus by Rhoeceus, and which is probably identical with the 'Labyrinth' which Pliny attributes to Theodorus himself. Diogenes Laertius (2. 103) says that he advised the inclusion of a layer of charcoal in the foundations of the Artemesium at Ephesus.

Herodotus 1. 51, 3. 41, 60; Plato, *Ion* 533 b; Vitruvius 7, *praef.*; Pliny *HN* 7. 198; 34. 83; 35. 146, 152; 36. 95; Pausanias 3. 12. 10; 9. 41. 1. H. W. R.

THEODORUS (2) of Cyrene (b. c. 460 B.C.), mathematician, teacher of Plato and Theaetetus (Pl. *Thet.* 147 d-148 b), was originally a pupil of Protagoras but turned early to mathematics. Plato represents him as proving separately that $\sqrt{3}$, $\sqrt{5}$, and the roots of the other non-square numbers up to 17 are irrational (the irrationality of $\sqrt{2}$ being known already).

PW v. A. 1811.

W. D. R.

THEODORUS (3) of Gadara (fl. 33 B.C.), rhetor and younger rival of Apollodorus (q.v.). He taught Tiberius at Rhodes, and his writings (lost) included works on grammar and rhetoric (*Π. θέσεως*, *Π. πρόπορος διδασκείας*), besides *Π. ιστορίας* and *Π. πολιτείας*. His importance lies in the school he founded, and among his followers were the author of *Π. ὑψους* and Alexander, son of Numenius. The different principles upheld by the Apollodoreans and Theodoreans (Schanz, *Hermes* xxv (1890)) may be gathered from Anon. Seguerianus (Spengel, *Rhet.* i. 427 ff.), Seneca (*Controv.* 2. 1. 36), Quintilian, and Augustine. See RHETORIC, LATIN, para. 3; THEODOREANS.

J. W. H. A.

THEODOSIUS I and II.

(1) THEODOSIUS I, surnamed 'the Great', son of Theodosius, the general who, after recovering Britain for Valentinian I, died in unmerited disgrace, was called in by Gratian to help him repair the disaster of Adrianople (A.D. 379). Appointed Augustus of the East, Theodosius succeeded in a few years in overcoming the Gothic peril, partly by victories, partly by wise conciliation and by enlisting Goths as allies in the imperial service. The

price was a heavy one, the barbarization of the Eastern army. When Maximus in 383 rose in Britain and Gratian died near Lugdunum, Theodosius recognized the new emperor in the West. But Valentinian II still held Italy and Africa, and, when Maximus in 387-8 forced a quarrel on him and invaded Italy, Theodosius was driven to take sides, to receive the young emperor, and declare war on Maximus. Victorious at Siscia, Theodosius pursued and captured Maximus near Aquileia, and allowed rather than ordered his execution. Theodosius had two sons, Arcadius, already made Augustus in 383, and the younger Honorius, also destined to Empire. Valentinian, nominally restored to power, was actually under the tutelage of Theodosius; he resided in Gaul until his murder in 392, when the patrician, Eugenius, was set up by the Franks as puppet-emperor in his place. Again Theodosius was forced to interfere. Invading Italy in 393, he won the decisive battle of the Frigidus. Honorius was created Augustus in Rome, and the general Stilicho was prepared for the post of guardian to the two young princes. Soon afterwards, in 395, Theodosius died.

Theodosius won the title of the 'Great' by his settlement of the Gothic problem and by an able administration, which maintained peace with little interruption in the East and restored imperial unity, after two civil wars, in the West. A strict Athanasian, he was the first emperor to impose orthodoxy throughout his dominion and to break down the lingering resistance of paganism, especially in its stronghold of Rome. His submission to the penance demanded by St. Ambrose of Milan in 390 for the massacre of Thessalonica is famous.

(2) THEODOSIUS II, son of Arcadius, was created Augustus in 402, while still a child, and succeeded his father in 408. For long years he was under tutelage, first of the prefect Anthemius, 408-14, then of his own sister, Pulcheria, who was made Augusta in 414. Eudoxia, whom he married in 421, also played a leading part in politics. Peace in the East was interrupted only by two short Persian wars, but the Balkans were threatened by Ostro-Goths, and soon after 440, by Attila and his Huns, and a policy of diplomacy and subsidies was used to compensate for military weakness. In the West, on the death of Honorius Valentinian III and his mother, Galla Placidia, were restored in 423, after the brief usurpation of Johannes. Valentinian married Eudoxia, daughter of Theodosius, and remained under Eastern influence. An expedition against the Vandals in Africa in 431 was unsuccessful. The publication of the Codex Theodosianus in 438 was the one great achievement of a long reign (408-50), lacking in immediate distinction, but important in the orderly development of the great Byzantine Empire.

Camb. Med. Hist. i; J. B. Bury, *Hist. of later Roman Emp.*³ (1923). H. M.

THEODOSIUS (3) of Bithynia (probably between 150 and 70 B.C.), mathematician and astronomer, mentioned by Strabo, is probably to be identified with Theodosius the inventor of a sun-dial for use in any locality, mentioned by Vitruvius, and with an author Theodosius mentioned by Suidas. Works: extant (1) *Σφαρική*, the oldest extant Greek work on sections of the sphere, a compilation of earlier discoveries, (2) *Περὶ οὐρανίων* (astronomical tables for different parts of the earth), (3) *Περὶ ἡμερῶν καὶ νυκτῶν*; lost (1) *ὑπόμνημα εἰς τὸ Ἀρχιμήδους ἐφόδιον*; (2) *Ἀστρολογικά*; (3) *Διαγραφὰς οὐκίων*.

PW v A. 1930. *Sphaerica*, ed. J. L. Heiberg, 1927. W. D. R.

THEODOTUS, *see* JEWISH GREEK LITERATURE.

THEOGNETUS, one of the later poets of the New Comedy. Fr. 1 ridicules excessive preoccupation with philosophy, fr. 2 mentions Pantaleon, whom Chrysippus describes as *ὁ πλάγος*.

FCG iv. 549 f.; *CAF* iii. 364 f.

THEOGNIS (1) (*fl.* 544-541 B.C.; Suidas, s.v. *Θεογνῖς*), elegiac poet, of Megara. Some 1389 lines survive in good manuscripts under his name, and there is much dispute about their authenticity. The chief difficulties are: (1) among these lines are passages written by other poets, or only slightly altered from them, notably Mimnermus (795-6, 1020-2), Tyrtaeus (935-8, 1003-6), Solon (227-32, 315-18, 585-90, 1253-4), Euenus (465-96 and possibly 667-82, 1345-50). These are not cases of the practice of 'paradiorthosis', by which a line was taken and slightly altered in a different sense, as in most cases they are either unaltered or altered in some quite trivial way. (2) In the text of Theognis there are repetitions, which look like variations of the same theme, and it is hard to believe that both sets were written by the same man. (3) There are chronological difficulties. 894 refers to the Cypselids, who disappear from history c. 580 B.C., while 773-82 is a prayer to Apollo to keep the Medes away from Megara and cannot be earlier than 490 B.C. (4) the existing text does not agree with either of the two books mentioned by Suidas, the *Maxims* in 2,800 verses and the *Gnomology to Cyrnus*. It seems therefore probable that the original work of Theognis has been supplemented, especially as we find many variations on a given theme, which suggest that the book is a collection of *σκόλια* intended for the use of singers who had to cap one song with another on a similar subject. A clue for detecting the authentic Theognis ought to lie in 19-23, where the poet speaks of a 'seal' on his work which cannot be stolen or replaced by a substitute, but there is no agreement on what this seal is. It has been thought to be the excellence of the work, the name 'Theognis' in 22, the name Cyrnus, which appears in many poems. If the last is right we may perhaps have a means for restoring at least the *Gnomology to Cyrnus* which Suidas mentions. Otherwise the problem seems insoluble. The poems to Cyrnus show marked individuality. Their poet has a strong aristocratic bias, is very frank about his emotions, uses bold and vivid metaphors, went into exile (1197-2000), believed in traditional tenets of Greek morality, and was not without some worldly wisdom. The whole collection agrees with this section in its political temper, and we may conjecture that it was popular, if not composed, in aristocratic circles in Athens in the fifth century. The separate poems are sympotic elegies, and the book may have been a song-book used by those who did not wish to improvise when called on for a song over the wine. Book II, which consists of love-poems, seems to be Athenian, and the whole collection begins with four introductory pieces whose themes recall those of Attic *σκόλια*. But otherwise it is hard to mark breaks in the collection, though some regard the promise of immortality to Cyrnus, 237-54, as the end of one section and 753-6 as the end of another. The section 1-254 is much more quoted by fourth-century writers than the rest of the book, and may perhaps have had a separate circulation. The whole collection is interesting as being the poetry of a small class with clear ideas about morals and politics and a strong interest in personal relations. Reference in it to Simonides (469, 667, 1349) and to Onomacritus (503) may be to the familiar bearers of these names.

THEOGNIS (2), a tragic poet spoken of contemptuously by Aristophanes (*Ach.* 11, 140; *Thesm.* 170) as one who *ψυχρὸς ὢν ψυχρὰς ποιεῖ*. He is identified by some with the Theognis who was one of the Thirty Tyrants. If so, he resembled Critias in combining 'tyranny' with poetry. A. W. P.-C.

THEOGONIA, (1) *see* EPIC CYCLE, (2) *see* HESIOD.

THEOI PATROOI, PATRIOI: DI PATRII (θεοὶ πατρώιοι, πατριοί). Of the two adjectives, the former means *connected with a father, or fathers*, as οὐσία πατρώα, an estate inherited from one's father; the latter, in dialects (such as Attic) which use both, is vaguer, meaning *ancestral, time-honoured, traditional*. Applied to gods, the former has therefore the more intimate meaning; a θεὸς πατρώος is at least the god whom the speaker's father, or his ancestors generally, worshipped, while a πατριος θεός may be merely one whom it is customary to worship in his community, or in the Greek world generally.

The narrowest and most exact meaning of πατρώος θεός is a god from whom descent is claimed. Aesch. fr. 162 Nauck may serve as an example:

οἱ θεῶν ἀγχίσποροι
οἱ Ζηνὸς ἐγγυς, ὧν κατ' Ἰδαίον πάγον
Διὸς πατρώου βωμός ἐστ' ἐν αἰθέρι,
κούπω σφιν ἐξίτηλον αἶμα δαιμόνων.

'Those near akin to the gods, close to Zeus, whose altar of Zeus Patroos lies, on Ida's heaven-kissing slope, in whose veins the blood of the deities is yet fresh.' The exact context is unknown, but clearly the poet is speaking of heroes who are but a generation or two from their ancestor Zeus. It is in this sense that Athenians worshipped Apollo Patroos. Every candidate for the archonship was tested, and one of the questions put was whether he had a cult of Zeus Herkeios and Apollo Patroos. The former question was meant to ensure that he belonged to a respectable family, having its own proper domestic cult; the latter, to make it clear that he was, what all Athenians claimed to be, a good Ionian, since Ion (q.v.) is son of Apollo and ancestor of the Ionian stock. See Arist. *Atl. Pol.* 55. 3. Another not uncommon use of πατρώος is in such a context as Ar. *Nub.* 1468 (paratragic), καταιδέσθητι π. Δία. Here Zeus is named by a father appealing to his son's sense of duty. He is evidently the god who cares for fathers and their rights. When Orestes (Eur. *El.* 671) says ὦ Ζεῦ πατρώε καὶ τρόπαι' ἐχθρῶν ἐμῶν, he may very well be combining the two senses, for Zeus is his ancestor (*see* TANTALUS) and he wants his help to revenge the murder of Agamemnon.

But that πατρώος cannot always have this sense is clear from the fact that it is used as a title of Artemis at Siccyon (Paus. 2. 9. 6), where her rude and archaic image testified the antiquity of her cult, but clearly, being virgin, she was not an ancestress. Again, the epithet is applied to Hestia, *IG* xiv. 980 (from Rome), and certainly Hestia is uniformly virgin; the dedicator perhaps meant to differentiate her from the Roman Vesta (q.v.). In much the same manner, other inscriptions in the same collection (nos. 971, 962, 972) apply the title to the Palmyrene gods and the (Thracian?) Ares. This is in contrast, on the one hand with πατρώος applied to the obscure Eumelos as ancestor-god of the Eumelidae (*ibid.* 715), on the other hand with the use, not of πατρώος but of πατριος of Aeneas in an inscription from Ilium, *CIG* 3606, where the dedicators might certainly claim him as an ancestor. A long list of examples will be found in Roscher's *Lexikon* iii. 1688-9, of gods of all sorts, from (probably) actual ancestors thought of as deified to ordinary gods traditionally worshipped by the persons in question, who seem to be called quite indifferently πατρώιοι or πατριοί, with one or two instances of θεοὶ μητρώιοι, whether deified maternal ancestors or gods worshipped in the household of the dedicator's mother.

In Rome, *di patrii* manifestly cannot have the narrower sense of θεοὶ πατρώιοι, at least in official cult, since no Roman god was officially an ancestor; the theories, e.g., about the identity of Remulus and Quirinus (q.v.) had no effect on the State cult of the latter. A good example of its use is in Verg. *G.* 1. 495, 'di patrii Indigetes et

Romule Vestaque mater'. The expression is ambiguous, but either he calls the Indigetes, Quirinus and Vesta, all *patrii*, or he uses that epithet of the first of these only; the former is the more likely. Since no one, even mythologically, seems to have claimed the Indigetes (q.v.) for ancestors, and certainly no one laid such a claim to Vesta, the sense 'worshipped by our fathers, ancestral' is perfectly clear. Nor does it mean only those gods to whom the epithet *pater* (or *mater*) is applied, for while such titles are known for Quirinus and Vesta, no such collocation as *Indigetes patres* is to be found. There is, however, a somewhat specialized sense in which the word is used; it applies above all to the Penates. In this sense *paternus* is once or twice employed; the evicted tenant in Horace, *Carm.* 2. 18. 26 goes his way 'paternos (πατρώους) in sinu ferens deos'. These would be his *di penates*, represented by images or other symbols, which he piously takes away as Anchises did his in leaving Troy (Verg. *Aen.* 2. 717), though here they are called *patrii*, appropriately, for they are not merely the gods of the individual house but the future objects of national Roman worship, the *Penates publici*, which are not venerated because they formed part of anyone's *sacra domestica*, but because they had been adored by Rome and the States supposedly her ancestors from time immemorial, cf. PENATES. Examples of this use are: Cicero, *Har.* 37, 'patrii penatesque di'; *Dom.* 144; cf. Dion. Hal. *Antiquit.* 1. 67. 3, some say *di penates* means Πατρώιοι (θεοὶ).

Roscher's *Lexikon*, arts. 'Patrii di' (J. Ilberg), 'Patrioi theoi'. 'Patroa' (Höfer), 'Patrooi theoi' (Ilberg). H. J. R.

THEOLOGUMENA ARITHMETICAE. This work has been thought to be by Iamblichus, because Iamblichus apparently wrote about the properties of the Monad. But it does not bear the name of Iamblichus in the manuscripts, and is merely a compilation from Anatolius and Nicomachus.

Ed. V. de Falco (1922).

W. D. R.

THEON (1) of Alexandria (1st c. A.D.), son of Artemidorus of Tarsus, and successor of Apion (q.v.) at Alexandria. He wrote, *inter alia*, alphabetical lexica of Tragedy and Comedy, probably based (mainly) on the unalphabetical collections of Didymus; commentaries on the chief Alexandrian poets (completing his father's unfinished work on Callimachus); and one of the first treatises on Greek syntax.

C. Giese, *De Theone eiusque reliquiis* (1867).

P. B. R. F.

THEON (2) of Smyrna (fl. c. A.D. 115-40), Platonist, author of an extant work *Τὰ κατὰ τὸ μαθηματικὸν χρήσιμα εἰς τὴν Πλάτωνος ἀνέγνωσιν*, and of a lost commentary on the *Republic* and a lost work on the order of Plato's writings. The extant book is an elementary work on arithmetic (especially on the types of numbers), the theory of musical harmony, and astronomy.

Ed. E. Hiller (1878). *PII* v A. 2267.

W. D. R.

THEON (3), AELIUS, of Alexandria (2nd c. A.D.), rhetor, wrote commentaries on Xenophon, Isocrates, and Demosthenes, also a *Τέχνη* and *Ζητήματα περὶ συντάξεως λόγου* (lost). His *Προγυμνάσματα* (Spengel, *Rhet.* ii. 59) is a manual of some merit, which rivalled in popularity the work of Hermogenes.

J. W. H. A.

THEOPHANES of Mytilene, the historian of Pompey, after a pro-Roman part in home politics, accompanied P. in the Third Mithridatic War, and, receiving Roman citizenship, fought in the Civil War. His work appears to have treated only P.'s campaigns, which he compared to those of Alexander, and was written probably in 63/2 B.C. to further P.'s cause in Rome.

FGH ii, p. 919; *ED*, p. 614; R. Laqueur, *PIV* v. 2265.

A. H. McD.

THEOPHILUS, Middle Comedy poet, late in the period: he won a victory in 330/329 B.C. Eight or nine titles survive (two of them mythological burlesques, the rest from daily life). Fr. 1, the mutual devotion of master and slave.

FCG iii. 626 ff.; CAF ii. 473 ff.

W. G. W.

THEOPHORIC NAMES, see NAMES, THEOPHORIC.

THEOPHRASTUS (372/369–288/285 B.C.; Apollod. ap. Diog. Laert. 5. 36; 40; 58), Peripatetic philosopher. He was born at Eresus in Lesbos, his father being the wealthy fuller Melantas (Athenod. ap. D.L. 5. 36). When he came to Athens he is said to have attended Plato's lectures (D.L. l.c.). Probably during Aristotle's stay in Assos and Mitylene T. joined him (see Jaeger, *Aristotle*, Engl. transl., 115. 1), and became his most faithful pupil. When Aristotle left Athens in 323/322 T. took over the presidentship of the school (Apollod. l.c.). The Peripatos had the greatest external development under this famous scholar and writer. Important and productive pupils worked under him. Up to 2,000 students are said to have attended his lectures (D.L. 37). He had connexions with such powerful princes as Cassander and Ptolemy (l.c.). As a pupil of Aristotle he was subject to political attacks in Athens (l.c.). His pupil Demetrius of Phalerum enabled him to purchase an estate for the school, which aliens actually were not entitled to do (D.L. 39; 52). His testament proves him a wealthy and careful man (D.L. 51 f.).

WORKS

Preserved: *Enquiry into plants* (*Περὶ φντῶν ἱστορίας*) in nine books and *Aetiology of plants* (*Περὶ φντῶν αἰτιῶν*) in six books, the first a classification and description, the latter a physiology, of plants. In these great works T. used the biological principles of Aristotle to build up for the first time a system of botany.

The *Characters* (*Χαρακτῆρες*), a collection of thirty short pictures of typical characters, such as the loquacious, the mean, etc. His descriptions are rich in delightful features. The idea of the work can be traced back to the typology of human characters Aristotle gives in the *Ethics*.

'From the *Metaphysics*' (*Θεοφράστου τῶν μετὰ τὰ φυσικά*), a short collection of problems in which difficulties are discussed arising out of the Aristotelian metaphysics.

There are several little scientific treatises dealing with mineralogical, meteorological, and physiological subjects: *On stones*, *On fire*, *On winds*, *On weather signs*, *On odours*, *On weariness*, *On swooning*, *On sweat*, *On paralysis*.

The treatise *On sense-perception* (*Περὶ αἰσθήσεως καὶ αἰσθητῶν*) is part of the great work on the history of Physics (*Φυσικῶν δόξαι*, including *Metaphysics*; see PHILOSOPHY, HISTORY OF). Another historical work was his big collection of laws in 24 books which is almost entirely lost.

Other examples of the lost part of T.'s enormous work may be gathered from the bibliography. Lists of his writings are to be found in Diogenes Laertius (5. 42 f., cf. Usener, *Analecta Theophrastea*, 1858). T. as an original philosopher cannot be compared with Aristotle or even with Zeno or Epicurus. His critical but at the same time susceptible and refined mind was captured by Aristotle at a time when the new basis the master had laid required application, development, enlargement, and criticism. This task T., more a scholar than a philosopher, fulfilled with productive and masterly skill. His power of work was fabulous. He wrote standard works in Botany and History of Philosophy. He carried on Aristotelian ideas in Logic, Rhetoric, Poetics, Ethics, Politics, and Science, so that his works together with the

Aristotelian dialogues represented the Peripatetic school throughout the Hellenistic age.

B.

THEOPOMPUS (1), a king of Sparta and leader in the First Messenian War (Tyrtaeus fr. 3; see MESSENA). He was credited by fourth-century writers with two constitutional reforms—the subjection of resolutions by the Apella to a veto by the kings and Gerousia, and the institution of the ephorate. It is probable that the ephorate was of earlier origin (see EPHORS), but that it obtained its wide executive powers under Theopompus.

M. C.

THEOPOMPUS (2), Athenian writer of comedy; dramatic activity c. 410–370 B.C. Suidas lists 24 plays, including mythological burlesques (e.g. *Ἀδμητος*; *Πηνελόπη*), 'political' plays (e.g. *Εἰρήνη*; *Μῆδος*), and comedies of manners (e.g. *Βαρύλη* ('The Dwarf'); *Καπηλίδες*).

FCG ii. 792 ff.; CAF i. 733 ff.; Demiańczuk, *Suppl. Com.* 86 f. M. P.

THEOPOMPUS (3) of Chios (b. c. 378 B.C.), historian, banished with his father Damasistratus c. 334 for Spartan sympathies and restored by Alexander as a supporter against the pro-Persian oligarchy. On the latter's death he fled to Egypt.

Theopompus, a contemporary of Ephorus, was a pupil of Isocrates and adopted his view of history as the handmaid of politics. Little remains of numerous writings except fragments from the two works on which his fame rests, the *Hellenica* (*Ἑλληνικαὶ ἱστορίαι*) and *Philippica* (*Φιλίππικὰ*). The former, a continuation of Thucydides from 411, reached the battle of Cnidus, 394, in 12 books, and took the supremacy of Sparta as its main theme. Our knowledge of the *Hellenica* is meagre unless we accept R. Laqueur's recent arguments (*PIW*, s.v. 'Theopompus') for the identification of the author of the Oxyrhynchus *Hellenica* (see OXYRHYNCHUS, THE HISTORIAN FROM) with Theopompus. These arguments rest on style, methods, and the evidence of personal views and research embodied in the papyrus agreeing with characteristics of T.

Theopompus was able to view events in Greece from a detached standpoint, as is shown by his choice of Philip of Macedon as the connecting theme of the 58 books of *Philippica*. Beginning with Philip's accession,

this prolific work was a world history depicted in a series of extensive digressions. Certain of these acquired separate titles (*Tà θαυμασία, Περὶ δημαγωγῶν*, etc.). T. was remarkable for wide and critical research and for the harshness of his verdicts. See also HISTORIOGRAPHY, GREEK, para. 4.

FHG i. 278; iv. 643; FGrH. ii. 115; E. Meyer, *Theopomp's Hellenika* (1909); *Hellenica Oxyrhynchia* (O.C.T.). G. L. B.

THEORIKA, State allowances made to the poorer citizens of Athens to enable them to visit the theatres, introduced, it is said, by Pericles. Two obols were paid per head at each performance to all persons registered for the purpose on the roll of citizens. Later, allowances were paid on other occasions also. In the fourth century B.C. a regulation was made that all surpluses of the State should be used for *theorika* (except during war-time, as an enactment of Demosthenes provided). Another law of the same period punished with death anyone suggesting the use of these funds for army purposes during times of peace. The administrators of the *theorika*, οἱ ἐπὶ τῷ θεωρικῶν, were elective magistrates who had considerable, and during the time of Eubulus (q.v.) even a controlling, power over financial administration.

The term occurs in Roman Egypt, too, where it seems to mean funds for religious local festivals, which had to be supplied by taxation.

A. M. Andreades, *A History of Greek Public Finance* (U.S.A. 1933), Index, s.v. 'Theorikon'; G. Busolt-H. Swoboda, *Griechische Staatkunde* i, ii (1920-6), Index, s.v.; W. Schwahn, in *PW*, s.v. 'Theorikon'. F. M. H.

THEOROI (θεωροί), 'observers', a word originally applied to sight-seeing travellers and to the attendants at festivals of distant cities. It became an official title given to a city's representatives at another city's festival. The great panhellenic festivals were attended by theoric delegations (θεωρίαι) from every Greek State. Cities to which *theoroi* regularly came assigned the duty of receiving them to official *theorodokoi* (θεωροδόκοι). At the festivals the *theoroi* offered sacrifices in the name of their cities, and so the title was likewise given to the envoys that a city sent to a distant shrine to offer sacrifice in its name and to the envoys that it sent to consult a distant oracle. The envoys that were sent round to announce the coming celebration of a festival and, after the creation of new panhellenic agonistic festivals in the third century B.C. and later, to announce the new games to all the Greek States were also called *theoroi*. It thus became the accepted title of all sacred envoys. The religious functions of *theoroi* eventually obscured the original purpose of their office, and as early as Thucydides several cities gave the title to annually elected religious magistrates. At Thasos the *theoroi* were eponymous magistrates.

F. Poland, *De legationibus Graecorum publicis* (Leipzig, 1885); C. P. Bill, *TAPA* xxxii (1901), 196-204; P. Boesch, *Θεωρός* (1908); A. Boethius, *Die Pythais* (Uppsala, 1918). J. E. F.

THEOS (θεός) denotes a god, especially one of the great gods, from his anthropomorphic aspect; from the aspect of power he is also called δαίμων (see DAIMON). When there is no room for doubt, θεός often takes the place of the proper noun: thus ὁ θεός is at Athens Athena. There is no reason for assuming anonymous gods. At Eleusis τῷ θεῷ are Demeter and Kore, ὁ θεός and ὁ θεὰ Pluto and Persephone. The indefinite expressions θεός τις, θεοί alternate in Homer with δαίμων to denote some unknown divine power; in later authors τῷ θεῶν is an equivalent. This abstraction becomes finally an expression for the irrational in human life, that which cannot be explained by natural causes. No plausible etymology exists. Plato's derivation from θεῖν 'to run' (*Cratylus* 397 d), depends on his opinion that the innate power of motion of the celestial bodies is a sign of their divinity.

M. P. N.

THEOXENIA (θεοξένια), or **THEODAISIA** (θεοδαΐσια), a Greek rite 'held on certain fixed days on the supposition that the gods in person were visiting the cities' (schol. Pind. *Ol.* 3, p. 105, 14 ff. Drachmann). The statement of Hesych., s.v., that it was 'a festival in common for all the gods', may go back to a gloss relating to a particular (unknown) example. The characteristic feature was that a god or gods were considered to be present as guests at a banquet given by their worshippers. This might apparently be a public or private ceremony; if the former, it was often an important one, hence the fairly common occurrence of a month called Theoxenios or Theodaisios. The best-known was at Delphi, in Theoxenios (March-April); for this the sixth Paean of Pindar (q.v.) was written. Here presumably Apollo (q.v.) was the chief guest of honour, but not the only one: θεῶν ξενία (Pind. *op. cit.* 60); for an indication that Leto was present cf. *Ath.* 372 a. The meal was shared by human beings, witness the setting aside, as late as Plutarch's time (*De sera* 557 f), of a portion for Pindar's descendants. Another was that in honour of the Dioscuri and Helen (qq.v.) at Acragas, Pind. *Ol.* 3; this seems to have been rather a domestic feast of the Eumenidae on a magnificent scale than a public festival proper. Several other instances are recorded; see F. Pfister in *PW*, s.v. 'Theodaisia', 'Theoxenia'. H. J. R.

THERA, one of the Sporades, a treeless semi-circular island, forming part of the cone of an ancient volcano, and famous for its wine. According to tradition it was originally settled by Phoenicians. Later came colonists from Laconia, who built the temple to the Carnean Apollo. Owing to dissensions the older population migrated to Cyrene. The islanders took no part in the Persian wars, but, though Dorians, appear as allies of Athens in the Peloponnesian war. The island was a Ptolemaic naval base during the third and part of the second century B.C.

German archaeological excavations (1895-1902) have revealed a fine capital city, with a theatre, of Hellenistic and Roman times.

Hdt. 4. 147 ff. Cf. Bursian ii. 520 ff.; *Thera*, ed. H. von Gaertringen (1899-1902). Pfuhl, *Ath. Mitt.* xxviii. 1-288 (tombs, etc.). Dörpfeld, *Ath. Mitt.* xxix. 57-72 (theatre). W. A. L.

THERAMENES (b. c. 455 B.C.), Athenian statesman. He was one of the principals in establishing the Four Hundred (q.v.). Four months later he was active in overthrowing them and establishing the Five Thousand; he is said to have prosecuted the oligarchic leaders himself. He acquiesced in the subsequent restoration of the full democracy, and assisted Alcibiades in restoring Athens' naval supremacy (see PELOPONNESIAN WAR). At Arginusae (406) he was ordered to help the ships wrecked after the battle; he laid the blame for the failure to rescue the crews on the *strategi*, and escaped prosecution. In 404 he was sent to negotiate peace with Sparta, and is said deliberately to have wasted three months in discussion while Athens was closely besieged. But he was sent again and brought back the final terms of peace. He was elected one of the 'Thirty Tyrants' (q.v.), but soon quarrelled with the extremists, especially Critias (q.v.), who had him condemned and executed.

His character was violently censured in antiquity, for his frequent change of sides and attacks on former friends, by some of the democrats (as Lysias) and the extreme oligarchs; some (as Aristotle) warmly defended him, as one who would serve Athens under any constitutional government. Aristophanes makes fun of his cleverness, but genially. We have now no means of judging his sincerity.

A. W. G.

THERAPNE, the site of an early sanctuary on a steep cliff on the left bank of the Eurotas, to the south-east of Sparta. On an adjacent hill-top remains of a modest Late

Helladic settlement were excavated in 1910. The massive remains of a fifth-century building (excavated by the British School at Athens in 1909) represent the altar (and temple?) of Helen, who was worshipped here, together with the Dioscuri and Menelaus. The cult of the Twins was later transferred to Sparta itself. Polybius calls the sanctuary Menelaion, Pausanias the temple of Menelaus. Votive offerings attest a cult from the early Geometric period to the fourth century B.C. A. M. W.

THERMAE, *see* BATHS.

THERMOPYLAE (i.e. 'Hot Gates'), so-called from its hot sulphur springs, formed an important defence line of Greece, separating Phocis from Thessaly; it followed Mt. Oeta and the Spercheus valley. There were three passes, one westward and another eastward of Anthela, where the central pass (Thermopylae proper) lay, and where the Phocians had built a wall against Thessalian attacks. Notwithstanding their narrowness, the passes could be turned, outflanking the defenders. Thus Xerxes (August 480 B.C.), Brennus (279), and M' Acilius Glabrio (191) forced Thermopylae against the resistance of, respectively, the Spartans, the Aetolians, and Antiochus III.

F. Stählin, *PIW*, s.v. 'Thermopylen'; Y. Béquignon, *La Vallée du Spercheios* (1937), 43 ff., 235 ff. P. T.

THERMUM, religious centre of Actolia. Situated north-east of L. Trichonis on a natural rock-castle, it commanded the central plains of Aetolia and formed the meeting-place for the Aetolian League. Extensive excavation has revealed its occupation from the Bronze Age and its importance as a cult centre for the worship of Apollo Thermios, Apollo Lyseios, and Artemis; oval houses, early type of *megaron*, three temples of c. 600 B.C., and terra-cotta metopes and antefix heads revealing Corinthian influence are the most important discoveries. Its historical importance coincides with the Aetolian League, until its sack in 218 B.C. by Philip V of Macedon.

Apex. 'Eph. 1900, 167 f.; *Apex. Delat.* 1915 and 1916; W. J. Woodhouse, *Aetolia* (1897), 252 f. N. G. L. H.

THERON, tyrant of Acragas (488-472 B.C.), father-in-law of Gelon, with whom he defeated the Carthaginians at Himera (480). His reign was distinguished by love of peace and culture. He was closely attached to Pindar and Simonides, and he made Acragas into one of the most beautiful Greek cities. In the quarrel between Gelon's brothers Hieron and Polyzelus (c. 476) he took the latter's side. But actual war between Theron and Syracuse was avoided, and Hieron betrayed to Theron the plot of the Himeraeans against his son.

Hdt. 7. 165 f. Pindar, *Ol.* 2, 3, ff. 118 f., and scholia. Diod. bk. 11. Schachermeyr, *PIW*, s.v. 'Theron'. V. E.

THERSANDER (Θέρσανδρος), name of five mythological persons, for whom see Höfer in Roscher, s.v.; the one of most genealogical importance is son of Polynices and Argeia (*see* ADRASTUS), from whom Theron of Acragas claimed descent (Pindar, *Ol.* 2. 43 ff.); he was one of the Epigoni (q.v.). H. J. R.

THERSITES, in mythology, an ugly, foul-tongued fellow, who rails at Agamemnon (*Iliad* 2. 212 ff.), until beaten into silence by Odysseus. Evidently, from his description, he is of low (non-Achaean) birth; but in post-Homeric tradition (schol. *Il.* *ibid.*) he is of good family, son of Agrios brother of Oeneus (q.v.), therefore akin to Diomedes (q.v.). Hence, when Achilles slays him for railing at him when he mourns for Penthesilea (*Acthiopis*), a quarrel arises and Achilles goes to Lesbos to be purified. H. J. R.

THESAUROI, *see* TREASURES.

THESEUS (Θησεύς), son of Aegeus (q.v.) or Poseidon, i.e., of a sea-god, and national hero of Athens. This explains his prominence in ancient, especially Attic, literature; the chief surviving continuous accounts of him, however, are Plutarch, *Theseus*, and Apollod. 3. 216 ff., continued by *Epit.* 1. His legend had manifestly been influenced by that of Heracles (q.v.; encounters with brigands and monsters; campaign against the Amazons), and it is not surprising that he is made Heracles' friend and contemporary. There is no proof that any real person lies behind the legend, but that is not impossible.

2. *Childhood and youth*. When Aegeus departed from Troezen, he left instructions with Aethra that when her son was able, he should lift a certain rock, under which Aegeus had hidden a sword and sandals. Meanwhile, the boy was educated by Pittheus, his tutor being a certain Connidas, a hero honoured in Attica the day before the Theseia (Plut. op. cit. 4). On reaching young manhood (sixteen years old, Paus. 1. 27. 8) he lifted the rock easily (Plut. 6) and determined not to sail to Athens to find his father but go the more dangerous way by land. He thus encountered Periphetes, or Corynetes, Sinis, Sciron, Procrustes, Phaea the sow of Crommyon (qq.v.), and other dangerous men and beasts; the exact numbers and names vary in different accounts. Plutarch (9) says that Theseus was eager to emulate Heracles, and in fact this is one of the most obvious places in which the latter's legend has influenced his.

3. *Attic and Cretan adventures*. Arrived in Attica, he was in danger from Medea (q.v.), who persuaded Aegeus to send him against the Marathonian bull, which in some accounts was Pasiphae's bull brought from Crete by Heracles (q.v.). On the way there, an old woman named Hecale hospitably entertained him; having killed the bull, he found her dead on his return, and ordered that her memory should be honoured (Callim., frs. of *Hecale*, p. 240 ff. Mair; Plut. 14). Coming back to Athens, he narrowly escaped an attempt of Medea to poison him (Apollod. *Epit.* 1, 5), thanks to Aegeus recognizing him in time. He now heard of the tribute yearly sent to the Minotaur (q.v.), and volunteered, or was specially chosen by Minos, to be one of the youths included in it (Plut. 17). On the voyage to Crete he proved his divine ancestry by leaping overboard and coming back safely from the palace of Amphitrite with a gold ornament which Minos had thrown in (Bacchyl. 16). In Crete he killed the Minotaur by the help of Ariadne (q.v.), who gave him a clue of thread to find his way out of the Labyrinth and afterwards fled with him. He left her at Dia (Naxos); in the original story this was probably due to some magical forgetfulness (cf. Theocr. 2. 45-6), but this detail having fallen out, various reasons were given for his ingratitude (Plut. 20). Thence he sailed to Delos, where he and his comrades danced a complicated figure, in commemoration of the Labyrinth, said to be preserved in the traditional Delian dance known as the 'crane' (Plut. 21). This may serve as an example of the numerous ceremonies, Attic and other, said in later times to commemorate some part of his adventures. For his return cf. AEGEUS.

4. *Kingship*. Theseus succeeded his father and is supposed to have brought about the *συνοικισμός*, or union of the various communities of Attica into one State with Athens for the capital (Plut. 24). The event is itself historical, but its age and author unknown. He took part with Heracles in the expedition against the Amazons, or went against them on his own account, and won Antiope, or Hippolyte (cf. HIPPOLYTUS) for himself; the Amazons in their turn invaded Attica, held the Arcopagus against Theseus, and were finally defeated in a desperate battle. Pirithous the Lapith raided Marathon, was met by Theseus, and became his friend and ally; Theseus came to his wedding-feast and took part in the

resultant fight with the Centaurs (q.v.), and later helped Pirithous to invade the lower world in an attempt to carry off Persephone (q.v.). According to the most familiar of the many versions of this story, Theseus was ultimately rescued by Heracles from imprisonment, but Pirithous remained below. Theseus also carried off Helen (q.v.) while she was very young, and consequently Attica was invaded by the Dioscuri (q.v.).

5. *Death and posthumous honours.* Apart from the variant of his permanent detention by Hades (Verg. *Aen.* 6. 617-18, perhaps already in *Od.* 11. 631) his reign is generally said to have been ended by a rebellion (headed by Menestheus, a descendant of Erechtheus, q.v., *Plut.* 32), which led to his banishment; he went to Scyros and was there murdered by king Lycomedes (*Plut.* 35). Long after, some bones alleged to be his were brought from Seyros by Cimon (*Plut.* 36), and a hero-shrine built for them (not the temple now popularly called the Thescum).

6. *Contact with other legends.* Besides Heracles, Theseus is said to have been one of the helpers of Meleager (q.v.) in the boar-hunt (*Plut.* 29), and an Argonaut (q.v., *ibid.*); he brought about the burial of the bodies of the Seven against Thebes (*Eur. Suppl.*), and kindly received Oedipus (q.v., *Soph. OC.*).

Steuding in Roscher's *Lexikon*, s.v. (abundant references to ancient literature and art); H. Herter in *Rh. Mus.* 85 and 88.

H. J. R.

THESIS in metre, *see* METRE, GREEK, 1.

THESMOPHORIA, a women's festival common to all Greeks, regularly celebrated in the autumn. In Athens it took place on the 11th-13th Pyanopsion (Oct./Nov.). The women erected bowers with couches of plants and sat on the ground. The second day was a fast. The name of the third day, *Καλλιγένεια*, hints at the fecundity of mankind also, but the chief purpose of the festival was to promote the fertility of the corn which just was to be sown. Pigs had been thrown down into subterranean caves (*μεγάρα*), probably at the Scirophoria; the putrefied remains were brought up, laid on an altar, and mixed with the seed-corn. The myth of Eubuleus, the swineherd swallowed up by the earth when Pluto carried off Kore, is an *aition* to account for this custom. *See* DEMETER.

M. P. Nilsson, *Griech. Feste*, pp. 313 ff.; J. E. Harrison, *Proleg. to the Study of Greek Religion*, 120 ff.; L. Deubner, *Attische Feste*, 50 ff. The interpretation of Demeter *θεσμοφόρος* as *legifera* is to be rejected. M. P. N.

THESMOTHEAI, the six junior archons at Athens (*see* ARCHONTES), sitting as a college. They were first instituted presumably (before the publication of law codes) to keep record of judicial decisions as well as to act as judges. Later their functions were purely judicial. They had charge in principle of cases in which the interests of the community as a whole were immediately concerned, and in practice of all cases not specifically within the province of other magistrates. They conducted the *dokimasia* (q.v.) of all magistrates and clections by lot; and they allotted the days for trials and the courts to the presiding magistrates.

A. W. G.

THESPIAE, near the east foot of Mt. Helicon, was the chief town of south Boeotia. The Thespians, alone of Boeotians, fought in full strength at Thermopylae and Plataea. They took a prominent part in the restored Boeotian League after 446 B.C., providing two boeotarchs. The Spartans used Thespiea as a base for their anti-Theban policy after 382, and it remained important after their expulsion. It was in Roman times still one of the chief Boeotian cities (*Strabo*, pp. 493, 410). Visitors came to see the Eros of Praxiteles (*Cic. Verr.* 2. 4. 135), and the sanctuary and games of the Muses (*see* HELICON).

T. J. D.

Fiehn in *PW*, s.v. 'Thespeia'.

THESPIS won a prize for tragedy at Athens about 534 B.C. (*Marm. Par.*). Some authorities (e.g. *Suidas*, s.v.) say that he came from Icaria (in Attica). He was the first to appear as an actor separate from the chorus, and speaking a prologue and set speeches (*Aristotle ap. Themistium Orat.* 26, p. 316; *Diog. Laert.* 3. 56), his face disguised in various ways and ultimately in a linen mask—the disguise which would most easily allow an actor to change from one character to another (*Suidas*, s.v.). *Suidas* states that he wrote plays called *The Contests of Pelias* or *Phorbas*, *The Priest*, *The Young Man*, and *Pentheus* (*TGF* 832-3), but the plays passing under his name in the fourth century B.C. were known to be forgeries (*Diog. Laert.* 5. 92). Horace's description of him (*Ars P.* 275 ff.) as taking his plays about on waggon, with a chorus, whose faces were stained with wine-lees, probably rests on a confusion of early tragedy with early comedy. *See also* TRAGEDY.

THESPROTI, *see* EPIRUS.

THESSALONICA, a city of Macedonia, founded by Cassander, who synoecized the small towns at the head of the Thermaic Gulf; perhaps on the site of Therme (*Strabo*, fr. 24). It was named after Cassander's wife. It stood at the junction of the Morava-Vardar route from Europe with the route from the Adriatic to Byzantium (the later Via Egnatia). An open roadstead sheltered by Chalcidice, Thessalonica became the chief Macedonian port, displacing Pella when its harbour was silted up. Strongly fortified, it withstood the Roman siege, surrendered after the battle of Pydna, and became the capital of the Roman province (146 B.C.); in the Civil War it served as Pompey's base. A free State and the main station on the Via Egnatia, it enjoyed great prosperity, shown by its prolific coinage, and was made a Roman colony by Decius c. A.D. 250. The population included a large Roman element and a Jewish colony, visited by St. Paul, one of whose disciples, Aristarchus, became the first Bishop of Thessalonica. Second city to Constantinople in the Byzantine Empire, Thessalonica reached a height of prosperity to which the extant walls and early Byzantine churches bear witness, until it was sacked by Saracens in 904.

E. Oberhummer, *PW*, s.v. 'Thessalonika'.

N. G. L. H.

THESSALUS (1) of Cos (fl. c. 421-411 B.C.), the more famous of Hippocrates' two sons. Galen considered him to be the author of bks. 5 and 7, and the part-author of bks. 2 and 6, of the Hippocratic work on epidemics, and thinks he may have been the author of the *Kar' iŋtpeion*.

PW vi A. 165.

W. D. R.

THESSALUS (2) of Tralles, the *Iatronikes* as he styled himself, lived in Rome and died before A.D. 79. Pliny the Elder quotes his epitaph. The new medical school to which he laid claim in a letter to Nero was that of the Methodists.

Thessalus accepted Themison's doctrine of the *communio* but did not understand them as a dogmatic conception. He rather took them to mean the morbid change visible in the patient which indicates with necessity what the physician should do: change the existing state into its opposite. In short, he interpreted the *communio* as a true sceptic would (*Sext. Emp. Pyr.* 1. 236). The degree of the necessary change he determined by considering the size of the *communio*, the locality affected, and the seasons, so that his treatment did not much differ from the usual one. Medical theory, however, was greatly simplified in this way. Thessalus' school was the only new sect seriously to compete with the older Hellenistic schools. Galen's attacks are such as one would expect from a

reactionary archaist without understanding of the modernist attitude of Nero's time.

TEXT. Fragments not collected. The treatise on remedies (F. Cumont, *Rev. Phil.* 1918), probably not by Thessalus.

LITERATURE. H. Diller, *PW* vi A. 168; cf. L. Edelstein, *PW*, Suppl. vi. 358, s.v. 'Methodiker'. Medical doctrine, Th. Meyer-Steinag, *Das medizinische System d. Methodiker*, Jenaer med.-hist. Beiträge (1916); T. C. Allbutt, *Greek Medicine in Rome* (1921).

L. E.

THESSALY, a district of northern Greece. Thessaly proper, comprising the four tetrads, Thessaliotis, Hestiaeotis, Pelasgiotis, and Phthiotis (q.v. for the distinction between Thessaly and its Perioecis), consists of two large and level plains separated by hilly country. Mountain barriers impede communication by land with neighbouring areas, and the only outlet to good harbours is a low pass leading to the Gulf of Pagasae. Owing to the extent of its plains Thessaly was richer in grain, horses, and cattle than other parts of Greece, but extremes of temperature discouraged the growth of olives and vines.

After producing an important prehistoric culture Thessaly was overrun by waves of northern invaders. Most of these pressed on southwards, but the Thessali, who migrated from Thesprotia, remained and dominated the plains, reducing the conquered to serfdom or driving them into the mountains. A few baronial families gradually became supreme, and their enterprise in organizing a loosely-knit national State headed by a *tagus* (q.v.) made Thessaly a formidable power in the sixth century. The rivalries of aristocratic houses and the medism of the Aleuadae (q.v.) soon caused a decline, which was intensified during the fifth century by social unrest, as the urbanization of this backward district gradually broke down baronial domination. In the wars between Athens and Sparta the Thessalians favoured the former but rendered little assistance, and the foundation of a Spartan colony at Heraclea (q.v. 4) Trachinia illustrates their impotence.

Late in the fifth century Lycophron (q.v.) established a tyranny at Pherae, and a protracted struggle began between the Pheraean tyrants and the bulk of the Thessalians led by Larissa, where the Aleuadae had become a city aristocracy. This conflict was disastrous, since both sides enlisted external support from powers who aimed at selfish domination of a valuable district. It was only during the tyranny of Jason (q.v. 2), who revived the national State and had himself elected *tagus*, that Thessaly was united and formidable to the rest of Greece. Anarchy returned under Alexander (q.v. 5) of Pherae and his successors, and Thessaly fell an easy prey to Philip of Macedon, who adroitly turned local quarrels to his own advantage. In theory the Thessalians retained their independence, but the kings of Macedon held the archonship of the Thessalian League for life, and Thessaly remained virtually a Macedonian province. Its contingent of cavalry was invaluable to Alexander in Asia. An unsuccessful attempt was made in the Lamian War to throw off Macedonian suzerainty, and in the Hellenistic period Thessaly was often overrun by rival powers, some parts falling under Aetolian control.

In 196 Rome liberated Thessaly from Macedonian rule and established a new Thessalian League, which was maintained even after 148, when Thessaly was absorbed in the Roman province of Macedonia.

H. D. W.

THESTIUS, in mythology, king of Pleuron, father of Lynceus and Idas (Argonauts and hunters of the Calydonian boar) and of Althaea, wife of Oeneus (q.v.; Ovid, *Met.* 8. 304, 446 and elsewhere).

THESTOR (Θέστωρ). Of the five persons so called (Höfer in Roscher, s.v.), the least obscure is the father of Calchas (q.v.; *Iliad* 1. 69). He has no legend, the tale in Hyginus, *Fab.* 190, being manifestly late romance.

THETES (Θήτες), in general, wage-labourers. At Athens they constituted the lowest of the four census-classes, men with property producing less than 200 *medimnoi* of corn or the equivalent in other produce or money. By the constitution of Solon (q.v.) they were made members of the Ecclesia and Heliæa; but could not hold magistracies. This limitation was never formally abrogated; but from c. 450 B.C. they were in practice admitted to all offices. Because they could not afford a suit of armour they did not serve in the hoplite ranks; but when Athens became mainly a naval power, they had the even more important duty of serving as rowers, marines, and navigation officers, for which the State provided the equipment. On land some of them served as 'light-armed' men, i.e. as a transport and labour corps. See PENTACOSIOMEDIMNOI, HIPPEIS, ZEUGITAI.

A. W. G.

THETIS (Θέτις), a Nereid, who was fated to bear a son mightier than his father. This being revealed by Themis to the gods, Pindar, *Isthm.* 8. 34 ff. (in Aesch. *Prom. Bound* and *Prom. Unbound* she reveals it to her son Prometheus, who discloses it as the price of his liberation; cf. PROMETHEUS), Zeus and Poseidon gave up all thoughts of possessing her, and instead gave her to Peleus (q.v.), as the most deserving of mankind. Their wedding was attended by all the gods, who brought various gifts (Pind. *Pyth.* 3. 92 ff.; Catullus 64. 31 ff., etc.). She bore one child, Achilles (q.v., *Iliad* 18. 55 ff.; Pindar, *ibid.* 100); Lycophron, 178, says there were seven, of whom the rest perished in the fire when she tried to make them immortal, cf. PELEUS. See further Roscher's *Lexikon*, arts. 'Peleus', 'Thetis'.

H. J. R.

THEVESTE (modern *Tebessa*), an old Berber town, at the east end of the High Plateaux, commanding the upper Ampsaga. Hanno conquered it for Carthage in the third century B.C. It became an important road-centre, linking up with Carthage, Cirta, Tacapae, and Lambaesis. The Flavians moved the legion from Ammaedara (*Haidra*) and made Theveste its permanent camp. When the legion occupied Lambaesis (probably near the beginning of Trajan's reign), Theveste became a colony.

Its strategical importance led to its refortification by the Byzantines in a manner which laid down the pattern of medieval fortifications.

W. N. W.

THIRTY TYRANTS (τ). At the end of the Peloponnesian War (April 404 B.C.) the oligarchs at Athens already had the upper hand, Critias leading the extremists, Theramenes the moderates. Both sections joined in asking Lysander for help against the democrats; under pressure from him the Ecclesia was compelled to appoint thirty *ἐγγραφεῖς* to draw up a new constitution *κατὰ τὰ πάτρια*. The Thirty at once seized full power, constituted a new Boule under their control, and a board of Ten to rule Piræus, abolished the diasteries, and began the removal of obnoxious democrats and *sykophantai* (June). This developed into a reign of terror, many respectable citizens and metics being executed and their property confiscated; a Spartan garrison was stationed on the Acropolis; no new constitution was promulgated. To meet the protests of Theramenes, Critias agreed to draw up a list of 3,000 to constitute the citizen body, but he never published it, and he stifled further opposition from Theramenes by executing him. 1,500 men in all are said to have been executed; many were exiled or fled. But the Thirty failed to prevent the capture of Piræus

by a band of exiles under Thrasybulus (q.v.), and Critias was killed in a battle (Dec.-Jan. 404/3). They were now deposed by the moderate oligarchs, who constituted themselves as the 3,000, and were replaced by a board of Ten who eventually became reconciled with Thrasybulus' party, by the good offices of the Spartan king Pausanias (q.v.). The full democracy was now restored (June 403), and the remnant of the Thirty, who had retired to Eleusis, were exterminated there two or three years later.

Xenophon, *Hell.* 2. 3. 4; Aristotle, *Ath. Pol.* 34. 3-41. 1 (less trustworthy than Xenophon, especially in chronology); Diodorus 14. 3-6 (from Ephorus). Details in Lysias (esp. *Or.* 12 and 13), Andocides, and Isocrates. A. W. G.

THIRTY TYRANTS (2), the name given in the *Historia Augusta* to the swarm of pretenders that arose in the provinces about the middle of the third century A.D., mainly under Gallienus. Name and number are derived from the notorious tyrants of Athens after the Peloponnesian War. As the *Historia* (Pollio) on more than one occasion gives the number as 'twenty' instead of 'thirty', one might conjecture behind the longer list a shorter one of twenty. The order of arrangement seems to be haphazard.

In Gaul we have *Postumus*, *Postumus Junior*, *Lollianus* (*Laelianus*), *Marius*, *Victorinus*, *Victorinus Junior*, *Tetricus*, *Tetricus Junior*: in Illyricum, *Regilianus* (*Regalianus*), *Ingenuus*, *Valens Superior* and *Aureolus*: in Greece, *Piso* and *Valens*: in Isauria, *Trebellianus*: in Syria, *Cyriades*, *Macrianus Senior*, *Macrianus Junior*, *Ballista*, and *Quietus*: in Palmyra, *Odaenathus*, *Herodes*, *Herennianus*, *Maconius*, and *Timolaus*: in Egypt, *Aemilianus*: in Africa, *Celsus*: uncertain place, *Saturninus*. Two 'female tyrants', *Victoria* (Gaul) and *Zenobia* (Palmyra), complete the thirty; but, to dispense with women, *Titus* (under Maximin I) and *Censorinus* (under *Claudius II*) are appended. The names italicized above are known from coins; of the others some, like the younger *Postumus* and *Victorinus*, are mere shadows; others, like *Piso* and *Valens*, though known to history, are very doubtfully classed as pretenders.

CAH xii. 169 ff.; Parker, *Roman World*, 167 ff.

H. M.

THISBE, see **PYRAMUS**.

THOAS (Θόας), in mythology, (1) the father, (2) the son by Jason of Hypsipyle (q.v.).

THOMAS MAGISTER (*Theodulos*) of Thessalonica was the Secretary of Andronicus II (A.D. 1282-1328), but withdrew to a monastery, where he devoted himself to scholarship.

WORKS. (1) *Ecloga Vocum Atticarum* ('Εκλογή ὀνομάτων καὶ ῥημάτων Ἀττικῶν'), based especially on Phrynichus, Ammonius, Herodian, and Moeris, but with much added material that is less valuable, drawn from his own reading, e.g. in Herodotus, Thucydides, Aelius Aristides, and Synesius.

(2) Scholia, which are almost valueless, to Aeschylus, Sophocles *Aj.*, *El.*, OT, Euripides *Hec.*, *Or.*, *Phoen.*, Aristophanes *Plut.*, *Nub.*, *Ran.*; the Pindar scholia ascribed to him are probably the work of Triclinius. Lives of these poets appear under his name in some manuscripts.

(3) Declamations on set themes in the manner of the ancient orators, e.g. *De Regis Officiis* (Π. βασιλείας); panegyrics on famous personalities of earlier date, e.g. Gregory Naz.; eulogistic addresses to contemporaries; deliberative discourses on questions of the moment.

(4) Letters.

Ecloga, F. Ritschl (1832); J. P. Migne, *PG* cxiv (1855); T. Hopfner, *Sitz. Wien. Akad.* 1912. J. F. L.

THRACE was in historic times the eastern half of the Balkan peninsula. Originally extending to the Adriatic, the Thracians were driven back to the river Axios by Illyrian invaders c. 1300 B.C.; after 480 they lost the land west of the Strymon to the Macedonians, who also took from them the Pangaeus district c. 350. Thrace, even in the restricted sense, was not a uniform country: it included the grain and orchard lands of the Hebrus valley, the wooded massif of Mt. Haemus, and the steppe of the Dobrudja. The Thracian people spoke the same (Indo-European) tongue, but fell into some twenty independent and mutually discordant tribes, chief among them the Getae by the Danube, the Bessi on Mt. Haemus, and the Odrysae in the Hebrus valley. Each tribe was a loosely compacted monarchy, with a fighting and hunting aristocracy, and a folk engaged in tillage, lumbering, or (as among the Getae) stock-raising. The Thracians were not without a native culture. Their bronze age resembled that of Mycenaean Greece; they cultivated poetry and music; their nature deities, Dionysus (the vegetation-spirit) and Zalmoxis, were also powers of the underworld who gave men life after death. But their savage methods of fighting, their human sacrifices, their habits of tattooing and of eating butter, made them appear barbarous to the Greeks, and unlike their Macedonian neighbours they took on no more than a veneer of Greek civilization.

Greek colonists settled on the south and east coasts of Thrace after 700. In exchange for pottery, metal-ware, and wine, they obtained timber and slaves. Greek concessionaires worked the gold and silver mines of Mt. Pangaeus (which also supplied some Thracian dynasts with silver for coinage), and Greek recruiting officers (especially in the fourth century) enlisted Thracian 'peltasts' or light-armed fighters. After a period of vassalage to Persia (c. 512-479), the Thracians united under the Odrysian chiefs Teres and Sitalces (q.v.), but by 400 they had again fallen apart. In 342 the southern tribes were subdued by Philip of Macedon; these furnished Alexander with a valuable corps of light troops. From 323 to 281 most of Thrace came under Lysimachus, and henceforth the country stood open to Greek traders; but after Lysimachus' death it reverted to independence and dissension.

In the first century B.C. the Roman governors of Macedonia made occasional retaliatory raids upon marauding Thracian tribes; in 29-28 M. Crassus and c. 12 B.C. L. Piso subdued the country systematically. In A.D. 46 the Emperor Claudius, to end recurrent unrest, made southern and central Thrace into a province, and annexed the north to Moesia. Later emperors developed the road-system (centring on Byzantium), and from the time of Trajan constituted cities of Greek type. But the continuous barbarian invasions of the third and following centuries condemned Thrace to remain essentially a military province.

S. Casson, *Macedonia Thrace and Illyria* (1926), pt. 1; G. Kazarow, *CAH* viii, ch. 17; G. A. Short, *Annals of Archaeology and Anthropology* 1937, 141-55 (Greek colonies on the Black Sea); Jones, *Eastern Cities*, ch. 1; B. Lenk and A. Betz, *PH*, s.v. 'Thrace'. M. C.

THRACIAN SEA, see **AEGEAN SEA**.

THRASEA PAETUS, **PUBLIUS CLODIUS** (cos. suff. A.D. 56). Stoic, renowned for his uprightness and republican sympathies. He modelled himself on Cato Uticensis, of whom, utilizing Munatius Rufus, he composed a *Life* which Plutarch consulted (*Cato Min.* 25, 37). Condemned under Nero (A.D. 66), he ended his life in noble fashion (*Tac. Ann.* 14. 12, 48-9; 15. 20-22; 16. 21-35). See also **ARRIA MINOR**. G. C. W.

THRASYBULUS (d. 388 B.C.), son of Lycus, Athenian general and statesman. In 411 he was a leader of the democratic State formed by the navy at Samos in opposition

to the Four Hundred. He was responsible for the recall of Alcibiades and contributed largely to the naval success of the following years.

He was banished by the Thirty and fled to Thebes where he organized a band of seventy exiles and occupied Phyle (late autumn, 404). When his followers had increased to a thousand, he seized the Piraeus and defeated the troops of the Thirty. Thanks to an amnesty proclaimed at the instance of Sparta, he led his men to Athens, and the democracy was restored. In the Corinthian War he played a prominent part, and in 389/8 he commanded a fleet which gained many allies but suffered from lack of financial support. At Aspendus his troops plundered the natives, who murdered him in his tent.

Thrasybulus clung obstinately to an imperialistic policy when Periclean ambitions were far beyond the resources of Athens. But he was long remembered as a staunch champion of democracy who nevertheless avoided the excesses of contemporary party-struggles.

Thucydides, bk. 8; Xenophon, *Hell.* bks. 1-4; Diodorus, bks. 13-14; Nepos, *Thrasybulus*.
H. D. W.

THRASYLLUS of Alexandria (d. A.D. 36), astrologer. Tiberius made his acquaintance during his stay in Rhodes (6 B.C.-A.D. 2) and came to believe in him implicitly; Thrasyllus remained till his death in close contact with the Emperor. He was a man of good education and a serious student of astrology. Works: (1) a work or works on astrology, epitomized later in a *Συγκεφαλαίωσις τοῦ Ἱεροκλέα Θρασύλλου πίνακος*; (2) *Περὶ τῶν ἑπτατόνων*. In addition he was, with Dercyllides, responsible for the division of Plato's works into tetralogies.

PIV vi A. 581.

W. D. R.

THRASYMACHUS of Chalcedon (fl. c. 430-400 B.C.), sophist and rhetorician, is best known from his defence, in the *Republic*, of the thesis that justice is the interest of the stronger. He played an important part in the development of Greek oratory, by his elaboration of the appeal to the emotions by means of elocution and 'action', and in the development of prose style by his attention to rhythm and to the building up of periods.

Testimonia and frs. in Diels, *Vorsokr.* 2. 319-26; PIV vi A. 584.
W. D. R.

THRASYMEDES (*Θρασυμήδης*), a son of Nestor who takes a minor part in the *Iliad* 10. 255; 16. 321 ff., and elsewhere. In the Wooden Horse, Quint. Smyrn. 12. 319.

THRENOS, see DIRGE.

THUBURSICU(M) NUMIDARUM (modern *Khamissa*), a market-town on the road from Hippo Regius (q.v.) to Theveste. Lying in the richly phosphated Bagradas valley, it became a prosperous centre of the agricultural life which Masinissa introduced into his territory. Its traditional loyalty to the Numidian royal house survived in Roman times in the worship of Gauda and Hiempsal. Attacked in A.D. 23 by Tacfarinas and his Garamantian allies, it was relieved by the proconsul, Dolabella. After being administered jointly by native chieftains and military prefects, it was made a municipium by Trajan, and became a colony in A.D. 270. Its extensive ruins have yielded many excellent specimens of Greek and Roman art.

S. Gsell and C. A. Joly, *Khamissa, Mdaourouch, Announa* (Paris 1922).
W. N. W.

THUCYDIDES (1), Athenian statesman, son of Melesias; related by marriage to Cimon (q.v.), whom he succeeded as 'leader of the rich' in 449 B.C. He must then have been elderly, if his son was contemporary with Aristides' son (Plato, *Laches*, init.). Plato speaks of his

military activities, but he is known only as a politician. He was a bitter opponent of Pericles till his ostracism in 443 or 442. According to Plutarch he organized an oligarchic and anti-imperialist party. If so, the party disappeared after his ostracism. He later returned to Athens in his old age, and appears to have been prosecuted on some charge (*Ar. Ach.* 705 ff.). Aristotle and Plutarch vouch for his respectability and his statesmanship, as recognized by all; for the latter there is no evidence.
A. W. G.

THUCYDIDES (2), author of the (incomplete) History of the War between Athens and Sparta, 431-404 B.C., in 8 books.

1. **LIFE.** He was born probably between 460 and 455 B.C.: he was general in 424 (4. 104) and must then have been at least 30 years old; while his claim in 5. 26. 5 that he was of years of discretion from beginning to end of the war perhaps suggests that he was not much more than grown up in 431. He probably died about 400. He shows no knowledge of fourth-century events. The revival of Athenian sea power under Conon and Thrasybulus, from 394 on, made the decision of Aegospotami less decisive than it seemed to T. (compare e.g. 5. 26. 1 with *Xen. Hell.* 5. 1. 35). Of the three writers who undertook to complete his History, only Xenophon took his view that the story ended in 404 (or 401). Theopompus took it down to 394, and so probably did Cratippus (*Plut. Mor.* 345 d). If, as seems most likely, the very respectable author of the *Hellenica Oxyrhynchia* is Cratippus, then both his work and Theopompus' are on a very much larger scale than Xenophon's, a scale like Thucydides' own. This fact, as well as considerations of language and outlook, makes it likely that Xenophon's continuation (*Hell.* bks. 1-2) was written earlier than the others, and indeed, before the battle of Coronea in 394. But if this be so, then T. cannot have lived more than a year or so into the fourth century. Marcellinus, in his *Life*, c. 34, says that T. was 'over 50' when he died. If he was born about 455 and died about 400, this will be true. The figure may be from Cratippus, who evidently gave some biographical data: Marcellinus quotes him just before (33) for the view that T. died in Thrace.

Thucydides, then, was part of that ardent youth whose abundance on both sides seemed to him to distinguish the war he wrote of. Something of his ardour may be felt in 2. 31: his pride in the soldier's profession and his devotion to the great commander, Pericles.

He caught the Plague, some time between 430 and 427, but recovered, and in 424 failed in the task of saving Amphipolis from Brasidas. Not to have been a match for Brasidas does not prove him a bad soldier: from his history one receives the impression of a first-rate regimental officer, ashore or afloat, who saw war as a matter of style; perhaps his defence of the generals before Megara in 4. 73. 4 (cf. 108. 5) says worse of his judgement of problems of high command than his failure against Brasidas. He was exiled for this (424 winter) and returned 20 years later, after the war was over, and died within a few years.

He had property and influence in the mining district of Thrace (4. 105. 1). His father's name was Olorus (4. 104. 4), the name of Cimon's Thracian grandfather; his tomb was in Cimon's family vault. It is almost certain he was related by blood to Cimon, and probably to Thucydides the statesman (*JHS* 52. 210); born in the anti-Pericles opposition, he followed Pericles with a convert's zeal.

2. **PARTS OF THE HISTORY.** The incomplete history falls into five parts: A, an introduction (bk. 1). B, the 10 years war (2. 1-5. 24). C, the precarious peace (5. 25-end). D, The Sicilian war (6 and 7). E, fragment of the Decelian war (8). It is convenient to take first B and D, the two complete wars.

B is enclosed between two statements that 'the continuous war has herein been described'. It was therefore provisionally finished (if these are T.'s words). It contains one allusion to the fall of Athens (2. 65. 12) and several allusions to events late in the 27 years: these are no doubt additions made to an already existing narrative, since one passage certainly (2. 23. 3) was not written as late as the last decade of the century. The narrative gets rather more summary after T.'s exile (424): e.g. after the futile embassy to Artaxerxes I (4. 50) nothing is said of the important negotiations with Darius II.

D is the most finished portion. As it stands it is adapted to a history of the whole war (6. 7. 4, 6. 93. 4, 7. 18. 4, cf. 7. 9 etc., also 7. 44. 1, 7. 87. 5), and twice at least refers to events of 404 or later (7. 57. 2, 6. 15. 3-4). But these may be revisions and it has been suggested that T. published it separately; and this opinion, though little held now, is not disproved. B and D are connected by C, sequel to B and introduction to D, and provided accordingly with a second preface. For symptoms of incompleteness, see below. It covers 5½ years, very unequally. Its two outstanding features are the description of the Mantinea campaign, and the Melian Dialogue. The former should perhaps be regarded, with B and D, as a third completed episode. The latter foreshadows the dramatic style of D; but if we read 5. 111 with 8. 27 we shall draw no facile moral (see 8. 27. 5).

E has the same symptoms of incompleteness as C and, moreover, stops abruptly in the middle of a narrative. It is very full, covering barely two years in its 109 chapters.

A consists of (i) 1. 1-23, a long preface, illustrating the importance of T.'s subject by comparison with earlier history (the so-called 'archaeology') and stating his historical principles; (ii) the causes of the war—that is, for the most part, an account of the political manoeuvres of 433-2; he adds important digressions, especially 1. 89-117, a history of the years 479/8-440/39, partly to illustrate his view that the war was an inevitable result of Athens' power, partly to make his history follow without interval on that of Herodotus (1. 97. 2). The second motive perhaps explains the length of another digression (1. 128-38) on the fate of Pausanias and Themistocles.

3. INCOMPLETENESS. E stops in mid narrative, in winter 411: T. intended to go down to 404 (5. 26. 1). It shares with (roughly) C two peculiarities, absence of speeches and absence of documents, which are thought to show incompleteness; for these see below. The plan to make of BCDE a continuous history of the 27 years is only superficially achieved, even to 411: e.g. there is nothing of Atheno-Persian relations between 424 and 412, vital though these were (2. 65. 12). We shall see below that T. kept his work by him and revised continually; so he left double treatments of the same theme, one of which he meant no doubt to suppress. E.g. the tyrannicides (1. 20, 6. 54-9); possibly 1. 23. 1-3 is a short early variant of 1. 1-19; 3. 84 of part of 82-3 (Schwartz 286 f.). It may be even suspected that 8. 82. 2 is a less accurately informed version of 86. 4-5 and the two have been merely harmonized by 85. 4. If this last suspicion were just, it would be good evidence that T.'s remains were put into shape by an editor, whose hand may be further suspected in the misplacement of 3. 17, in 1. 56-7 (whose author—as it stands—surely misconceived the course of events), perhaps even in 1. 118. 2 (where the last sentence seems to leap from the 'fifties to 432); an editorial hand has, indeed, been suspected wholesale. Though no single case is quite decisive, it is unlikely T. left his unfinished work in need of no editing. If we look for an editor, one thinks naturally of Xenophon, who wrote the continuation (it seems) immediately after T.'s death; the suggestion was made in antiquity (Diog. Laert. 2. 57). His soldierly (if not his intellectual) qualities might commend him to T., but if it was indeed he, he worked with

extreme piety, and his hand is very little apparent. Xenophon's limits and virtues alike disqualify him for the authorship of 1. 56-7.

4. SPEECHES AND DOCUMENTS. 'Ancient craftsmen, and T. notably, aimed at exactness; but in his speeches, T. admits (1. 22. 1) that exactness was beyond his powers of memory. Here, then, as in reconstructing the far past (1. 20-1), he had to trust to his historical imagination, whose use generally he planned to avoid (*ὡς ἂν ἐδόκουν ἐμοὶ εἰπεῖν*: this meant applying to the speeches the sort of rationalizing schematism that, e.g., Hecataeus applied to geography); and even here, he promises he will control its use as rigorously as he can by the tenor of the actual words. It is much debated whether he made this profession early or late; and it has been much explained away. But it is unreasonable to doubt that from the start T. took notes himself, or sought for hearers' notes, of the speeches he considered important. But since he used speeches dramatically, to reveal the workings of men's minds and the impact of circumstance, it is clear that verbatim reports would not have served even if he could have managed to get them, and he was bound to compromise (unconsciously) between dramatic and literal truth. It is likely that, as his technique developed, dramatic truth would tend to prevail; it is tempting to put his profession of method early, a young man's intention. Even so, while we cannot suppose that, at a moment when morale was vital, Pericles used the words in 2. 64. 3; while it is unlikely that the Athenian debater at Melos developed exactly the same vein of thought as Phrynichus before Miletus (5. 111-8. 27); while Pericles' first speech (1. 140 ff.) is perhaps composite, and hard to assign to a single occasion; it is yet dangerous to treat the speeches as free fiction: their dramatic truth was combined with the greatest degree of literal truth of which T. was capable. He tried to recreate real occasions.

There are no speeches in E, and (except the Melian Dialogue) none in C: Cratippus (a younger contemporary) says T. had decided to drop their use. Modern critics treat their absence as a symptom of incompleteness; they would have been added had he lived. But it is possible that these parts without speeches are experiments in new techniques. T. may have felt, as many readers do, that the narrative of the 10 years is a compromise between the methods of tragedy and of a laboratory notebook, so that between the profoundest issues and the particular detail the middle ranges (e.g. an intelligible account of strategy) are neglected. In the later narrative the methods are more separated. The Sicilian war was capable of almost purely dramatic treatment; C and E evidently not. And in consequence in E at least a new technique is developed, less like either drama or chronicle, more of an organized narrative, with more of the writer's own judgements of values and interpretations of events. It is questionable if E would be improved by speeches, that is, could be profitably (or at all?) transformed into the style of B or D: was Cratippus perhaps right about T.'s intention?

This would not prevent some of the speeches in bks. 1-4 being composed (or revised) very late. The new experiment would not entail eliminating the dramatic from those books; T. experimented to the end and never solved his problem. It is commonly thought that the Funeral Speech was written or rewritten after Athens' fall; and 2. 64. 3 surely was. The Corcyra debate (1. 31-44), on the contrary, has good chances of being an actual report, written up soon after delivery. Though some speeches aim at dramatic characterization (Gorgiasic, 4. 61. 7: Laconic, 1. 86), all are in Thucydides' idiom. But the personalness of this idiom is often overestimated (Finley, *op. cit. infra*).

It is noteworthy that those portions which lack speeches have (instead?) transcriptions of documents: that is,

E and (roughly speaking) C.* If, then, we take C and E as experiments in a new method, the experiment begins in the latter part of B. These documents are usually thought (like the absence of speeches) a sign of incompleteness, since they offend against a 'law of style' which forbids the verbatim use of foreign matter in serious prose. We need not debate the general validity of this law: with so inventive a writer as T., his laws of style are to be deduced from his practice, and 5. 24. 2 (cf. 2. 1) suggests that the end of B is provisionally finished. Are they part of the experiment? One may be surprised (though grateful) that T. thought the full text of the Armistice (4. 118-19) worth its room. One of the documents (5. 47) is extant in fragments (*IG* i² 86) and confirms the substantial accuracy of the copies. One conflicts gravely with the narrative (5. 23, 5. 39. 3): it would seem the narrative was written in ignorance of the exact terms, and has not been revised.

5. 'EARLY' AND 'LATE'. T. says (1. 1. 1) he began to write his history as soon as war started; and it is at least arguable that much of the existing narrative, in all five parts of the work, was written, substantially as we have it, very soon after the events. But he worked slowly, and, as he says at 1. 22. 3, laboriously; correcting in the light of better information (we only detect this process where it is incomplete; e.g. 5. 39. 3 was due for correction in the light of 5. 23) or of later events (1. 97. 2; 4. 48. 5, where the qualification *δοα γε* may have been put merely *ex abundanti cautela*, but more likely when the troubles started again in 410). If his point of view, or his method, changed materially during this process, it becomes of importance to know from which point of view this or that portion is written. Almost a century ago, Ullrich called attention to this, believing that an important change of approach came with his discovery (announced in the second preface, 5. 26) that the war had not ended in 421.

Two criteria have been used to determine earliness or lateness: (a) reference to, or ignorance of, datable events or conditions; (b) the stage in T.'s own development which a passage reveals.

(a) References to late events cannot be written early, but they may be inserted in early contexts: e.g. those who think D early regard 6. 15. 3-4 and 7. 57. 2 as additions. Ignorance of late events is very much harder to establish: those same who think D early may suspect in 6. 41. 3 ignorance of Dionysius' tyranny, or even (a very slippery question) in 6. 54. 1 ignorance of Herodotus' history—but cannot prove their suspicions; yet where such ignorance is certain (see below), we may be sure that the narrative (or line of thought) which warrants them was conceived early. The results of this method are modest: e.g. (i) 1. 10. 2 was not written after the catastrophe of 404: therefore the war against which earlier wars are being measured is not the completed 27 years, and the 'end of war' mentioned in 1. 13. 3-4, 1. 18. 1, is presumably 421; (ii) 2. 23. 3 was not written after the loss of Oropus in 411: therefore some of the narrative of B was written much as we have it before 411; (iii) 2. 65. 12 refers to the fall of Athens: therefore B received additions down to 404 at least.

(b) More has been hoped from the second method. T. worked from his twenties to his fifties, his material growing under his eyes: there must surely be some intellectual or spiritual growth, some change of outlook. The best exponent of this method is Schwartz, who gives (op. cit. infra 217-42) an eloquent account of T.'s growth. The danger of this method is evident: in the ablest hands it yields quite different results (Meyer, Schwartz), and its first postulate may be doubted, namely, that T.'s opinion on the 'true cause' of the war (1. 23. 6) was not

formed till after the fall of Athens. No doubt that was his view after 404; no doubt 1. 23. 6 and 1. 88 were written (inserted?) pretty late. But much the same view is expressed by the Corcyran envoy in 1. 33. 3 (cf. 42. 2); and whether the envoy said it or not it was surely Pericles' view. Pericles believed that if Athens used her opportunity in 433 she was bound to provoke in Sparta an enmity that must be faced; all his career, against Cimon and his successors, he had fought for his conviction that Athens and Sparta were natural enemies and Greece not large enough for both. His admirers held that this clear principle (1. 140. 1) was obscured in debate by the irrelevant particulars (1. 140. 4-141. 1). We have not to consider whether Pericles was right: rather, the effect on T. The devout disciple saw the story unfold in the terms his master had foreseen (2. 65). How far such a 'Pericles-fixation' may have warped T.'s judgement, see below.

If this first postulate go, the second will follow it, viz. that only after 404 was Pericles given the importance he now has in bks. 1-2, since after 404 T. started to rewrite his history as a 'defence of Pericles' (Schwartz 239). It hardly needs to be said that many hold to these postulates and the present writer's disbelief is as subjective as their belief. If these are untrue, truer postulates may be found: the attempt to recreate T.'s experience should (and will) never be dropped.

6. TRUTHFULNESS. Perhaps no good historian is impartial; T. certainly not, though singularly candid. His tastes are clear: he liked Pericles and disliked Cleon. He had for Pericles a regard comparable to Plato's for Socrates, and an equal regard for Pericles' Athens. These things were personal: but in principle, concentrations of energy (like Athens or Alcibiades) were to his taste. Their impact on a less dynamic world was likely to be disastrous—but whose fault was that? The world's, he says, consistently (1. 99; 1. 23. 6 etc.; 6. 15; 6. 28; cf. 2. 64. 3-5): and though this consistency may surprise us, we need not quarrel with it. Such judgements are rare, since T. conceives his task as like medical research (see below, and cf. 3. 82. 2) where blame is irrelevant; the disconcerting simplicity of 2. 64. 3 (power and energy are absolute goods) is the more striking.

We need not here investigate T.'s possible mistakes. The present writer believes that Pericles (having planned an offensive war) lost his striking power, first because Potidaea revolted, next because of the Plague. Forced to the defensive, he left that as his testament. T. was reluctant to face the fact of this failure, and accepted the testament, siding with the defeatist officer class against the revived offensive of Cleon (4. 27. 5, 28. 5, 65. 4, 73. 4; cf. 5. 7. 2). This is why Pericles' huge effort against Epidaurus (6. 31. 2; motive, cf. 5. 53) is recorded as a minor futility (2. 56. 4); why Phormion's first campaign in Acarnania (2. 68. 7-9; of 432?) is left timeless; why we hear nothing of the purpose of the Megara decree; why, when that nearly bore fruit at last, T. suggests that the capture of Megara was of no great moment (4. 73. 4; but cf. 72. 1).

Such criticisms hardly detract much from his singular truthfulness. Readers of all opinions will probably agree that he saw more truly, inquired more responsibly, and reported more faithfully than any other ancient historian. That is a symptom of his greatness, but not its core. Another symptom is his style: it is innocent of those clichés of which Isocrates hoped to make the norm of Attic style; in its 'old-fashioned wilful beauty' (Dionysius) every word tells. Like English prose before Dryden and Addison, it uses a language largely moulded by poets: its precision is a poet's precision, a union of passion and candour. After T. history mostly practised the corrupting art of persuasion (cf. Isocr. 4. 8): his scientific tradition survived in the antiquarians, of whom he is the pioneer (1. 8. 1, 2. 15. 2, 3. 104. 4-6, 6. 55. 1), but the

* Not exactly C: C ends with the Melian Dialogue (which in colour belongs to D?) and B has documents instead of speeches in its latter part, i.e. after the occasion of T.'s exile.

instinctive exactness of early Greek observation was lost. To combine his predecessors' candour of vision with his successors' apparatus of scholarship was a necessity laid on him by his sense of the greatness of his subject: he could no more distort or compromise with what he wished to convey than Shakespeare or Michelangelo could.

Thucydides would no doubt prefer to substitute, for these great names, the practice of any honest doctor. He was not modest, but in his statement of his principles he is singularly unaware of his unique equipment, and claims rather that he has spared no pains. The proper context for this statement (1. 20-2) is, first, his very similar statement about his own account of the Plague (2. 48. 3), and then the physician Hippocrates' maxim, 'ars longa vita brevis'. The 'art' which outlasts individual lives is the scientific study of man: the physician studied his clinical, T. his political, behaviour. To know either so well that you can control it (and civilization is largely made up of such controls) is a task for many generations: a piece of that task well done is something gained for ever (1. 22. 4).

H. T. W.-G.

7. STYLE. In a famous sentence (*Thuc.* 24) Dionysius gives as the four 'tools' in Thucydides' work-shop τὸ ποιητικὸν τῶν ὀνομάτων, τὸ πολυειδὲς τῶν σχημάτων, τὸ τραχὺ τῆς ἀρμονίας, τὸ τάχος τῶν σημασιῶν. The first, third, and fourth of these criticisms are undoubtedly true. T.'s style has a poetical and archaistic flavour (it is often difficult to distinguish clearly between the two), as a reader sees at once when he turns from T. to Andocides and Lysias. His consistent use of αἰεὶ for αἰεί, ξύν for σύν, and σσ for ττ is one of the signs of this tendency. 'Roughness' is to be seen in his bold changes of construction and his violent hyperbata, in which he wrests an emphatic word from its natural place in the sentence to give it more prominence (1. 19 κατ' ὀλιγαρχίαν, 1. 93. 4 τῆς θαλάσσης). 'Speed' is perhaps the most striking of all his characteristics. He achieves an extreme concision, hardly to be paralleled in Greek prose except in the gnomic utterances of Democritus. A sentence like δοκεῖ . . . καταστροφή (2. 42. 2) is gone in a flash, and no orator, composing for the ear, could have risked such brevity. At 2. 37. 1 μέτεστι . . . προτιμάται two antitheses are telescoped into one. τὸ πολυειδὲς τῶν σχημάτων is much more open to question, especially as Dionysius has just before credited T. with the use of the θεατρικὰ σχήματα (pariosis, paronomasia, and antithesis) affected by Gorgias and other writers of the sophistic school. T.'s thought is, it is true, markedly antithetical in cast (e.g. 1. 70. 6), and antithesis is sometimes strained (e.g. 2. 43. 3). But, unlike the Gorgianists, he has no affection for merely external antithesis, and he often deliberately avoids formal balance (e.g. 4. 59. 2). He eschews almost entirely certain other common adornments of style. He is too austere to use metaphor at all freely, or asyndeton (more suited to the spoken word). He does employ certain devices of assonance, neither, like Gorgias, as ἡδύσματα, nor, like Demosthenes, for emphasis pure and simple, but for the enphazizing of a contrast (3. 82. 8 εὐσεβεία . . . εὐπρεπεία, 6. 76. 2 καταοικίσαι . . . ἐξοικίσαι, 76. 4 ἀνυπερτωτέρου . . . κακοῦνυπερτωτέρου). He has a strong leaning, as Dionysius observed (*Amm.* 2. 5), towards abstract expression (e.g. 3. 82-3), sometimes carried to the length of personification (πόλεμος 1. 122. 1, ἔλπις 5. 103. 1). He probably coined abstracts (especially in -σις) freely, as Euripides did, according to the fashion of the late fifth century, and sometimes used them out of season (7. 70. 6, ἀποστέργειν, and the odd-looking negated abstracts, 1. 137. 4 οὐ διάνειν, etc.). Like Antiphon, he experimented freely with the use of neuter adjective, or even participle (1. 142. 8 ἐν τῷ μὴ μελετῶντι), to convey an abstract idea. His periods are usually loosely constructed (e.g. 3. 38. 4-7), of clauses longer in actual

words, and far richer in content, than those of other Greek prose-writers (e.g. 2. 43. 2-6).

H. T. W.-G.

THUGGA (modern *Dougga*), a hill-town west of the military road from Carthage to Theveste. The site was occupied in neolithic times. The Berbers built the market-town of Thukka on the hill slopes, for the sale of wheat, barley, oil, beans, and grapes from the fertile Oued Kaled valley. Phoenicians from the coast cities joined them, improved their agricultural methods, established government by shophets (*see* CARTHAGE), and built temples to Baal and Taanit. Marius settled some veterans at Thugga, and Roman *pagus* and native *civitas* existed side by side. By A.D. 100 the shophets had become *dunmuri*; in the second century there was great building activity by generous citizens, and in the third the town became Colonia Licinia Septimia Aurelia Alexandriana Thugga. Its best-known ruins are the beautiful Capitoline temple, the theatre and the Berber mausoleum with its bilingual inscription.

L. Carton, *Dougga* (Tunis, 1929).

W. N. W.

THULE (Θούλη), a northern land first heard of and described by Pytheas (q.v.). It lay six days' sail to north of Britain. At midsummer the sun's and the Bear's paths, as seen at Thule, coincided, and neither set. The inhabitants ate berries, 'millet' (oats?) threshed in barns because of the dampness and lack of sun, herbs, fruits, roots, and honey. Round Thule everything was held in an impalpable mass 'like a jelly-fish' (thick fog?) which Pytheas himself saw. It is uncertain whether Thule was Iceland or Norway. Nothing further was discovered about it, but it was henceforth regarded as the northernmost part of the inhabited world. Eratosthenes drew a parallel through Thule at 66° (Arctic circle), which remained for long on maps. Ptolemy gave Thule a N.-S. extension of 55 miles and located it at Mainland (Shetland), though he retained the belief in its midsummer midnight sun. The land of Thule which Agricola's fleet claimed to have seen (*Tac. Agr.* 10) was no doubt a Shetland island.

Strabo 63-4, etc.; Plin. *HN* 2. 187. 4. 104; Geminus, *Elem. Astron.* 6; Ptol. *Geog.* 2. 3. 14. 2. 6. 22. 8. 1. 3. Cary-Warrington. *Explorers*, 36 ff.; G. E. Broche, *Pythéas le Marchiste* (1936), 145 ff.

THURII (Θούριοι), Pericles' panhellenic foundation (443 B.C.), which Herodotus and Lysias reputedly joined. Its site, near to, possibly identical with, that of Sybaris

(q.v.), is certain (H. Philipp in *PW* vi A. 646 f.). It was originally inhabited by Messapii (J. Whatmough, *Foundations of Roman Italy* (1937), 336). Despite stasis, quarrels with other Greeks, and Lucanian wars, Thurii flourished for a time, but finally became voluntarily a Roman dependency, and as such opposed Pyrrhus. To revive Thurii after its spoliation by Hannibal Rome founded the Latin colony of Copia here, 193 B.C. (App. *Hann.* 57; Livy 35. 9). But, although remaining strategically important, Thurii gradually declined and ultimately was abandoned (App. *BCiv.* 1. 117; 5. 56. 58; Diod. 12. 9 f.; Strabo 6. 263).

J. Bérard, *Bibliogr. topogr.* (1941), 94; K. Freeman, *Greece and Rome*, 1941, 49 ff.; V. Ehrenberg, *AJPhil.* 1948, 149 ff. E. T. S.

THYESTES, see AEGISTHUS, ATRÆUS.

THYIA (Θυία), apparently the same word as θυιάς, a Bacchante. There being a spot so named at Delphi (Hdt. 7. 178. 2), she is occasionally heard of (as *ibid.*) as the nymph of the place.

THYIADES, see MAENADS.

THYMOETES (Θυμοίτης) (1), a brother of Priam, Hom. *Il.* 3. 146; Verg. *Aen.* 2. 32, whereon see Servius for his quarrel with Priam; Diod. Sic. 3. 67. 5. (2) Son of the above, Diod. Sic. *ibid.*

THYONE, see SEMELE.

THYSDRUS (modern *El Djem*), a Tunisian market-town, lying inland south of Hadrumetum. It was captured by Caesar in 46 B.C., and fined for supporting the Pompeians. Subsequently it became the centre of a prosperous agricultural district; its amphitheatre, of which striking ruins survive, was built for 60,000 spectators. The elder Gordian (q.v.) was proclaimed emperor at Thysdrus. W. N. W.

TIBER rises as a creek in the Apennines near Arretium, develops into Central Italy's greatest river, meanders south to Narnia (confluence with the Nar), then SW past Rome (where it divides about the *Insula Tiberina*), and enters the Tyrrhenian Sea at Ostia. The silt it carries down with it on its 250-mile journey accounts for its tawny colour ('flauus Tiberis'); it accumulates at its mouth to choke the harbour works (*portus*) built by Trajan and others (Claudius even excavated a separate, artificial mouth), and constantly advances the coastline at Ostia. Tributaries: Tinia-Clitumnus, Clanis, Nar, Anio, Allia and numerous brooks (Pliny's 42 is actually an underestimate). Navigation, although possible as far as Narnia, was hazardous owing to the swift current. Inundations are first recorded in 241 B.C. (Oros. 4. 11), but were frequent in all periods, even after Augustus instituted *curores riparum et alvei Tiberis* (Suet. *Aug.* 37). The salt deposits at its mouth were worked in very early times, although the settlement at Ostia which traditionally dates from Ancus Marcius' period is not demonstrably older than the fourth century B.C. The Tiber formed the eastern border of Etruria (and hence is frequently called *Tyrrhenus* or *Lydius*) and the northern boundary of Latium. In Imperial times opulent villas studded the banks of its lower course.

Strabo 5. 218; 232 f.; Pliny, *HN* 3. 53 f.; Dion. Hal. 3. 44. S. A. Smith, *Tiber and its tributaries* (1877); G. Calza in *Capitolium* 1937. E. T. S.

TIBERIANUS, in Gaul as *praefectus praetorio*, A.D. 335 (Hieron. Chron. ad ann. 2352), was a poet whose best-known piece is the *Amnis ibat*, 20 trochaic tetrameters. Its feeling for nature prompted Bachrens' suggestion that Tiberianus also composed the *Pervigilium Veneris* (q.v.). For his other brief poems and fragments (text and tr.) see J. W. and A. M. Duff, *Minor Lat. Poets*, 1935. J. W. D.

TIBERIAS, on L. Galilee, was founded by Herod Antipas (q.v.). Despite its Greek constitution, it was a completely Jewish city. It was the capital of a toparchy, and also of Galilee, till Nero gave Galilee to Agrippa II. In the Jewish war the proletariat was anti-Roman, but the aristocracy on the whole loyal to the king and to Rome; it surrendered to Vespasian and was spared. After the Second Jewish War Tiberias was paganized by Hadrian, but it later became once more a thoroughly Jewish city, the seat of a rabbinical school. A. H. M. J.

TIBERIUS (1), the Emperor (TIBERIUS JULIUS CAESAR AUGUSTUS), was the son of Ti. Claudius Nero and Livia, born in 42 B.C. His mother was divorced, in order to marry Octavian, early in 38 shortly before the birth of her second son Drusus. From 20 B.C., when, accompanying Augustus to the East, he received back the standards lost to the Parthians at Carrhae, until A.D. 12, when he returned to Rome after retrieving the situation on the Rhine after the disaster of Varus, Tiberius had a brilliant military career (interrupted only from 6 B.C. to A.D. 4). Between 12 and 9 B.C. he reduced Pannonia. From 9 B.C. (after the death of his brother) to 7 B.C. and again from A.D. 4 to 6 he campaigned in Germany. From A.D. 6 to 9 he was engaged in suppressing the great revolts of Pannonia and Illyricum. (See, for details of these campaigns, R. Syme, *CAH* x, ch. 12.)

2. After Agrippa's death Tiberius was forced in 12 B.C. to divorce Vipsania Agrippina, mother of his son Drusus, in order to marry Augustus' daughter, Agrippa's widow, Julia. A son born of this—most unhappy—marriage died in infancy. In 6 B.C. Tiberius was granted *tribunicia potestas* for five years and invited to carry out a diplomatic mission in the East. Augustus hoped, however, to be succeeded by one of his young grandsons, Gaius or Lucius, and, perhaps through pique on that account, Tiberius retired to Rhodes in 6 B.C. He returned to Rome, though not to Augustus' favour, in A.D. 2. In A.D. 4, both his grandsons having died, Augustus was forced to recognize Tiberius as his likely successor. He adopted him, together with Agrippa Postumus, forcing Tiberius to adopt his nephew Germanicus. Tiberius was given *tribunicia potestas* for ten years, and this was renewed in A.D. 13 for a further ten years. He was also, at the time of his adoption and again in A.D. 13, given *imperium proconsulare*, like that held by Augustus.

3. Augustus died on 19 August A.D. 14 and Tiberius, in virtue of the *imperium* which he already possessed, was able to discharge urgent administrative duties in the interval before September 17, when (*Fast. Amitern.*, *CIL* 1, i², p. 244), after an embarrassing and unprecedented debate (*Tac. Ann.* 1, 10–13) he was, on the proposal of the consuls, proclaimed Emperor. He reigned until his death on 16 March A.D. 37.

4. Loyalty to Augustus was the keystone of Tiberius' policy. While Augustus was consecrated and a *templum divi Augusti* was built at Rome, Tiberius refused to accept any extravagant honours for himself (*Tac. Ann.* 4. 37 f.; cf. the inscriptions from Gythium, *Ελληνικά* i (1928), 7 ff., 152 ff.). In foreign policy he followed the 'consilium coercendi intra terminos imperii' bequeathed to him by Augustus (*Tac. Ann.* 1. 11) and, when Germanicus was recalled from the Rhine at the end of 16, the project of conquering Germany was at last abandoned. Cappadocia was made a province on the death of its king Archelaus in 17. The revolt of Florus and Sacrovir in Gallia Lugdunensis in 21 was suppressed with little difficulty by the Upper German army. Trouble with Parthia threatened on two occasions, but was settled by diplomatic negotiation, by Germanicus in 18 and by L. Vitellius at the very end of Tiberius' principate. Tiberius' only innovation in provincial administration lay in lengthening the tenure of office of imperial *legati* in the

provinces, whether from slackness or of set purpose (see Marsh, *op. cit. infra*, 157 ff.). In finance Tiberius exercised rigid economy, built little, gave donations sparingly and games hardly at all; he therefore bequeathed great wealth (more than 2,000 millions of sesterces; Suet. *Calig.* 37, Dio. Cass. 59. 2).

5. Tiberius' difficulties in administration were many. His accession coincided with legionary revolts in Pannonia and in Lower Germany, the German legions being ready to proclaim their commander, Germanicus, Emperor. In the Senate he was persistently irritated and insulted by such men as L. Arruntius and Asinius Gallus (q.v.). Within his own family there was jealousy concerning the selection of his prospective successor. After the death of Germanicus in 19 and of Tiberius' son Drusus in 23, the way lay open to the sons of Agrippina and Germanicus: Nero, Drusus, and Gaius. Nero and Drusus fell through the schemes of Sejanus, and Gaius, while his life was saved, received little preparation for government from Tiberius.

6. The reign of Tiberius was disfigured (cf. Tac. *Ann.* 1. 72 f.; 4. 6, 'legesque, si maiestatis quaestio eximeretur, bono in usu') by the heavy incidence, especially after 23, of trials, chiefly before the Senate, for *maiestas* and *perduellio* (on the distinction, not explicit in Tacitus, and on the figures and details of the law and its administration, see Rogers, *op. cit. infra*). There is record of more than 100 such prosecutions, of which those of M. Seribonius (q.v. 2), Libo Drusus in 16 and of Cn. Calpurnius Piso (q.v. 7) in 20 were outstanding. Tiberius' own responsibility is hard to assess. Though he showed no vindictiveness or cruelty (cf. Tac. *Ann.* 3. 51), a stronger man might have checked the abuse. There is no evidence that he was ever in serious danger of assassination; yet he had a morbid fear of it, and was encouraged in this fear by L. Aelius Sejanus (q.v.), prefect of the Praetorian Guard and, after 23, Tiberius' chief adviser. Tiberius was encouraged by him to leave Rome for Capreae in 26; he did not return to Rome again, but corresponded by letter with the Senate. Agrippina and Nero were arrested in 26, Drusus in 30, and were all subsequently put to death or committed suicide. Sejanus himself was arrested and executed in Rome on the charge of conspiracy, in 31. His death was followed by that of many of his supporters.

7. While stories of Tiberius' vice on Capreae may be discounted, his mind was almost unlinged in the last six years of his life (cf. Tac. *Ann.* 6. 6). Lacking the affability ('ciuile ingenium') of his brother Drusus and nephew Germanicus, apt to speak in language of obscure and, it was thought, sinister ambiguity (cf. especially Dio Cass. 57. 1), austere, not even possessing, like his son Drusus, the pardonable and popular weakness of fondness for games, he neither sought popularity nor won it; in Rome itself the news of his death was welcomed.

BIBLIOGRAPHY

ANCIENT SOURCES: We have a contemporary account of Tiberius' campaigns under Augustus and of the first sixteen years of his reign in Velleius Paterculus 2. 94-131. This account (published in A.D. 30) is favourable to Tiberius (and also to Sejanus). It is in sharp contrast to the other Roman accounts of the reign, viz. Tacitus, *Annals* 1-6 (most of book 5, with its account of the arrest and trial of Sejanus, is lost), Suetonius, *Tiberius*, and Dio Cassius, bks. 57 f. Tacitus' bias against Tiberius, displayed often in strikingly inept comment and innuendo, has been variously explained. Possibly he saw in Tiberius the prototype of Domitian; though, for a different explanation, see T. S. Jerome, *Aspects of the Study of Roman History* (U.S.A. 1923), chs. 15-17. Without doubt Tacitus' chief sources, the historians who wrote at the end of the Julio-Claudian period, whose works have perished (e.g. Servilius Nonianus, Aufidius Bassus and, in her memoirs, to which Tacitus once refers, *Ann.* 4. 53, the younger Agrippina), gave an extremely unfavourable account of Tiberius. See, on Tacitus' sources, P. Fabia, *Les Sources de Tacite* (1891), and F. B. Marsh, *The Reign of Tiberius* (1931), appendix 1. The Jewish writers, Philo a contemporary and Josephus, are friendly to Tiberius and unfriendly to Sejanus.

MODERN LITERATURE: F. B. Marsh, *The Reign of Tiberius* (1931), and M. P. Charlesworth, *CAH* x, chapter 19, both with

complete bibliographies; R. S. Rogers, *Criminal Trials and Criminal Legislation under Tiberius* (U.S.A. 1935); *Studies in the Reign of Tiberius* (1943); E. Ciaceri, *Tiberio* (1944); D. M. Phipps, *Autour de Tibère* (1944). See, on the Gythium inscriptions, E. Kornemann, *Neue Dokumente zum lakonischen Kaiserthum* (1929) and M. Rostovtzeff, *Rev. Hist.* clxiii (1930). J. P. B.

TIBERIUS (2) JULIUS CAESAR GEMELLUS, one of twin sons born in A.D. 19 to Drusus, son of Tiberius, and Livina. Tiberius made him joint heir with Gaius to his personal property. Though the Senate annulled the will, Gaius adopted Tiberius Gemellus and allowed him to be hailed as *Princeps Iuventutis*. He was put to death, however, during the first year of Gaius' principate.

J. P. B.

TIBERIUS (3) JULIUS ALEXANDER, of an opulent Jewish family of Alexandria, nephew of Philon (q.v. 4), but a renegade from the ancestral faith, rose high in the service of Rome. He was procurator governing Judaea (c. A.D. 46-8), when he executed the sons of Judas the Galilean; general staff officer under Corbulo in Armenia (63) and soon after Prefect of Egypt. His long edict, published soon after Galba's accession, has been preserved (*OGI* 669). Tiberius Alexander made his troops take the oath in the name of Vespasian on 1st July 69, which date was adopted as the 'dies imperii'. Enjoying high favour with the new dynasty, he was present with Titus at the siege of Jerusalem in the same function as he had held under Corbulo. He vainly tried to have the Temple preserved.

TIBIAE, see MUSIC, § 9 (ii).

TIBULLUS, ALBIUS (48?-19 B.C.), Roman elegiac poet, pre-eminently 'tersus atque elegans' (Quintilian, 10. 1. 93). Little is known of him except what can be gathered from his poetry and references and poems by Horace and Ovid. There is also an anonymous and corrupt *Vita*, going back perhaps to Suetonius, containing, however, little not found in his poetry. It is preceded by an epigram of Domitius Marsus (recently argued to be the author of the *Vita*), which fixes the date of his death.

2. An arresting personality, well educated, of equestrian rank, he, like other Augustan poets, lost a considerable portion of his patrimony during the civil wars. Notwithstanding his complaints of 'paupertas', not to be taken seriously, he had enough left to lead a comfortable existence in Rome or on his estate between Praeneste and Tibur. He became the poet laureate of the republican literary circle, headed by Messalla Corvinus (q.v.), whom, according to some, he accompanied to Gaul—a view unacceptable to the present writer. He accompanied Messalla to the East, but, falling ill at Corcyra, returned to Italy.

3. The collection under T.'s name (*Corpus Tibullianum*) contained originally three books, which Italian scholars of the fifteenth century divided into four. Only the first two definitely belong to him. The first was published about 26 B.C. Elegies 1, 2, 3, 5, 6, were inspired by Delia, a woman of plebeian extraction, whose real name, according to Apuleius, was Plania. She is somewhat of a mystery, described now as single, now as having a 'coniunx', probably in the euphemistic sense. Her faithlessness put an end to the poet's idyllic dream of a happy life with her in the country. Elegies 4, 8, 9 deal with Marathus, a 'puer delicatus', whom T. admired, perhaps in order to forget Delia's fickleness. Elegy 7 is a birthday poem in honour of Messalla, mentioned also in other elegies; elegy 10 contrasts the blessings of peace with the savagery of war.

4. Book II consists of six elegies; its lacunae are due to the ravages of time, not to posthumous publication. The heroine of 3, 4, 6 is Nemesis, a greedy, unscrupulous

courtesan, who almost became the Nemesis of the poet's life. Elegy 1 gives a charming description of the Ambarvalia festival; the occasion for 2 is the birthday of his friend Cornutus. Elegy 5 celebrates the installation of Messalla's son, Messalinus, as one of the *xv-viri*. This elegy is important because in it alone T. touches upon national topics; yet even here the erotic element intrudes, namely his love for Nemesis (111-20).

5. Book III is the literary property of Lygdamus (q.v.). Book IV opens with the Panegyricus (q.v.) Messallae. Elegies 2-6, however, known as the Garland of Sulpicia, treat incidents of Sulpicia's love for Cerinthus. They are artistic counterparts to elegies 7-12, written by Sulpicia herself (q.v.). The author of 2-6, likewise of 13-14, is undoubtedly Tibullus. The two latter probably refer to his love affair with Glycera mentioned by Horace (*Carm.* 1. 33).

6. One thing is certain—the entire collection emanated from Messalla's circle; later, perhaps during Claudius' reign, an editor (some think Lygdamus) published the entire poetry of the circle in the form transmitted.

7. Tibullus' poetry was limited to two main topics: love and longing for idyllic country life. These themes he handles in masterly fashion, through a series of small pictures skilfully woven into a harmonious and artistic whole. By his art that hid art, by his exquisite Latin and melodious verse freed from the burdensome pedantry of Alexandrian learning, he became the poet who contributed most to the perfection of Roman elegy. Respected by his contemporaries, he enjoyed a solid reputation throughout the ages and notwithstanding some adverse criticism in recent years he has stood the test of time. See also ELEGIAC POETRY, LATIN.

TIBUR, nowadays *Tivoli* with numerous monuments. Famed for fruits, building-stone (travertine), and cults (e.g. Hercules, Vesta, Albunea), it lies 18 miles ENE. of Rome, where the Anio (q.v.) leaves the Sabine mountains (Strabo 5. 238). Founded before Rome, possibly by Sieuli, Tibur was a powerful member of the Latin League with several dependent towns (Pliny, *HN* 16. 237; Dion. Hal. 1. 16; Cato fr. 58 P.). In the fourth century B.C., aided occasionally by Gauls or Praenestines, it frequently fought Rome until deprived of territory in 338 (Livy 7-8. 14). Tibur, however, remained independent and could harbour Roman exiles (Dessau, *ILS* 19; Livy 9. 30). Acquiring Roman citizenship c. 90 B.C. (App. *BCiv.* 1. 65), it became a fashionable resort: Catullus, Horace (possibly), Augustus, and Hadrian had Tiburtine villas. Propertius' Cynthia and captive potentates like Syphax (201 B.C.) and Zenobia (A.D. 273) also sojourned here.

TICIDAS, one of the *neoterici* (q.v.), wrote erotic poems to 'Perilla', i.e. Metella (Ovid, *Tr.* 2. 433; Apul. *Apol.* 10). See Baehr. *FPR* 325; Morel, *FPL* 90.

TIGELLINUS, GAIUS (?) OFONIUS, a man of low birth and morals, was exiled by Gaius in 39 for adultery with Agrippina. Under Claudius he lived in obscurity, but found favour with Nero, upon whom he had the worst influence. Promoted first to the post of *praefectus vigilum*, he was in 62 made *praefectus praetorio*. In 65 he received the *triumphalia ornamenta* and other distinctions for his loyalty in the Pisonian conspiracy. In 68 he swore allegiance to Galba, though he was compelled to resign from his position of *praefectus praetorio*. Under Otho Tigellinus was forced to commit suicide. His memory was universally execrated.

Stein, *PW*, s.v. 'Ofonius Tigellinus'.

R. L. J.

TIGRANES (1) I 'the Great', son (?) of Artavasdes; king of Armenia. He was set on the Armenian throne c. 94 B.C. by Parthian troops, in return for 'seventy valleys' in Armenia (Strabo 11. 532). He rapidly consolidated his power, and his alliance with Mithridates of Pontus led to an interference in Asia Minor which Rome would not tolerate. In 92 B.C. Sulla was sent; an agreement between Rome and Parthia failed to curb Tigranes, who embarked on remarkable conquests in the north of the Parthian Empire. At the height of his career he ruled Gordyene, Adiabene, and Media Atropatene, and even part of the Seleucid possessions in Cilicia and Phoenicia, and he assumed the imperial title 'King of kings' (Joseph. *Ag.* 13. 419-21; Plut. *Luc.* 21). This empire, of which Tigranocerta (q.v.) was founded as the capital, was short-lived. In 69 war was resumed by Rome, Lucullus captured Tigranocerta, but the issue remained undecided until Pompey succeeded in separating the Armenian and Pontic kings. Tigranes' son rebelled and fled to Pompey; together they marched on Artaxata and Tigranes finally surrendered. He lost all his possessions except Armenia proper. Henceforward, though engaging in frontier disputes with Parthia, he kept peace with Rome.

F. Tournèize, *Histoire politique et religieuse de l'Arménie* (1911); *PW*, s.v. 'Tigranes' (F. Geyer); see also ARMENIA, LUCULLUS, POMPEY.

M. S. D.

TIGRANES (2) II (20 B.C.-c. 6 B.C.) son of King Artavasdes of Armenia. Captured and sent to Egypt by Antony, he lived for many years in Rome. After the murder of his brother Artaxes, the Armenians sent a request to Augustus that he be sent to reign instead (Tac. *Ann.* 2. 3). Tiberius accompanied him with an army, and Tigranes was crowned without opposition. Armenia was thus restored to the ostensible control of Rome.

M. S. D.

TIGRANES (3) III (c. 2 B.C.), son of Tigranes II. On his father's death he was crowned by the pro-Parthian party in Armenia, to reign jointly with his sister-consort Erato. He was expelled by the Romans, but returned after the murder of the Roman nominee a few years later. Attacked by Augustus' adoptive son C. Caesar, he made overtures for peace, but died fighting on his eastern frontier.

M. S. D.

TIGRANES (4) V, great-grandson of Archelaus of Cappadocia (Tac. *Ann.* 14. 26). In A.D. 60 he was sent from Rome to replace Tiridates (q.v. 3) on the throne of Armenia. When he proceeded to lay Adiabene waste, Vologeses of Parthia sent his general Monaces to invade Armenia, and Tigranes was shut up in Tigranocerta; but the siege was raised after negotiations. He was withdrawn by the Romans in 62 and disappeared from history.

M. S. D.

TIGRANOCERTA, city in Armenia, in Arzanene; later rechristened Martyropolis. Founded by Tigranes I (Appian, *Mithr.* 67), it replaced Artaxata (q.v.) as the capital of Armenia; it was colonized by Armenians and Cappadocian Greeks (Strabo 12. 2. 7; Plut. *Luc.* 25. 29) and strongly fortified. In 69 B.C. the battle of Tigranocerta

marked the culmination of the Mithridatic wars and the victory of Lucullus (q.v. 2); it was the centre of the struggle between Tiridates and Corbulo (q.v.), and in the wars of Sapor II against Rome and Armenia in the fourth century A.D. it was destroyed by the Sassanians.

The site of Tigranocerta is disputed; see C. F. Lehmann-Haupt, *Armenien einst und jetzt* (1910-31); *PW*, s.v. 'Tigranocerta'; T. Rice Holmes, *Roman Republic* (1923) i. 409 ff. M. S. D.

TIGRIS, the more easterly of the Two Rivers of Mesopotamia. Rising in Armenia, it flows south-east through Assyria and Babylonia to the Persian Gulf. On its left bank it receives three main tributaries, the Greater and Lesser Zab and the Diyala. The great Nahrwan canal ran parallel to the east of it. At Seleucia it is only c. 18 miles from the Euphrates (q.v.) and the rivers were joined in antiquity by a network of canals. At the double mouth of the Tigris were the kingdoms of Mesene and Characene. Both rivers frequently change their course. The Tigris is the faster; the journey downstream could be made on rafts, Seleucia being the limit for shipping. M. S. D.

TIMACHIDAS of Lindus in Rhodes (c. 100 B.C.), wrote commentaries on several Greek authors, a *δεῦπνον* (in eleven books or more—*Ath.* 1. 5 a) and a miscellaneous glossary.

TIMAEUS (1) of Locri in Italy, Pythagorean, the chief speaker in Plato's *Timaeus*. We have no knowledge of him independent of this, and he may have been a fictitious character. The work in ps.-Doric dialect *Περὶ φύξης κόσμου καὶ φύσιος*, which passes under the name of Timaeus Locrus, is a late (probably 1st century A.D.) and unintelligent paraphrase of the *Timaeus*: cd. (with Plato's *Timaeus*) C. F. Herman (Leipzig 1852).

Testimonia in Diels, Vorsokr. 1. 441. *PW* vi A. 1203.

W. D. R.

TIMAEUS (2) of Tauromenium (c. 356-260 B.C.). His father Andromachus became tyrant of Tauromenium when he settled there with the Naxians expelled by Dionysius II (358), and by his moderate rule succeeded in retaining his position after the liberation of Sicily by Timoleon (343). However, T. fled to Athens, either in 317, when Agathocles drove his enemies from Syracuse to Agragas, or when he seized Tauromenium (312). There he remained for fifty years, studied rhetoric under Philiscus, pupil of Isocrates, came into contact with the Peripatetic School, and probably returned to Sicily under Hieron II.

The *History* (*Ἱστορίαι*) in 38 books was primarily concerned with Sicily, and its importance was great in standardizing previous accounts of Sicilian history and origins. It included events in Italy and Carthage, frequently mentioned affairs in Greece, and reached its conclusion with Pyrrhus' death (272). The books on Agathocles and Pyrrhus (34-8) seem to have been added to the original plan, perhaps after T.'s return.

Timaeus' faults largely resulted from his rhetorical training and were common to most of his contemporaries. He showed little critical ability, and his rationalizing of myths is clumsy. But charges of wilful ignorance or falsification (*Diod. Sic.* 13. 90; *Polyb.* 12. 25) cannot be substantiated; and we must recognize in him the cultivation of wide interests characteristic of the Peripatetics, diligence in collecting information, and a reasonable impartiality, except in the case of Agathocles.

G. L. B.

Flg i. 193.

TIMAEUS (3) (probably 4th c. A.D.), under the influence of Neoplatonism, compiled an extant lexicon of Plato.

Editions: Ruhnken (1759); Koch (1833); Dübner (in *Beitrag* to Plato, 1839).

TIMAGENES of Alexandria, captured and brought to Rome in 55 B.C., where he taught rhetoric and knew Augustus, but subsequently fell out of favour with him. He was a friend of Asinius Pollio, at whose villas he lived. The reference to him in *Hor. Epist.* 1. 19. 15 is obscure. He wrote a *History of Kings* (*Βασιλείς*), which was used by Pompeius Trogus.

Flg iii. 317-23; *FGH* ii. 88; *PW* vi A. 1. 1063-71. J. D. D.

TIMANTHES (late 5th c. B.C.), painter, of Cythnus, later of Sicyon, contemporary of Zeuxis; famed for his *ingenium*. In his 'sacrifice of Iphigenia' he showed degrees of grief culminating in the veiled Agamemnon (reflections on late reliefs, Pfuhl, figs. 638-9). He also painted an ideal Hero, and a sleeping Cyclops with a tiny Satyr beside him. T. B. L. W.

TIME-RECKONING. The ancients, like all civilized peoples, were faced with a grave difficulty in the reckoning of time, apart from the incidental ones which must have confronted their earliest attempts to observe its passage accurately. For reasons of 'ancestral custom', quire as much religious as scientific or practical, they tried 'to conduct their years in accordance with the sun, their days and months in accordance with the moon' (*Geminus of Rhodes*, 8. 7). Now the three natural divisions of time, day, lunar month, and solar year, are incommensurables. Taking the day as 1, the lengths of the other two are approximately $29\frac{1}{2}$ and $365\frac{1}{4}$ respectively, but these last two figures are far from accurate, and the inaccuracy is bound to show itself in any calendar, however carefully reckoned, which tries to combine them.

2. **THE DAY** (*ἡμέρα, ἡμέρα, dies*). Although the Babylonians, with whose astronomy the Greeks early became to some extent acquainted, divided day and night (24 hours, *νυχθήμερον* in Greek) into twelve periods (double hours, cf. *Hdt.* 2. 109. 3, but see J. E. Powell in *CR* 54, 69 f.), the Greeks made little use of this measurement for any but purely scientific calculations till Hellenistic times (cf. *CLOCKS*). Ordinarily, in classical times, they did not speak of hours but of 'cock-crow', 'time of full market' (i.e. mid-morning), 'noon', 'lamp-lighting', 'time of first sleep', and the like. When hours were used, they were not of fixed length, but each $1/12$ of the day (or night), consequently varying with the season. Our hour is the *ώρα ἰσημεριῆς, hora aequinoctialis*, $1/12$ of the day or night at the equinox. Besides the natural reckoning of the day from dawn, it was common in Greece to reckon it officially, for calendar purposes, from sunset to sunset; the Romans reckoned from midnight.

3. **THE WEEK** was little used, save, in Hellenistic times, by believers in astrology (see *ASTROLOGY*). It is a grouping of days in accordance with the supposed governing of the first hour of each by the planet whose name it bears; for details see F. H. Colson, *The Week*, (1926; not always quite accurate, but the fullest and best account in English). Strictly speaking, neither Jews nor Christians observe a week, since both officially reject astrology, but a festival (Sabbath and Sunday respectively) which occurs at intervals of seven days. The planetary week becomes important about the third century A.D., and is called *εβδομάς, septimana*. In Italy it was customary to have market-days (*nundinae*) at intervals of eight days (a *nundinum*). This might loosely be called a week, but was of very small importance for reckoning time. On calendars it was marked by a continuous series of letters, A-II, the first being the day of the *nundinae*.

4. **MONTHS** (see further *CALENDARS*) were (except as noted below) lunar, more or less accurately reckoned. They always consisted of an integral number of days,

which varied slightly so that the average length approximated to $29\frac{1}{2}$ days in any given calendar. It was early noticed that while 12 of these months were about equal to a (solar) year (354 or 355 days as against 365 $\frac{1}{4}$) the difference was great enough for such a calendar to be about three months too short in eight years. Hence the practice (date and author unknown) of arranging the years in groups of eight (called *oktaeteris*) and inserting in them three extra months (*μῆνες ἐμβόλιμοι*). The total number of days would thus be about right (2,922, if the intercalation was accurately made). Astronomers, beginning with Meton and Eudoxus (qq.v.), constructed more elaborate and accurate cycles (see, e.g., Geminus 8. 50), but the influence of these on the civic calendars was apparently slow and slight.

5. THE YEAR (*ἔτος*, *ἐνιαυτός*, *annus*) consequently was unsatisfactory, since it never exactly coincided with the solar year. As the chief industry of antiquity was agriculture, a demand existed, and was met by the above-named astronomers and others after them, for a perpetual calendar which should show the astronomical facts* and the supposed meteorological events (prevailing winds, etc.) connected with them. Examples of these are the calendar at the end of Geminus (see bibliography, infra), the fragments of a calendar found at Miletus in 1899 (Kubitschek, op. cit. infra, p. 173), and the so-called Italian rustic calendars (ibid., p. 120). They are founded upon the signs of the zodiac, not on civic months. Since a movable pin often enabled the owner to note the day of the local calendar alongside the day given on the perpetual one, the name *παράπηγμα* was commonly given to such a device. But in Egypt, from very early times, there had been in use a calendar beginning with the rising of Sirius (considered as the sign of the coming rise of the Nile) which consisted of 365 days divided into 12 months having nothing to do with the moon but consisting of 30 days each, with 5 extra days (*ἐπαγόμεναι* in Greek) at the end of the year. This, of course, meant that in four years the calendar was a day wrong, and in 1,460 years (a Sothis-period, so called from the Egyptian name of Sirius) it righted itself. This difference was well known and its reform proposed (Decree of Canopus, 238 B.C.; see Kubitschek, p. 89) by the insertion of a day every fourth year. On this basis Caesar's reform was founded (see CALENDARS), and adopted by Romans and to some extent by others.

6. ERAS. Ancient years, however calculated, were not numbered on any generally understood system, as with us, but merely named ('in the archonship of so-and-so', 'in the consulate of X and Y', 'in the tenth year of the reign of A', etc.), which was next to useless for chronology. This defect was felt, especially by historians, and several cras were proposed. The most familiar were the Olympiads (first celebration of Olympic games, traditionally 776 B.C., thereafter every four years), used quite commonly by chronologists from the fourth century B.C. on; the years from the foundation of Rome, A(nno) V(rbis) C(onditae) or A(b) V(rbe) C(ondita), an event reckoned by Varro (q.v. 2) at 753 B.C. in our dating; and some important local cras, as that of the Seleucidae (kings of Pergamon), from 312 B.C.; several Roman provinces had eras of their own, see Kubitschek, pp. 76 ff. Chronographers from Eratosthenes (q.v.) to the great Christian historian Eusebius of Caesarea and his Latin adapter St. Jerome (see Rose, *Handbook of Lat. Lit.*, 492) also used, for earlier dates, such events as the fall of Troy (1183 B.C., Eratosthenes) or the birth of Abraham (2016 B.C., Eusebius). Our era was introduced by the abbot Dionysius Exiguus (d. c. A.D. 540); the practice of reckoning early dates backwards from it is quite recent and a little complicated by the fact that astronomers do

and historians generally do not insert a year 0 between 1 B.C. and A.D. 1.

Literature: mostly cited in text. The most convenient summary of relevant facts, with good account of earlier works, is W. Kubitschek, *Grundriss der antiken Zeitrechnung* (1928). The most important ancient author, Geminus of Rhodes, is best edited by Manitius (1898; critical text and German version). See also CALENDARS.

H. J. R.

TIMESITHEUS, GAIUS FURIUS SABINUS AQUILA, like most of the bureaucrats of the third century A.D., rose from the ranks and entered the equestrian service by way of the centurionate. His career is remarkable for its accumulation of vicarial procuratorships held under Severus Alexander, Maximinus, and Gordian III. In 241 he was appointed Praetorian Prefect and till his death at Nisibis in the winter of 243-4 exercised over his young master a domination that made him virtually emperor. His unscrupulousness is perhaps reflected in the Latin writers' version of his name, Misi-theus.

ILS 1330, and see under GORDIAN III.

H. M. D. P.

TIMGAD, see THAMUGADI.

TIMOCLES, Middle Comedy poet, late in the period, but he practised with wit and originality the *ιαμβική ιδέα* of the Old Comedy, attacking, among many others, Demosthenes and Hyperides. Almost one-half of the fragments touch upon personal ridicule. Of 27 known titles four denote mythological burlesques (*Ἡρώες*, *Κένταυρος*), two refer to characters (*Ἐπιχαυρέκακος*, *Πολυπράγμων*). An original formation is *Ὁρεσταντοκλείδης*, i.e. Autocleides suffering the fate of Orestes—obsessed, however, not by Furies, but by beldames of this world. The latest date to be found in T. is the reference to the *γυναικονόμοι* of Demetrius of Phalerum; fr. 32. 3—after 317 B.C. Fr. 1, the strange gods of Egypt; fr. 6, consolation from Tragedy, which outdoes human woes; fr. 8, defence of the parasite's life; fr. 12, Demosthenes 'never uttered an antithesis'.

FCG iii. 590 ff.; CAF ii. 451 ff.; Demiańczuk, *Suppl. Com.* 88 ff. W. G. W.

TIMOCREON (first half of 5th c. B.C.), lyric and elegiac poet of Ialysus in Rhodes (fr. 1. 3, Plut. *Them.* 21). He probably took the Persian side when they occupied Rhodes, went to Susa as the guest of the Great King (Ath. 10. 415 f), engaged in controversy with Themistocles after 479 for failing to take him home, and mocked him for his failure to win favour at the Isthmus, and, apparently, for not being made general c. 477 B.C. He also had interchanges with Simonides, who criticized his style (fr. 162) and character (fr. 99). He was a pentathletic victor and a great glutton (Ath. 1.c.). He wrote *σκόλια* (fr. 5, with a possible reference to his taking money from the Persians) and epigrams (fr. 6; with a possible reference to Themistocles) in a mixture of colloquial and literary language.

Text: E. Diehl, *Anth. Lyr. Graec.* ii, pp. 120-3.

Criticism: C. M. Bowra, *Greek Lyric Poetry* (1936), 369-73. C. M. B.

TIMOLEON, Corinthian general who fought for Syracuse against Dionysius II (q.v.), Hicetas, tyrant of Leontini, and the Carthaginians (345 B.C. ff.). At Corinth he had proved himself an anti-tyrannic and unselfish citizen. Arriving in Sicily at the invitation of the Syracusan patriots, he fought successfully with a small mercenary force against overwhelming odds. He drove Dionysius from the citadel of Syracuse, and recaptured the rest of the city from Hicetas, who was left in the lurch by his Carthaginian allies. With the assistance of other Greek cities which now joined him he invaded the Carthaginian province, and decisively defeated on the banks of the Crimisus a large and newly levied army from Carthage (341). After some further hard and partly

* The Greek peasant was a tolerable practical astronomer from the days of Hesiod and earlier, see, e.g., *Op.* 383; so must the Italian farmers have been.

unsuccessful campaigns he made peace with Carthage. He next removed the remaining tyrants in Sicily, resettled some important cities, and restored their autonomy. Growing blind, he withdrew from politics (about 337). The date of his death is unknown. Sicily, enjoying a short time of peace and wealth, honoured him highly after death. But his work was soon undone by Agathocles (q.v.): the soldier overcame the idealist.

Main sources, all depending on his panegyrist Timæus: Plutarch, *Timoleon*; Nepos, *Timoleon*; Diodorus, bk. 16. Literature: Hackforth, *CAH* vi. 285 ff.; Stier, *PW*, s.v. V. E.

TIMON (Τίμων) (1) of Athens, the famous misanthrope, a semi-legendary character. He seems to have lived in the time of Pericles. Aristophanes is the first to allude to him. He became known to Shakespeare through Plutarch (*Ant.* 70) and Lucian's dialogue.

Protop. Att. 13845.

V. E.

TIMON (2), son of Timarchus from Phlius, sceptic philosopher, c. 320–c. 230 B.C. (Apollon. Nicaensis ap. Diog. Laert. 9. 109). Like his master Pyrrhon he came from a poor family; he earned his living as a dancer. After attending the lectures of the Megarian philosopher Stilpon he met Pyrrhon in Elis, and became his pupil and prophet. After a life of wandering as a sophist he had saved enough money to live independently in Athens. There he died at 90 years of age (*Antig. Car. ap. Diog. Laert.* 9. 112).

Timon was the literary exponent of the old sceptic school, a versatile and witty writer. His prose writings are lost except for a few fragments. Of his poetry (tragedies, comedies, etc.) only fragments of philosophic caricatures are preserved. The 'Silloi' (i.e. mock-poetry) in three books ridicule in parodic pseudo-homeric hexameters all dogmatic philosophers. In the *Indalmoi* (i.e. ideas, opinions) he proclaimed the theory of scepticism and refuted dogmatic errors.

Fragments: K. Wachsmuth, *Sillographi Graeci* (1885); H. Diels, *PPF* (1901); Studies: *PW* vi A. 1301; see also SCEPTICS. K. O. B.

TIMOSTRATUS (early 2nd c. B.C.), one of the latest comic poets of Athens whose fragments survive. A man of good Athenian family, T. obtained in 188 B.C. fifth place with *Αὐτοῦμένος*, in 183 third place with *Φιλοκκίος* (*IG* ii². 2322, lines 141, 155).

FCG iv. 595 f.; *CAF* iii. 355 ff.

W. G. W.

TIMOTHEUS (1) (c. 450–c. 360 B.C.; *Marm. Par.* 76), dithyrambic poet, of Miletus. After failures in Athens he succeeded with the *Persae*, a lyric nome, for which Euripides wrote the prologue (*Satyr. Vit. Eur.* fr. 39, col. 22) c. 419–416 B.C. Large portions of this are preserved in a papyrus of the fourth century B.C. It is an account of Salamis, in which a crude realism is combined with a grotesque imitation of the high style. It closes with the poet's claim to have revolutionized music. Though written out as prose, the *Persians* is constructed on easily distinguishable metrical principles. It is astrophic and composed of various *metra*. His works were collected in eighteen books, but few other fragments are of interest except fr. 7, in which he proclaims the newness of his art. He is said to have influenced Euripides, and parallels have been noted between the speech of the Phrygian in *Persians* 152 with that of the Phrygian in *Eur. Or.* 1365 ff. See MUSIC, § 10.

Text: E. Diehl, *Anth. Lyr. Graec.* ii, pp. 134–52. Commentary: U. von Wilamowitz-Moellendorf, *Timotheos: Die Perser* (1903). C. M. B.

TIMOTHEUS (2), son of Conon and pupil of Isoerates. Elected *strategus* in 378 B.C., when the Second Athenian Confederacy was founded, he won many members for the Confederacy by his tour of NW. Greece in 375. Recalled in 374, he broke the peace just concluded with Sparta by restoring democratic exiles in Zacynthus, and was

given the command against Sparta in 373. Paralyzed by lack of funds, he was impeached but acquitted; to restore his fortunes he served for Persia against Egypt. Upon the fall of Callistratus in 366 he returned to power with an imperialist policy, which alienated Persia and the Confederacy; in spite of Epaminondas' naval campaign he achieved considerable success, but failed repeatedly to capture Amphipolis. Discontent among the Confederates, which his policy evoked, resulted in the Social War; in 356 Timotheus, Iphierates, and Chares, sharing the command at Embata, failed to co-operate, and impeached by Chares, he was sentenced to a fine of 100 talents, left Athens, and died in 354. A wealthy aristocrat with little sympathy for the demos, he pursued an individualist and short-sighted policy with outstanding ability.

P. Cloché, *La Politique étrangère d'Athènes 404–338 B.C.* (1934). N. G. L. H.

TIMOTHEUS (3), Greek sculptor of the fourth century B.C., who worked on the sculptures of the sanctuary of Asclepius at Epidaurus and later on the Mausoleum of Halicarnassus, in company with other artists. An inscription at Epidaurus records payments made to him for making reliefs (or models) and acroterial figures for the temple. The surviving sculptures from Epidaurus give us some indication of his style, which appears to have been in the Attic manner. S. C.

TIN, as a component of bronze, occurs very early in Mesopotamia, apparently derived from a distant source, probably Drangiana. Bronze is found sporadically in the later Early Minoan period, and regularly from Middle Minoan times; it probably reached the rest of Europe at a rather later date. The principal sources available to the classical world were the Erzgebirge (cf. Scymnus 493) and western Europe. Small quantities were mined in Etruria in pre-Roman times, and tin was worked near Delphi. The Phoenicians tried at times to monopolize the western sources, but by the third century Massilia established an overland route. The main Punie source was probably Galicia. Breton tin was worked at an early date, but not much in Roman times; the mines of central Gaul closed soon after the Roman conquest. Cornish tin was hardly known before the Late Bronze Age; it was worked all through the Roman period under native supervision. In Cornwall must be located the Cassiterides. They were known to Massiliotes from the fifth century, but the sea-route thither from Spain was discovered by P. Crassus (q.v. 2) probably about 95 B.C. See also CASSITERIDES.

Metallic tin must have been known to alloy in exact proportions with copper; little has survived, mainly owing to oxidization, but also because it was not of great use unalloyed. Classical writers confuse tin and lead, because they had no clear idea of the atomic difference of metals. Mining was largely in places; in Cornwall vein-mining was not started before late medieval times.

See especially Strabo 3. 175–6, Polybius 34. 10. H. Hencken, *Archaeology of Cornwall and Selly* (1933); W. C. Borlase, *Tin-mining in Spain Past and Present* (1897); O. Davies, *Roman Mines in Europe* (1935); *Proc. Belfast Natural History Society* 1931/2, 41. O. D.

TINGI(S) (modern *Tangier*), a seaport nearly facing Gibraltar across the Straits. Phoenician sailors established a trading-station there and fitted it with an elaborate water-supply, for use on their voyages to Tartessus and the Canaries. After Bocchus' death it passed to Juba II. Tingi received municipal rights and became the capital of the procurator of Mauretania Tingitana under Claudius. It was cut off from Rusaddir (*Mcilla*) by the Riff mountains, but was connected with Volubilis (q.v.) and Sala by military roads. Among the auxiliaries which protected Tingi was a detachment of British cavalry. W. N. W.

TIQUADRA, see **BALEARES INSULAE**.

TIRESIAS (*Τειρεσίας*), a legendary blind Theban seer, so wise that even his ghost still has its wits (*φρένες*, cf. *SOUL*) and is not a mere phantom (*Odyssey* 10. 493-5). Later legends account for his wisdom and blindness chiefly thus: (a) He saw Athena bathing; since his mother was her friend, she did not cause his death, but blinded him and gave him the power of prophecy by way of compensation (Callimachus, *Lav. Pall.* 57 ff.). (b) He one day saw snakes coupling and struck them with his stick, whereat he became a woman; later the same thing happened again and he turned into a man. Being asked by Zeus and Hera to settle a dispute as to which sex had more pleasure of love, he decided for the female; Hera was angry and blinded him, but Zeus recompensed him by giving him long life and power of prophecy. So Hyginus, *Fab.* 75, see Rose, ad loc. His advice was sought throughout the times of the Labdaecidae, and he finally died after the evacuation of Thebes when besieged by the Epigoni, from drinking of the spring Tiphussa (Apollod. 3. 84, cf. Athenaeus, 41 e). H. J. R.

TIRIDATES (1) **II** was the throne-name of some Parthian, not an Arsacid, who was probably Monaeses, the general who had defeated Antony's invasion. He revolted against Phraates IV, apparently in 32 B.C., and expelled him; but in 30 Phraates was restored by the Suren from Seistan. Tiridates escaped to Syria, and in 27 invaded Mesopotamia; as he had learnt that only an Arsacid could hold the throne successfully, he set up as joint-king with himself Phraates' young son Phraates, but by 25 Phraates IV had recovered Parthia, and the boy-king had fled to Augustus. Tiridates' end is unknown.

W. W. Tarn, *Mélanges Glotz* ii. 831.

W. W. T.

TIRIDATES (2) **III**, grandson of Phraates IV, was sent by Tiberius to contest the Parthian throne, with the military support of L. Vitellius, governor of Syria (*Tac. Ann.* 4. 32). Expelling Artabanus II, he was welcomed by the pro-Roman faction in the cities of Mesopotamia, and was crowned at Ctesiphon (A.D. 35); he was subsequently again driven out by Artabanus. M. S. D.

TIRIDATES (3), brother of Vologeses I (q.v.) of Parthia, who set him on the throne of Armenia (A.D. 54). He fled before the Romans and was temporarily displaced by Tigranes V (q.v.), but was reinstated by Vologeses. By a compromise with Corbulo (q.v.) T. agreed to journey to Rome and receive the crown of Armenia ceremonially from Nero (A.D. 66). M. S. D.

TIRO, MARCUS TULLIUS, freedman, secretary, and friend of Cicero, wrote a biography of him and perhaps collected his notable sayings. He also published original works (*De usu atque ratione linguae Latinae*, a miscellany [*Ἰανδέκται*], *Epistulae*) and perhaps prepared a tragedy. He edited some parts of Cicero's works and assisted in the collection of the letters. He invented a system of shorthand (*notae Tironianae* is a modern name), which is preserved with modifications (see **TACHYGRAPHY**).

W. Drumann, *Geschichte Roms* vi³ (1929), 356; H. Peter, *HRRel.* ii, p. xvii; Schanz-Hosius, *Röm. Literatur*⁴ i (1927), 590. A. M.

TIRO, see also **JULIUS** (12).

TIROCINIUM, see **IUVENES**.

TIRONIANAE NOTAE, see **TACHYGRAPHY**.

TIRYNS occupies a rocky hill in the Argive plain, 2½ miles north of Nauplia and 1 mile from the sea. A few neolithic fragments show that the site was early inhabited,

and with the Early Bronze Age (c. 2800-2100 B.C.) it became important. A round house, perhaps that of the chief, stood on the summit with huts clustered round, and the main settlement spread in the plain below. In the Middle Bronze Age a settlement on the hill with the pottery, houses, and tombs characteristic of the age seems to have been fortified. Its inhabitants belonged to what was probably the first wave of Greek-speaking people in Greece. To this succeeded (1600-1400) in the Late Bronze Age a prince's house of which only a few fresco fragments remain. About 1400 Tiryns began to assume its present form. In the first stage a great wall was built round the south of the hill with a gate on the east. In the second stage the fortress was enlarged at a higher level created by terracing. The wall was extended to the north to include the middle part of the hill, and on the east a great gate, like the Lion Gate at Mycenae, was built. In the third stage the vaulted galleries with store chambers on the south and east were added. A bastion with a side gate was thrown out on the west and a massive wall was built round the north of the hill to protect flocks and herds and refugees. Within the south citadel arose a complex of buildings comprising an earlier and a later royal residence. The earlier palace on the east is well built though small, and is approached through a court. The west or great megaron was a noble hall entered through two courts with propylons, and the inner court contained an altar and a colonnade. It was richly decorated with frescoes, like its predecessors, and by the hearth was a place for a throne. At the side were a bathroom and chambers with upper stories. The lower town on the plain developed similarly, and Tiryns at this time was a rich and powerful State. Attempts to reconcile the plans of the palace and the two megara with the Homeric house divided into men's and women's apartments are based on the false assumption that the two megara were contemporaneous and parts of one homogeneous structure. The palace perished by fire at the end of the Late Bronze Age, but Tiryns continued to be inhabited through the geometric and archaic periods, and a temple seems to have arisen on the ruins of the palace. Tiryns survived into the classical period as an independent town and sent a contingent to Plataea, but was destroyed by Argos c. 470 B.C.

H. Schliemann, *Tiryns* (1886); A. Frickenhaus, G. Rodenwaldt, K. Müller, *Tiryns* i-iv (1912-39); G. Karo, *Führer durch Tiryns* (1934). A. J. B. W.

TISIAS of Syraeue (5th c. B.C.), pupil of Corax and teacher of Gorgias, Isocrates, and Lysias, wrote a *τέχνη* based on that of Corax. To him have been attributed the Doric fragments on rhetoric in *POxy.* iii, pp. 27 ff. (see W. R. Roberts, *CR* xviii (1904), 18 ff.).

T. W. H. A.

TISSAPHERNES, satrap of the Anatolian coastal provinces from 413 B.C., after he had suppressed the revolt by Pissuthnes of Lydia. In 412, prompted by Alcibiades, he began the policy of intervention in the Peloponnesian War, though his support for Sparta was intermittent and half-hearted, his real objective being the exhaustion of both sides. The conspiracy of his brother Terituchmes against Darius II may have been a contributory factor in Tissaphernes' relegation to Caria in 408, when Cyrus initiated a vigorous pro-Spartan policy. In 401, when Cyrus began to mobilize his army, Tissaphernes, who had previously denounced him on Artaxerxes' accession, rode post-haste to warn the Great King. At Cunaxa his cavalry charge decided the day. He was restored to his command of the coastal provinces, and had to bear the brunt of the Spartan offensive which followed. Though he diplomatically diverted most of the attacks against Pharnabazus, he was crushingly defeated by Agesilaus near Sardis in 395. The

hatred of Parysatis (Artaxerxes' daughter) had long made his position insecure, and after his disaster Artaxerxes decided to remove him. He was lured by Tithraustes to Colossae and assassinated.

W. Judeich, *Kleinasiatische Studien* (1892), ch. 2. D. E. W. W.

TITAN (*Τῑτάν, -ήν*), one of the older gods who were before the Olympians, children of Heaven and Earth. Hesiod (*Theog.* 132 ff.), lists Oceanus, Coeus, Crius, Hyperion, Iapetos, Theia, Rhea, Themis, Mnemosyne, Phoebe, Tethys, and Kronos. These names are an odd mixture of Greek and non-Greek, personal names and abstractions. For the battle between them and Zeus see *KRONOS*. The etymology of *Τῑτῑνες* is highly uncertain; Hesiod (*ibid.* 209) fancifully derives it from *τιταίνεω*, to strain, and *τίσις*, vengeance, in allusion to their relations with their father. Later poetry often uses Titan and Titanis for Hyperion and Phoebe, Sun and Moon. See also *ORPHISM*. H. J. R.

TITANOMACHIA, see *EPIC CYCLE*.

TITHE, *δεκάτη*, the tenth part of a revenue offered as thankoffering to a god; the sense is often the same as that of votive offering, *ἀπαρχή* (q.v.). E.g. a certain Aeschines offered a statue to Athena as *δεκάτη* (*IG* i². 543). Best known are the tithes which the Athenians brought to the Eleusinian goddesses and in a decree exhorted all Greeks to bring (*IG* i². 76; 2; *SIG* 83).

M. P. N.

TITIANUS, JULIUS (2nd c. A.D.), epistolographer (Ciceronian in style), miscellanist, and grammarian. His studies of Virgil are mentioned by Servius ad *Aen.* 10. 18. His son wrote prose fables. The elder Titianus was nicknamed 'ape' (*simia*, *Sid. Apoll. Ep.* 1. 1. 2) by his fellow *Frontoniani* (q.v.) in disapproval of his copying Cicero's epistolary style.

Teuffel, § 364.

J. W. D.

TITIES, RAMNES, LUCERES, see *TRIBUS*.

TITINIUS (1), Latin poet; earliest known composer of *fabulae togatae* of the type called *tabernariae*, in lively popular Plautine style. He survived Terence, with whom he was classed in character-drawing, especially feminine. See *DRAMA, ROMAN*, para. 5.

Fragmenta: O. Ribbeck, *CRF*² 133 (3rd ed. Teubner, 1897). E. H. W.

TITINIUS (2) **CAPITO**, **GNAEUS OCTAVIUS**, belonged to the younger Pliny's circle and is praised by him as an upholder of high literary standards (*Ep.* 8. 12). His *recitationes* included obituaries of prominent citizens. Pliny addresses to him a very interesting comparison between history and oratory (*Ep.* 5. 8). For the inscription recording his career see *ILS* 1448. J. W. D.

TITIUS (1), **GAIUS** (2nd c. B.C.), orator and tragic writer. The abundance of *argutiae* in his speeches is mentioned by Cicero, *Brut.* 167.

See Teuffel, § 141.

TITIUS (2) **MARCUS**, served as Antony's quaestor in the Parthian expedition (36 B.C.), and hunted down Sextus Pompeius in the following year. He went over to Octavian in 32, was *consul suffectus* in 31, and fought in the campaign of Actium. He was later governor of Syria.

Plutarch, *Antony*; Appian, *BCic.* bk. 5; Dio Cassius, bk. 48-50. G. W. R.

TITIUS (3) **PROBUS**, **GAIUS**, an epitomator whose relation to Julius Paris, abbreviator of Valerius Maximus, is obscure. The difficulty was felt by Vossius, *De Historicis Latinis*, prefixed to Leyden edn. of Val. Max. 1655.

Teuffel, § 279. 11.

TITUS (**TITUS FLAVIUS VESPASIANUS**, A.D. 39-81), the son of the future emperor Vespasian, was educated with Claudius' son Britannicus. He served in Germany and Britain as *tribunus militum*, and accompanied his father, eventually serving as *legatus legionis*, to Palestine. When Vespasian departed to assume the principate, Titus was left to carry on the Jewish war, which he completed in 70 with the capture of Jerusalem. On his return to Rome he triumphed with Vespasian and was promoted to virtual partnership in the government. He was given the *proconsulare imperium* and the *tribuniicia potestas*, held the censorship (73) and seven consulships with his father, and was made *praefectus praetorio* without colleague. He was thus marked out for the succession, and on Vespasian's death was declared princeps automatically (A.D. 79).

Under his father Titus had conducted a most unpopular liaison with Berenice, sister of Herod Agrippa, and as *praefectus praetorio* he had shown himself cruel. Only the soldiers adored him. But as princeps Titus rapidly won universal affection. Possessed of good looks, intelligence, and charm, he introduced an era of fabulous generosity. His father's carefully garnered wealth enabled him to indulge his love of giving, and nobody was turned away from his door. His own house was set in order, Berenice finally dismissed, and Vespasian's modest way of living retained.

There were no executions or trials for *maiestas*, and informers were publicly scourged and expelled. By these and other means the Senate was mollified and its opposition practically ceased. Titus showed the utmost leniency to conspirators, even promoting participants. With his brother Domitian his relations were unhappy; feeling that he could not trust him, he did not promote Domitian from his post of *princeps iuventutis*.

Two disasters befell Italy during the reign, the eruption of Vesuvius (24 August 79), which destroyed Pompeii and Herculaneum, and the plague and great fire in Rome (A.D. 80). Titus generously helped the sufferers, and took in hand an extensive building programme to replace the damage of the fire. He completed the Colosseum and built the *Thermae* that carry his name.

Titus died in 81. His death caused universal sorrow, and this 'darling of the human race' (Suetonius) was at once enrolled among the gods. Probably his lavish expenditure would soon have caused a crisis; but men remembered his short reign as a period of ideal happiness.

Suet. *Titus*; Dio Cass. bk. 66; *PIR*, F 264; Weynand, *PI*², s.v. 'Flavius' (207); *PIR*, F 399. See also *VESPASIAN*. R. L. J.

TITYUS, a son of Earth, whom Odysseus saw in Hades, covering nine acres of ground, while two vultures tore at his liver, as a punishment for assaulting Leto (*Od.* 11. 576-81). The seat of desire is appropriately punished. He was killed by Zeus (*Hyginus, Fab.* 55), Apollo (*Apoll. Rhod.* 1. 759 ff.), Artemis (*Pindar, Pyth.* 4. 90; in *Euphorion*, fr. 105 Powell, she was defending herself, not her mother), or Apollo and Artemis (*Apollod.* 1. 23). For variants in his story, which are numerous, see *Vaser* in *Roscher*, s.v. H. J. R.

TLEPOLEMUS, see *LICYMNUS*.

TMOLUS (*Τμῶλος*), the deity of the Lydian mountain so named. He appears, with Midas, as judge of the contest between Apollo and Pan (*Ovid, Met.* 11. 156 ff.), and as a coin-figure.

TOGA. The toga was the conventional town dress of the respectable Roman citizen, corresponding to our black morning-coat. It was uncomfortable and expensive; but to wear it on public occasions in Rome was an ancestral custom which had to be observed. The material was fine white wool, with the distinguishing

mark of a purple border for curule magistrates and for youths till they reached manhood, *toga praetexta*. In shape it was like two large segments of a circle equal in size placed with the straight edges together. In length it was nearly three times, in width about twice, the height of the wearer; and it required very careful adjustment. Before putting on it was folded lengthwise, bunched into thick folds, and thrown over the left shoulder with a third of its total length hanging in front. The rest of the cloth was passed across the back, brought forward under the right arm, and again thrown back over the left shoulder, covering nearly all the left arm. Then the back portion was spread out to cover the right shoulder, and the front was drawn up at the breast so as to make a mass of folds, *sinus*, which served as a pocket.

TOGATA sc. *fabula*, see *FABULA*.

TOILET. Most of the aids to beauty known to-day were to be found in ancient times on a lady's toilet table; and both in Greece and Rome men gave much more attention to their bodies than is usual with us. The Greeks were constantly rubbing themselves with olive-oil, and the Romans under the Empire devoted much time to massage and bathing; dandies went further and would remove the hair from every part of their body with tweezers, pitch-plaster, and depilatories.

Many specimens have been found of ancient toilet implements, such as mirrors, combs, razors, scissors, curling-tongs, hair-pins, safety-pins, nail-files, and ear-picks. Mirrors were usually made of burnished metal, for though glass was known it was seldom used. Combs were of the tooth-comb pattern, with one coarse and one fine row of teeth. Razors, made of bronze, were of various shapes, the handle often beautifully engraved. Safety-pins (*fibulae*) and brooches had many forms elaborately inlaid with enamel and metal. Ear-picks—*auriscalpia*—were in general use at Rome.

Cosmetics and perfumes were freely used. Athenian wives attached importance to white cheeks, as distinguishing them from sunburned working women; they applied white lead, and also used a rouge made from orchid. Roman ladies also had a great variety of salves, unguents, and hair-dyes, kept in a toilet box with separate compartments for powders, paints, and tooth-pastes. Several recipes for these commodities are given by Ovid in his mock-didactic poem *De medicamine faciei*, the strangest being one for a lotion 'halcyon cream', made apparently from birds' nests and guaranteed to cure spots on the face.

Greek women usually wore their hair arranged simply in braids, with a parting in the middle, drawn into a knot behind; and the same style was frequently adopted in Rome. But under the Empire a fashion arose of raising a structure of hair on the top of the head, painfully arranged by a lady's maid. Blondes were fashionable in Rome, and brunettes could either dye their hair or use the false hair which was freely imported from Germany.

Men in early Greece and Rome wore beards and allowed the hair of the skull to grow long. From the fifth century the Greeks cut the hair of their skulls short, and from the time of Alexander they shaved their chins. The Romans followed suit in the third century B.C., but from the time of Hadrian they again wore beards.

Ovid, *De medicamine faciei*.

TOLOSA, town in Gallia Narbonensis, modern *Toulouse*, a typical river-plain site (of pre-Roman origin), which under Augustus completely superseded the important Halstatt-La Tène oppidum of Vicille-Toulousc. In 106 B.C. Tolosa was wantonly sacked by the consul Cn. Servilius Caepio, who carried off a huge spoil. Under

the Empire Tolosa possessed *ius Latii* and perhaps the title of colony (Ptolemy 2. 10. 6). Famous for literary culture, its most famous son was, however, the warrior Antonius Primus. Since 418 it was the capital of the Visigothic kingdom (*regnum Tolosanum*). Its ancient remains are scanty.

TOMIS (Τόμις, Τόμαι; Tomi; mod. *Costanza*) was a Milesian colony of the seventh century. It had a trade route to the Danube across the Dobrudja, but until the third century it played a subordinate part to its neighbour Istria (q.v.). It was brought under Roman rule by M. Lucullus (72 B.C.), but continued to suffer from raids by the hinterland peoples until it was incorporated in the province of Moesia. Under Roman rule, if not before, it was the head of a league of neighbouring Greek cities. The poet Ovid, who was relegated to Tomis by Augustus, held rank there as ἀγωνοθέτης.

M. C.

TORCH-RACE, a relay race in which sacred fire was carried by competing teams from one altar to another. At Athens it formed part of the Prometheia, Hephaestea, and Panathenaea, and was extended to other cults, as that of Pan (Hdt. 6. 105). In the festival of Bendis at Piraeus it was a horse-race (Pl. *Resp.* 328 a). The contest probably originated in the belief that fire through use loses its purity, and that fresh fire must be periodically fetched from the altar of a fire-god. The ritual was common to many cults in all Greece and maintained its sacral character throughout antiquity.

See articles 'Lampadedromia' in *PW* and *Dar.-Sag.* F. R. W.

TORQUATUS, see *MANLIUS* (4).

TORTURE was applied in the Roman criminal procedure at an early time, but only to slaves to make them confess when accused or to force the truth out of them as witnesses. The procedure was called *quaestio*; a slave's evidence was never *testimonium*. In Republican times the use of torture was fairly common, but the emperors of the first two centuries A.D. tried to restrict it by admitting it only in cases of grave crime and when the delinquent was so near conviction, 'ut sola confessio seruorum deesse . . . uideatur'. (See the discussion in *Dig.* 48. 18.) From the time of Tiberius the application of torture extended to free persons (to witnesses in the second century), except the *honestiores* (q.v.). Stricter provisions were introduced with regard to some special crimes such as adultery and *crimen maiestatis*, where slaves could be examined under torture against their *domini*, though normally they were not allowed to give evidence against them. In post-classical times torture was extended to civil proceedings (*Cod. Theod.* 2. 27. 1. 2 a), and even Justinian with his distrust of witnesses maintained it, though with restriction to low-born and suspected individuals.

TOWNS. I. GREEK AND HELLENISTIC. Very little was known about the residential planning of Greek towns of the fifth century B.C. before the recent excavations at Olynthus in Macedonia. These have disclosed a regular formation of domestic buildings opening to long straight streets, as in the much earlier towns of Egypt; an arrangement obviously suitable for a flat site. The only other evidences of this period or earlier are those from some fortified hill-towns, where remains within the walls are too scanty to enable any substantial conclusions to be drawn. Hippodamus of Miletus (q.v.) is credited with the adoption of the 'Gridiron' system of planning in squares, with all streets at right angles to one another, and it is evident that Priene (fourth, third, and second centuries) which is on a hill slope, wonderfully preserved, shows no attempt to depart from parallel rectangular formations; these suited the plan types of the larger units

2. The scenes of a tragedy consisted of set speeches or dialogue as might be required; in the earliest play of Aeschylus (the *Suppliants*) dialogue is mostly between an actor and the chorus leader and there is little conversation between two actors. The scenes are separated by choral odes of considerable length and of high excellence as lyric poetry. This suggests that tragedy sprang from a performance which was entirely lyric, and in fact the introduction of a single actor, delivering a prologue and

set speeches, is attributed, on what seems to be good authority, to Thespis (q.v.), who gave a performance at Athens about 534 B.C. and probably began the use of the iambic trimeter metre for such speeches, though the trochaic tetrameter was never entirely abandoned for dialogue. The actors and chorus in tragedy wore masks (the actor's mask having been introduced by Thespis, after other experiments in disguise), and must have had some kind of *σκήνη* or tent to change in. The number of the chorus employed by Thespis and by Aeschylus in his early days is disputed; some scholars think that it was fifty, as in the dithyramb, and argue that as in Aeschylus' earliest extant play the chorus represented the fifty daughters of Danaus, it must have contained fifty singers; others, who doubt the derivation of tragedy from dithyramb, point to the fact that the chorus in other plays of Aeschylus consisted of twelve or, later, fifteen singers.

3. The attempt to trace back the development of tragedy before the fifth century is beset with uncertainties at every point. Phrynichus, indeed, a slightly senior contemporary of Aeschylus, seems to have written plays predominantly lyric and not unlike the early plays of Aeschylus himself. But of Thespis nothing more is certainly known than what has been stated above, though one account brings him to Athens from Icaria (in Attica), where his performances may have been connected with the autumn festival of the vintage, and some scholars, relying upon late and doubtful notices, think that these or some similar performances may have been a grotesque affair, which, developing in different directions, gave rise to both tragedy and comedy. No ancient authority attributes satyric plays or satyr-choruses to Thespis. We hear (Pollux 4. 123) of a time 'before Thespis' when 'someone' got up on a table and answered the chorus, and Thespis may have turned this 'someone' into a regular actor impersonating a character. A late notice (Suidas, s.v. *Ἀπίων*) ascribes to Arion of Corinth (about 600 B.C.) the invention of the *τραγικὸς τρόπος*, i.e. probably the style or mode in music which afterwards belonged to tragedy, and a statement (Joannes Diaconus in *Hermogenem*) attributed to Solon says that Arion composed the first *δραμα τῆς τραγωδίας*. Further, Herodotus (5. 67) records that at Sicyon the *τραγικοὶ χοροὶ* commemorating the sufferings of the hero Adrastus were transferred by the tyrant Cleisthenes to the worship of Dionysus, and very late sources (Suidas, s.v. *Ἀπίων* and *οὐδὲν πρὸς τὸν Διονύσιον*) mention a 'tragic poet' Epigenes of Sicyon, who was upbraided for introducing into the worship of Dionysus themes which had nothing to do with the god. Possibly inventions or innovations of Epigenes may have had some influence later on the embryo tragedy of Athens, and it may have been some such originally Dorian performance into which Thespis imported an actor. Some scholars believe that the story of Thespis' performances in Icaria was a late invention, intended to deprive the Dorians of the credit for an Athenian institution. The connexion of early tragic lyrics with Dorian peoples is supported by language. The language of tragedy is, in its main substance, Attic, but not only is there a considerable infusion of Epic and Ionic forms (due to a tradition from days when 'Homer' in a broad sense was the only literature), but in the lyric portions the use of *ā* for *η* is probably Doric in origin. A considerable number of Doric words and forms is also to be found in the iambic, as well as in the lyric, portions of tragedy. The explanations which treat these forms as old Attic are less probable (see Pickard-Cambridge, *Dithyramb, Tragedy, and Comedy*, pp. 146 ff., 417 f., and refs. there given). Such forms (as well as the Ionic) doubtless came naturally to a poet who was moved to express himself in language possessing greater distinction than ordinary speech. The theory of the origin of tragedy which is probably still most popular is based mainly on

the literal acceptance of statements made by Aristotle (*Poet.* 3-5). According to this theory, the original lyric performance was identical with dithyramb, and its chorus was composed of satyrs, exhibiting some of the physical characteristics of goats (*τράγοι*). The actor was developed out of the leader (*ἐξάρχων*) of the dithyramb; the abandonment of the grotesque language and dancing of the satyrs coincided with the introduction of the iambic trimeter, a more serious metre than the trochaic tetrameter, and the plots, originally short, became longer. Suidas' statement that Pratinas of Phlius (about 500 B.C.) was the first to compose satyric plays is explained away by supposing that the original satyr-plays or tragedies (there being at first *ex hypothesi* no difference) had been drifting too far from Dionysus and subjects connected with him, and that what Pratinas really did was to re-introduce from Phlius the old type of satyric play, which now or shortly afterwards became a pendant to three non-satyric tragedies. (The date at which tragedy on this view discarded the satyric dress for its chorus is not specified.)

4. In support of this theory are usually adduced the names *τραγωδία* and *τραγωδοί* (goat-singers), explained as referring to the goat-like satyrs, and transferred, it is supposed, to the horse-tailed satyrs of Attica; and the fact that Suidas ascribes to Arion the composition of literary dithyrambs and the production of satyrs speaking verse, as well as the invention of the *τραγικὸς τρόπος*, it being assumed that in all three points one and the same type of composition is referred to—an assumption for which there seems to be no ground. It is also the fact that in the fifth century satyric plays were always the work of the same composers as tragedies, and were generally like tragedies in structure.

5. But this theory presents great difficulties. There is no evidence that a dithyramb was ever danced in satyr-costume, nor is there any trace of dramatic elements in dithyramb before Bacchylides (well on into the fifth century); the dithyrambic chorus was circular, the tragic rectangular. Suidas' notice about Pratinas is more naturally interpreted to mean that he introduced satyric plays for the first time into a festival of non-satyric tragedies; the names 'dithyramb' and 'tragedy' or 'tragic chorus' are never interchangeable in the Classical period, and Arion's 'tragic' song and the tragic choruses of Sicyon were probably quite distinct from dithyramb; the word *τραγωδοί*, 'goat singers', may mean, not singers in goat-costume (a meaning inappropriate to the equine satyrs of Attic drama), but singers competing for the goat as a prize (such as Thespis received), or at the sacrifice of a goat (as perhaps at Icaria, though the evidence is not very satisfactory). Possibly, therefore, Aristotle was theorizing, inferring that the more crude and primitive satyr-drama must have preceded the finer tragedy, and that both might have sprung from the dithyramb, which had come by his own day to include dramatic elements, and which was also known once to have had more riotous forms than later, so that it would not be absurd to connect it with satyr-play. It is difficult to imagine that the noble seriousness of tragedy can have grown so quickly, if at all, out of the ribald play of satyrs.

6. It seems more probable that early in the sixth century experiments in lyrics of a serious or 'tragic' kind, dealing with heroic legend (and with no special preference for stories connected with Dionysus) were made in the northern towns of the Peloponnese, especially Corinth and Sicyon, and in the latter place at least came to be associated with the worship of Dionysus; that later in the century Thespis made his experiment at Athens, combining his choruses with an actor delivering set speeches, and probably imparting a higher tone to what may have been a rough kind of performance; that these Athenian plays came under the influence of the Peloponnesian and Dorian lyric 'tragedy'; and that the

two strains came to be blended, and so arose the tragedy of Phrynichus and Aeschylus, associated with the Great Dionysia and, in that festival, with dithyramb and with the Satyric drama brought by Pratinas from Phlius. (For a full presentation and discussion of the evidence see Pickard-Cambridge, *Dithyramb, Tragedy, and Comedy*, chs. 1 and 2, and Ziegler, art. "Tragoedia" in *PW*. The former also discusses the theories of Sir William Ridgeway and Dr. Gilbert Murray, of whom the one derives tragedy from rites said to have been enacted at the tombs of heroes, the other from a supposed ritual-sequence representing the death and resurrection of the Year, in the form of a *δαίμων* or hero. These theories do not appear to have won any very wide acceptance.)

7. The history of tragedy in the fifth century will mainly be found in the articles on Aeschylus, Sophocles, and Euripides (see also AGATHON, ION, IOPHON). The present article deals mainly with some general aspects of tragedy, its subjects, form, production, etc.

8. Tragedy in Greece was a religious ceremony in the sense that it formed part of the festivals of Dionysus, and that it dealt with grave religious problems; but it was not an act of worship in the same way as was dithyramb, in which the chorus represented the Athenian people itself paying honour to the god, and its members remained in their own persons. The tragic chorus was always dramatic and 'in character', and from the first the action and the lyrics had most commonly no reference to Dionysus, but presented in dramatic form themes chosen freely from the whole range of epic story and floating legend, gradually settling down, as Aristotle says (*Poet.* 14) to a narrower range (largely non-Dionysiac) as it was found that the legends of certain houses furnished better material than others for dramatic treatment. If the chorus sings an ode to Dionysus, it is because the dramatic situation suggests it (as in Sophocles, *Ant.* 1115), not as an Athenian act of worship. But the tragedy of the three great poets and their contemporaries was always religious in the sense that the interest was not simply in the action as an exciting series of events, nor simply in the study of striking characters (though both these interests were strong), but in the meaning of the action as exemplifying the relation of man to the powers controlling the universe, and the relation of these powers to his destiny. In the choral odes, and implicitly in the action, the character of these ultimate powers is set forth, and even if (as often with Euripides) the conclusion drawn or to be inferred is a sceptical one, the spectator or reader is always in contact with the ultimate problems of human life and world-order. (The articles on the three great tragedians will illustrate this.) At the same time, tragedy shows a growing interest in the character of human beings as such. The personages of Aeschylus, though they include some very striking individuals, tend to be types or embodiments of a principle; Sophocles devotes himself mostly to displaying the effect upon certain noble and well-marked, but not abnormal, characters, of some terrible crisis or strain; the characters of Euripides are less raised above ordinary human life; his plays are often studies in distracted or abnormal mentality; he specializes and analyses with a minuteness entirely foreign to Aeschylus and almost absent from the plays of Sophocles.

9. With the growing interest in individual character went an increasing attention to art. Aeschylus is never entirely free from the crudities of primitive drama; in Sophocles we find the perfectly balanced and controlled use of all the resources of tragedy; in Euripides an indulgence, highly skilful, but in the judgement of many critics excessive, in more sensational effects both in action and in language. The importance of the actor's art grew correspondingly, until in the fourth century Aristotle (*Rhet.* 3. 1) could say that the actors now counted for more than the poets. Where attention is

concentrated on the performer there is less attention to the message; and whereas Aeschylus was a teacher and a prophet, and Sophocles always maintained the highest religious and moral earnestness, and Euripides was taken so seriously as to provoke strong antagonism, there is no reason to suppose that tragedy was so taken in the fourth century. It was simply a form of art, and perhaps not a particularly successful one; and the chorus, which had embodied the essence of the poet's teaching a century before, came to be, very often, only a singer of interludes. Aristotle does not allude to the religious interest of tragedy at all.

10. The poets were free to vary the legends which they found current, for the sake either of their moral or of dramatic art. Aeschylus made some modifications for the sake of religious truth; Euripides, for whom the legends had little religious value and were merely human inventions, himself invents freely; but it was Agathon who first composed a tragedy in which both characters and plot were entirely invented (*Arist. Poet.* 9). Very rarely a subject might be taken from contemporary or recent history; Phrynichus' *Phoenissae* and *Taking of Miletus*, Aeschylus' *Persae*, Theocletes' *Mausolus*, and Moschion's *Men of Pherae* are instances.

11. The poets might also be teachers in politics, though only to a subordinate extent. In Sophocles, indeed, there is little discernible allusion to contemporary issues, and he keeps wholly within the limits of his heroic plot. But in Aeschylus the contemporary reference and the moral are often unmistakable, while Euripides sometimes offers political discourses out of all proportion to their dramatic appropriateness, and alludes frequently to events and questions of his own day. Indeed, hatred of Sparta sometimes leads him to insert passages suggested as much by the contemporary as by the dramatic situation. That in all three poets there should be passages in praise of Athens is natural enough, and both Aeschylus and Euripides like to trace back to a legendary source the beginnings of some honoured institution, religious or political. The poets tend also to modify in the direction of constitutional monarchy or democracy the legendary traditions of absolute power.

12. The presentation of tragedies at the Great Dionysia in groups of three, followed by a satyric play, was regular throughout the fifth century, though the satyric play might be replaced by a fourth tragedy or by a play which, if not a tragedy, was at least of a serious kind, like the *Alkestis* of Euripides, who wrote very few satyric plays. From about the middle of the fourth century the satyric play dropped out, except for the performance of a single one at the beginning of each festival. (This is first recorded for 341 B.C. (*IG* ii. 2320).) Aeschylus often presented groups of plays, trilogies or tetralogies, connected in subject; the practice was probably his invention and was little followed by other poets, but Polyphradmon composed a *Λυκοῦργεια*, dramatizing the story of Lycurgus, Sophocles (possibly, but not certainly) a *Τηλέφεια*, Philocles a *Παρδιονία*, and Meletus an *Οιδιπόδεια*; and now and then there seems to have been a looser connexion of subject between a group of plays exhibited by Euripides, as, for instance, between the *Alexander*, *Palamedes*, and *Troades* in 415, and between the *Chrysis*, *Oenomaus*, and *Phoenissae* about 409. It was only occasionally that the satyric play presented a lighter version of part of the same story as the preceding trilogy, as did the *Sphinx* and *Lycurgus* and probably the *Amymone* of Aeschylus.

13. The addition of an actor to the original chorus was attributed to Thespis (see above), and Aristotle in his brief summary (*Poet.* 4) says that Aeschylus increased the number of actors to two, diminished the part taken by the chorus, and made the dialogue predominant; Sophocles introduced a third actor and scene-painting. (Both these innovations were adopted by Aeschylus in

his latest plays.) In the *Oedipus Coloneus*, written in his last years, Sophocles probably required four actors. As the importance of the actor's part increased, tragedy passed from oratorio into drama; but not completely, for the lyric element long remained an essential part, and there was never a complete presentation of the action. The critical or fatal act took place, with the rarest exceptions, off the scene or even outside the play; the dialogue and the speeches of the actors lead up to it or develop its consequences, but on the scene itself there is very little action. Exceptions will be found at the end of Aesch. *Agam.*, and in the *Supplices* and *Eumenides*; in Soph. *OC.* and Eur. *Andr.* and *Heraclidae*. Obviously the interplay of characters and motives was impossible until there were more actors than one, and on this side of dramatic art Aeschylus himself only gradually acquired the consummate skill which he shows in the *Agamemnon*. The single actor could do little more than narrate or ask and answer questions. (The name *ὑποκρίτης* by which he was called probably means 'answerer', though other interpretations have been offered.)

14. In the first play of Aeschylus it is the fortunes of the Chorus which are the subject of the play; and in his work the Chorus never loses its importance as the vehicle of his most profound reflection and the lessons which he draws from the action; when not itself the leading personage (as in the *Supplices* and *Eumenides*) it is always closely connected with the hero and his fortunes, and may take a not unimportant share in the development of the action. In Sophocles, though it takes no part in the action, it is intimately interested in it and usually attached closely to one of the leading personages, though the choral odes may lack some of the religious intensity of those of Aeschylus, and their reflections may be rather those of a wise and right-minded spectator, not deficient in relevance or appropriateness. In some plays of Euripides, on the other hand, the chorus seem to be on the spot accidentally and may even be in the way; they may be detached from the hero and the action, and their chants may at times seem to be almost callously irrelevant, though there is usually some good reason for this. Neither in Sophocles nor in Euripides have the choral odes the magnitude which they regularly display (except in the *Prometheus*) in Aeschylus. With Agathon (according to Arist. *Poet.* 18) the chorus is said to have been reduced to the singing of interludes unconnected with the play, and this may often have happened in the fourth century. The entry of the chorus is very commonly made to the accompaniment of marching anapaests, and these with the lyric ode which follows when the chorus is in position for dancing (or the lyric or semi-lyric passage substituted for it) form the *parodos* or entrance-song. The succeeding choral odes are termed *stasima*; but there is a form of lyric dialogue between the chorus and a principal actor, the *kommos*, which often takes the place of a *stasimon* and probably reproduces a traditional form of lamentation such as is recorded in Homer (c.g. *Il.* 18. 49 ff., 24. 720 ff.), though it is not, in tragedy, confined to lamentations. The *parodos* is regularly preceded (after the two earliest plays of Aeschylus) by a speech or a scene forming a prologue, and after the *parodos* the normal structure may be said to be a regular alternation of *episodes* or Acts (in which the actors take the main part, though the chorus may join in dialogue or make brief comments on the speeches) and *stasima*. The number of *episodes* and *stasima* may be as small as three of each or as many as five or six, according to the view taken of the composition of the particular play. But the limits of variation in this typical structure are very wide. In Aeschylus in particular there are frequently scenes which are mainly lyric, with brief speeches by an actor or snatches of dialogue between the lyrics, the whole sometimes forming a more or less (though not completely) symmetrical structure of the type known as

epirrhematic (lyrics and *epirrhemata* of speech or dialogue), and in most plays of Sophocles and several of Euripides there are similar reminiscences of what may have been an original epirrhematic form. This form is also not rare in the *kommos*. Again, an *episodesion* (particularly if long) may be broken up by the insertion of lyrics or anapaests, or (more rarely) the strophe and antistrophe of a choral ode may be separated and interlaced with the parts of an *episodesion*. The structure of some plays of Euripides (e.g. the *Hippolytus*, *Hercules Furens*, and *Troades*) is in parts very free, though the normal alternation of *episodes* and *stasima* is always observed in considerable parts of the play. Rarely in Aeschylus or Sophocles, much more commonly in Euripides, an anapaestic or lyric monody by one of the actors may be introduced, and in such monodies (and more rarely in choral lyrics), the regular antistrophic form of composition (in strophe and antistrophe, with or without epode) may be abandoned for free lyrics (*μέλος ἀπολελυμένον*) in which the music as well as the words was highly emotional (see EURIPIDES). Scholars differ as to the extent to which the choral lyrics printed continuously in our manuscripts were divided up, particularly at moments of excitement or uncertainty, between several members of the chorus; but there was certainly the possibility of expressing conflicting views through the two halves of the chorus. In some plays there was a secondary chorus (for instance in the *Supplices* and *Eumenides* of Aeschylus, the *Hippolytus* of Euripides and some lost plays), which might play a not unimportant part (see Lammers, *Die Doppel- und Halb-Chöre in der antiken Tragödie*, 1931). The beginning and end of an *episodesion*, or the entrance of a character, were often marked, particularly in Aeschylus, by a passage in anapaestic dimeters. The play concluded with a final scene (*exodos*) very variable in structure; but there was never a great choral finale, like that of a modern oratorio; the chorus at most speak a few quiet words.

15. It is certain that the several metres used by the poets possessed different emotional values, though they can no longer be fully appreciated. In dialogue the trochaic tetrameter usually implies greater excitement than the iambic trimeter in which dialogue and set speeches are mainly composed. The anapaestic dimeter is used either in marching (and in similar movements at the beginning and end of a scene), or, with less strict metrical rules, in lamentation; in the latter case, and possibly in the former, the words were sung. Hexameter passages are very rare; there is a remarkable lament in elegiacs in Euripides' *Andromache*. Of purely lyric metres, the dochmiac expresses the greatest emotional excitement or distress.

16. The plot of an ancient tragedy displays far less variety than a play of Shakespeare, and Aristotle regards as the ideal plot one in which each step arises out of what precedes it as its necessary or probable consequence, and everything irrelevant to the main causal sequence is excluded, though the poet's skill is shown in so arranging the sequence that pity, fear, and surprise are aroused in the highest degree. (On the value of surprise he lays great stress, and it should be noted that he states that even the best-known plots were known only to few.) So he prefers plots in which the crisis is a *περιπέτεια*, in which the action brings about just the reverse of what the agent intends or the spectator is led to expect, or an *ἀναγνώρισμός*, the revelation at the critical moment of a close relationship, unsuspected until some dreadful deed was done or about to be done, or events had reached an *impasse*. (Many forms of recognition are classified in *Poetics* 16.) Best of all is a plot in which *περιπέτεια* and *ἀναγνώρισμός* are combined. It is noteworthy that Aeschylus, whom Aristotle almost leaves out of account, seems to have made little use of either.

17. The fact that the Chorus was normally present

throughout the action imposed certain conditions upon tragedy from which the modern dramatist is free. The action must take place out of doors, and change of place is very rare, though it occurs, e.g., in Aeschylus' *Eumenides* and Sophocles' *Ajax*, the chorus having been sent away for sufficient reasons; interiors of houses, otherwise invisible, may be displayed by means of the ἐκκύκλημα or the throwing open of doors. It might be expected that the constant presence of the Chorus would also require that the action should be continuous in time; but in fact this so-called 'Unity of Time' was not strictly observed. Aristotle (*Poet.* 5) notes that it was the usual practice to represent (in a play lasting up to 3 hours) events which could fall within about 24 hours, so that considerable intervals of time might be supposed to elapse during a choral ode, and if usually the intervals were not long enough to cause any trouble with audiences accustomed to the convention, they might if required be much longer, as in Aeschylus' *Agamemnon* and *Eumenides*; there is great compression of the events happening off the stage in Sophocles' *Trachiniae*, Euripides' *Andromache* and *Supplices*, and some other plays; the choral ode separated the scenes as effectively and unobjectionably as a modern curtain. In a number of plays, all, of course, acted in broad daylight, the action is supposed to take place at early dawn or even at night. There is no reason to suppose that a Greek audience was more troubled by this than an Elizabethan.

18. Tragedy in Athens was probably performed at first in a circular orchestra in the precinct of Dionysus with no fixed background, except possibly the tent or shelter in which the actors dressed. In the earliest plays of Aeschylus all the scenery that is needed is a raised structure on the far side of the orchestra from the audience, to serve in the *Supplices* as a stepped altar, with the statues of a number of gods grouped round behind it; in the *Persae* as the Tomb of Darius; in the *Septem* again as an altar, with statues of gods, and in all three plays the plain background (probably the side of the actors' σκήνη) could represent whatever the play required—the wall of Artemis' sacred precinct (*Supp.* 144–6), the Persian council chamber (*Pers.* 140–1), possibly the palace of Eteocles (or any building on the Theban acropolis) in the *Septem*. There can have been no raised stage, as is shown by the movements of the chorus, and the orchestra must have been large enough to accommodate considerable crowds. It is probable, but not certain, that a few stones still remain to mark the position of this early orchestra. The *Prometheus Vinculus* raises complicated scenic problems which cannot be discussed here; the edition of G. Thomson offers a solution more probable than any so far suggested. By the date of the *Orchestra* Aeschylus had evidently adopted the painted background, introduced first by Sophocles and representing a palace or temple-front, and this remained the normal setting of tragedy to the end of the classical period. The façade was probably not raised above the orchestra on a stage, though there may very likely have been a broad step (with images of gods, if required), and often an altar, in front of the central door; few scholars can now be found to defend the existence of a raised stage in the fifth century, and it seems clear that a chorus and actors had complete freedom of access to one another, though the actors probably performed for the most part against the background. In the *Ajax* of Sophocles the background represents the tent of Ajax, though there are difficult scenic problems connected with the play; special scenery must have been arranged for the *Philoctetes* and *Oedipus Coloneus*, Sophocles' two last plays, and stagecraft had doubtless developed considerably by the end of the century. In the satyric *Ichnetae* a very simply decorated background may have represented the χλωρός ἰώδης πόντος, with the entrance to Cyllene's Cave, and the *Cyclops* of Euripides, with the cave of

Polyphemus, may have been somewhat similarly staged. The normal façade suffices for most plays of Euripides, with additions or modifications when required, e.g. in the *Electra*, in which the front is that of a workman's cottage, and in the *Andromache*, in which the shrine of Thetis as well as the palace of Neoptolemus was required. In four plays the scene was laid before a temple (*Heraclidae*, *Supplices*, *Ion*, *Iphigenia in Tauris*), in front of which in the *Heraclidae* must have been a large stepped altar, while the *Iphigenia* and probably the *Ion* need a portico. In other plays the background consists of one or more tents. The indications in the plays of Euripides (as in those of Sophocles) are against a raised stage, and the *Rhesus*, which many scholars suppose to be a fourth-century play, still requires that chorus and actors shall be on the same level (see line 684). The raised stage is thought by some scholars to have been introduced when the theatre was remodelled in the latter part of the fourth century—the chorus having ceased to be an integral part of the play, but the more probable date of the change is early in the second century. The extant remains of the theatre at Athens afford no certainty on this point, and it must not be assumed that the change was made everywhere in the Greek world at the same time. Some of the new theatres springing up in many parts of Greece and Asia Minor may have been the first to introduce the stage.

19. The Athenian poets made use of various somewhat crude mechanical devices, the γέρανός, the μηχανή and θεολογεῖον to display actors (usually gods) in the air, the ἐκκύκλημα to reveal the interior of a house or temple, and others; the precise use of these in particular plays is keenly debated. Probably Aeschylus experimented freely; Sophocles used such devices little if at all; Euripides certainly used the μηχανή and θεολογεῖον in many plays, though perhaps he employed the ἐκκύκλημα less often than is sometimes supposed.

20. *Tragedy at the Lenaea and Rural Dionysia.* Of Tragedy at the Lenaea in the fifth century all that is known is that in 419 and 418 two poets competed, each with three tragedies (no satyric play) (*IG* ii². 2319), and that Agathon won a victory in 416 (*Ath.* 5. 217 n). There are many records of Lenaeon tragedy for the fourth century (*IG* ii². 2325; *Diod. Sic.* 15. 74; *Plut. X Orat.* 839 d) and among the victors named are Dionysius of Syracuse, Aphareus, Theodectes, and Astydarnas. At the Rural Dionysia there were frequent performances of tragedy, which may have helped to familiarize the inhabitants of Attica with the great masterpieces. The festival at the Piraeus seems to have been of special importance, and here and at Salamis new plays were sometimes produced. We hear also of festivals at Collytus, Eleusis, and Icaria, and an inscription from Aixone records the exhibition of tragedies (including Sophocles' Τηλέφεια) and comedies there (see A. E. Haigh, *Attic Theatre*, pp. 29, 30, and A. W. Pickard-Cambridge in Powell and Barber, *New Chapters* iii. 69 ff.).

21. *Later Tragedy.* In the century after his death the influence of Euripides on the drama was probably stronger than it was in his life-time, and a certain inferiority of contemporary writers to the great three of the fifth century seems to have been acknowledged: old plays were sometimes performed (*IG* ii². 2318, Wilhelm p. 23), and from about 341 B.C. one such play was regularly exhibited at the beginning of the festival after the single satyric play (*IG* ii². 2320). Dramatic festivals now came to be held all over the Greek world and theatres sprang up everywhere, though we have little evidence as to the plays presented. Aeschines acted in the *Oenomaus* and *Antigone* of Sophocles, which Demosthenes (18. 180, 19. 246) speaks of as often exhibited. The extant *Rhesus*, ascribed to Euripides, is probably a fourth-century play, in which some of the characteristic idioms of all three of the great tragedians are imitated; but if not strong in character-drawing, it is a good acting play with ²²

impressive final scene. The century was more famous for great actors than great poets (see above); but the reputation of Theodectes, Astydamos, and others must have had some foundation. Apart from the historical plays mentioned above, mythological subjects unknown to the fifth century were sometimes chosen, such as the stories of Adonis and of Leda. There may have been experiments in form, such as the *Centaur* of Chaeremon (q.v.), and Chaeremon and others either wrote to be read, not acted, or at least are regarded by Aristotle as better fitted for reading (*ἀναγνώστικοί*), being characterized by a vivid descriptive style (*γραφικὴ λέξις*, as opposed to *ἀγωνιστικὴ*) (Arist. *Rh.* 3. 12). The fact that several of the poets of the century were rhetoricians as well as (or more than) poets may be connected with this. In the third century, when Alexandria was the chief literary centre of the world, we hear of the *Pleiad* of seven tragic poets at the court of Ptolemy Philadelphus (285–247 B.C.); five of these were Homerus, Lycophron, Philicus, Sosithus, and Alexander Aetolus (qq.v.); for the remaining two places various names are given. Over 60 names of tragic poets of the Hellenistic period are preserved; the titles of their plays suggest that they often took subjects seldom, if at all, treated in the classical period.

22. In the fourth and third centuries satyric plays were sometimes composed which were more like comedies in their topical and personal allusions. (See PYTHON, LYCOPHRON, SOSITHEUS.) There seems to have been some revival of this form of composition under the influence of Sosithus, and it did not die out entirely, at least outside Athens, before the Christian era.

23. It appears that new tragedies were occasionally composed down to the second century A.D., but not later (see Haigh, *Tragic Drama*, p. 444).

TRAJAN (MARCUS ULPICIUS TRAIANUS), Roman Emperor A.D. 98–117, son of M. Ulpian (q.v. 1) and a Spanish mother, born at Italica in Baetica on 18 Sept. A.D. 53 (less probably 56), served his vigintivirate (c. 70), and spent the next ten years as military tribune, accompanying his father to Syria (c. 75); he was subsequently quaestor and (before 86) praetor. During a legionary command in Spain, he was called to counter the revolt of Saturninus (q.v. 3) in Upper Germany (c. 88); he was consul (*ordinarius*) in 91. Governor of Upper Germany in 97, he there learned of his adoption by Nerva (q.v.). The choice was interesting. Trajan was Spanish-born, his family

was 'new'; he had seen little of Rome; and Nerva had collateral kinsmen. But Trajan was an experienced soldier, respected but popular as a general, and probably possessing influence at Rome (see SURA).

2. After Nerva's death Trajan (now *cos.* II), unwilling to hasten to Rome or to stress his Nervan connexion (honoured but never emphasized), preferred to inspect and organize the Rhine and Danube frontiers: this, with his execution of the mutinous Praetorians (see NERVA), and his halving of the normal donative, showed his strength. Senatorial privileges were at once confirmed. Early in 99 he returned to Rome, amid general welcome, and in 100 held his third consulship (refused in 99; others in 101, 103, 112). Pliny's *Panegyric*, delivered that year, elaborated his character. Popular with the army, affable to senators, protector of the people, he was *princeps*, not *dominus*; a natural leader, he did not abuse his powers. Personally modest and simple like his wife, Plotina (q.v.), he insisted on traditional forms.

3. His social and financial policy, however, was the reverse of reactionary. *Congiararia* (presumably of 75 *denarii* a head) were given in 99 and 102. Free distributions of corn continued, with more recipients, and the corn-supply received special attention. The system of *alimenta* (q.v.) was extended; accession-gifts were remitted; the scope of the Inheritance Tax was narrowed; provincial burdens were lightened. There was an ever-increasing programme of public works, at first mainly repairs, supervision, and sundry road-building, but after 107 building increased; this (with the vast *congiarium* paid in 107: 500 *denarii* a head) was doubtless the result of the treasure won in the Second Dacian War (5 million lb. weight of gold and double of silver; the figures are not easily disproved). New baths, the Aqua Traiana, the Naumachia, the magnificent Forum Traiani (q.v.), and new roads and bridges, at home and abroad, were constructed after 107, when there were also sumptuous games celebrating the Dacian conquest.

4. For Trajan's Dacian and Parthian wars there was justification. Domitian's arrangement with Decebalus (q.v.) left the Danube (and Moesia) unsafe. Trajan left Rome in 101, crossed the Danube at Lederata and marched by way of Bersovia and Aizis (Priscian, *Inst. Gramm.* 6. 13) to Tibiscum, to be joined perhaps by a parallel column proceeding *via* Tsierna (cf. *ILS* 5863) and the Teregovia Keys pass. At Tapae he fought an apparently indecisive battle, and retired to winter on the Danube. In 102 he advanced up the Aluta valley to the Red Tower pass, and, helped by Lusius (q.v.) Quictus, finally forced the surrender of Decebalus and his capital Sarmizegethusa. Trajan returned to Rome to claim his triumph and title 'Dacicus'. The peace was short; by 105 Decebalus had attacked the Iazyges and besieged the Roman garrisons left in Dacia. Trajan, proceeding through Illyricum to Drobetae, relieved the garrisons. In 106 he crossed Apollodorus' great new bridge at Drobetae, recaptured Sarmizegethusa, and drove Decebalus to suicide. Dacia was annexed as a province, with its capital at Sarmizegethusa, now a colony. The gold- and salt-mines were quickly operated; one legion, XIII Gemina, soon sufficed as a garrison, with *auxilia*. Dacia thus became at last a bastion protecting the lower Danube. The Tropaeum Traiani at Adam-kissi (q.v.), commemorated Trajan's triumph.

5. In Numidia Roman occupation was quietly strengthened by the founding of Thamugadi and Lambaesis (qq.v.). In the east, too, Trajan began modestly in 105–6 with the annexation of Arabia Petraea or Nabataea (q.v.) by A. Cornelius Palma (q.v.); thus the Flavian eastern frontier was rounded off. But Parthia was still a menace, and when, after 110, its king Osroes dethroned Axidares (Rome's Parthian vassal in Armenia), Trajan set out (Oct. 113), probably intending to annex Armenia. He advanced to Elegeia; Armenia, falling easily into his

hands, was incorporated with Cappadocia and Lesser Armenia (114). Trajan (now officially 'Optimus'), perhaps elated by effortless conquest, moved south into Upper Mesopotamia, taking Nisibis and (through Lusius Quietus) Singara: coins proclaimed *Armenia et Mesopotamia in potestatem p. R. redactae*. In 115 he crossed and descended the Tigris, and captured Ctesiphon, the Parthian capital, while a parallel force descended the Euphrates: winter found him (now 'Parthicus') at the Tigris mouth. With Mesopotamia and its valuable trade-routes captured, consolidation and organization were now essential. But in 116 southern Mesopotamia revolted, while Parthian forces successfully attacked Trajan's base-lines—Armenia, Adiabene, and north Mesopotamia. Trajan suppressed the revolt, making Parthamaspatēs client-king at Ctesiphon (cf. coins, *Rex Parthis datus*); Lusius Quietus repelled attacks in the north. But the Empire was restless: Jews were in savage revolt in Cyrene, Egypt, Cyprus, and the Levant; Trajan himself was infirm. Leaving his new and precarious conquests, he turned homeward in 117, dying in Cilicia c. August 8th (see HADRIAN). While the Dacian wars had brought solid gain, the expense of the Parthian campaigns was out of all proportion to their material advantages.

6. General administration was economical and strict, but humane and progressive. Provincial governors, lax under Nerva, were well chosen; provincial and local finances, often unsound, were entrusted to special administrators (like Pliny in Bithynia and Maximus in Achaëa) and to local *curatores* (q.v.). *Equites* continued to replace freedmen in the Civil Service; more provincials—eastern as well as western—were made senators. But, as Pliny's correspondence shows, the burden of administration lay with Trajan; and provincial initiative received no encouragement. Trajan himself was fully conscious of his imperial mission, to secure *Felicitas, Securitas, Aequitas, Iustitia—Salus Generis Humani*; and his ruling on the Christians (Plin. *Ep.* 10. 97) illustrates his combined firmness and humanity in general legislation. The principate was a burden laid by heaven upon an earthly vice-gerent (cf. Plin. *Pan.* 80. 3), the servant of mankind, a public exemplar. The title 'Optimus', used unofficially as early as 100, emphasized by the great *Optimo Principi* coin-series of 103 onwards, and official from 114, rehabilitated the principate in the mystical glory (second only to that of Jupiter Optimus Maximus) enjoyed by Augustus but since dissipated. Trajan's consecration was no mere compliment; and his tradition (cf. Eutropius 8. 5) remained alive.

TRAJAN'S COLUMN, see FORUM TRAIANI.

TRALLES (*Τράλλεις*, also *Τράλλης*), a city sometimes attributed to Lydia, sometimes to Caria, on a strong position on the north side of the richest section of the Maeander valley; its wealth and commercial advantages are inherited by the modern Aidin. First mentioned by Xenophon, it was an important city in the Hellenistic (for part of which it was called Seleuceia) and Republican periods; under the early Empire it received a large body of Italian inhabitants and the epithet *Caesarea*. Its organization and cult are relatively well known from numerous coins and inscriptions. Its Church received a Letter from Ignatius. W. M. C.

TRANSMIGRATION. Although the belief that the soul after the death of the body passes into some other corporeal substance is widespread, cogent evidence is lacking that it existed in Greece otherwise than as a philosophical tenet or theological doctrine of non-popular origin. There is even less trace of it in Italy. It was certainly taught by the Pythagoreans and regarded as one of their most characteristic dogmas, e.g., Horace, *Carm.* 1. 28. 10, where see commentators; cf. Empedocles, 375, Pindar, *Ol.* 2. 56 ff. It is also Orphic, as Pindar, fr. 127 Bowra. Hence opinions as to its ultimate origin must vary with the theories held as to the sources of these systems. From one or both of them it passes into Platonism (e.g., Plato, *Resp.* 10. 614 D ff.), and so, e.g., to the mixed eschatology of Verg. *Aen.* 6. 713 ff. Its existence outside the then civilized world was remarked, e.g., among the Druids (Caesar, *BCall.* 6. 14. 5; Lucan 1. 454 ff.). H. J. R.

TRAPEZA (table), see FURNITURE.

TRAPEZUS, a colony of Sinope, traditionally founded in 756 B.C. as a trading-post on the south-east coast of the Euxine. Its mediocre harbour and inhospitable neighbours retarded its development, so that in 399 it was still a small town tributary to Sinope. It formed part of the kingdoms of Mithridates VI, Deiotarus, and the line of Polemon, and grew steadily in importance in the early Empire, since it was the nearest port to the Armenian frontier. It became a free city in A.D. 64 and received harbour works from Hadrian, but its prosperity was destroyed when it was sacked by the Goths in 259.

TRAVEL. Among the Greeks there was much travel, not only by soldiers and merchants, but by visitors to the great religious centres (pilgrims, athletes, actors), and by sightseers (e.g. to Athens); but the organization of travel was as yet little developed. The establishment of the Pax Romana, the union of the civilized world under one government, and the construction of good roads throughout the Empire provided facilities for communication which cannot be paralleled till modern times. The Roman government imposed no restrictions on travel, and as a result there was constant movement between Italy and the provinces, and between the several provinces. Under the Republic many Italians lived permanently or temporarily in the provinces (see *CONVENTUS*). There was a large Italian settlement in Delos. Southern Gaul was full of Roman citizens (Cic. *Font.* 11), and when Mithridates invaded the province of Asia the number of Romans and Italians massacred by him was estimated at 80,000. Many of these were *publicani* or *negotiatores*, but it is probable that some settled on the land, especially in Africa (*JRS* viii. 34 ff.). Conversely many provincials moved to Italy. Settlements of Syrians are found in

ports like Puteoli, and Juvenal complains that the Orontes had poured into the Tiber.

Members of the Roman 'governing class' had occasion to travel widely in the performance of their duties. A speaker in Tacitus (*Ann.* 3. 33), who declares that he had spent forty years in service abroad but had always left his wife in Italy, must have visited her sometimes. All active members of the senatorial class held appointments in several provinces in the course of their career. Many Roman soldiers were stationed in parts of the Empire far from their homes, in which they often settled when their period of service had expired (*Tac. Ann.* 14. 27). Artists and philosophers and religious teachers like St. Paul moved freely from province to province. The satirists are full of references to the risks which merchants would incur for the sake of gain: one merchant boasts in an inscription that he had made 72 voyages from the Peloponnese to Italy. Roman traders ventured far outside the limits of the Empire, and were fairly familiar with India. Ptolemy's Geography shows that some knowledge of Indo-China existed in the Roman Empire in the second century, and finds of Roman coins in the countries of northern Europe show that traders went far beyond the Rhine and the Danube. Wealthy Romans travelled freely for pleasure, and often made long stays in the more attractive cities of Greece and Asia Minor.

By modern standards travelling was not comfortable in the Roman Empire. Aelius Aristides emphasized the discomforts of his journey from Asia Minor to Rome in A.D. 155, and the conditions under which Horace travelled to Brundisium (*Sat.* 1. 5) were not luxurious. Travelling was not free from danger even in Italy: travellers were liable to be attacked by highwaymen even on the Via Appia and Flaminia. On the whole, however, travel was safer than it has been at most periods of history. Bodies of troops were stationed at intervals on the main roads of Italy, and in the provinces it was the duty of governors to secure safety of communications.

On the accommodation of travellers see INNS. See also NAVIGATION, ROADS.

TREASURIES (θησαυροί). This term is usually applied by ancient authors, and consistently employed by Pausanias, to a type of small building erected at the major Greek sanctuaries for the purposes of housing the archives and treasures of a particular Greek city-state or community. These buildings were invariably small in size and built like miniature Greek temples *in antis*, with two main supporting columns. Sites of at least twenty such treasuries have been identified at Delphi and twelve at Olympia. The treasuries were mostly built of the material most characteristic of the city or area which they represented. The Treasury of Sicyon at Delphi was made of Sicyonian limestone, that of Siphnos of island marble, while the Treasury of Megara was adorned with terra-cottas in Megarian clay. The Treasury of Cyrene at Olympia contained sculptures of African limestone. Each contained some of the principal portable or precious minor objects belonging to the State it represented. There were also treasuries at the sanctuary of Apollo at Delos. The official name for a treasury was *olkos*, the 'communal house' in which were kept the *sacra*. The treasury served especially for official *theoroi* who came as delegates to festivals. Records were kept in them also, and inscriptions concerning nationals were cut on the walls of each treasury. Two treasuries at Delphi survive to us more or less intact, or capable of complete restoration,

that of the island of Siphnos and that of Athens. The former in the Ionian style was the richest and most highly adorned at Delphi. It was built c. 540 B.C. The latter is a severe Doric building and was built c. 510. The earliest treasury known is of the late seventh century and the latest of the fourth century. S. C.

TREBATIUS TESTA, GAIUS, a Roman jurist, contemporary of Augustus, and a friend of Cicero, who dedicated to him his *Topica*, and Horace. Recommended by Cicero to Caesar as legal adviser, he enjoyed his favour. As a legal writer Trebatius is known as the author of an extensive treatise on sacred and pontifical law (*De religionibus*) and of a work *De iure civili*. He was highly esteemed as a jurist who could take an independent attitude; the fact that Labeo was his disciple procured him the reputation of a good teacher. A. B.

TREBIUS NIGER (? 2nd c. B.C., Teuffel, 132; but placed under Empire by Cichorius, *Röm. Studien*, 1922) is several times quoted on points in natural history by Pliny (e.g. 9. 80; 89; 93; 10. 40; 32. 15).

TREBONIANUS GALLUS, GAIUS VIBIUS (emperor A.D. 251-3), was proclaimed emperor by his army after the battle of Abrittus and subsequently raised his son Volusianus to the rank of Augustus (see DECIUS 4). His reign was disastrous. The Persians overran Mesopotamia, the Goths, temporarily bought off, re-entered Moesia, and plague was rampant. The situation on the Danube was, however, restored by Aemilianus (q.v.) in 252; but next year Aemilianus marched into Italy and advanced to Interamna, anticipating the reinforcements that Trebonianus had ordered Valerian to bring from Raetia (see VALERIANUS). In the ensuing battle Trebonianus and his son were murdered by their troops.

H. M. D. P.

TREBONIUS, GAIUS, quaestor c. 60 B.C., *tribunus plebis* in 55, when he carried the *Lex Trebonia* conferring five-year commands on Pompey and Crassus. As *legatus* he did good service in Gaul (55-0) and in 49 conducted the siege of Massilia. Praetor in 48, he was sent next year to Spain, but failed against the Pompeians. Though appointed *consul suffectus* by Caesar in 45, he is said to have plotted against him in that year, and he took part in the actual assassination in 44, detaining Antony outside. Proconsul of Asia in 43, he was treacherously murdered by Dolabella at Smyrna. He published a collection of Cicero's witticisms.

F. Münzer, *PIV* vi A. 2274-82.

C. E. S.

TREES, SACRED. Tree worship, characteristic of primitive religion, took a prominent place in old Cretan religion. Not only growing trees, often seen inside the doors of shrines or behind walls, but also boughs were the objects of adoration and sacrifice (orgiastic dancing apparently belonged to the ritual). Prehistoric Crete knew trees as deities (epiphanies of goddesses are recognizable in some tree-cults); to the Greeks, however, trees (and groves) were only holy. The tree, 'having its own soul' (Sil. Ital., cf. *δρῦς* and art. NYMPHS), was only the abode or the property of a deity (just as springs, mountains, etc. were): so in the story of the Thessalian king, Erysichthon (q.v.), who cut down the holy oak (or attacked the holy grove of poplars) and was correspondingly punished by Demeter. In general it seems to have been a common custom, when clearing a virgin forest, to leave a tree or a clump of trees unheaven, as 'holy' (often dedicated to Artemis). The oak (cf. the mantic oak of Dodona) was mostly associated with Zeus (an inheritance from Indo-European times), the olive-tree with Athena, the laurel with Apollo (cf. the metamorphosis of Daphne), the plane sometimes with Dionysus (cf. his epithet *δενδρίτης*), the myrtle with

Aphrodite, the agnus castus (important for medicine) with Asclepius. But trees and plants were often sacred to a deity simply because they grew near to his or her temple or altar (cf. the wild olive used for crowns at Olympia). Cypress, elms, white poplar may have adorned burial places and were accordingly characteristic of the infernal regions. Sacrifices and all sorts of gifts to sacred trees are known from Homeric times. Greek mythology knows the Tree of Life (the Gardens of the Hesperides), but not the originally Oriental World-tree (cf. the Scandinavian Yggdrasil).

In the Forum of Rome the sacred *figus Ruminalis* or fig-tree of Romulus was one of the most holy emblems of the Eternal City (cf. the cornel-tree on the Palatine, Plut. *Rom.* 20).

TREMELLIUS SCROFA, see SCROFA.

TRESVIRI, see TRIUMVIRI.

TRES (TRIUM) VIRI CAPITALES, see VIGINTISEXVIRI.

TREVERI, a Gallic tribe in the Moselle basin. Strong Germanic admixture is attested by ancient authors, who are supported by archaeological evidence of German penetration c. 200 B.C. They furnished cavalry to Caesar, but gave him much trouble to subdue; and were active in rebellion under the early Empire (29 B.C., A.D. 21, A.D. 70), so that they lost their privilege of 'libertas'. Nevertheless, the presence of the Rhine army as a market tempted them to loyalty; and the second century shows an era of great prosperity based on large-scale agricultural organization (cf. the Igel-Säule of the Secundinii). The invasions of the third century destroyed this culture, but the land recovered somewhat with the establishment of the emperor's and prefect's court at Trier (Augusta Treverorum, q.v.). Trier fell finally to the barbarians c. 430.

TRIBONIANUS (d. A.D. 543-5), a confidant and the most intimate collaborator of the Emperor Justinian in the composition and publication of his legislative works. His birth-place was (probably) Side in Pamphylia. He began as an advocate, but soon he rose to the high offices of the *magister officiorum* and *quaestor sacri palatii* which he occupied several times. As a lawyer of great learning, especially in the legal literature of the past centuries (Justinian says it in particular praise of him) he was invited by the Emperor to assist in the work of codification, first in the composition of the first Codex as an ordinary member of the Commission and subsequently, when he had given proof of his quality in this task, as the director (*gubernator*) of the work on the compilation of the Digest. He chose his collaborators for this mighty undertaking by commission from the Emperor himself. It may be that the idea of making and the plan for constructing the great collection originated in his mind. In the same manner the direction of the work on the *Institutiones* was entrusted to him. He took an equally prominent part in the edition of the second Codex, for which he was especially qualified, having been the intellectual author of the collection of *Quinquaginta Decisiones* published in the time between the two Codes (*Inst. Inst.* i. 5. 3).

Tribonian is considered the responsible editor of Justinian's Codification, and so all alterations and insertions executed by the Compilers have been put to his account, and are sometimes called 'emblemata Triboniani'. The expression is hardly correct, for he, though the soul and creator of the whole Codification, cannot be

considered the author of all interpolations, a good share of which may well have been the work of his collaborators. However, having regard to the high praise which the Emperor gave him, we must admit that Tribonian's part in the imperial legislative work was decisive.

There are notices of Tribonian in Procopius (*Pers.* i. 24-5), Hesychius, and Suidas. The last named has articles on two distinct Tribonians. If the identity of these two persons is assumed (as B. Kübler tried to demonstrate), Tribonianus might be the author of some philosophical writings and of dissertations about planets, prosody, and various other topics.

B. Kübler, s.v. 'Tribonianus' in *PW* vi A; 'Die Gehilfen Justinians bei der Kodifikation', *Acta Congr. iurid. internaz.* Rome 1934, i. 22 ff. A. B.

TRIBUNI AERARII were the magistrates or officials who collected the war-tax and distributed pay to the soldiers of the several tribes (although they were soon superseded in this office by the *quaestores*). Whether they originally were the heads of the tribes is doubtful, as these officials later were named *curatores*. In the first century B.C. the tribunes appear as a class somewhat similar to, but less wealthy than, the knights, and from them the third *decuria* of judges was taken (70 B.C.). A *Lex Iulia* (46) exempted them from this task.

Mommsen, *Staatr.* iii². 189 ff., 532 f.; J. Lengle, *PW*, s.v. P. T.

TRIBUNI MILITUM in the Republican Army were the senior officers of the legions. Elected by the people, they ranked as magistrates, and six were assigned to each legion. They were employed in administrative duties and only rarely held a tactical command. When the number of legions was increased, only the tribunes of the four *legiones urbanae* were elected by the people; the remainder were nominated by the consuls.

In the Caesarian period the tribunes were knights and their importance declined with the rise of *legati*. Under the Principate the tribunate in the legions was reserved for young men starting a senatorial (*laticlavii*) or an equestrian career (*angusticlavii*), the latter outnumbering the former.

Tribuni also commanded cohorts in the Household Troops and *cohortes milliariae* in the *Auxilia*. In the Constantinian army the title is borne by officers in command of units (e.g. *legio*, *vexillatio*, etc.) in the field army. H. M. D. P.

TRIBUNI PLEBIS (or **PLEBI**, *δημαρχοί*) were officers of the plebs first created in 500-450 B.C. The name is evidently connected with *tribus*, but it is uncertain whether the tribunes were at first chiefs of the tribes, who later became officers of the plebs, or whether the names simply imitated that of the *tribuni militum* already existing. The original number of the tribunes is variously given as two, four, or five; but the only certain fact is that before 449 B.C. it had risen to ten. The tribunes were charged with the defence of the lives and property of the plebeians. Their power was not derived from any statute, but from an oath of the plebeians to uphold their *sacrosanctitas* or inviolability—an oath which the patricians never effectually challenged. The tribunes asserted a right of veto (*intercessio*) against any act performed by the magistrates, against elections, laws, *senatus consulta*. The only magistrates exempted were (until c. 300 B.C.) the dictator, and perhaps the *interrex*. The tribunes further summoned the plebs to assemblies (*concilia plebis*, more usually called *comitia plebis tributa*), elicited resolutions (*plebiscita*), and asserted a right of enforcing the decrees of the plebs and their own rights (*coercitio*). *Coercitio* probably could go as far as the infliction of death. Connected with the *coercitio* was a certain amount of jurisdiction. Tribunes were elected by the *comitia plebis*. Each tribune could stop the action of his

colleagues by veto. Thus the office was better equipped for obstruction than for getting things done.

This revolutionary power was gradually recognized by the State. The tribunes became indistinguishable from magistrates of the State, although without *imperium* and insignia. The full acknowledgement of their power coincided with the recognition of *plebiscita* as laws with binding force (c. 287 B.C.). The tribunes were first admitted to listen to the debates of the Senate; at least from the third century B.C. they obtained the right of convening the Senate; in the second century the tribunate became a sufficient qualification for entry to the Senate. From the fourth and third centuries B.C. the tribunate became partially an instrument by which the Senate could control the magistrates through the veto. But the tribunate never forgot its revolutionary traditions. In this period a custom sprang up which rendered reelection to the tribunate unconstitutional; but this custom was broken by C. Gracchus. From the time of Gracchus the tribunician veto was curtailed by special clauses of laws and *senatus consulta*. Sulla excluded the tribunes from the magistracies of the Roman People and abolished or curtailed their power of moving legislation and their judicial powers. In 75 B.C. they were readmitted to the magistracies, and in 70 the tribunician power was restored to its full extent. The builders of the Principate appreciated the value of the tribunician power in the construction of their personal power. Caesar assumed at least the tribunician *sacrosanctitas*. Augustus, probably in three steps (36, 30, 23 B.C.), obtained a permanent *tribunicia potestas*. The Republican tribunate remained, but lost all its independence and nearly every practical function. Until the third century A.D. the tribunate remained a step in the senatorial career for plebeians alternatively with the aedileship. There is still evidence for the tribunate in the fifth century A.D.

TRIBUS. In Rome the tribe was a division of the State. An analogous division existed in Etruscan Mantua (Serv. ad *Aen.* 10. 202). The *tribu* of the *Tabulae Iguvinae* is on the contrary the whole community. The connexion of *tribus* with *tres* is uncertain. The three original Roman tribes were Titienses (Tities), Ramnenses (Ramnes), and Luceres. It is nearly certain that these tribes were originally ethnic and not local; they probably included the plebs from the first.

The ethnic tribes were virtually eliminated by the creation of new local tribes, which consisted of four urban tribes and an increasing number of 'rustic' tribes. The urban tribes were traditionally ascribed to Servius Tullius; but this tradition is not universally accepted by modern scholars. The sixteen oldest rustic tribes bore the names of patrician families, who evidently owned a large part of their territory. The newer tribes included territories in which settlements of Roman citizens were founded, or citizenship was conferred on the native inhabitants. The number of thirty-five, which was attained in 241 B.C. by the progressive addition of rustic tribes, was never exceeded. Later enrolments of citizens into tribes were made without reference to geographic contiguity.

All citizens were probably registered at all times in the local tribes, but at least for some part of the third century B.C. the lower social orders were usually confined to the urban tribes. The punishment of 'expulsion from

a tribe' (*tribu movere*), which the censors possessed, had by the second century come to mean relegation to an urban tribe.

The extension of the Roman franchise to a great part of Italy after the Social War introduced the question of the balance between new and old citizens. The attempt to confine new citizens to a few tribes in order to check their importance in the *comitia* ultimately failed. But in general freedmen were admitted only to the urban tribes. From the Ciceronian age the name of the tribe in abbreviated form had a regular place in the citizen's full name (the first instance of a regulation of the matter in *CIL* i². 583). Provincials, both individuals and *civitates*, who in Imperial times received the Roman citizenship, had to be enrolled in some specified tribe. No absolute rule was followed, but for instance people or *civitates* of Gallia Narbonensis were enrolled by preference in *tribus Voltinia*, the Orientals in the *Collina* and *Quirina*.

The territorial tribes were the units for census, taxation, and the military levy. Officials called *tribuni aerarii* (q.v.) long had charge of the financial obligations of the tribe. The relation between the *tribuni aerarii* and other officers called *curatores tribuum* is uncertain. The assemblies of the plebs and special less important assemblies of the whole people were arranged by territorial tribes (see *COMITIA*).

There is evidence also for the tribes as a voting section of the citizens in some *municipia* (Lilybaeum) and *coloniae* (Genetiva Urso, Iconium).

TRIBUTUM was a direct tax, as distinguished from a *vectigal* (q.v.). Under the Republic the term *stipendium* was more commonly employed (e.g. Cic. *Verr.* 3. 12), but in the Principate *tributum* was in general use, especially in imperial provinces (Gaius 2. 21). Between 404 and 167 B.C. a *tributum* was intermittently imposed on Roman citizens to meet the cost of wars. This was regarded rather as a compulsory loan than as a tax, and might be repaid out of the spoils of war. After 167 the word was applied only to provincial taxation. Provinces which paid a fixed *tributum* or *stipendium* were distinguished from those subject to variable *decumae* (q.v.). In the Principate a distinction was made between the *tributum soli*, which was imposed on all provincial land except that on which the *ius Italicum* had been conferred, and the *tributum capitis*, which was charged on other forms of property. Until the reign of Diocletian Italy was exempt from *tributum*, but all provincials, whether in possession of Roman citizenship or not, paid *tributum*. The assessment to *tributum* was based on the *census* (q.v.), but nothing is known as to the rate at which it was levied. Exemptions were given by grants of *immunitas* (q.v.) to communities or individuals. See FINANCE, ROMAN, para. 3.

TRICLINIUM, the dining-room in a Roman house, or more commonly the arrangement of the three couches about the dining-table on three of its four sides. These couches each held three guests, who reclined upon their left elbow, and were known as *Lectus summus*, *medius*, *imus*. The first, on the right hand of the service, was reserved for the chief guests, but the place of honour was the third cushion on the middle couch—*locus consularis*—the host generally sitting next on the first cushion of the lowest couch.

F. A. W.

TRICLINIUS, DEMETRIUS (early 14th c.), the outstanding critic of his day, lived probably at Constantinople. He was a scholar of considerable learning, with a particular interest in metric, but the quality of his scholarship was affected by the unfavourable conditions of the time, and his emendations are of unequal merit.

His transcript of Hesiod, with scholia in his own handwriting, survives in *Cod. Marcianus gr.* 464 (dated 1316). His annotated text of Pindar, now represented in a family of twenty-eight manuscripts, is of little value. His text of Aeschylus is preserved in *Cod. Farnesianus* I.E. 5; his extant notes, largely metrical, to five plays, occasionally present successful corrections. To his annotated edition of Sophocles, now represented by the *libri Tricliniani*, we owe some good readings. His scholia to Euripides are practically useless. Of his work on Aristophanes and Theocritus little is known.

T. Hopfner, *Sitz. Wien. Akad.* 1912.

J. F. L.

TRIERARCHY. A liturgy (q.v.), for naval purposes, the trierarchy was of special importance at Athens, from which a few other States copied the institution. From the early fifth century the Athenian *strategi* chose for one year from the wealthy adult citizens a number of trierarchs corresponding to the number of triremes to be manned. Furnished with the hull and tackling of a trireme, along with the pay and food of the crew, the trierarch, who acted also as captain, bore all expense of maintenance and repair, totalling some forty to sixty *minae* (Lysias 21. 2, 32. 26-7). After 411 B.C. two citizens usually shared each trierarchy; revisions in 357 and again, at the urging of Demosthenes (*De Corona* 102 ff.), in 340 spread the burden more equitably. Demetrius of Phalerum abolished the liturgy in 317-307 B.C. Elsewhere in Greece the term 'trierarch' denoted merely captain of a trireme; in the Hellenistic and Roman periods, a trierarch might command any warship.

Orations of Demosthenes, especially 14 (*On the Symmories*) and 51 (*On the Crown of the Trierarchy*). M. Brillant, *Dar.-Sag.*, s.v. 'Trierarchia' (1918). C. G. S.

TRILOGY, see TRAGEDY, para. 12.

TRINUNDINUM was the interval between three *nundinae*, i.e. the space of 24 days (by inclusive reckoning), required between moving and voting a resolution, or between the nomination of candidates and the polling, or between the promulgation and execution of a sentence, etc. The legal force of this measure of publicity, which also guaranteed the legislative power against any abuse on the part of the executive, was confirmed by the *Lex Caecilia Didia* (98 B.C.).

Mommsen, *Röm. Staatsr.* iii². 1229 ff.

P. T.

TRIOPAS (Τρίοπας), in mythology, father (Callimachus, *Cer.* 79) of Erysichthon (q.v.); the latter's sin and punishment are sometimes ascribed to him, as Hyginus, *Poet. Astr.* 2. 14. Triopas (occasionally called Triops, Τρίοψ) is usually Thessalian, but appears in bewildering and mutually contradictory genealogies (see Mayer in Roscher's *Lexikon*, s.v.). There seems to be no doubt that he is somehow connected with the place Triopion in Caria (Steph. Byzant. s.v.). It is also possible that his name ('Three-eye') covers an old sky-god, cf. the three-eyed Zeus in Paus. 2. 24. 3.

H. J. R.

TRIPOLIS (in Phoenicia) was a joint colony of Tyre, Sidon, and Aradus. From Antiochus IV's reign it issued municipal coinage. In 111 B.C. it gained its freedom, but it later fell under a tyrant, who was executed by Pompey; its liberty was not restored. Its territory produced a noted wine.

A. H. M. J.

TRIPTOLEMUS, see DEMETER, MYSTERIES.

TRIEME. The earliest type of Greek warship, the simple *pentekontor* with twenty-five oarsmen on a side, was supplanted in the sixth century B.C. by the more complex trieme, which remained the standard war-galley throughout the ancient period, except in Hellenistic times (see *QUINQUIREME*). Light in structure, undecked, and slim in comparison with merchant craft, the Athenian trieme of the fourth century B.C., probably standard, measured about 120 ft. by 20 ft. The prow of the galley, rising into a lofty prow-post which was given a hooked shape by the Greeks and was voluted by the Romans, bore a ram of wood and bronze. On each side of this was painted a large apotropaic eye. A cross-beam, introduced in the Peloponnesian War, strengthened the prow and projected from the sides sufficiently to protect the 'oar-box', an outrigger construction which compensated for the curving sides of the galley.

The trieme in part sacrificed seaworthiness for efficiency in battle. During storms and at night it was often beached, for its crew (about 200 men) had but cramped quarters. It made an average speed of some four to five knots, aided by a square sail. In battle the mast was lowered or put on shore, and the trieme, formidable chiefly for its ram (see *DIEKPLUS*), was propelled by the easily-directed force of oarsmen.

The arrangement of these rowers, which marks the great advance of the trieme over the *pentekontor*, has been much debated, for the ancient evidence is obscure. The long-accepted view that the rowers sat in three superimposed banks is now generally rejected; it seems probable that, the rowing-benches being slanted forward, the rowers sat three on a bench, each rower pulling an individual oar.

E. Assmann, *Seeversen* in A. Baumeister's *Denkmäler der Klassischen Altertümer* (1888; full reproduction of ancient representations); W. W. Tarn, 'The Greek Warship', *JHS* 25 (1905) and *Hellenistic Military and Naval Developments* (1930); F. Brewster, 'The Arrangement of Oars in the Trieme', *Harv. Stud.* 44 (1933). C. G. S.

TRITOGENEIA, see ATHENA, para. 2.

TRITON (Τρίτων), the merman of Greek, or rather pre-Greek mythology. The meaning of the name is unknown, but since the syllable *trit-* recurs in the name of the sea-goddess Amphitrite, also non-Greek, it is permissible to suppose that it is a pre-Hellenic vocable meaning something like 'water'. The Tritons remain quite vague figures, mostly appearing as a decoration of sea-pieces and other works of art, but they sometimes play a subordinate part in a legend. For example, a Triton in human form appears to the Argonauts (q.v.), at Lake Tritonis and gives them the clod of earth which was the pledge of future possession of Cyrene; Virgil (*Aen.* 6. 171 ff.) has a story of a Triton who, furious at the presumption of the human trumpeter Misenus in daring to challenge him to a contest (Tritons are commonly represented as playing on conches), drowns him. Pausanias (9. 20. 4; 21. 1) had seen what were represented as bodies of Tritons, possibly sea-beasts of some kind.

H. J. R.

TRITOPATORES (Τριτοπάτορες), **TRITOPATREIS** (Τριτοπάτρες), obscure figures of Attic cult, worshipped at Marathon on the eve of the Skira (Deubner, *Att. Feste*, p. 44). Their name seems to mean 'great-grand-fathers', and they are said to be wind-gods, also the first ancestors of mankind, and to be prayed to for children before a marriage (Photius, s.v.).

H. J. R.

TRITTYES (τριτῆες, 'thirds'), divisions of *phylae* (q.v.) at Athens; territorial in character (both in the old and new *phylar*), but for State, not local administration. The old *trittyes* each formed a group of four *naukrariai* (q.v.); the new ones were simply local divisions of the *phylae*, used for the mustering of crews for triremes.

Plato speaks of *trittyarchoi* as officers of minor rank (in the army or the navy?), but nothing else is known of them. The *trittyes* did not form separate corporative units, like the *phylae* and the *demoi*. A. W. G.

TRIUMPHAL ARCHES were erected by the Romans to commemorate victories, and in honour of individual emperors. Though resembling other arches erected to mark the pomerium (q.v.) or to lend dignity to approaches of towns, bridges, and fora, they seldom had any practical function, and were frequently entirely detached from any walls. Pliny refers to arches designed to carry statuary as 'recently introduced'. The façades were usually of marble and ornamented with applied Orders (Corinthian or Composite), free-standing columns being usual in the later examples, engaged columns or pilasters in the earlier. A heavy attic story with a large inscribed tablet was usually superimposed above the cornice; and the whole structure generally served as a pedestal for a group of statuary. The earlier examples are mostly of the single-arch type, but this was later superseded by a large central arch flanked by two smaller ones. The most notable examples in Rome itself are those of Constantine (A.D. 312: commemorating his victory over Maxentius); of Titus (82: taking of Jerusalem); and of Septimius Severus (203: the Parthian Victories). Outside Rome those of Trajan at Ancona (112), built on a bridge-head, and at Beneventum (114) deserve notice. The example at Orange may perhaps date from the reign of Augustus. It is an early specimen of the triple-arched type, and unusual in having pediments and a double attic story. Most of the earlier arches are in Italy or Gaul: many of the later in North Africa. H. W. R.

TRIUMPHUS (cf. *θριαμβος*) was the processional return of a victorious Roman general, when he went to offer sacrifice to Jupiter on the Capitol. The Senate granted triumphs in accordance with certain rules. They were reserved for magistrates with *imperium*, who had been in command on the day of the victory. In the late Republic, triumphs were regularly celebrated by proconsuls and praetors. Generals remained outside Rome until granted permission to retain their *imperium* within the city on the day of the triumph. *Legati* of a general could not triumph, but the rule was broken by Caesar and afterwards by the triumvirs. The victory had to be won against foreigners, not in civil wars.

The procession comprised the magistrates and Senate, trumpeters, the spoils of the enemy (including pictorial descriptions and allegorical figures), the white oxen destined for sacrifice, the principal captives in chains, the lictors, the *triumphator* in a chariot with four horses, while the army followed behind. The *triumphator* wore the dress of a king or of Jupiter (this important question is doubtful); he had laurel, sceptre, and crown and his face was painted red. His children rode with him. To avoid the evil eye an amulet was worn, and a slave whispered: 'Hominem te memento.' The army followed shouting 'Io triumphe', praises of the general, and coarse expressions or verses. The procession entered Rome by the Porta *Triumphalis*, passed through the Circus Flaminius and reached the Via Sacra and the Forum. At the Clivus Capitolinus the principal captives were generally taken away and put to death. At the Capitol the laurel was deposited on the lap of the god. Triumphs might last longer than one day. The *triumphator* preserved the privilege of appearing at public spectacles in special dress; his name was inscribed in the *Fasti Triumphales*.

The triumph on the Alban Mount was a procession to the Temple of Jupiter Latiaris there. It probably derived from the times of the Latin League, and it was used by generals when the Senate refused a regular

triumph. It was recorded in the *Fasti*. A *triumphus navalis* was equally possible, but no details are known.

During the Empire the triumph became an imperial prerogative. The *ornamenta triumphalia* (the right to appear at festivals in triumphal dress) were bestowed on other generals. From the time of the Antonines, triumphal dress was worn by every consul on entry into office and other special occasions. The emperors used triumphal costume freely.

TRIUMVIRI (*tresviri*), any board or commission of three, e.g. *tresviri capitales* (police magistrates), *tresviri monetales* (masters of the mint), *triumviri agris dandis assignandis* (commissioners appointed under an agrarian law). The term is specially applied, (a) in modern usage to Pompey, Caesar, and Crassus after their political alliance in 60 B.C.; (b) (officially) to Antony, Lepidus, and Octavian, after the *Lex Titia* of 27 Nov. 43 B.C., which appointed them *triumviri rei publicae constituendae* with practically absolute powers, for five years. They retained the office after its legal termination, and it was renewed for a second quinquennium after the Treaty of Tarentum. Lepidus was deposed in 36. Antony contrived to use the title after 33, though Octavian appears to have dropped it.

First Triumvirate: Cicero, *Letters*; Vellicus 2. 44; Plutarch, *Crassus* 14, *Pompey* 47, *Caesar* 13-14; Appian, *BCiv.* 2. 9; Dio Cassius 37. 54 ff. Second Triumvirate: Augustus, *Mon. Anc.* 7; Plutarch, *Antony* 19 ff.; Suetonius, *Aug.* 27; Appian, *BCiv.* 4. 2 ff. and 5. 95; *Illyrica* 28; Dio Cassius 46. 54 ff. and 47. 2. Modern Literature: T. TRIVIA, Latin translation of *Τριδιτρίς*, title of Hecate (q.v.) as goddess of cross-roads. Since the identification of Hecate with Artemis and Selene was popular in Hellenistic times and Diana (q.v.) was identified with Artemis, the epithet is often used of Diana, as Lucretius 1. 84; Catullus 34. 15; cf. Verg. *Aen.* 6. 35 (Hecate and Diana). H. J. R.

TRIVIUM, see EDUCATION, i. 9.

TROAS, the mountainous north-west corner of Asia Minor forming a geographical unit dominated by the Ida massif and washed on three sides by the sea. Its name derives from the belief that all this area was once under Trojan rule. The interior is inaccessible, and the more important cities were situated on the coast. The historical significance of the Troad derives from its strategic position flanking the Hellespont (a factor which may already have weighed with the Achaeans in their attack on Troy). From the sixth century Athens became increasingly interested in holding the straits, but after Aegospotami Persia nominally controlled the Troad. It became the battlefield in the struggle between east and west when Alexander routed the Persian first line of resistance at the Granicus. Later the Troad was ruled by Antigonos, who founded Antigoneia—afterwards Alexandria Troas—and from him the country passed successively under the power of Lysimachus, the Seleucids, and Attalus I of Pergamum. The Attalids bequeathed it to Rome, and the Troad suffered severely in the wars of the Republic; but under the Empire it enjoyed a long period of tranquillity until the Arab incursions of the eighth century.

W. Leaf, *Strabo on the Troad* (1923).

D. E. W. W.

TROGLODYTAE (*Τρωγλοδῦται*, 'Cave-dwellers') were a primitive people who dwelt in natural or artificial caves, mostly on the Red Sea coast south of Egypt, but also on the Arabian and Iranian coasts, in north-west Africa, and on the north side of the Caucasus. Their lands on the Red Sea coast were explored by agents of Ptolemy II and III. They mostly went naked, ate the bones and hides as well as the flesh of their cattle, and drank a mixture of milk and blood. They squeaked like bats, talked gibberish, and buried their dead by pelting them with stones. They kept women in common, but were governed by 'tyrants'.

Hdt. 4. 183; Diod. 3. 32-3 (from Agatharchides); Strabo 16. 775-6. E. H. W.

TROGUS, POMPEIUS, the Augustan historian, a Voconian from Gallia Narbonensis, whose grandfather was enfranchised by Pompey and whose father served under Caesar, wrote zoological, and perhaps botanical, works, used by the Elder Pliny, and a Universal History in forty-four books, entitled *Historiae Philippicae*. Beginning with the Ancient Orient and Greece (bks. 1-6), he treated Macedon (bks. 7-12) and the Hellenistic kingdoms to their fall before Rome (bks. 13-40). Bks. 41-2 contained Parthian history to 20 B.C., bks. 43-4 the kingly period of Rome, and Gallic and Spanish history to Augustus' Spanish victory. His source, which is independent of the patriotic Roman tradition, may possibly be Timagenes of Alexandria. The narrative was elaborate, in the Hellenistic, especially the Peripatetic, fashion, with dramatic presentation and a moralizing tendency; speeches were as a rule reported indirectly (Justin. 38. 3. 11; but note Mithridates' speech, 38. 4). This character is reflected in the epitome of Justinus (q.v.) by which, in addition to the *prologi* (tables of contents), the work is preserved.

TROIAE HALOSIS, poem on the taking of Troy in the *Satyricon* of Petronius (q.v. 2).

TROILUS (*Τρωϊλος*), son of Priam (q.v.), mentioned *Iliad* 24. 257 as dead. Later accounts, as the *Cypria* (Proclus), specify that he was slain by Achilles (q.v.; cf. Verg. *Aen.* 1. 474 and Servius thereon; more in Mayer in Roscher, s.v.). 'Troilus and Cressida' (i.e. Chryseis) is a purely medieval fiction, having no connexion with antiquity. H. J. R.

TROPHONIUS (*Τροφώνιος*), apparently 'the Feeder', a Boeotian oracular god (description of his shrine at Lebadea, P. Philippson, *Symb. Osf. fasc. suppl.* ix, pp. 11 ff.). Of him and his brother Agamedes practically the same story is told as that of the architect of Rhampsinetus (q.v.; Paus. 9. 37. 4 ff.). His oracle was held in great reverence, and visited with elaborate and obviously archaic ritual, after which the inquirer was supposed to be snatched away underground and given direct revelations (ibid. 39. 5 ff.); for its legend see ibid. 40. 1 f.

H. J. R.

TROPHIES (*τρόπαια*, *trophaea*, from *τροπή*). An ancient victory was marked and consecrated by the erection of a mound, a heap of stones, or more often a trophy of captured arms. There were two kinds of trophies, the *tumulus* or mingled heap of arms, and the single panoply set on a stake, corresponding to the *mêlée* and the duel; the second form eventually became more popular. The trophy was erected generally on the battlefield, sometimes in the sanctuary of the deity to whom the victory was ascribed. Naval trophies stood on the coast near the battle-site or in the home port of the

victorious fleet, and were composed of captured prows or sterns, or the fore-part of a ship on which a statue of a deity or the commanding admiral might be erected.

Regularly observed in the fifth century, the practice later grew rarer, and the Macedonians did not originally erect trophies, though there are occasional Hellenistic examples. At Rome naval trophies were frequently exhibited in the Forum. Under the Empire the trophy often became the crowning ornament of a permanent stone memorial; examples are the Trophies of Augustus at La Turbie and of Trajan at Adamklissi.

A. Reinach, *Dar.-Sag.*, s.v. 'trophaeum'.

F. N. P.

TROS (*Τρώς*), an early Trojan prince, for whose genealogical position see TEUCER.

TROY (mod. *Hissarlik*) stood 4 miles from the east side of the Aegean entrance to the Dardanelles, and in the north-east corner of the triangular plateau between the rivers identified as the Scamander and Simois. Excavation has revealed nine well-defined strata. The earliest town, Troy I, began early in the Bronze Age; it had a crude brick wall on a battered stone base with projecting gate towers. The second stratum was larger; it was defended by a similar wall with projecting towers and pierced by gates approached by ramps. Near its centre, within a court entered by a propylon, was a large megaron-like building flanked by others, presumably the residence of the ruler. To this settlement belonged the great treasure found by Schliemann. It was followed by two more settlements of the Early Bronze Age, slightly larger but apparently unfortified. The fifth settlement marked the transition from the Early to the Middle Bronze Age. The sixth stratum covered the Middle and most of the Late Bronze Age. It was much larger and was protected by a high well-built wall of limestone. It was entered by a great gate at the south, and there were two smaller gates. Within a series of terraces stood large houses with interior columns. Outside was a cremation cemetery. This rich and well-populated town passed through three stages: (a) and (b) before and after the construction of the wall; (c) after the addition of its towers. The last two stages were of the Late Bronze Age. Troy VI was wrecked by an earthquake, and its reconstruction (known as Troy VIIA) may be identified with the Troy of Priam, for its destruction by fire befell about the traditional date for the Trojan War. Troy VII n shows Danubian and Thracian contacts and covers the Early Iron Age. Troy VIII was the town of the Greek colonial and archaic period. Troy IX was the Hellenistic and Graeco-Roman Ilium, which flourished till after the days of Constantine. The earlier 'cities' were, like Mycenae and Tiryns, the fortified residences of kings, but the Graeco-Roman Ilium had its citadel on the hill of Hissarlik (then devoted to the temple of Athena), and spread over the plateau to the south-east. Of all the prehistoric sites in the Troad Hissarlik is the largest and most important and corresponds best with the Homeric accounts of Troy. Of the other excavated sites suggested for Troy some have not revealed any prehistoric remains at all and others have proved insignificant. The site on Bally Dag by the Bunarhasi springs, which before Schliemann's day was held to be Troy, has little or no correspondence with Homeric descriptions. Excavation has shown that its walls were not older than the classical period, and that the earliest remains were contemporary with Troy VIII (c. 800 B.C.). The lately revived theory that Hissarlik was not an inhabited site, but a polyandrian or incineration necropolis, needs no refutation.

TRYPHIODORUS (5th c. A.D.), epic poet, believed to have lived in Egypt; he was influenced by Nonnus and influenced Colluthus. His poems include an *Iliu Halosis*, still extant, which is partly dependent on Quintus Smyrnaeus (q.v.), and partly, besides others, on a lost poetic source unknown to Quintus but used by Virgil. The poem lacks brilliance, but has some rhythm, music, and vitality.

Text: W. Weinberger, 1896. Criticism: W. Weinberger, *Wien. Stud.* xviii (1896), 116-59; L. Castiglioni, *Riv. fil. liv.* N.S. iv (1926), 501-17; E. Cesnaro, *Studi ital. di filol. class.* N.S. vi (1928), 231-50, vii. (1929), 251-300; W. F. J. Knight, *CQ.* xxvi (1932), 178-89. W. F. J. K.

TRYPHON, son of Ammonius, an important Greek grammarian at Rome under Augustus. His works, which were used by his contemporary Didymus, by Apollonius Dyscolus, and very freely by Herodian, included musical, botanical, zoological, and important dialect glossaries; as Atticist and analogist (see GLOSSA (Greek) and CRATES (3) of Mallos) he wrote *Περὶ Ἑλληνισμοῦ, Περὶ ὀρθογραφίας*, on disputed breathings, and on etymological pathology, which 'science' (including, for him, dialectal variation) he founded. His works are lost. Our *T. Περὶ παθῶν* is a late abridgement.

J. Wackernagel, *De pathologiae veterum initiis* (1896). P. B. R. F.

TUBILUSTRIUM, see MARS.

TUCCA, see PLOTIUS.

TUDITANUS (1), PUBLIUS SEMPRONIUS (cos. 204 B.C.), military tribune at Cannae (216), curule aedile in 214, praetor in 213, commanding at Ariminum until 211, became censor in 209. A leading diplomat, he closed the First Macedonian War by the Peace of Phocnice (205). Consul in 204, he won a success over Hannibal near Croton, dedicating a temple to *Fortuna Primigenia* (194). His Greek experience placed him on the embassy to Greece, Syria, and Egypt in 200, which opened the new Roman policy in the East, with the Second Macedonian War.

Livy 24. 43 ff.; 29. 12-13 and 36; 31. 2. G. De Sanctis, *Stor. Rom.* iii. 2. 432; M. Holleaux, *Rome, la Grèce et les monarchies hellénistiques* (1921), 255. Cf. A. H. McDonald and F. W. Walbank, *JRS* 1937, 180. A. H. McD.

TUDITANUS (2), GAIUS SEMPRONIUS, consul in 129 B.C. when he triumphed over the Iapydes, wrote *Libri magistratum* in at least thirteen books, treating intercalation, the *maius* and *minus imperium*, the origin of the tribunate, and the *nundinae*. Fragments about the Aborigines, the books of Numa, the death of Regulus, and (probably) Flaminius' triumph, indicate an historical work.

H. Peter, *HRRel.* i* (1914), pp. cci; 143. Cf. C. Cichorius, *Wiener Stud.* 1902, 588. A. H. McD.

TULLIA (1), the younger daughter of Servius Tullius, was said to have impelled her brother-in-law, the future Tarquinius Superbus, to murder her husband, Aruns Tarquinius, and her father, in order that she might marry him and become his queen. Tullia then drove her chariot over her dead father's body, in a street thereafter named Vicus Secleratus. The story, for which a Greek origin has wrongly been claimed, is probably an aetiological myth invented to explain the street name and the gesture of a statue, which was popularly believed to represent Servius Tullius.

P. T.

TULLIA (2), Cicero's beloved daughter (Tulliola), born c. 78 B.C., married in 63 C. Calpurnius Piso Frugi, who died in 57, then in 56 Furius Crassipes, and finally in 50 P. Cornelius Dolabella. Separated from her third husband in 46, she died in 45. Cicero considered building a temple to her. Her death was a turning-point in his mental life.

A. M.

TULLIANUM, the underground execution-cell of the prison at Rome, flanking the *comitium*, and connected with Servius Tullius (Varro, *Ling.* 5. 151; Festus 356). The derivation from **tullus*, a spring, is more attractive, for the existing work is a well-chamber, once circular, built in coursed peperino (Tenney Frank, *Buildings of the Roman Republic*, 39-47) of the third century B.C. The room above it has a travertine front repaired in A.D. 22 or 45 (*CIL* vi. 31674; cf. *ILS* iii, p. 342). The frontal orientation, as of the *comitium*, is by the cardinal points. A spring still rises in the present floor, higher than the original. Here were executed most State prisoners, including Jugurtha, the Catilinarian conspirators, and Vercingetorix.

I. A. R.

TULLIUS ('Tully' esp. in 18th-cent. English), see CICERO. See also TIRO.

TULLIUS LAUREA, MARCUS, see LAUREA.

TULLUS HOSTILIUS, traditionally the third king of Rome (673-642 B.C.), is probably an historical figure, and the suggestion that he is a duplication of Romulus need not be discussed. His capture of Alba Longa, which ceased to be an independent commonwealth during the regal period, and his founding of the *Curia Hostilia*, may be accepted as facts. The *Curia* was indisputably built by an eponymous king, because no consul Hostilius is mentioned in the early Fasti, nor did the gens Hostilia come to power till the end of the second century B.C. The laws and reform, however, attributed to Tullus are, like his public works, pure inventions.

H. Last, *CAH* vii. 377, 401 f.

P. T.

TUMULTUS was the state of fear (*timor*) and confusion resulting from a war fought on the frontiers of Italy (or, originally, near the walls of Rome). Cicero (*Phil.* 8. 1. 3) attests that there were only two examples of *tumultus*, namely *tumultus Italicus* (i.e. war in Italy and, later, civil war) 'quod erat domesticus' and *tumultus Gallicus* (as Gaul was the only province that had a common frontier with Italy), 'quod erat Italiae finitimus'. The term probably came into use after the Gallic capture of Rome (387 B.C.). When the *tumultus* was announced, business and the administration of justice stopped (*justitium*), army leave was cancelled, and all the citizens, wearing the military dress called *sagum*, were levied, even if previously exempted from service, to form a supplementary corps named *tumultuarii milites*.

TUNICA, see DRESS, para. 3.

TURBASIA, see DANCING.

TURBO (QUINTUS MARCIUS TURBO FRONTO PUBLICIUS SEVERUS), of equestrian rank, was sent in A.D. 117 by Trajan to quell Jewish trouble in Egypt. Dispatched by Hadrian (immediately after accession) to subdue revolt in Mauretania, as imperial procurator, he thus displaced Lusius (q.v.) Quietus. Early in 118 Hadrian appointed him to the special and temporary command of Pannonia with Dacia, with distinguishing rank equivalent to that of *praefectus Aegypti*, though hardly with this title (see S.H.A. *Had.* 7. 3). In 119 he replaced Attianus (q.v.) as *praefectus praetorio*: his prefecture, loyal and unselfishly industrious, probably continued until 135, if not longer. He himself may have survived into Antoninus' reign.

S.H.A. *Had.*; Dio Cassius, bk. 69; *PIR*, M 179; R. H. Lacey, *The Equestrian Officials of Trajan and Hadrian*, etc. (Diss. Princeton, 1917), p. 17, no. 39. C. H. V. S.

TURIA, wife of Q. Lueretius Vespillo (cos. 19 B.C.), concealed her husband during the proscriptions of 43-42 until his pardon was obtained. She is usually identified with the subject of the so-called 'Laudatio Turiae' (ILS 8393).

Appian, *BCiv.* 4. 44; Val. Max. 6. 7. 2. Modern Literature on the *Laudatio*: Mommsen, *Ges. Schr.* i (1905), 395 ff.; W. Warde Fowler, *CR* xix (1905), 261 ff. The identification with Turia is disputed by D. Vaglieri, *Not. Scavi* (1898), 412 ff., and Hirschfeld, *Wien. Stud.* xxiv (1902), 233 ff. G. W. R.

TURNUS (1), Italian hero, son of Daunus and the nymph Venilia, and brother of the nymph Juturna; king of the Rutulians, whose capital was Ardea. He was the accepted suitor of Lavinia, daughter of Latinus (q.v.), but Latinus subsequently betrothed her to Aeneas against the will of his wife Amata. The Latins, roused by Juno, join with the Rutulians to make war on the Trojans. Turnus fights bravely, leads the attack on the Trojan camp and defends Lavinium. He slays Pallas, son of Evander, and is twice saved by Juno from Aeneas, who finally pursues and kills him (*Aen.* 7-12). C. B.

TURNUS (2), satirist under Domitian, brother of the tragic poet Scaeva Memor (q.v.), and credited with 'ingentia pectora' by Martial (7. 97. 7; 11. 10; Probus (Vallae) *ad Iuven.* 1. 20; Rut. Namat. 1. 603-4; Lydus, *Mag.* 1. 41).

TURPILIUS, SEXTUS (died old, 103 B.C.), Latin composer of *comediae palliatae*, livelier and more popular than Terence's. Of thirteen surviving titles six come from Menander. See **DRAMA, ROMAN**, para 4. Fragments: O. Ribbeck, *CRF*² 85 (3rd ed. Teubner 1897). E. H. W.

TURPIO, AMBIVIVUS, see **AMBIVIVUS**.

TURRANIUS GRACILIS (of uncertain date), an authority on Spain, used by the elder Pliny (*HN*, bks. 3, 9, and 18, *index auctorum*).

TURRINUS, CLODIUS, name of two rhetoricians, father and son, discussed by the elder Seneca (*Controv.* 10, pr. 14-16). The senior lost force in speaking by too strict adherence to Apollodorean rules: he held an important appointment in Spain. The son, in whom Seneca saw high promise, was treated as one of his own sons. J. W. D.

TUSCULUM, a city near *Frascati* 15 miles south-east of Rome. Its extensive remains occupy a strong, bracing site 2,198 feet above sea-level. Myths shroud its origin, but Tusculum was certainly powerful in early Latium. Its dictator Octavius Mamilius allegedly supported his son-in-law Tarquinius Superbus (508 B.C.); but traditions associating Tusculum with Etruscans may be mere aetiological fictions to explain its name. More credibly, Tusculum reputedly led the Latins at Lake Regillus (q.v.) c. 496, when Mamilius himself fell. Thereafter, however, being exposed to Aequian attacks via Algidus, it became Rome's ally and staunchly resisted Aequi, Volsci, and Gauls. Tusculum, the first Latin city to obtain Roman citizenship (381), supplied Rome with several illustrious families (Mamilii, Fulvii, Fonteii, Juventii, Porcii). Some Tuscumans joined the Latin revolt in 340 B.C. but usually Tusculum remained loyal (e.g. against Hannibal). A *municipium* under late Republic and early Empire, Tusculum was a fashionable resort where wealthy Romans sojourned: Lucullus, Maecenas, and especially Cicero, who composed several philosophical treatises in his Tuscum villa (at Poggio Tulliano?). Subsequently Tusculum is seldom mentioned, but was still an important stronghold when destroyed in medieval times. Cato the Censor was born here.

Strabo 5. 239; Livy 1. 49; 2. 15 ff.; 3. 7 ff.; 4. 33 ff.; 6. 21; 8. 7 ff.; 26. 9; Dion. Hal. bk. 10 passim. G. McCracken, *A Short History of Ancient Tuscum* (U.S.A. 1939). E. T. S.

TUTANUS, see **REDICULUS**.

TUTELAGE, see **GUARDIANSHIP**.

TŪTĪCĀNŪS, friend of Ovid from youth, whose name could not appear in elegiac verse without the playful seansions of *Pont.* 4. 12. 10-11: cf. 4. 14. He retold Homeric themes in Latin.

TWELVE TABLES, the earliest Roman code of laws, and the starting-point in the development of Roman law. The circumstances under which it was drawn up are not clear, and the authenticity of the Twelve Tables has therefore been called into doubt by some scholars. But it may be regarded as certain that the Twelve Tables were actually drawn up by a special commission of *decemviri legibus scribundis* in 451-450 B.C. (see **DECEMVIRI**). Enacted by the *Comitia Centuriata* as a statute (*lex duodecim tabularum* appears often in the sources), the Twelve Tables were published in the Forum on tablets of bronze (or wood). The original Tables perished when Rome was burnt by the Gauls. The object of the code was to collect the most important rules of the existing customary law, the knowledge of which had been till then confined to the *pontifices*, and the levelling of existing legal customs by the abolition of patrician privilege. Thus they had both a codificatory and a legislative character. How far the *decemviri* fulfilled these tasks is very difficult to estimate, in default of authentic sources about the law in pre-decemviral times, and for lack of a complete text of the Code, which is known only through fragments surviving in legal and lay literature (altogether about 128, probably a third of the whole). The surviving text is mostly in a later and modernized Latin, but it contains a few passages in archaic language, whose meaning is not always clear. But it is beyond doubt that its legislative innovations may have been important, since the high constitutional position of the *decemviri* must have authorized them to make reforms. Some few reminiscences of Greek institutions in the Code may be brought into connexion with an embassy to Athens, which preceded the decemviral work. The Twelve Tables contained rules from all spheres of law: private and criminal law and procedure, sacral and public law. But the statement of Livy (3. 34. 6) that they were 'fons omnis publici priuatiq; iuris' is an exaggeration, for they were only a selection. The principal rules are mentioned in the separate articles on institutes of Roman law; for the important part which they played in the evolution of Roman Law, see **LAW AND PROCEDURE, ROMAN**, 1. The Twelve Tables were never abolished (even in Cicero's youth schoolboys learnt them by heart); but it is clear that the later development of Roman law must have made them obsolete. Some fundamental rules nevertheless remained operative until Justinian.

Reconstructions of the decemviral code have been attempted since the 16th century; the best one is that of R. Schoell, *Legis duodecim tabularum reliquiae* (1866). Modern editions are to be found in the collections of *Fontes iuris Romani* by Bruns-Mommsen-Gradenwitz, Girard, and Riccobono (second edition i, 1941)—see **LAW AND PROCEDURE, ROMAN**, 1.

Berger, *Pf*² iv A, s.v. 'Tabulae Duodecim'. See also the various text-books of Roman law. A. B.

TYCHE. Since *τύχη*, 'fortune', contains the stem of *τύχωναι*, 'to hit the mark', the notion of good fortune must have been prominent, though the word may, like *moira*, refer simply to one's 'lot', whether good or bad. It is not found in Homer (cf. Macrobi. *Sat.* 5. 16. 8), but

Hesiod (*Theog.* 360) includes Tyche among the Oceanids, and in the Homeric *Hymn to Demeter* (420) she appears as a companion of Persephone. When Aleman (fr. 62 Bergk, 44 Diehl) gives her a moral pedigree as daughter of Forethought and sister of Loyalty and Persuasion, she is more an abstraction than a deity. Archilochus (fr. 16 Bergk, 8 Diehl) aids the process of personification when he says that 'fortune and fate (*moira*) give all things to man'. Pindar hailed Tyche as patroness of Himera (*Ol.* 12), and numbered her among the Moirai (Paus. 7. 26. 8), probably in the place of Lachesis. We find the word first used as a common noun in the Homeric *Hymn to Athena* (11. 5), in the sense of 'good fortune'. In Tragedy it is of frequent occurrence, but there are comparatively few cases in which Tyche is clearly personified (e.g., Soph. *OT.* 977, 1080; Eur. *Hec.* 786, *Ion* 1514), and even here her influence on the course of events is negligible as compared with that of Fate. As a goddess, Tyche came to greatest prominence in Hellenistic and Roman times, being identified with the Latin Fortuna (q.v.). Yet she found no place in myth, and had little importance in cult except as Agathe Tyche and as patroness of various cities, e.g. Caesarea (Sozomen. *Hist. eccl.* 5. 4. 2), Antioch (Julian, *Apophth.* 176, p. 223 Bidez-Cumont), and even Constantinople (*Chron. pasc.*, a. 328 = Migne, *PG* 92. 709). Tyche was portrayed in sculpture as early as the sixth century B.C. by Bupalus of Chios (Paus. 4. 30. 6); more celebrated, however, in later times was the Tyche of Antioch by Eutycheides of Sicyon.

For Thucydides *tyche* was no divine power, but merely a term denoting those phases of a situation which men often prove powerless to anticipate or control, however intelligently they may have striven. 'Therefore', as he makes Pericles say (1. 140. 1), 'we are accustomed to blame chance for everything that happens unexpectedly.' In the same spirit Nicias, on the eve of the Sicilian expedition, argues for laying one's plans with all possible care, leaving as little as may be to chance (6. 23. 3; cf. 5. 16. 1). When the Melians express their trust in some divine fortune that will help them resist Athenian aggression (5. 104. 1; cf. 5. 112. 2), we perceive that the historian is only dramatizing their piety. Thucydides seems, therefore, to anticipate the philosophical conception of *tyche* as chance, the unforeseen element in human affairs which men use as an 'excuse for their own ill counsel' (Democritus ap. Stob. *Ecl.* 2. 8, p. 156 W.; cf. Anaximenes and Epicurus, *ibid.*, pp. 156, 159). Plato develops in the tenth book of his *Laws* the principle that all things are due to three causes, nature, Chance, and art, while for Aristotle chance is the incalculable in the human sphere, corresponding to 'spontaneity' among the lower animals.

In the Greek romances Tyche is often one of the operative forces, usually malicious (cf. Chariton 1. 14. 7; 2. 8. 6; 4. 1. 12 and *passim*, cf. p. 133 ed. Blake; Achilles Tatius 4. 9; 5. 7 and *passim*), rarely benevolent (e.g. Chariton 1. 10. 2), and sometimes as a symbol of the unpredictable (cf. Chariton 2. 8. 3). Not unlike a romance in some respects is an autobiography of the sophist Libanius (*Or.* 1), who reviews the influence which Tyche has exerted upon his life.

BIBLIOGRAPHY

Detailed discussion of the numerous contexts of *tyche*: L. Ruhl, in Roscher, *Lex.* v. 1310-57; Waser, *ibid.* 1357-80; S. G. Stock, 'Fortune (Greek)', in Hastings's *ERE* vi. 93 ff.; G. Busch, *Untersuchungen zum Wesen der τύχη in den Tragödien des Euripides* (Diss., Heidelberg, 1937); F. Allégre, *Étude sur la déesse grecque Tyche* (1889); A. Bouché-Leclercq in *Rev. del'hist. des religions* xliii (1891), 273-307; A. D. Nock, *Sallustius* (1926), lxxiv-lxxv; S. Eitrem in *Symb. Os.* xiii (1934), 47-51. R. A. P.

TYDEUS (*Τυδεύς*), in mythology, father, by Deipyle daughter of Adrastus (q.v.), of Diomedes (q.v. 2), and son of Oeneus (q.v.) (Apollod. 1. 75). He was a small but

powerful and valiant man (*Iliad* 5. 801). Being sent on an embassy to Thebes by the Seven, he took part in sports there and defeated all the rest; the Thebans laid an ambush for him, but he killed all but one of the fifty who composed it (4. 384 ff.). Later poems, drawing more or less on the Cyclic Thebaid, and still later ones which use the *Thebais* of Antimachus, tell of his part in the attack on Thebes, his furious battle-rage (as Aesch. *Sept.* 377 ff.), and the manner of his death (see MELANIPRUS). H. J. R.

TYNDAREOS (*Τυνδάρεως* or -ος), in mythology, husband of Leda and father, real or putative, of Helen, Clytemnestra, and the Dioscuri (qq.v.). He was king of Lacedaemon (Apollod. 2. 145, and often), brother of Leucippus (q.v. 1), and of Aphareus and Icarus (Apollod. 1. 87); for his varying genealogy, see Roscher's *Lexikon* v. 1406 f. He has not much legend of his own; Hesiod (fr. 93 Rzach) says that when sacrificing to the gods he forgot Aphrodite, who therefore made his daughters light and unfaithful. He is also associated with Heracles (q.v.); the hero had a serious quarrel with Hippocoon and his sons, wherefore he invaded Lacedaemon, their kingdom, overcame and killed them in a desperate battle in which he lost his brother Iphicles (q.v.), and gave Lacedaemon to Tyndareos (Aleman, fr. 1. 5 Diehl; Apollod. 2. 143 ff.). H. J. R.

TYNNICHUS, poet of unknown place and date, whose reputation rested on a single poem, a paean to Apollo, of which nothing survives, but which was admired by Aeschylus (Porph. *Abst.* 2. 18) and mentioned with high praise by Plato.

J. M. Edmonds, *Lyra Graeca* (Loeb), ii. 234-5.

TYPHON, TYPHOEUS (*Τυφών, Τυφωεύς*), a monster, often confused with the Giants (q.v.), as Horace, *Carm.* 3. 4. 53, but originally and properly distinct from them. He was born by Earth to Tartarus after the defeat of the Titans (Hesiod, *Theog.* 820 ff.). He had a hundred heads of dragon-shape, which uttered the sounds of all manner of beasts, also mighty hands and feet (presumably a hundred, or a hundred pairs, of each, though Hesiod does not say so) and would have done enormous harm if Zeus had not at once attacked him with his thunderbolts, overthrown him, and cast him into Tartarus, setting Aetna on fire by the way (in Homer, *Il.* 2. 783, he lies in the land of the Arimi; cf. Verg. *Aen.* 9. 715-16, and commentators on both passages). His shape suggests Oriental rather than Greek myth, and this is confirmed by his regular connexion with Cilicia. The story, therefore, in Apollod. 1. 41-4, Nonnus, *Dion.* 1. 154 ff., may be Eastern and ancient. Typhon strove with Zeus, stole his thunderbolts, and cut out his sinews with his own sword; but Hermes and Aegipan stole all back (or Cadmus, q.v., disguised as a shepherd, beguiled Typhon with his music), so Zeus was finally victorious; and buried Typhon under Aetna. H. J. R.

TYRANNIO (1) the Elder (early 1st c. B.C.). Theophrastus, son of Epicratides, of Amisus (where his teacher nicknamed him Tyrannio), afterwards a pupil of Dionysius Thrax, was brought by Lucullus as prisoner to Rome, where he was freed and enjoyed the patronage of Pompey, being the first Aristarchan to teach in the city. He was among those who examined the manuscripts brought by Sulla from Athens, 86 B.C. His works, on metre (a comparatively rare topic), on Homeric and other criticism and exegesis, and on grammar (which, under Atticist influence, he defined as *θεωρία μνησέως*) have perished. P. B. R. F.

TYRANNIO (2) the Younger, son of Artemidorus, a Phoenician, was brought as a prisoner to Rome and freed by Terentia. He was a pupil of T. the Elder, and

became an eminent grammarian at Rome, Strabo being among his pupils. He wrote on accents and other grammatical topics, but his works have been confused with those of the elder T., the fate of which they have shared.

P. B. R. F.

TYRANNY (*τυραννίς*, perhaps a Lydian word) was the illegal monarchy which was usurped by individuals in many oligarchic city-states of the seventh and the sixth centuries B.C., the 'age of tyrants'. It was not a special form of constitution or a reign of terror; that bad sense was attached to it later, especially by the democratic *polis* of the fifth century which glorified the tyrannicide, and by the political philosophers, e.g. Plato, to whom tyranny meant the worst constitution possible. Tyranny hardly ever lasted more than two generations. The best known of the tyrants were Peisistratus (qq.v.), Periander, Cleisthenes of Sicyon, Pisistratus (qq.v.). The last representatives of the early period of tyranny were the Syracusan tyrants Gelon and Hieron. A second epoch of tyranny was introduced by Dionysius I (q.v.). Tyranny of the older type mostly arose from political and economic leadership of the lower classes, and often prepared the rise of democracy. The outlines of the constitution did not change, but the tyrants used laws and institutions as the instrument of their own policy. In general they contributed greatly to the enrichment and civilization of their States, and without being 'business men' they participated in the great economic changes of their time. Later tyrants were mostly military adventurers.

H. Swoboda, *Griechische Staatsaltertümer* (1913); P. N. Ure, *The Origin of Tyranny* (1922).

V. E.

TYRE (*Τύρος*, *Tyros*), HELLENISTIC AND ROMAN, an important city on the Phoenician coast, some twenty miles south of Sidon. In 332 B.C. it offered an obstinate resistance to Alexander and was only captured after a famous siege. Though destroyed, it made a rapid recovery and remained under a native dynasty till 274, when it became a republic, ruled by *Suffetes*. From the reign of Antiochus IV it issued a municipal coinage, mostly inscribed in Phoenician, and in 125 it became free. It early struck a *foedus* with Rome, and its freedom was respected till 20, when Augustus withdrew it, probably for a time only. It was colonized with veterans by Septimius Severus, who granted it the *ius Italicum*, and also made it the capital of Syria Phoenice. It was a great commercial city, maintaining a *statio* at Puteoli and at Rome during the Principate, and was the seat of a famous purple-dyeing industry. It ruled a large territory, stretching to the upper waters of the Jordan.

TYRO, see **NELEUS**.

TYRRHENUS (*Τυρρηνός*), eponym of the Tyrrhenians (Etruscans, q.v. para. 3), Dion. Hal. *Ant. Rom.* i. 27. 1, where he is son of King Atys and comes from Maeonia; in schol. Plat. *Tim.* 25 b, he is Atys' grandson; son of Heracles, Dion. Hal. i. 28. 1, or of Telephus (q.v.) *ibid.*; apparently god of the Tyrrhenian Sea (Valerius Flaccus 4. 715). He invented trumpets (Hyginus, *Fab.* 274. 20).

H. J. R.

TYRSENI, see **ETRUSCANS**, para. 3.

TYRTAEUS, elegiac poet of the seventh century B.C., said by some to be an Athenian schoolmaster, who was sent to Sparta as the result of an oracle (Pl. *Leg.* 629 a, Paus. 4. 15. 6). It seems more likely that he was really a Spartan, since he was a general (Ath. 14. 630 f, Diod. Sic. 8. 36), and his fragments show him giving orders (frs. 1 and 8), which would hardly be tolerated by Spartans in a foreigner. He led the Spartans in the second Messenian

War and helped to take Messene (Suidas s.v. *Τυρταῖος*). His poems were collected at Alexandria in five books and contained: (1) war-songs, of which two specimens have been recognized in pieces of undoubted Spartan origin but not necessarily his (frs. 15-16 Bergk = *Carm. Pop.* 18-19); (2) exhortations in elegiac verse; and (3) a poem called *Πολυτεία* for the Lacedaemonians. Most of the existing fragments seem to belong to the second class. Fr. 1 seems to be concerned with some definite occasion in war, since it gives orders for tactical arrangements and is concerned with a siege. Fr. 6-7 is a single poem which begins by praising the virtue of dying for one's country and ends by urging the young men to valour. Fr. 8 begins with a general praise of courage at a time that seems to be after a defeat and ends with specific advice on conduct in battle. Fr. 9 is more elaborate; it is concerned with the nature of ἀρετή and of the ἀνὴρ ἀγαθός, whom Tyrtacus finds in the brave fighter. There is no good reason to suspect the authenticity of these pieces, since the type of warfare which they describe belongs to the seventh century, and all show a similar use of language, even of repeated phrases. Other fragments may belong to the third class, notably fr. 2 on the origin of the Spartans, fr. 3 on the alleged Delphian origin of their constitution, frs. 4 and 5 on the First Messenian War. T. was certainly connected with the political reforms of his time, though he was not necessarily a prophet of the so-called Lycurgan constitution. He writes in an epic language, with many echoes of Homer, and at times he is unskilful in his adaptation of a Homeric motive to new uses (fr. 6-7. 21-6 and *Il.* 22. 71-6, fr. 8. 29-34 and *Il.* 16. 215-17). His importance is more political than literary, though he seems to have influenced Solon. The Spartans are said to have sung his songs on the march (Ath. 630 c).

TZETZES, JOHANNES (12th c. A.D.), a copious, careless, quarrelsome, Byzantine polymath. In his youth he wrote (A.D. 1143) a commentary on the *Iliad*, followed by *Allegories on Iliad and Odyssey* (in 10,000 verses), and other verse works on *Antehomerica*, *Homeric*, and *Posthomeric*. His other writings included scholia on Hesiod, Aristophanes, Lycophron, and others, and a poem on prosody. His chief work, *Βιβλὸς Ἱστορικῆς*, by its first editor named *Χηλάδης*, is a review (in 12,674 verses) of Greek literature and learning, with quotations from over 400 authors. In regard to his poverty and slighted merits Tzetzes displays an engaging lack of reticence. He was not always without taste or discretion; e.g., once, when reduced to selling the rest of his library he retained his Plutarch; nor is felicity of expression lacking in (for example) his oburgation of Thucydides' cross-word style (*λοξοσυστροφῶν λόγους*). Generally, however, his manner is dull, and he is extremely inaccurate (perhaps owing to his frequent separation from his books). His uncorroborated evidence is accordingly viewed with much suspicion. Nevertheless, he preserves much valuable information from ancient scholarship.

U

UBII, a German tribe on the east of the Rhine, between the Main and the Westerwald, which besought Caesar's help against the Suebi (q.v.) in 55 B.C. Under renewed Suebic pressure in 38 B.C. Agrippa brought them across the river at their own request, and settled them on land formerly belonging to the Eburones, in which Cologne was later to rise (see *COLONIA AGRIPPINENSIS*). The Ubii furnished recruits to the Roman army; they only joined Civilis in A.D. 70 under duress and returned to their allegiance to Rome at the earliest possible moment.

O. B.

ULPIAN (1) (DOMITIUS ULPIANUS, d. A.D. 228), born at Tyre, one of the last Roman jurists of the classical period; his teacher is unknown. Banished by Elagabalus, he was recalled by Alexander Severus and appointed *magister libellorum*. He held several official posts, and finally (from 222) he was *praefectus praetorio*. He was killed (228) by the mutinous Praetorians, ostensibly for his severity and some plans of reform unfavourable to this privileged corps. He was a contemporary of Paulus and his colleague in some official posts, but in the sphere of scientific activity they were rivals (they do not cite one another). Ulpian was as voluminous a writer as Paulus, superior to him in clarity and ease of exposition, but not in originality and acuteness of judgement. He was mostly a compiler, but not a slavish copyist. He was a man of great learning, profoundly versed in the earlier literature, which he sifted with the critical acumen of a practitioner. His reports are exact and trustworthy, and though his contributions to the works of his predecessors were not very considerable, his merits cannot be denied. His works—nearly 280 books—published mostly in 211–17, were the chief source from which Justinian's compilers drew material for the *Digest*: one-third of the whole compilation comes from Ulpian's pen. His principal works are: *Ad edictum libri 81*, a long commentary on the Praetor's Edict, following the text of the Edict word by word, with an annex in two books on the Edict of the *aediles curules*; a comprehensive work *Ad Sabinum* in 51 books (probably two editions) with several supplementary monographs on various *Leges* or on special branches of the private law (*sponsalia*, *fidei-commissa*); general works for practitioners (*Disputationes*, *Responsa*, *Opiniones*, the last probably a post-classical compilation); short text-books: *Institutiones Regulae* (7 books), and a *Liber singularis Regularum*. (The text of this last work preserved in the manuscript Cod. Vat. Reg. 1128 is rather a fragment of an epitome or compilation, composed between 320 and 342, by an unknown writer with many post-classical transformations of classical texts taken from Gaius, Ulpian, and other jurists.) Some of Ulpian's monographs describe the functions of magistracies such as those of Proconsul, Consul, Quaestor, Praefectus urbi, Praetor tutelaris, etc.

Buckland, *Law Quarterly Review* xl (1912), 185–201; liii (1937), 508–18.

A. B.

ULPIAN (2) of Emesa taught rhetoric at Antioch in the reign of Constantine (A.D. 324–37) and wrote a number of declamations and rhetorical works. He is the reputed author of scholia to eighteen speeches of Demosthenes; they are of little independent value.

ULPIUS TRAIANUS, MARCUS, father of the Emperor Trajan (q.v.), was a native of Italica in Baetica, of which province he later became governor. He commanded Legio X Fretensis in the Jewish War (c. A.D. 67–8), becoming consul (the first of his family to reach this rank) soon afterwards. In 73–4 he was created a patrician. Governor of Syria c. 75–6 (cf. *Ann. épigr.* 1933, no. 205), he won *ornamenta triumphalia* (ILS 8970), doubtless due to his wise handling of Parthian threats, and became proconsul of Asia c. 79–80. He died before 100 (cf. Plin. *Pan.* 89); consecrated (c. 112), he was honoured on his son's coinage as *Divus Pater Traianus*.

ULPIUS, see also MARCELLUS (10); TRAJAN.

UMBILICI, see BOOKS, II. 2.

UMBRIAN, see DIALECTS (ITALIC).

UMBRIANS. The Umbrians, Sabellians, and Oscans form the P-speaking branch of the Italic, as contrasted with the Q-speaking Latins. These two Italic branches differ in (a) dialect (e.g. Latin Q is replaced in Umbrian by P thus: 'Quis' = 'Pis', cf. the 'Iguvian tablets' of Gubbio); and (b) burial practice: the Latins cremate, the Umbrians bury. It is impossible to say which arrived first in Italy; perhaps the geographical distribution rather suggests that the Umbrians were the earliest. There may have been several waves of Italic beginning c. 2,000 B.C. (or possibly earlier) and ending before 1,000 B.C. Evidently at one time the Umbrians occupied Etruria, for Herodotus (I. 94) says that the Etruscans landed among the 'Ομβρικοί. Since Herodotus lived at Thurii, a Greek colony, which must have known a great deal about the Etruscans, his phrase is probably correct. A few place-names also support this view. The Umbrians, therefore, being driven from Etruria and hemmed in on all sides by aggressive neighbours, were eventually confined to their historic province in central Italy. If Patroni's attractive suggestion that 'Umbri' is really the ethnical name of the people whom archaeologists nickname 'Villanovans' could be accepted, they would then cease to be shadowy and acquire a very vivid personality. Patroni supposes that the name Umbria did not originally belong to the central province but was given to it by the Villanovans, who at some time conquered it. He compares the naming in historic days of Lombardy from the Lombards. His view is unfortunately difficult to prove.

D. R.-Macl.

UNIVERSITIES, see EDUCATION, III.

URBANUS, a Virgilian scholar repeatedly cited by Servius in his commentary on Virgil. He is certainly later than Cornutus (q.v.) whom he criticizes; and Thilo, *Serv. praef.* 16, puts him as late as the fourth century (Teuffel-Kroll 379. 9).

URBICUS, see LOLLIUS.

URICONIUM, see VIROCONIUM.

URSO (nowadays *Osuna*), a native settlement in Spain about sixty miles east of Seville. A centre of Pompeian resistance in 45 B.C., it was stormed by Caesar, who later replaced the inhabitants with colonists. Bronze tablets containing part of the charter giving it colonial status (*Lex Coloniae Genetivae Iuliae*) survive. The charter is an administrative regulation (*lex data*) based on a legislative

act (*lex rogata*) issued by M. Antonius on behalf of Julius Caesar. The colonists came apparently from Rome and included freedmen who were granted the exceptional right of holding colonial magistracies. Noteworthy are the decorated cave-tombs for pagan burials. A translation, with commentary, of the *Lex Ursonensis* is given in E. G. Hardy, *Roman Laws and Charters* (1913).

J. J. Van N.

USUCAPIO, *see* DOMINIUM, POSSESSIO.

USURAE MARITIMAE, *see* BOTTOMRY LOANS.

USURY. Loans at interest were not customary in Greece and Italy during the early Iron Age, except perhaps for cattle and seed. Our earliest records come from Megara, and from Athens, where Solon removed all restrictions of interest, and made provisions for all types of loans. Usury with or without security became a profitable business during the classical period, both for private individuals and for temples and State institutions. Athens, from Solon's time, most Hellenic States, and Rome forbade lending on the security of the debtor's person, a practice prevalent in the East until the Hellenistic age, which was a period of large borrowing transactions throughout the civilized world. Usury was absolutely forbidden at Rome in 357 B.C., but the law became inoperative from the second century. The pitiless treatment of debtors by the upper classes at Rome during the later Republic is only too well known. Since 51 B.C. interest might not exceed 12 per cent., except for seed

loans; but usury by legal subterfuge is attested by authors and papyri. These evasions were gradually made more difficult, until in the Late Roman period a limit was fixed (50 per cent.), extending to seed loans. Unlimited usury was henceforth illegal.

See BOTTOMRY LOANS; INTEREST, RATE OF. M. Schnebel, *Aegyptus* xiii (1933), 35 f. F. M. H.

USUS, *see* MANUS.

UTICA, traditionally the oldest Phoenician settlement on the north African coast, some thirty miles north-west of Carthage; its ruins now lie five miles inland. Founded c. 1100 B.C., Utica became a flourishing port for the produce of the Bagradas valley. She remained jealously independent of the growing power of Carthage, joining the rebel African mercenaries in 238. Utica was besieged by Scipio (204) and supported Masinissa (q.v.) against Carthage in 149. Rome rewarded Utica with lands of the fallen city and made her the capital of the Roman province of Africa; Italian financiers and merchants settled in the Free City. Pompey made the port his base for the swift campaign which won Africa from the Marians (81). Later Utica remained loyal to the Pompeian cause against the forces of Curio and Caesar, and was the scene of Cato's suicide. Heavily fined for its senatorial sympathies, Utica lost ground as Roman Carthage became important, but received municipal rights under Augustus and colonial under Hadrian.

W. N. W.

V

VABALLATHUS, SEPTIMIUS, or in Greek ATHENODORUS, the son of Odaenathus (q.v.) by his second wife Zenobia (q.v.), was an infant when his father was killed but was his titular successor, under the guardianship of his mother. He at first assumed the title of king of kings and *corrector totius orientis*. In A.D. 270 Aurelian recognized him as *vir consularis, rex, imperator, dux Romanorum*. In 271 he was proclaimed *Imperator Caesar Vaballathus Athenodorus Augustus*. In 274 he was carried in Aurelian's triumph, but was spared and granted a pension.

A. H. M. J.

VACUNA, a Sabine goddess, Horace, *Epist.* 1. 10. 49. He probably puns on her name, as if she were 'vacationis dea' (so Cruquius' commentator ad loc.), but her real functions were already forgotten. Varro identified her with Victoria (q.v.; 'Acron' ad loc.), others with Bellona, Diana, Minerva, and Venus (qq.v.; *ibid.* and Porphyrio ad loc.). She had groves at Reate and by the Lacus Velinus (Pliny, *HN* 3. 109).

See E. C. Evans, *Cults of the Sabine Territory* (1939), index s.v.

H. J. R.

VAGELLIUS (name doubtful), Neronian poet and friend of Seneca (*QNat.* 6. 2. 8). Morel *FPL* 124. The same name is accepted by Ribbeck and others, but queried by Schanz, for the doubtful 'Vallegius' mentioned by Donatus (auctarium, Suet. *Vit. Ter.*) as a witness to the younger Scipio's share in Terence's plays.

J. W. D.

VALENS, FABIUS (*cos. suff.* A.D. 69), born at Anagnia of equestrian family, 'procax moribus neque absurdus ingenio' (Tac. *Hist.* 1. 62). Commander of Legio I in Germania Inferior, he supported Galba, suppressed the governor Fonteius Capito, and incited Vitellius to proclaim himself emperor. An army-commander in the

invasion of Italy and at Bedriacum, and honoured by Vitellius, he was impeded by ill health from reaching northern Italy in time to oppose the troops of Antonius Primus. Learning of the fall of Cremona, he made his way to Gallia Narbonensis, but was captured there and subsequently put to death.

R. S.

VALENS, *see also* VETTIUS (5).

VALENTIA (nowadays *Valencia*), a foundation of the Edetani in Hispania Citerior. Decimus Brutus settled the veterans of Viriathus (138 B.C.) either here or at another Valentia (? *Valença do Minho* in Portugal). Its inhabitants supported Sertorius' cause even after his death. The expression 'uterque ordo' (*GIL* ii. 3475) suggests a second veteran settlement, possibly by Pompey at the close of the Sertorian war. The prosperity of the city is proved by Iberian ceramics, Ibero-Roman coins, numerous inscriptions, and the fact of Byzantine occupation.

J. J. Van N.

VALÉRIANUS, PUBLIUS LICINIUS (emperor A.D. 253-60), Gallus' emissary in Raetia, was during Aemilianus' reign saluted emperor by his troops and after the latter's assassination accepted by the Senate (*see* TREBONIUS GALLUS and AEMILIANUS). He reached Rome in 253 and appointed his son, Gallienus (q.v.), Augustus and joint ruler of the Empire. In 256-7 Valerian left Rome for the East and repelled a Persian invasion. Meanwhile the Goths entered Asia Minor. Valerian attempted to relieve Bithynia, but was recalled by a new Persian attack. Owing to plague in his army he attempted negotiations, but by a perfidious ruse was arrested by King Sapor and carried off to die in captivity (260).

During his reign there was a further persecution of the Christians, and two edicts were issued imposing

penalties for recalcitrance upon clergy and laity. Yet Valerian was neither a fool nor a knave, and in a more peaceful age might have governed with unoffending moderation.

Zosimus i. 29-36; Zonaras 12. 23; Victor, *De Caesaribus* 32. Parker, *Roman World*, 163-71; *CAH* xii, ch. 6, § 5.

H. M. D. P.

VALERIUS (1) POPLICOLA, PUBLIUS, traditionally one of the first consuls in 509 B.C., is a figure of doubtful historicity. His story rests mainly on the account of Valerius Antias, who claimed descent from him, and was the main source of Plutarch's biography. His alleged victories over Rome's neighbours, his work as a popular lawgiver (e.g. a *Lex Valeria*, establishing the right of *provocatio*), his consequent *cognomen* Puplicola (*populum colere*), his raising the number of senators, and his institution of the quaestorship are all suspect.

P. T.

VALERIUS (2) POTITUS, LUCIUS, and M. Horatius Barbatus, the consuls who are said in 449 B.C. to have replaced the Decemvirs, were traditionally patrician benefactors of the plebs who reconciled the Orders. In all likelihood they acted as peacemakers, although their programme of appeasement probably consisted (apart from the restoration of the consulship) in the *de facto* recognition of the measures taken by the plebeians for their government (tribal assemblies) and their defence (the appointment of plebeian magistrates). The laws ascribed to Valerius and Horatius (Livy 3. 55) were: (1) the recognition that *plebiscita* bound the whole community; (2) the restoration of the right of appeal; (3) the sacrosanctity of plebeian magistrates. They must be rejected because *plebiscita* were given force of law only by the *Lex Hortensia* (c. 287 B.C.); the right of appeal had already been secured by the XII Tables; and the recognized sacrosanctity of plebeian magistrates, however welcome, juridically meant nothing except that they were now magistrates of the Roman community. They were attributed to the consuls of 449 because the fall of the Decemvirs seemed a landmark in the plebeian advance, or rather because the annalists liked to connect the basic elements of the Roman constitution with either the beginnings of the Republic (laws attributed to Valerius Puplicola) or the restoration of the consulship.

P. T.

VALERIUS (3) CORVUS, MARCUS. Roman hero of the fourth century B.C., traditionally a simple farmer who lived to be a hundred. He was consul in 348 (when only 22 years old), 346, 343, 335, 300, 299 (*suffectus*), dictator in 342, 301; altogether he occupied the curule chair twenty-one times. When military tribune (349) he engaged a giant Gaul in single combat: a raven (*corvus*), by flapping in the Gaul's eyes, presented Valerius with victory and a cognomen. Valerius is also said to have defeated Volsci (346), Samnites (343), the inhabitants of Cales (335), Aequi (300), Etrusci (299), and to have quelled a mutiny (342) and promulgated a law of appeal (300). Even Livy (cf. 7. 42; 10. 3) hesitated to ascribe all these exploits to him. Some of the exaggerations in surviving accounts probably derive from Valerius Antias. Modern writers are more critical.

Livy, bks. 7-10; Val. Max. 8. 13. 1; 8. 15. 5; App. *Gall.* 10; *BCiv.* 3. 88; Aul. Gell. 9. 11; Zonar. 7. 25; [Aur. Vict.] *De vir. ill.* 29. F. Münzer, *De gente Valeria*, Diss. Berlin 1891.

E. T. S.

VALERIUS (4) MESSALLA, MARCUS, as consul in 263 B.C., reduced the district around Aetna and drove back Hieron (q.v. 2), who then deserted the Carthaginian for the Roman cause. For this diplomatic success and for having freed Messana, Valerius received the

cognomen Messalla, which his predecessor Claudius (q.v. 5) may rather have deserved. He decorated a wall of the Senate-house with a painting of his success. He was censor in 252.

H. H. S.

VALERIUS (5) LAEVINUS, MARCUS, praetor in 227 B.C. and again in 215, commanded a fleet on the Illyrian coast against Philip V in 214, and in 212-211 entered into alliance with the Aetolians and Attalus of Pergamum in the First Macedonian War. Consul in 210, he captured Agrigentum, completing Marcellus' work in Sicily, which he governed for three years; in 208 he defeated a Punic fleet. In 205 he brought the Magna Mater from Pessinus to Rome. He died in 200. The records of a consulship in 220 (*CIL* i². 140) and a command in Greece in 201 (Livy 31. 3) are false.

Livy 23. 30 ff.; 26. 24 ff.; 27. 29; 29. 11. G. De Sanctis, *Stor. Rom.* iii. 2, pp. 309, 411.

A. H. McD.

VALERIUS (6) FLACCUS, LUCIUS, the friend and colleague of Cato, curule aedile (201 B.C.), praetor in Sicily (199), was consul with Cato in 195, defeating the Boians and Insubrians (195-194). Military tribune at Thermopylae (191), he was triumvir in 190-189, reinforcing Placentia and Cremona and founding Bononia. Censor with Cato (184), he became *princeps senatus* on the death of Scipio Africanus; he died in 180. Capable but not outstanding, he maintained a conservative traditionalism against Hellenism in Rome.

Livy 33. 42-3; 34. 22, 42, and 46; 36. 17 ff.; 39. 40 ff.; Polyb. 20. 9 ff.; Plutarch, *Cato maior*. G. De Sanctis, *Stor. Rom.* iv. 1, p. 580.

A. H. McD.

VALERIUS (7) FLACCUS, LUCIUS, consul (100 B.C.) with Marius whom he helped to repress Saturninus and Glaucia, was censor (97), and *princeps senatus*. As *interrex* (82) he carried the law investing Sulla with the dictatorship and became his *magister equitum*.

VALERIUS (8) FLACCUS, LUCIUS, curule aedile in 98 B.C., praetor (between 96 and 89), was elected *consul suffectus* to replace Marius in 86 to hold office with Cinna. He carried a *Lex de aere alieno* which remitted three-quarters of all outstanding loans. Sent by the democrats to supersede Sulla in his Eastern command against Mithridates, Flaccus crossed to Greece; his troops began to desert to Sulla; he quarrelled with his legate Fimbria, by whom he was ultimately murdered while marching through Bithynia (85).

M. H.

VALERIUS (9) AEDITUUS (fl. c. 100 B.C.), like Lutatius Catulus and Porcius Licinus, wrote epigrams, often erotic, after Greek models. Gellius (19. 9. 10) praises the verses of all three as unequalled for neatness and charm.

See J. Wight Duff, *Lit. Hist. Rome to Golden Age*, 246-7; Morel, *FPL*.

J. W. D.

VALERIUS (10) ANTIAS, the Sullan annalist, wrote a history of Rome in at least seventy-five books, from the origins to his own times. Bk. 2 included Numa, bk. 22 Mancinus at Numantia, bk. 45 (probably) the year 110 B.C.; the latest date preserved is 91 B.C., the latest book 75. This shows an increase in scale for contemporary events, but even for early times he wrote more fully than the records justified (Livy 3. 5. 12). He represents the Hellenistic, particularly the Isocratic, fashion in historiography, elaborating battle-scenes, inventing casualty figures, and rhetorically composing reports of debates and speeches. To information often false he added confusion and misrepresentation, under the political and family influences of his time, e.g. on early Valerian tradition. Livy criticizes his numbers (26. 49. 3; 33. 10. 8; 36. 38. 6), but followed him throughout

his work. His style was vigorous and rhetorical, if without grace, bringing annalistic history to its highest literary point before Livy.

H. Peter, *HRRel.* i² (1914), pp. ccv; 238; K. W. Nitzsch, *Die röm. Annalistik* (1873), 349; F. Münzer, *De gente Valeria* (1891); W. Soltau, *Livius' Geschichtswerk* (1897); M. Gelzer, *Hermes* 1935, 269. A. H. McD.

VALERIUS (11) SORANUS (i.e. of Sora), **QUINTUS**, trib. pleb. 82 B.C., was a linguistic and antiquarian scholar often quoted by Varro, *Ling.*: cf. Gell. 2. 10. 3; Cic. *De Or.* 3. 43; *Brut.* 169. Two hexameters of his on the fatherhood of Jupiter are quoted from Varro by St. Augustine, *De civ. D.* 7. 9.

See Morel, *FPL*. Schmekel (*Die Philosophie der mittleren Stoa* (1892), 446), placed him in the Scipionic Circle, and Büttner (Poreius Licinus u. der litter. Kreis des Lutatius Catulus, 123) sought to identify him with Valerius (q.v. 9) Aedituus. J. W. D.

VALERIUS (12) CATO, **PUBLIUS** (b. c. 100 B.C.), poet, teacher, and critic, born in Cisalpine Gaul, became head of the neoteric school of poets to which Catullus belonged. He wrote an *Indignatio*, protesting his free birth and lamenting early privations, when as an orphan he lost his heritage in Sullan times. An inspiring teacher, he was called the Latin Siren (Suct. *Gram.* 11). Besides editing Lucilius, he wrote grammatical works. Two poems attributed to him were especially praised by Suetonius (loc. cit.). The *Lydia*, celebrating a mistress, was learnedly erotic in the Alexandrian manner. The *Diana* (or *Dictynna*), now lost, followed Callimachus in treating the story of the Cretan nymph Britomartis, who, pursued by Minos, flung herself into the sea but was caught in a fisherman's net. Some scholars believe the *Diana* to form the second half of the *Dirae*, preserved in the *Appendix Vergiliana* (q.v.). L. R. P.

VALERIUS (13) FLACCUS, **LUCIUS**, son of (8) above, as praetor (63 B.C.) helped Cicero against Catiline. He was governor of Asia (62/1). Accused of extortion, he was defended in 59 by Cicero (cf. the extant oration *Pro Flacco*) and acquitted. He was a legate of the proconsul L. Calpurnius Piso Caesoninus in Macedonia in 57.

P. Willems, *Le Sénat de la république romaine* (1885), i. 464; J. Humbert, *Les Plaidoyers écrits de Cicéron* (1925). A. M.

VALERIUS (14) MESSALLA NIGER, **MARCUS**, a 'conservative' for whom Cicero avowed great respect (*Att.* 1. 14. 6), was praetor in 65 B.C., consul for 61, and censor in 55. As consul he favoured strong measures against Clodius (q.v.), who was accused of sacrilege, and a special court of inquiry was established; but his colleague M. Pupius Piso, a friend of Clodius, secured that the jury be chosen in the usual way, and Clodius was able to buy his acquittal (Cic. *Att.* 1. 13, 14, 16). J. M. C.

VALERIUS (15) MESSALLA CORVINUS, **MARCUS** (64 B.C.-A.D. 8), soldier, orator, statesman, and patron of letters, first distinguished himself at Philippi (42 B.C.) as supporter of Brutus and Cassius. Declining command of the Republican army after that disaster, he transferred his allegiance to Antony; but, disgusted with Antony's conduct, he joined Octavian (how soon, however, is not clear). He fought for Octavian against Sextus Pompeius (36) and in the Illyro-Pannonian War (35-34), subdued the Alpine Salassi (34-33), and as consul with Octavian (31) took part in the battle of Actium. After service in the East, as proconsul in Gaul he conquered the Aquitani, celebrating a triumph in 27. Already member of the College of Augurs, he became the first permanent *curator aquarum* in 11, and it was he who proposed the title of *Pater Patriae* for Augustus (2 B.C.). He reconstructed part of the Via Latina and several public buildings, gained fame as orator and historian, dabbled

in poetry and philosophy, and was the patron of a literary circle—Tibullus, Lygdamus, Sulpicia, and the author of the *Panegyricus Messallae* (q.v., and see PASTORAL POETRY, LATIN, para. 2). Titles of several of his grammatical and stylistic treatises have survived.

Though he served under Octavian, Messalla was, as shown by his resignation of the *praefectura urbis* (26) after only a few days in office, one of that small group of republican gentlemen who had the courage during most perilous times to assert their principles.

Historical fragments, H. Peter, *HRRel.* ii, pp. lxxviii ff. and Pinaoli, *Gramm. Rom. Frag.* i. 503 ff.; ORF iii. 188 ff. See also J. Hammer, *De Panegyricus Messallae* (U.S.A.), *ibid.* *Messallae expeditionibus* (1923); R. Syme, *The Roman Revolution* (1939), see Index; J. Carcopino, *Rev. Phil.* 1946, 96-117. J. H.

VALERIUS (16) MESSALLA MESSALLINUS, **MARCUS** (cos. 3 B.C.), son of (15) above, and a person of some distinction and oratorical talent but not to be compared with his parent. Legate of Illyricum in A.D. 6 and present with Tiberius on the campaign against Maroboduus, he was sent back to deal with the rebellious Pannonians and Dalmatians and reached Siscia after fighting a battle; he received *ornamenta triumphalia*. Later Messallinus spoke in the Senate on several occasions during the principate of Tiberius. His election as one of the *quindecimviri* in charge of the Sibylline books is celebrated in the longest poem (2. 5) of Tibullus, who enjoyed the patronage of Messallinus' father. R. S.

VALERIUS (17) MAXIMUS, a Roman historian in Tiberius' reign with strong rhetorical and philosophical bias. A poor man, he was befriended by Sextus Pompeius (cos. A.D. 14), and accompanied him to his governorship in Asia about A.D. 27. After his return Valerius composed a handbook of illustrative examples for rhetoricians, *Factorum ac dictorum memorabilium libri IX*. This is dedicated to Tiberius, to whom constant flattery is addressed; and the violent denunciation of Sejanus (9. 11 Ext. 4) suggests that it was published soon after his downfall in 31. The subject-matter of the nine books has no clearly defined plan, but is divided under headings mostly moral or philosophical in character (e.g. Omens, Moderation, Gratitude, Chastity, Cruelty), which are usually illustrated by Roman (*domestica*) and foreign (*externa*) examples. The latter, chiefly Greek, are admittedly less important, and in keeping with the strongly national spirit of the compilation are outnumbered by the *domestica* by two to one. The work is shallow, sententious, and bombastic, full of the boldest metaphor and rhetorical artifices of the Silver Age, especially forced antitheses and far-fetched epigrams, only occasionally relieved by touches of poetic fancy or neat passages of narrative or dialogue. His chief sources seem to have been Livy and Cicero, but there are indications of many others, such as Varro, Coelius Antipater, Pompeius Trogus, and several Greek writers. His use of this material is almost entirely non-critical, and varies greatly in extent and accuracy. Yet the variety and convenience of the compilation ensured some measure of success in antiquity, and considerably more in the Middle Ages. It is referred to by Pliny the Elder, Plutarch, and others. Most significant, however, is the existence of two later epitomes. The first is by Julius Paris (fourth cent.?) and has attached to it a summary on Roman names, *De praenominibus*, ascribed to a certain C. Titius Probus and elsewhere erroneously included in manuscripts as bk. 10 of Valerius' own work. The second, by Januarius Nepotianus (5th c.?), breaks off early in bk. 3.

Editions: A. Terrenius (1725; notes and index); C. Kempe (1884; good *Prolegomena*); Teubner (1885). Translation: W. Speed G. C. W. (1678).

VALERIUS (18) ASIATICUS, a wealthy Roman, born at Vienna (Narbonensis), was consul in A.D. 46. Involved in Gaius' death, he later fell a victim to Messalina for alleged aspiration to the Empire (47). Claudius attacked his memory in a famous speech (Dessau, *ILS* 212).

PIR, V 25; Ph. Fabia, *La Table claudienne de Lyon* (1929), 104. A. M.

VALERIUS (19) FLACCUS (two subscriptions in the Vatican manuscript of his *Argonautica* give his name fully as C. Valerius Flaccus Balbus Setinus (bk. 2), or as C. V. F. Setinus Balbus (bk. 5), but the last two names are uncertain). Nothing is known of his life save that he was a *quindecimvir sacris faciundis* (1. 5, 8. 239-41), that he probably began his poem in A.D. 80 (see references to Titus and his *Templum Divi Vespasiani*, 1. 13-16, and to the eruption of Vesuvius, 3. 208-9, 4. 507-9), and that premature death overtook him before he completed his eighth book in 92 or 93; for the only certain reference to him in Roman literature is Quintilian's brief expression of regret at his demise (*Inst.* 10. 1. 90).

His only known work is the *Argonautica*, which is indebted to but not a close imitation of the similar work of Apollonius Rhodius (q.v.), in so far as Valerius is less concerned with deliberate displays of learning and with passages which tend to lower the heroic standard of the epic. He is more pathetic than Apollonius and invests his characters and theme with a Roman dignity. The poem takes the reader in the company of the Argonauts from Ioleos to Colchis, where Jason secures the Golden Fleece and escapes with Medea, but it breaks off abruptly with the pursuit of the Argo by her brother Absyrtus. Had Valerius lived to complete his poem, he would probably have brought his heroes back via the Danube and either the Adriatic as did Apollonius, or the North Sea in order to pay a compliment to the memory of Vespasian, who had once served in Britain (cf. 1. 7-9).

Valerius is strongly influenced by both Virgil and Ovid, like the other epic writers of the early Empire, but is probably a truer poet than they, in so far as he is less obviously rhetorical than Lucan and a more original genius than Statius. Unlike them, however, he was unknown in the Middle Ages until the Florentine humanist Poggio Bracciolini discovered at St. Gall in 1416 a manuscript (now lost) of the first three books and part of the fourth. Vat. Lat. 3277 (*saec.* ix in.), possibly from Fulda, is the principal surviving authority for the text. See also EPIC POETRY, LATIN, para 3.

VALERIUS (20) LICINIANUS, Lucrus, from Bilbilis (Mart. 1. 61. 11; 4. 55. 1), an advocate whom Martial considered a Spanish Cicero, was exiled by Domitian, but permitted by Nerva to settle in Sicily, where he professed oratory (Plin. *Ep.* 4. 11).

VALERIUS, see also BABRIUS, DIOCLETIAN, HARPOCRATION, JULIUS, LICINIUS, MAXIMIAN, MAXIMINUS (2), MAXIMUS, PROBUS, SEVERUS (4).

VALETUDINARIUM, see MEDICINE, § III.

VALGIUS RUFUS (*cos. suff.* 12 B.C.), one of the poetic circle patronized by Maecenas (Hor. *Sat.* 1. 10. 82), was consoled by Horace (*Carm.* 2. 9) on the death of a favourite slave, Mystes, whom he had himself commemorated in elegiac laments. He composed epigrams, translated Apollodorus' rhetorical precepts (Quint. *Inst.* 3. 1. 18), wrote on grammatical questions and on herbs.

See *PIR*; Teuffel; Schanz; Baehrens, *FPR*.

J. W. D.

VALLIUS SYRIACUS, a distinguished rhetorician in the elder Seneca's *Controversiae* (1. 1. 11 and 21; 2. 1. 34 ff.; 7. 6. 11; 9. 4. 18). He proclaimed himself a pupil of Theodorus (q.v. 3), and therefore not a slavish employer of *narratio* (q.v.) in his speeches.

VANDALS, a Germanic race, who moved from their original home on the Baltic to the Hungarian plain about A.D. 170. There they developed mailed cavalry, armed with lance and bow, and raided Raetia and Italy. In A.D. 406 they crossed the Rhine at Moguntiacum (Mainz) in conjunction with the Germanic Suebi and the non-Germanic Alans, and three years later invaded Spain. They were acknowledged as *foederati*, and the Asding Vandals shared Galicia with the Suebi, while the Siling Vandals received Baetica and the Alans Lusitania. Visigoth attacks annihilated the Silings and cut up the Alans. Remnants of the latter joined the Asdings, and Gunderic became king of the Vandals and Alans.

Alone among the Germanic invaders the Vandals built a fleet, with which they overran the Balearic Islands. In A.D. 429 Gaiseric led his mixed nation into Mauretania (q.v.) Tingitana. The Vandals, who had become Arians, received the support of rebellious Moors, and Donatist and Circumcellion victims of Catholic repression. After some opposition Gaiseric seized Carthage (439), where he ruled as a practically independent king, controlling Italy's corn-supply. Making Carthage once more a great naval power, he attacked Sicily, Sardinia, and Corsica, and in 455 sent his fleet to the Tiber. The Vandal sack of Rome, though comparatively mild, avenged the fate of their Phoenician predecessors six centuries earlier. Gaiseric was the most dreaded power in the Mediterranean till his death (477).

The Vandals remained a tyrannical and persecuting minority of Arian landowners among their Catholic subjects. The Romano-Berber population served their illiterate masters with mental and manual labour. The Vandal leaders paid no taxes on their large estates; the old financial system disappeared; and, though corn, marbles, and minerals were still exported, African commerce dwindled. Justinian found an excuse to intervene, and Belisarius' expeditionary force crushed the Vandal armies (533). Subsequent revolts ended in the transportation of the fighting-men to different parts of the Empire, and the extirpation of the Vandal race from Africa.

Letters of St. Augustine; Procopius, *De Bello Vandalico*. E. Gautier, *Genserie, roi des Vandales* (1932); L. Schmidt, *Geschichte der Vandalen* (1901). W. N. W.

VARGUNTEIUS, QUINTUS (2nd c. B.C.), junior to Lampadio (q.v.) among early lecturers on old Latin poets, expounded Ennius in public lectures, attracting large audiences (Suct. *Gram.* 2).

VARIUS RUFUS, a distinguished elegiac, epic, and tragic Augustan poet, friend of Virgil (*Catal.* 7; *Ecl.* 9. 35), Maecenas, and Horace (*Sat.* 1. 5. 40; 6. 55), who praises his epic highly (*Carm.* 1. 6; *Sat.* 1. 10. 43). His recorded epics are the *De morte* (based perhaps on Epicurean principles with special reference to Julius Caesar's death) and a *Panegyric* on Augustus. His

tragedy *Thyestes*, performed at the games after Actium (29 B.C.), won deep admiration and comparison with the Greek masterpieces (Quint. 3. 8. 45, 10. 1. 98; Tac. *Dial.* 12). Assisted by Plotius Tucca (q.v.), he edited the *Aeneid* by Augustus' orders after Virgil's death.

Morel, *FPL*.

G. C. W.

VARRO (1), GAIUS TERENTIUS (cos. 216 B.C.), was represented in the hostile aristocratic tradition as of humble origin (a butcher's son) and as a radical demagogue opposed to the Senate (cf. C. Flaminius), whereas his career shows that he enjoyed the Senate's confidence, while his father may have been a rich merchant. He was praetor in 218 B.C. As consul he commanded at Cannae (q.v.); he was probably no more responsible than his colleague, L. Aemilius Paullus, for the subsequent disaster, after which he was thanked by the Senate for not despairing of the State. He served as proconsul in Picenum (215-213), held Etruria against Hannibal's advance (208-207), and went as an ambassador to Africa in 200.

H. H. S.

VARRO (2), MARCUS TERENTIUS (116-27 B.C.), was probably born at Reate in the country of the Sabines (Symmachus, *Ep.* 1. 2. 21; according to Augustine, *De civ. D.* 4. 1, 'Romae natus et educatus'). He was a pupil of the first Roman philologist L. Aelius Stilo, who made himself known by his researches into the genuineness of the comedies bearing Plautus' name. At Athens his teacher of philosophy was the Academic Antiochus of Ascalon. In public life Varro rose to be a praetor. He fought as a partisan of Pompey in Spain in 49, but without success. Caesar restored him to favour and appointed him keeper of the future public library in 47. After Caesar's death he was outlawed by Antony in 43, but escaped death. His libraries, however, were plundered. When the Civil War was over he was allowed to devote himself entirely to peaceful study. According to Gellius (3. 10. 17) he had already edited 490 books at the beginning of his 78th year. We know the titles of fifty-five works, a catalogue of Varro's writings (but not of all) having been preserved in a fragment of Hieronymus (Ritschl, *Opusc.* iii. 522 ff.). We possess only two of his works substantially: *De lingua Latina* (in part) and *Rerum rusticarum libri iii*.

WORKS

1. *De lingua Latina libri XXV*, of which bks. 5-10 are partly extant (only 5 and 6 entirely). Book 1 contained an introduction, probably a general view of the subject, books 2-7 explained how words had originated and were applied to things and ideas, 8-13 treated declension and conjugation, 14-25 dealt with syntax. Books 2-4 were dedicated by Varro to his quaestor Septimius, but starting from bk. 5 the remaining books are dedicated to Cicero. The work was published before Cicero's death, probably in 43 B.C. The derivations are often fanciful, but the work has preserved many quotations, especially from the old Latin poets.

2. *Rerum rusticarum libri III* (37 B.C.); bk. 1 treats of agriculture in general; 2 of cattle- and sheep-breeding; 3 of the smaller live stock kept on a farm, such as birds, bees, fishes, etc. Varro's aim was to rouse the diminished interest in country-life. The author has a tiresome tendency to group subject-matter under various headings and divide these again into subdivisions, but his prefaces are enjoyable and his book is not without wit.

Of Varro's lost works we may mention:

1. *Saturarum Menippearum libri CL*, probably between 81 and 67 B.C., humorous essays seasoned with verses, in which Varro followed, but in his own original way, the dialogues of the Cynic philosopher Menippus of Gadara (first half of 3rd c. B.C.). Varro proves himself here an enemy to the luxury and other foibles of his

time. Ninety titles and 600 fragments have come down to us.

2. *Antiquitatum rerum humanarum et divinarum libri XLI* (47 B.C.). The first twenty-five books dealt with *res humanae*, and the last sixteen books with *res divinae* (Augustine, *De civ. D.* 6. 3). To arrange his subject-matter he put the questions: Who? Where? When? What? After an introductory book, 2-25 were divided into four parts: 2-7 treated of persons (e.g. inhabitants of Italy), 8-13 of places (e.g. Rome, Italy), 14-19 of the times, 20-25 of the actions of men.

The sixteen books that contained the *res divinae* began with an introductory book; the rest were divided into five parts: 27-9, priests; 30-2, temples, etc.; 33-5, festal days, games, etc.; 36-8, *sacra*; 39-41 the gods.

3. *Logistoricon libri LXXVI* (44 B.C.-?), a collection of dialogues on various subjects—education of children, madness, chastity, etc. Every book took its name from a celebrated character, e.g. *Marius de fortuna*, *Tubero de origine humana*.

4. *Hebdomades vel de imaginibus* (libri xv; 39 B.C.). This work treated of famous Romans and Greeks, and contained 700 portraits illustrating the text (Plin. *HN* 35. 11). It was called *Hebdomades* (Gellius, 3. 10. 1), because the number 7 played an important part throughout.

5. *Disciplinarum libri IX*, an encyclopaedia of the *artes liberales*, i.e. of the branches of learning essential for a free-born man (cf. ENCYCLOPAEDIC LEARNING).

Varro's writings cover nearly every domain of science—history (*De vita populi Romani*, 'a social history of the Roman people'), geography, rhetoric, jurisprudence (*De iure civili lib. XV*), philosophy, music, medicine, architecture, literary history (*De scaenicis originibus lib. III*; *De comediis Plautinis*). He was the greatest scholar among the Romans; as to his method, he was a pupil of the Greeks, but he collected his matter largely himself. His works were a mine of information for pagan and Christian authors, and even for medieval compilers. See also GRAMMAR; SCHOLARSHIP, LATIN.

VARRO (3) ATACINUS, PUBLIUS TERENTIUS, was born at Atax in Narbonese Gaul in 82 B.C. and died shortly before 35 B.C. Of his life nothing is known but his attachment to a pseudonymous Leucadia, to whom he addressed elegies. Besides these, which Propertius and Ovid seem to respect, he wrote *Argonautica*, imitating or translating Apollonius Rhodius, a geographical poem named *Chorographia*, a poetical calendar entitled *Ephemeris* (but both word and authorship are disputed), apparently based on Aratus' *Phaenomena*, a *Bellum*

Sequanicum on Caesar's campaign of 58, and, Horace testifies, some ineffective satire. The ancients thought well of his versions from the Greek, and fragments tend to corroborate them: the *Bellum Sequanicum*, which might interest us most, seems not to have attracted them. See DIDACTIC POETRY, LATIN.

Morel, *FPL* 93.

E. P. B.

VARRO (4) **MURENA**, AULUS TERENTIUS, in 25 B.C. ruthlessly subdued the Salassi of the Val d'Aosta. His camp became later Augusta Praetoria (q.v.). While consul with Augustus (23), he was involved in a conspiracy with Fannius Caepio and was executed. His sister married Maecenas. To him is addressed Hor. *Carm.* 3. 19.

M. Fluss, *PW* v A. 706; H. Stuart Jones, *CAH* x. 136; R. Syme, *Roman Revolution* (1939), see Index. A. M.

VARUS (1), PUBLIUS ATTIVS, praetor, then proprator in Africa, in 49 B.C. after having opposed Caesar in Picenum, crossed to Africa. As the effective leader of the Pompeians he defeated Curio. After Pharsalus he had to resign to Scipio the supreme command. He fell at Munda.

A. M.

VARUS (2), PUBLIUS QUINCTILIUS (cos. 13 B.C.), of a patrician family that had been of no importance for centuries. He owed his career to the favour of Augustus, being the husband of Claudia Pulchra, the grand-niece of the Princes, and was able to acquire some political influence (his two sisters made good marriages, cf. the table in *PW* xvii. 870). Varus became proconsul of Africa (? 7-6 B.C.), and then legate of Syria. When Judaea revolted after the death of Herod the Great he marched rapidly southwards and dealt firmly with the insurgents (Josephus, *Bj* 2. 39 ff., etc.). Varus is next heard of as legate of the Rhine army in A.D. 9. When marching back with three legions from the summer-camp near the Weser, he was treacherously attacked in difficult country by Arminius (q.v.) whose professions he had trusted. The Roman army was destroyed in the *Salutis Teutoburgiensis* and Varus took his own life (Dio 56. 18-22; Velleius 2. 117-20; Florus 2. 30). Varus was made the scapegoat for the signal failure of Augustus' whole German policy. He is alleged to have been grossly extortionate in Syria, torpid and incompetent in his German command—'ut corpore ita animo immobilior, otio magis castrorum quam bellicae adsuetae militiae' (Velleius 2. 117. 2). On the site of his defeat see bibliography, *CAH* x. 943.

R. S.

VARUS (3), QUINCTILIUS, son of the general defeated by the Germans in A.D. 9, was as a speaker trained under the pre-Tiberian rhetor Cestius Pius from Smyrna.

VARUS (4), ARRIUS, a Roman knight, served with distinction as *praefectus cohortis* under Corbulo, but later defamed his old commander to Nero. In A.D. 69, when a *primus pilus* in one of the Danubian legions, he lent vigorous help to Antonius Primus on the Flavian side in the invasion of Italy, being rewarded after the final victory with the office of *praefectus praetorio*. Mucianus, however, soon arrived at Rome, put a check upon his ambitions (cf. the treatment of Antonius Primus), and reduced him to the post of *praefectus annonae*. He is not heard of afterwards.

R. S.

VARUS (5), P. ALFENUS, see ALFENUS.

VASE-PAINTING. NINTH TO EIGHTH CENTURY B.C. *Geometric.* Athenian 'Dipylon' vases have rhythmical bands (often divided into metopes) of complicated pattern and figure-scenes, battles, dances, funerals, etc., in silhouette. Local variants, mostly with fewer figure-scenes, occur elsewhere.

2. **SEVENTH CENTURY. Orientalizing.** From c. 725 B.C. patterns become more naturalistic and the decoration less orderly, with larger figures in partial outline; later the black-figure style (silhouette with incised inner markings) comes in. Athenian vases are divided into Early Proto-Attic (reminiscent of geometric), 'black and white', Late Proto-Attic (predominantly black-figure). In Corinth Middle and Late Proto-Corinthian, 700-625 (neat and orderly; some small polychrome vases of superlative merit), is followed by Early Corinthian, 625-600 (black-figure; animal friezes and heroic scenes). Median vases have large, untidy, heroic scenes. East Greek vases have processions of animals on white ground; figure-scenes are rare.

3. **SIXTH CENTURY. Black-figure.** In Athens two lines can be traced: 1. *Vigorous style.* Massive figures and often violent scenes. Originates in seventh century with Nessus painter. Continued by Sophilos, c. 570, the painter of Siana cups, 575-550, Saconides ('the Lydian'), 560-530, Execias (q.v.), Andocides (q.v.) painter, and Leagrus group, c. 515. 2. *Delicate style.* Drawing neat and fine, sometimes formal. Begins with Clitias, 560, and painters of Little Master cups, c. 550, then Amasis (q.v.) painter and the Affecter; and after 525 Antimenes painter and Menon painter (see ANDOCIDES).

4. Corinthian vase-painting continues till about 550, with some excellent pictures, e.g. 'Departure of Amphiaras'. Chalcis carries on the best Corinthian tradition until 520, but the later Phineus group shows Ionian influence. The finest Laconian vases, e.g. Arcesilas cup, are produced 590-550. The chief East Greek styles are Fikellura, 570-500 (derives from Rhodian; drawing often witty), Clazomenian, 560-530, including Northampton group (formal and decorative), Caeretan, 540-525 (lively scenes of 'Heracles and Busiris', etc.; perhaps made in Italy, but, unlike Pontic and allied groups, shows no Etruscan influence).

5. **530-400. Red-figure.** Figures reserved against black background, inner markings in black or brown. In Athens starts with Andocides (q.v.) painter and Menon painter. The vigorous style is continued by Euphronius (q.v.), Euthymides (q.v.), Cleophrades painter (see EPICETUS 1), Panaetius painter (see EUPHRONIUS), Brygus (q.v.) painter; and the delicate style by Epictetus (q.v. 1), Phintias (formal and elaborate), Berlin painter (rhythmical line and quiet beauty), Pan painter (mannerist), Duris (q.v.). After 480 Niobid painter and Pentesilea painter (see EUPHRONIUS) reflect composition of Micon and Polygnotus (q.v.); Chicago painter and painter of Boston phiale are quieter. White-ground vases, particularly *lecythi*, arc now common; Achilles painter, 460-440, develops tradition of Berlin painter; Reed painter (430-410) is more passionate. In red-figure Eretria painter (440-420) begins a rich style which Meidias painter elaborates (see MEIDIAS); Berlin Dinus painter is realistic and vigorous. Red-figure painting starts in south Italy about 440 and at first is strongly influenced by Athens.

6. **FOURTH CENTURY.** In Athens the rich style continues in the work of Meidias painter's successors. The vigorous style can be traced through successive groups of Kertch vases. In south Italy local groups, Lucanian, Tarentine (including Gnathia), Apulian, Paestan, etc., develop on their own lines; their subjects are sometimes interesting, the drawing usually unpleasing, and the decorative value marred by excessive use of white and yellow paint. Gnathia ware has interesting echoes of Sicyonian painting. Vase-painting ends in the third century.

VATES, *see* PROPHECIES.

VATIA, *see* SERVILIUS (2) and (3).

VATICAN, originally the district on the west bank of the Tiber extending from the territory of Veii to the reaches below Rome, but in the chorography of Rome restricted to the ridge (*mons* or *montes*) confining the river from Pons Milvius to the Janiculum (Cic. *Att.* 13. 33. 4). A still more restricted topographical use is represented by *Vaticana vallis* (Tac. *Ann.* 14. 14) and *Vaticanum* (Plin. *HN* 8. 37; 16. 237; 18. 20), the unhealthy plain which the valley drained. Here lay the *Naumachia* and the *Circus Gaii et Neronis*, the latter the scene of early Christian martyrdoms and close to the site of St. Peter's basilica. *Vaticanus* was also attached to a shrine of the Magna Mater, whose altars (*CIL* vi. 497-504) have been found on the site of St. Peter's façade and which seems to have been an important cult-centre, with branches in Gaul and Germany (*CIL* xiii. 1751, 7281).

I. A. R.

VATICINATIO, *see* DIVINATION, para 4.

VATINIUS, PUBLIUS, tribune 59 B.C., sponsored the bills granting Caesar (q.v.) Cisalpine Gaul and Illyricum, and confirming Pompey's Eastern settlement, and figured prominently in the attacks on Bibulus and in the Vettius affair. In 56 Cicero, defending Sestius (q.v.), delivered the invective *In P. Vatinius testem interrogatio*, but in 54, obedient to the triumvirs, successfully defended Vatinius on a bribery charge. After serving with Caesar in Gaul, Vatinius won a victory in the Adriatic in 47, and in December received the consulate, an office he always boasted he would hold. His proconsulate, in Illyricum, was recognized by a *supplicatio* in 45; and despite his surrender to Brutus in 43 he triumphed in 42. The best-hated man of his time, he was made an easy butt by his personal disabilities, weak legs, and scrofulous swellings; but he took raillery well, and in later life was genuinely reconciled with Cicero, to whom in 45 he wrote *Fam.* 5. 10. (Cf. Catullus, 14. 3 and 52-3.)

L. G. Pocock, *A Commentary on Cicero In Vatinius* (1926).

G. E. F. C.

VECTIGAL meant an indirect tax, though it is sometimes loosely used as equivalent to *tributum*. It was applied to revenue derived from public land, mines, salt-works, etc., and in general to rents derived from State property. Apart from such charges the only *vectigalia* of the Republican period were the *portoria* (q.v.) and the *vicesima libertatis*, a tax of 5 per cent. on the value of manumitted slaves. In the Principate the number of the *vectigalia* was increased, and they provided a considerable part of the State revenue. Only *vectigalia* were paid by the inhabitants of Italy, who were exempt from *tributum*. The most important of the *vectigalia* were the *portoria*. In order to raise revenue for the provision of pensions to old soldiers Augustus founded the *aerarium militare*,

into which was paid the yield of two new taxes, the *centesima rerum venalium*, a tax of 1 per cent. on sales by auction, and the *vicesima hereditatum*. The latter was a charge of 5 per cent. on all sums above 100,000 sesterces bequeathed to persons other than near relatives. The death-duties were paid by citizens only, and their introduction was resented by Italians, who objected to any form of taxation. The extension of the citizenship had the effect of increasing their yield. Another *vectigal* was the *quinta et vicesima venalium mancipiorum*, a 4 per cent. tax on sales of slaves. The collection of *vectigalia* was even in the Principate let out to companies of *publicani* (q.v.). In the second century single *conductores* (q.v.) took their place, and subsequently *vectigalia* were collected by State officials. *See also* EMPHYTEUSIS.

G. H. S.

VEDIOVIS, VEIOVIS, VEDIVS, an ancient deity, worshipped at Rome between the Arx and Capitol and on Tiber island (Platner-Ashby, p. 548 f.) and at Bovillae. His offering was a she-goat, sacrificed *ritu humano* (Gell. 5. 12. 12), whether that means on behalf of the dead (cf. Festus, p. 91. 24 Lindsay) or as a surrogate for a human victim (Preller-Jordan, *Rom. Mythol.* i. 265). This suggests a chthonian god, but his name is puzzling. The ancients, deriving *Iuppiter* from *iuuare*, took Vediovis as 'the non-helper' (Gell. *ibid.* 8), i.e. harmful, or as 'little Iuppiter', on the analogy of *uegrandis* (Ovid, *Fasti* 3. 445-8, cf. Festus, p. 519. 22 Lindsay, both from Verrius Flaccus); Wissowa, *RR*, p. 237, as a sort of anti-Iuppiter, a god of the dead; C. Koch, *Der römische Juppiter*, p. 68, as meaning an abnormal form of Iuppiter. His festival was on 21 May (calendars) and his statue of Apolline type (Gell. *ibid.* 11 f.).

II. J. R.

VEDIUS POLLIO, PUBLIUS, a freedman's son, was friend of Augustus, who made him a knight; rich and cruel, he used to feed his lampreys with human flesh. He was active in the civil service in Asia after Actium, and was widely honoured. He died in 15 B.C. bequeathing to Augustus the villa of Pausilypon (q.v.).

PIR, V 213; K. Scott, *AJPhil.* 1939, 459; R. Syme, *Roman Revolution* (1939), 410.

A. M.

VEIENTO, FABRICIUS, impeached A.D. 62 for his satiric 'Codicilli' against senators and priests, was banished by Nero and had his publications burned (therefore much in demand, 'conquisitos lectitatosque', says Tacitus); but under Domitian became active in Rome as a delator and one of Juvenal's satiric council on the Emperor's turbot (Tac. *Ann.* 14. 50; *Juv.* 3. 185; 4. 113 and 123; 6. 113).

J. W. D.

VEII, the most southern of Etruscan cities, only nine miles north of Rome, was a perpetual menace to it in early times ('assidui et annuversarii hostes', Florus 1. 12). Dennis aptly calls it the 'Troy of Italy', recalling the legends of the siege which ended Veii's wars with Rome in 396 B.C. Till then the Romans had not mastered the west bank of the Tiber. The captured land was soon formed into four new rustic tribes. Veii was about seven miles in circumference. Livy (1. 15; 5. 2) testifies to its early strength, Florus and Plutarch (*Camillus*) to its wealth, but it had become desolate by the time of Augustus (Propertius 10. 27), when it was made a *municipium Augustum*. Probably the materials were used in building Rome. Veii was especially famous for its statuary. Pliny (*HN* 35. 157) has preserved the name of Vulca, commissioned to furnish statues for Jupiter's temple on the Roman Capitol. From Vulca's school came the terracotta statue of Apollo found in 1916, now in the Museo di Villa Giulia at Rome.

D. R. MacL.

VEIOVIS, *see* VEDIOVIS.

VEIOVIS AEDES, *see* CAPITOL.

VELABRUM was the low ground between the Capitol and Palatine in Rome, originally a swamp open to Tiber floods. The Cloaca Maxima (q.v.) passed riverwards through it, and by draining made of it one of the busiest centres in the city (Macrob. 1. 10. 15), contained between the Vicus Tuscus and Vicus Iugarius and carrying all traffic between the Forum and the river. Here lay Aeca Larentia's shrine. I. A. R.

VELIA, now a narrow ridge or spur connecting the Palatine and Oppian hills of Rome at the head of the Via Sacra (q.v.). The summit was probably modified by levelling for the vestibule of Nero's *Domus Aurea* in A.D. 64, where later stood the temple of Venus and Rome, dedicated in A.D. 135. The saddle was crowned by the Arch of Titus (*GIL* vi. 945). I. A. R.

VELITES. In the early Republican army the light-armed troops were recruited from citizens unable to provide themselves with hoplite armour and were called *rorarii*. By the Second Punic War their title had been changed to *velites*. The number in each legion was the same as that of *hastati* or *principes*. In battle they were employed probably as *iaculatores* (*υποφονάχοι*) in conjunction with the cavalry to open the attack and were regularly stationed on the flanks. They were abolished by Marius and their place was taken by foreign contingents (e.g. Balearic slingers). *See also* ARMS, ROMAN.

Kromayer-Veith, *Heerwesen und Kriegführung der Griechen und Römer* (1928). H. M. D. P.

VELIUS LONGUS (early 2nd c. B.C.), scholar, who interested himself in the language of Republican authors and wrote a commentary on the *Aeneid*. Only his *De orthographia* (ed. Keil, *Gramm. Lat.* vii. 46-81) is extant.

Cf. Teuffel, § 352. 3 a; Schanz-Hosius, § 596.

VELLEIUS PATERCULUS, GAIUS (c. 19 B.C.-after A.D. 31), was of Campanian descent. We owe our knowledge of his origin and personal history to the naïve family pride with which he refers to the exploits of his forefathers and his own career. His maternal ancestors included Decius Magius, who remained faithful to Rome when Capua joined Hannibal, and Minatius Magius, who received Roman citizenship for raising a legion which fought for Rome in the Social War. V.'s paternal grandfather was *praefectus fabrum* under Pompeius, and his father served in the cavalry in Germany. He himself served as a tribune in Thrace and Macedonia and accompanied Gaius Caesar to the East in 1 B.C. He served for eight years under Tiberius as prefect of horse and *legatus* in Germany and Pannonia, and, on Tiberius' recommendation was elected quaestor in A.D. 6 and praetor in 15. There is no evidence that he held further office.

The *Historiae Romanae* is a compendium of Roman history addressed to V.'s friend M. Vinicius (who married Julia, daughter of Germanicus) on attaining the consulship, A.D. 30. Bk. 1, of which the opening and the part dealing with the period from Romulus to the battle of Pydna are missing, begins with the history of the Orient and Greece and ends with the fall of Carthage and Corinth (146 B.C.); bk. 2, covering the period 146 B.C. to A.D. 30, becomes more detailed as it approaches the author's own day, doubtless because, as he tells us, he projected a fuller history from the Civil War onwards. He inserted two historical excursions, on Roman colonization (1. 14-15) and on the Roman provinces (2. 38-9), and three on literary topics, one on early Latin literature (2. 9), and another on the Ciceronian and Augustan period (2. 36), in which he couples Virgil with the minor poet Rabirius, while a third (1. 16-17) points out that the flourishing periods in Greek and Latin literature were

confined within very brief limits. He shows some knowledge of Greek literature, mentioning Homer, Hesiod, tragic and comic writers, Isocrates, Plato, Aristotle. He cites Cato, Hortensius, and the *Memoirs* of Augustus among his sources (1. 7. 3; 2. 16. 3 and 124. 3). A considerable controversial literature discusses authors possibly used by him (see Schanz).

Velleius is the typical retired officer who has turned amateur historian. He is enthusiastic rather than critical and has all the pretentiousness of the novice who has fallen under the spell of contemporary rhetoric. Though his work is the earliest extant specimen of post-Augustan prose, his style has all the characteristics of the Silver Age. His attempts at pointed phraseology, though occasionally effective, are often puerile. He indulges in lengthy sentences which are not periods but mere strings of clauses interspersed with parentheses, and he has an irritating fondness for exclamations and interrogations. He admits that he wrote hurriedly, and the stream of his narrative, if it sometimes carries the reader along with it, certainly lacks profundity. His interest is chiefly biographical, and he portrays, often with some skill, the lesser lights as well as the protagonists of history. His admiration for his old chief Tiberius and for the whole imperial house is unbounded; even Tiberius' ministers, such as Sejanus, can do no wrong. His work is a valuable source for the reigns of Augustus and Tiberius and a useful corrective for the diatribes against Tiberius of Tacitus and Suetonius.

VELLUM, *see* BOOKS, I. 12, 13.

VENANTIUS HONORIUS CLEMENTIANUS FORTUNATUS was born, probably after A.D. 530, near Treviso in northern Italy, and was educated at Ravenna. He left Italy for Gaul in 565. There he visited the grave of St. Martin at Tours, and there he continued to live till his death about 600. With him the Latin poetry of Gaul ends. The most notable of his many poems is the *De virtutibus S. Martini* in four books, of 2243 hastily composed hexameters.

Best ed. of his verse and prose, F. Leo and B. Krusch in *MGH* A. S. (1881-5).

VENATIONES. Fights of man against beast or beast against beast were introduced into Rome in the second century B.C. They grew more elaborate, until under the Empire the whole world was ransacked for animals, which were brought by sea to Ostia and kept in cages under the arena. Lions, panthers, bears, bulls, hippopotami, crocodiles were either matched against each other or against human *bestiarii*. Five thousand wild and four thousand tame animals were slaughtered, some of them by women, when the Flavian amphitheatre was opened; eleven thousand when Trajan celebrated his triumph over the Dacians.

Friedländer ii. 62-74.

F. A. W.

VENETI (1), Gallic tribe occupying modern *Morbihan*. Their strongly 'Atlantic' culture was but slightly touched by Celticism in the La Tène period, but they themselves strongly influenced south-west British cultures by their trade, which stimulated their resistance to Caesar. They were defeated by D. Brutus in a naval battle (57 B.C.). Under the Empire their commerce declined, but a prosperous agricultural life is indicated by villa-finds. The region was occupied by emigrant Britons in the fifth century.

Caes. *B.Gall.* 3. 8-16. C. Jullian, *Ilist. de la Gaule* ii. 486-94; vi. 437-49. C. E. S.

VENETI (2) inhabited the fertile areas about the head of the Adriatic. Chief cities: Ateste in prehistoric times, Patavium in historic (see **ANTENOR**). Inscriptions, dating from the fifth to the first century B.C., show that the Veneti spoke an Illyrian language (cf. Hdt. 1. 196). Archaeological evidence reveals that they immigrated into north Italy c. 950; here they preceded and later successfully resisted Etruscans and Gauls. They were highly civilized, preferred horse-breeding and commerce to war, and early organized the Baltic amber (q.v.) trade. They particularly worshipped a goddess of healing, *Reltia*. Always friendly to Rome, the Veneti aided her against Gauls (390 B.C.) and Hannibal. Later from allies they became subjects, though retaining local autonomy. Presumably they obtained Latin rights in 89, full citizenship in 49 B.C. Their romanization ensued.

Strabo 5. 212; Polyb. 2. 17 f.; Livy 1. 1; 5. 33; 10. 2. R. S. Conway, *CAH* iv. 441; *Prae-Italic Dialects* i (1933). 230; J. Whatmough, *Foundations of Roman Italy* (1937), 171 (with bibliography). For their alleged Paphlagonian origin see Serv. ad *Aen.* 1. 242; *Hom. Il.* 2. 852; Strabo 12. 543. E. T. S.

VENILIA, a goddess of forgotten nature and functions. It is implied by Varro (*Ling.* 5. 72) that she is associated with Neptunus (q.v., cf. August. *De civ. D.* 7. 22). Some insignificant stories, patently late inventions, are told of her by poets.

VENNONIUS, an early Roman author, now lost, whose history Cicero greatly regrets not to have at hand (*Att.* 12. 3. 1; cf. *Leg.* 1. 6). He is cited by Dionysius of Halicarnassus, 4. 15.

Peter, *HRRel.* i. 142.

VENTIDIUS, **PUBLIUS** (cos. *suff.* 43 B.C.), the proverbial upstart of the Roman revolutionary wars; probably of quite reputable municipal origin. Captured in infancy at Asculum and led in the triumph of Pompeius Strabo (89 B.C.), he made his livelihood with difficulty. Abusively designated as a *mulio*, he was probably an army-contractor (cf. Gellius 15. 4, the best account of his early life). Like other representatives of the defeated and impoverished Italians, he became an adherent of Caesar, through whose patronage he entered the Senate. Praetor in 43, Ventidius, who had been raising three legions in his native Picenum, reinforced Antony, after his defeat at Mutina. As a reward, he became consul later in the year. In 41-40 B.C. he intervened indecisively in the *Bellum Perusinum*. After the Pact of Brundisium, he was sent to drive the Parthians out of Asia and Syria, in which task he won brilliant victories at the Cilician Gates and at Mt. Amanus (39), and at Gindarus (38). Superseded by Antony (there were allegations of taking bribes from the king of Commagene), he returned to Rome to celebrate his Parthian triumph (38), and died soon after, being honoured with a public funeral. His Parthian triumph was long remembered (cf. Tac. *German.* 37. 4: 'infra Ventidium dilectus Oriens'). No official or contemporary evidence gives P. Ventidius the cognomen 'Bassus'; nor can he quite be proved identical with Sabinus, the *mulio* of Virgil, *Catal.* 10.

R. Syme, *Roman Revolution* (1939), see Index.

VENUS, an Italian goddess, not originally Roman (Varro, *Ling.* 6. 33: 'cuius nomen ego antiquis litteris . . . nusquam inveni'). She is so obscure that the only clues to her functions are her name, a few passing remarks of antiquaries, and her identification. The name should by all analogies be neuter and apparently is feminine merely because it denotes a female; as a common noun it means 'charm, beauty', and so may be compared to *Charis* (q.v.). Varro (op. cit. 6. 20) says that on the *Vinalia Rustica* (a day mistakenly supposed to be her festival) gardeners keep holiday. Cf. *Rust.* 1. 1. 6, Venus has *procuratio hortorum*; Festus, pp. 322. 19; 366. 35, Lindsay; Pliny, *HN* 19. 50. Add Naevius, *fr. com.* 122 Ribbeck, who speaks of eating 'Venus that has felt Vulcan's power', i.e. boiled vegetables. We may therefore suppose that she was the *numen* whose power made herb-gardens look 'charmingly' prosperous and fertile. There is not the smallest evidence that she had anything to do with animal fertility, including that of mankind. However, perhaps through the association of Aphrodite (q.v.) with *Charis*, or the *Charites*, she somehow became identified with her at an unknown date. It would seem that the cult of Aphrodite of Eryx (*Venus Erycina*) was the first point of contact (temple in 217 B.C., see Platner-Ashby, p. 551). To classical Rome Venus was Aphrodite; so much so that the Greek metonymies (Aphrodite = love-making, highest throw at dice, luck, etc.) were taken over by her. As *Venus Genetrix* (= mother of the *gens Julia*) she was prominent in Imperial cult.

Wissowa, *RK* 288 ff.; Keune in Roscher's *Lexikon*, s.v.

H. J. R.

VENUSIA, a town, probably of Peucetian origin, in Apulia near the Lucanian border, famed as Horace's birthplace (*Sat.* 2. 1. 34); nowadays *Venosa*. When Rome took Venusia it was a populous Oscan-speaking city, 292 B.C.; it received a Latin colony one year later (Dion. Hal. 17-18. 5 incredibly numbers the colonists at 20,000). Venusia immediately became a military stronghold and important station on the Via Appia (Strabo 5. 250). Resisting Hannibal, it harboured the fugitives from Cannae, thereby repeating the rôle it had probably played in 280 after Heraclea (Polyb. 3. 116 f.; Zonar. 8. 3). In 200 Rome reinforced Venusia (Livy 31. 49). Roman arrogance presumably provoked its defection in the Social War (Malecovati, *Fragm. Orat. Rom.* ii. 140; App. *BCiv.* 1. 39). In 43 the Triumvirs settled veterans here and Venusia remained a *colonia* in Imperial times (App. *BCiv.* 4. 3).

N. Jacobone, *Venusia* (1909).

E. T. S.

VER SACRUM, literally, consecrated (produce of the) spring. In times of distress, or merely when the population was superabundant, Italian communities and others, including Greek, also (Dionysius, Strabo) used to consecrate to a god, often Jupiter, all that should be born in the spring. The beasts were apparently sacrificed; but the human beings (*sacraui*), when twenty years old (Festus, p. 150. 21), were veiled and sent out of the country. They might go where they would and found a new settlement.

Festus, pp. 150. 224, 119 Lindsay; Dion. Hal. *Antiquit.* 1. 16; Strabo 5. 4. 12, p. 250. Cf. Livy 22. 10.

VERBENA, **VERBENARIUS**, see **FETIALES**.

VERBORUM A GRAECIS TRACTORUM LIBRI, see **CLOVIUS**.

VERCINGETORIX, son of Celtillus, formerly king of the Arverni, raised the revolt against Caesar in 52 B.C., and was acclaimed king of the tribe and general of the confederates. Defeated by Caesar's cavalry at Noviodunum Biturigum, he adopted 'Fabian' tactics, hampering Caesar's supply by systematic destruction. With this was combined the strategy of tempting Caesar to attack

or ingloriously decline the attack on impregnable ground. The policy succeeded admirably near Avaricum, where Caesar did not attack, and at Gergovia, where he did. Vercingetorix was led to risk another attack on Caesar in the field, which was badly defeated, so that he retreated to another prepared fortress, Alesia (q.v.). Caesar had an unexpected weapon, the circumvallation, with which he beat off not only Vercingetorix but the Gallic army summoned from outside to break it. Vercingetorix surrendered and was put to death after Caesar's triumph (46).

Caes. *B.Gall.* bk. 7. C. Jullian, *Vercingetorix* (1921). C. E. S.

VERGILIOMASTIX, 'the scourge of Virgil', is a bombastic name given perhaps to any of the rampant critics of Virgil. See Servius ad *Ecl.* 2. 23; *Aen.* 5. 521; Ribbeck, *Proleg. ad Verg.*, ch. 8 (1866); Donatus, 16. 61-2 (E. Diehl, *Die Vitae Vergilianae u. ihre antike Quellen*, 1911). R. M.

VERGINIA was traditionally slain by her own father to save her from the cupidity of the decemvir Appius Claudius. This murder is said to have precipitated a revolution leading to the overthrow of the decemvirs (449 B.C.). The poetical details of this legend show that the story, although probably based on that of Lueretia, was not invented by jurists as a precedent for the protection of individual liberty, or by annalists desirous of explaining the fall of the decemvirs. The late connexion of the legend with the story of Appius Claudius' lust and tyranny is proved by the fact that the so-called plebeian heroes Verginius and Verginia in fact belonged to a family that was indisputably patrician.

C. Appleton, *Rev. hist. droit franç.* (1924).

P. T.

VERGINIUS FLAVUS, a famous Neronian teacher who had Persius for a pupil. His renown brought exile on him (*Tac. Ann.* 15. 71). Quintilian held his authority in great respect, mentioning him in several passages.

Teuffel, § 297. 9.

VERGINIUS, see also RUFUS (6).

VERNA, see SLAVES, para 8.

VERONA, a town on the river Athesis in Cisalpine Gaul, astride the routes to the Brenner Pass in fertile wine-producing country (*Verg. G.* 2. 94). Although probably founded by Raeti, it is first mentioned in history as a town of the Cenomani (Pliny, *HN* 3. 130; *Livy* 5. 35). Prior to Imperial times little is known of Verona except that it was Catullus' birthplace. A large, flourishing city, Verona had the title of *colonia* in A.D. 69 (*Strabo* 5. 212; *Tac. Hist.* 3. 8). Numerous Roman remains (including magnificent first-century amphitheatre, third-century walls, etc.) and the fact that Constantine (312), Theodoric (499), and the Lombards (568) thought it worth while to occupy it, demonstrate its importance.

A. M. Allen, *History of Verona* (1910); P. Marconi, *Verona Romana* (1938). For its Raetic origin see J. Whatmough, *Harv. Stud.* xlviii (1937), 181.

E. T. S.

VERRES, GAIUS, was a notorious governor of Sicily, chiefly known through the speeches of Cicero. His public career began in 84 B.C., when he was quaestor to the Marian consul Cn. Papirius Carbo. He deserted Carbo in order to attach himself to Sulla, who gave him some land at Beneventum. In 80 he went to the East as *legatus* and later *legatus pro quaestore* of Dolabella, the governor of Cilicia. Verres and his chief co-operated in plundering the provincials, but when Dolabella was prosecuted on his return in 78 Verres secured his own safety by giving evidence against him. In 74 he obtained the praetorship by bribery, and made use of his office to enrich himself. In his governorship of Sicily (73-70) he

showed, according to Cicero, a complete disregard of the rights both of the provincials and of Roman citizens. On his return he was prosecuted for *res repetundae* before a court consisting of senators. Though Verres secured the support of Q. Hortensius, Cicero produced such strong evidence that he abandoned his defence and went into exile at Massilia. Cicero's 'Actio Secunda' was therefore never delivered. Verres seems to have spent the rest of his life at Massilia. In 43 he was proscribed by Antony, who is said to have coveted the works of art which he had stolen from the provincials.

G. H. S.

VERRIUS FLACCUS, see FLACCUS.

VERTUMNUS, an Etruscan god (*Varro, Ling.* 5. 46; *Prop.* 4. 2. 4, who says he came from Volsinii). A statue of him stood in the *Vicus Tuseus*, and Propertius (*ibid.* 13 ff.) indicates that the tradespeople there made frequent offerings to him. Nothing is known of his functions; his name may be connected with the Etruscan family *ultimni*, latinized Veldumnus. The Romans etymologized it from *uertere*, e.g. *Prop. ibid.* 21 ff.

See Wissowa in Roscher, s.v.

H. J. R.

VERULAMIUM, town in Britain, near modern St. Albans (Herts.). According to Tacitus (*Ann.* 14. 33), it was sacked by Boudicca in A.D. 61. He speaks of 'municipium V.' which has been almost universally, though rashly, interpreted as a technical term of status; Verulamium was, however, certainly a cantonal capital (*Catuvellauni*). A shrine of the martyr St. Alban (date uncertain), close by, was visited by St. Germanus in 429 (*Script. rer. Meroving.* vii. 262).

Excavations carried out since 1930 have added much knowledge. It appears that a Belgic city, defended by forest and on its open side by slight earthworks, was built c. 15 B.C. by Tasciovanus on a plateau above the valley of the Ver (not therefore Cassivellaunus' *oppidum*). After the Roman conquest the site was moved to the river valley, and after Boudicca's sack (61) an area of c. 150 acres was enclosed by an earth-bank. This was succeeded c. 130 by a new walled town c. 200 acres in area, on a slightly different site. Portions of the Forum, two triumphal arches, a theatre, a gymnasium(?), temples, houses, and shops have been uncovered, all built c. 130-70. In the third century the town decayed (possibly London diverted its trade) and by 300 bore some resemblance to a bombarded city (*Verulamium*, 28). A thorough reconstruction c. 300 restored prosperity for a time, but the population declined in numbers and in standard of life, until after the English conquest the site was waste.

VERUS, LUCIUS (L. Ceionius Commodus) (A.D. 130-169), son of L. Aelius (q.v. 4), was born at Rome, and on Aelius' death passed to the Aurelian family, being adopted by Antoninus Pius (q.v.) in 138, and brought up with M. Aurelius (q.v.), who directed his studies. He assumed the *toga virilis* in 145, became quaestor in 153 and consul in 154, with a second consulship in 161. Thus, on Pius' death he lacked all the special standing of his adoptive 'twin' Marcus Aurelius, ten years his senior; but Marcus at once created him (as 'L. Aurelius Verus') Augustus and colleague with tribunician power, and married him to Lueilla (q.v.) in 164. He was weak and indulgent—defects which made his administration (see AURELIUS) an embarrassment to his partner, and his death perhaps a relief to the Empire.

VESPAE IUDICIUM COCII ET PISTORIS IUDICE VULCANO, contest between baker and cook in ninety-nine hexameters by a travelling rhetorician Vespa. The poem shows no trace of Christianity and is familiar with mythology and Roman folk-lore, but cannot be older than the third century A.D. because of its prosody (*in caccabō, quāsi, Meleāger*). Metre is pleasing, although final syllable is admitted in the fifth rise (e.g. 'potest superiorum').

Bachrens, *PLM* iv. 326.

O. S.

VESPASIAN (TITUS FLAVIUS VESPASIANUS), emperor A.D. 69–79. Born A.D. 9, at Sabine Reate, the son of a tax-gatherer, Flavius Sabinus, he was *tribunus militum* in Thrace, *quaestor Cretae et Cyrenarum*, aedile in 38, praetor in 40. As *legatus* of Legio II Augusta, he received the *triumphalia ornamenta* for his services in Britain (44). In 51 he was *consul suffectus*, and subsequently (? c. 63) proconsul of Africa. In 66 he accompanied Nero to Greece, but fell into disfavour because he went to sleep at one of the Emperor's recitals. Nero, however, suddenly appointed him to quell the Jewish rebellion (late 66). On 1 July 69 the legions at Alexandria hailed Vespasian as Emperor, and their example was followed on the 3rd by those in Judaea. On 22 December, with the death of Vitellius, the Senate formally appointed Vespasian emperor.

2. The new emperor was well fitted to carry out the heavy task of reconstruction which lay before him. The keynote of his character was a sturdy common-sense which despised all ostentation. A typical countryman, he was blunt, straight-forward, and honest, with a strong and somewhat coarse sense of humour. His immediate task was to restore public confidence and to repair the damage of the civil wars. Titus, the Emperor's eldest son, was left to carry on the war in Palestine, and two competent generals, Annius Gallus and Petilius Cerialis, were appointed to suppress the revolt of Civilis (q.v.). By the end of 70 Vespasian could boast that there was peace on all frontiers, and in 71 the temple of Janus was ceremonially closed. In the same year Vespasian and Titus celebrated a magnificent triumph for the capture of Jerusalem.

3. The new era of peace and reconstruction was ushered in by the rebuilding of the Capitoline Temple, which was started in 70. Next, Vespasian turned to the pressing problem of imperial finance. He stated himself that forty thousand million sesterces (c. £400,000,000) were needed to make the State solvent. Retrenchment alone was not sufficient. The tributes of the provinces generally were raised and strictly exacted, public land unlawfully occupied was resumed for the State, and various new taxes were devised. Vespasian incurred a reputation for parsimony as a result of these measures, but the whole Empire benefited. In Rome itself magnificent buildings, such as the Temple of Peace and the Colosseum, were erected, while money in the provinces was freely spent on building, road-making, and the encouragement of art and education.

4. It was largely for financial reasons that Vespasian assumed the censorship with Titus in 73, but he also honoured the most distinguished of the Italians and provincials by means of *adlectio* (q.v.), and so filled up the numbers of the Senate, depleted by civil war and persecution. He thus obtained valuable recruits for the administration, and from this time dates the gradual substitution of *equites* for freedmen in the imperial government. In keeping with this liberal outlook was his edict conferring Latin rights on all the towns of Spain. The founding of numerous colonies in backward provinces furthered romanization, and Vespasian's general policy was to encourage municipal life. He also exerted the strictest control over governors and officials, and severely punished maladministration.

5. In foreign policy Vespasian aimed at consolidation and strengthening of existing frontiers. The number of legions was maintained at twenty-eight. In the East Vespasian substituted three armies with a total of six legions in Syria, Cappadocia, and Judaea, for the old four-legion army in Syria. In 72 the kingdoms of Commagene and Armenia Minor were annexed. In Britain the subjugation of Wales was completed, and the Roman frontier was advanced into Scotland (*see* Cerialis, FRON-TINUS, AGRICOLA). In Germany the frontier was pushed forward by means of roads and forts, to strengthen the angle between the Upper Rhine and the sources of the Danube (73–4).

6. Vespasian made little direct change in the constitution. The position assigned to Titus of virtual partnership in the administration was of especial importance. Titus commanded the praetorians and performed many of the tasks of government. Vespasian thus assured the succession, and he made it plain that Titus was to be succeeded by Domitian. Together with Titus Vespasian held the ordinary consulship in every year except 73 and 78; this was probably due to a desire to enhance the dignity of the new imperial house. The Senate was formally consulted on all occasions, but the tendency was towards autocracy. This was resented by certain of the Stoic aristocracy, who, in alliance with the Cynics, attacked in particular the arrangements for the succession. The tolerant Vespasian was forced eventually to execute their leader, Helvidius Priscus (q.v.), and to exile, and in one or two cases kill, Cynic philosophers. The only direct plot was that of A. Caccina and Eprius Marcellus in 79, which Titus summarily suppressed.

7. Vespasian died in 79, and was deified by the Senate. His reign had restored the prosperity of the Roman world and brought back sanity into the Empire.

VESTA, VESTALS. Vesta is the Roman hearth-goddess, the etymological equivalent of Hestia (q.v.), as she is in cult. She was prominent in family worship (*see* WORSHIP, HOUSEHOLD; PENATES), and is sometimes depicted in *lararia* (as Boyce, *Am. Ac. Rome* xiv, plate 24) with her favourite beast, the ass ([Verg.] *Copa*, 26). Not much is known of her domestic ritual, but see Cato, *Agr.* 143. 2.

For her as for Hestia it is evident that the royal hearth-cult must have been supremely important in early times. Hence it is very natural that her State worship (*Vesta publica populi Romani Quiritium*) should not be in a temple but in a round building near the Regia, doubtless an imitation in stone of the ancient round hut (the modern *capanna*). This contained no image (Ovid, *Fasti* 6. 295–6), but a fire which never was let out ('ignis inextinctus', *ibid.* 297; 'ignem illum sempiternum', Cicero, *Dom.* 144). Curtained off from the rest of the building was the *penus* (Festus, p. 296. 12 Lindsay), which was opened for some days at the Vestalia, 9 June, a time of ill-omen, for the building was cleaned then and the days were *religiosi* and *nefasti* till the dirt had been disposed of on 15 June, *Quando ST(arcus) Delatum Fias*). The *penus* contained various sacred objects, but as none but the Vestals might enter it, their nature was never known but widely guessed at (e.g. Livy 26. 27. 14; cf. Dion. Hal. *Ant. Rom.* 2. 66. 3). This cult, though old (founded by Numa, Dion. Hal. *ibid.* 1 and other authors), was not primitive, for the Forum is not part of the oldest Rome. Preceding it was the cult of

Caca, on the Palatine (Servius on *Aen.* 8. 190), of like character.

Vesta was served by the Vestal Virgins, representing the daughters of the royal house (see Rose in *Mnemos.* liv (1926), 2 ff.). They are said to have been originally two, then four, but in historical times normally six (Plut. *Numa* 10). They served originally for five years (Dion. Hal. 1. 76. 3), in historical times for thirty, during which time they must remain virgin, but after which they might marry, though few did, as it was supposedly unlucky (Plut. *ibid.*). Candidates must be between the ages of six and ten, and were chosen by the *Pontifex Maximus*, with the formula *te, Amata, capio*, from a total of twenty (if so many offered). They were not necessarily patricians. They received numerous honours, including emancipation from their fathers' tutelage, but were under the control of the *Pontifex*, who could scourge any who let the sacred fire out or committed other offences short of unchastity; for that the culprit was entombed alive (an obvious ordeal; Vesta might set her free if she was innocent). See Plut. *loc. cit.*; Gellius 1. 12.

Not much is known of the ritual, save that it was old-fashioned, not using water from mains and relighting the fire, if ever it went out, by friction of wood (Wissowa, 254). The Vestals wore the old sacral dress otherwise used by brides only. See MIRACLES, ATRIUM VESTAE.

Wissowa in Roscher's *Lexikon*, s.v.

H. J. R.

VESTRICIUS SPURINNA, a distinguished military commander, praised by Pliny for lyrics in Greek and Latin (*Ep.* 2. 7; 3. 1): see Schanz-Hosius, § 416.

VESUVIUS, a famous volcano in central Italy, long dormant (Diod. Sic. 4. 21. 5), whose crater, where wild vines grew, served as a fortress refuge for Spartacus (q.v.). Strabo (5. 8) describes the slopes as well cultivated, the summit as flat and barren. After a preliminary earthquake on 5 Feb. A.D. 63 (Seneca, *QNat.* 6. 1; cf. Tac. *Ann.* 15. 22), which severely damaged Pompeii and Herculaneum, with slighter effects at Naples and Nuceria, a very violent eruption took place, after warning rumblings, on 24-5 Aug. 79, in which Pliny the Elder perished, as his nephew describes (Plin. *Ep.* 6. 16. 20). This buried Pompeii in sand, stones, and mud, Herculaneum in liquid tufa, Stabiae in ashes. Further eruptions are recorded in 202 (Dio Cass. 77. 2), 472 (*Chron. Marcell.* A.D. 472), and 512 (Procop. *Goth.* 4. 35). The existing mountain is a huge crater, of which one side and part of the floor alone remain, and are dwarfed by a large central cone (Vesuvio, 1,303 m.).

VETERA, near Xanten, on the Rhine opposite the Lippe, was one of the chief bases in the Augustan invasions of Germany, and c. 16-14 B.C. became the permanent headquarters of two legions. Their fortress was rebuilt in A.D. 43, and a magnificent headquarters building or praetorium and legate's palace belonging to it have been excavated. Around it a large civil settlement grew up. All was destroyed by Civilis in 70, and a new fortress for a single legion was erected on a fresh site. In 100 Trajan built a fortified military colony nearby, but the legion was maintained here until the end of the Roman Empire. O. B.

VETERINARY SCIENCE, see HIPPIATRICI, MULOMEDICINA, SURGERY, para. 10.

VETTIUS (1) PHILOCOMUS, a friend of Lucilius, on whose satires, like Laelius Archelaus, he lectured and commented (Suet. *Gram.* 2).

VETTIUS (2) SCATO, PUBLIUS, an Italian general in the Social War, who had the distinction, in 90 B.C., of defeating both the Roman consuls (L. Caesar and P. Rutilius Lupus) in the same year.

VETTIUS (3), LUCIUS, a professional informer, gained notoriety in 62 B.C. by charging Caesar with complicity in the Catilinarian Conspiracy (Suet. *Iul.* 16). In 59 he professed to have knowledge of a conspiracy to assassinate Pompey. The plot was revealed through the younger Curio, in whom Vettius confided. On cross-examination before the Senate, and before Caesar in the forum, Vettius implicated several well-known members of the senatorial party; shortly afterwards he died in prison in suspicious circumstances. It remains unknown whether the plot was genuine, and, if so, who was behind it. It may merely have been fabricated by Vettius for his own ends.

Cic. *Att.* 2. 24, *Vatin.* 24-6, *Sest.* 132; Suet. *Iul.* 20; Dio 37. 41, 38. 9; Appian, *BCiv.* 2. 12; Plutarch, *Lucullus*, 42. J. M. C.

VETTIUS (4) BOLANUS commanded a legion under Corbulo in Armenia (A.D. 62), and was sent by Vitellius as legate of Britain (69-71), where he failed to keep firm control of the Brigantes. He was proconsul of Asia, and raised to the patriciate perhaps by Vespasian.

Statius, *Silv.* 5. 2. R. G. Collingwood, *Roman Britain* (1937), 107. A. M.

VETTIUS (5) VALENS, astrological writer of the second century A.D.

Ed. W. Kroll, 1908.

VETTIUS (6) AGORIUS PRAETEXTATUS (d. A.D. 384) was a resolute opponent of Christianity, who held many high offices in the State, both priestly and administrative. We have from him a notable epitaph, with a long poem in iambic *senarii*, showing how a synthesis of pagan cults was attempted in face of the common enemy, Christianity. He prepared a Latin translation of Themistius' adaptation of Aristotle's *Categories*. He also did something for the purification of the texts of various Latin authors. His career was in many ways parallel to that of his contemporary Symmachus (q.v. 2).

CIL vi. 1779 (= Dessau, *ILS* 1259); *Carm. Epigr.* no. 111. A. S.

VETTIUS, see also JUVENCUS.

VETUS, see ANTISTHIUS.

VEXILLUM, in the Republican army, was the standard of the legionary cavalry. Under the Principate it was sometimes the standard of the auxiliary *alae*, but more commonly was used as the standard of a detachment or of a corps of veterans after their period of service under the *aquila* had been completed. Hence it came to mean a detachment (*vexillatio*) of infantry, and in the Constantinian army of cavalry, or a body of veterans (*sub vexillo tendentes*).

H. M. D. Parker, *The Roman Legions* (1928); A. von Domaszewski, 'Die Fahnen im römischen Heere', *Abhandlungen des archäologisch-epigraphischen Seminars der Universität Wien*, 1885, 1-80; M. Rostovtzeff, 'Vexillum and Victory', *JRS* 1942. H. M. D. P.

VIA AEMILIA, named after its builder M. Aemilius Lepidus, cos. 187 B.C. (Livy 39. 2), and subsequently repaired by Augustus and Trajan, ran from Ariminum 176 miles north-west to Placentia (with later extensions to Augusta Praetoria, to Segusio, to Aquileia, all somewhat inaccurately called Via Aemilia). The Aemilia helped to romanize Cisalpine Gaul rapidly. It touched every important city of the district (still called Emilia) except Ravenna.

M. Aemilius Scaurus, censor 109 B.C., built another Via Aemilia prolonging the Via Aurelia (q.v.) to Dertona and Vada Sabatia.

Strabo 5. 217. N. Lamboglia, *Athenaeum* 1937

E. T. S.

VIA APPIA, the Romans' principal route to south Italy and beyond (Strabo 6. 283). Appius Claudius Caecus, censor 312 B.C., built and named the 132-mile section from Rome to Capua (Livy 9. 29). It had probably been extended by 244 through Beneventum, Venusia, and Tarentum to Brundisium (234 miles). Paving of the Appia commenced in 295 and apparently was complete by Gracchan times (Livy 10. 23; Plut. *C. Gracch.* 7; reject Diod. 20. 36). In Imperial times a praetorian *curator* kept the road in order. Its exact line can be traced most of the way to Beneventum, but not beyond, since the shorter route to Brundisium via Canusium and Barium, which Horace (*Sat.* 1. 5. 77 f.) and later the Via Traiana used, led to neglect of the Appia. Between Rome and Beneventum, however, one can still see roadside tombs (e.g. the Scipios', Caecilia Metella's), the ancient pavement (c. 20 ft. wide at *Itri*), a rock-cutting (at Tarracina), embankments (e.g. at Aricia and *Itri*), bridges (three between Caudium and Beneventum), and milestones. One of these proves that, even though travellers preferred the 19-mile-long ship canal, the Appia from its earliest days crossed the Pomptine marshes (q.v.) (C. Hülsen, *Röm. Mitt.* 1889, 83 f.). Various branches, e.g. the Via Popillia to Rhegium, were also somewhat inaccurately called Via Appia.

T. Ashby, *Roman Campagna* (1927), 174 f.

E. T. S.

VIA AURELIA, important highway (Cic. *Phil.* 12. 9) of unknown date, but presumably built before its extension, the Via Aemilia Scauri of 109 B.C. It was 175 miles long, running from Rome north-west to Alsium, thence along the Etruscan coast to Vada Volaterrana. Later prolongations to Dertona and to Arelate are also called Via Aurelia in the Itineraries.

D. Anziani, *Mélanges d'arch.* 1913.

E. T. S.

VIA DOMITIA, a very ancient route from the Rhône to Spain, improved by the Romans apparently before the death of Polybius (124 B.C.; cf. 3. 39. 8), but owing its name to the conqueror of Narbonensis, M. Domitius Ahenobarbus (121). It was repaired by M. Fonteius (c. 75), and under the Empire by Tiberius (A.D. 31-2—earliest inscribed milestones), Claudius (41), Antoninus Pius (145), Maximinus (235-8), and Diocletian (284-305).

Grenier, *Manuel* ii. 26-9.

C. E. S.

VIA EGNATIA, Roman road built c. 130 B.C. from the Adriatic coast to Byzantium; named after Egnatia on the Apulian coast, where the corresponding road from Rome to Brindisi touched the sea, the Via Egnatia was the main route from Rome to the East. Two branches of the road, starting respectively from Dyrrhachium and Apollonia, united in the Skumbi valley, crossed the Balkan range by Lake Lychnidus (*Ochrida*), and descended to Thessalonica via Heraclea, Eordaea, Aegae, and Pella, whence it followed the Thracian coast to Byzantium. It followed the line of a trade-route through the Balkan range which Corinth had exploited.

N. G. L. H.

VIA FLAMINIA, the great northern highway of Italy, built 220 B.C. by C. Flaminius, when censor (Livy *Epit.* 20; reject Strabo 5. 217). It was 209 miles long from Rome via Narnia, Mevania, Nuceria, and Helvillum to Fanum Fortunae, where it turned north-west and followed the Adriatic coastline via Pisaurum to Ariminum. After A.D. 69 the section between Narnia and Nuceria was provided with an alternative, six-mile longer route via Interamna, Spoletium, and Fulcinium. From its earliest days the Flaminia was much frequented; its importance was, if anything, enhanced in late Imperial times when the imperial court was at Milan or Ravenna. Large towns grew up along its tomb-lined course (Livy 22. 11; Cic. *Phil.* 12. 9; Tac. *Hist.* 1. 86; 2. 64; Juv. 1.

61. 171). The road was often repaired: by C. Gracchus, Augustus (parts of whose bridge at Narnia, and an honorific arch at Ariminum survive), Vespasian (whose tunnel through Intercisa Pass still exists near Calles), Trajan, Hadrian. Various branches, e.g. from Nuceria to Ancona, were also inaccurately called Via Flaminia.

T. Ashby-R. A. L. Fell, *JRS* 1921.

E. T. S.

VIA LATINA, perhaps the earliest of the highways radiating from Rome, is not named after its builder—a fact suggesting high antiquity. It ran south-east and by 334 B.C. probably already reached Cales (q.v.). Pyrrhus and Hannibal both used it, presumably because it followed an easier line than the Appia. After surmounting the outer rim of the Alban Hills at Algidus, the Latina followed the Trerus valley through the Hernici country where the Via Labienna joined it near Anagnina. It crossed the Liris at Fregellae, then proceeded via Aquinum, Casinum, Venafrum, Teanum, and Cales across the Volturnus to Casilinum where it merged with the Appia. (A later short cut via Rufrae avoided Venafrum.) The 135-mile Latina was much frequented (Strabo 5. 237); important branches ran from it into Samnium. Its exact line can still be traced without much difficulty.

T. Ashby, *Roman Campagna* (1927), 153 f.

E. T. S.

VIA POSTUMIA, north Italian highway centring on Cremona, whence it ran in one direction through Dertona to Genua and in the other through Mantua to Aquileia. (There was also a branch from Bedriacum through Verona to the Brenner Pass.) This road, built by Sp. Postumius Albinus, cos. 148 B.C., consolidated the conquest of Liguria. The Itineraries regard it as part of the Via Aurelia, and ancient authors virtually ignore it.

Dessau, *ILS* 5806, 5946; Tac. *Hist.* 3. 21.

E. T. S.

VIA SACRA (or **SACRA VIA**), the street connecting the *Forum Romanum* with the Velia, affording access to the Palatine. The name probably comes from the hallowed buildings which the street passed, connected with the shrines of Vesta and the Regia. The earliest known monument at its end is the *fornix Fabianus* (*JRS* 1922, 27-8) of 121 B.C., whence the road straggled towards the Velia, passing many private houses and shops, its pavement being still visible. In A.D. 64 Nero planned the street anew as a noble colonnaded avenue flanked by large bazaars for jewellers, florists, and luxury-traders. The northern bazaar was smaller and was obliterated by the basilica of Maxentius; the southern, though curtailed by Hadrian's extensions of the Atrium Vestae (q.v.), occupied the considerable space between that house and the Arch of Titus.

I. A. R.

VIA VALERIA, important highway running north-east from Rome to Aternum on the Adriatic. Its first 18 miles comprised the very ancient Via Tiburtina. This was prolonged, possibly c. 300 B.C., to Carsoli, Alba Fucens, and apparently Cerfennia (Livy 10. 1. 3; Diod. 20. 90, emending *Zepevia*. Livy 9. 43 records a road-building Valerius, censor 306 B.C.). This extension later became a paved highway, perhaps in the censorship of M. Valerius Messalla (154 B.C.), and was the Via Valeria proper (cf. Strabo 5. 238). Finally the Emperor Claudius continued the road as the Via Claudia Valeria from Cerfennia to the Adriatic (R. Gardner, *BSR* ix. 1920). Pliny's estimate of 136 miles as the breadth of Italy is based on the Valeria (*HN* 3. 44).

E. T. S.

VIATORES were public bailiffs, mostly freedmen or of low birth, whose chief business was to run errands for the magistrates and summon senators to meetings. They also seized confiscated goods, made arrests, and executed the commands and sentences issued by their respective

magistrates. They formed a corporation divided into several *decuriae* according to the rank of the magistracies (the first was therefore the *decuria consularis*). Municipal magistrates also employed *viatores* chiefly to collect taxes.

Mommsen, *Röm. Staatsr.* i². 360 ff.

P. T.

VIBIUS (1) **MARSUS**, GAIUS (*cos. suff.* A.D. 17), legate of Germanicus in the East, proconsul in Africa (27-30); accused of *maiestas*, he narrowly escaped death (37). Legate of Syria (42-5), he was hostile to King Agrippa.

PIR, V 388; R. S. Rogers, *Criminal Trials under Tiberius* (1935), 162. A. M.

VIBIUS (2) **RUFUS**, GAIUS (*cos. suff.* A.D. 16), a declaimer of Tiberius' reign, married Cicero's widow. His arguments are often cited in the elder Seneca's *Controversiae* (e.g. 2. 1. 2 and 28; 2. 3. 8; 2. 6. 10; 7. 3. 4; 9. 2. 2).

VIBIUS (3) **CRISPUS**, QUINTUS, a dangerously persuasive *delator* with a pleasant style of oratory (Quint. *Inst.* 10. 1. 119; 12. 10. 11; Tac. *Ann.* 14. 28; *Hist.* 2. 10; 4. 41 and 43; *Dial.* 8 and 13.)

VIBIUS (4) **MAXIMUS**, GAIUS, *praefectus coh. III Alpinorum* in Dalmatia A.D. 93 (*CIL* iii. 859), prefect of Egypt in 104, was a friend of both Martial (11. 106) and Statius, whose *Silv.* 4. 7 was written in his honour. Its close suggests that V. rivalled the terseness of Sallust and Livy in a Universal History.

Peter, *HRRel.* ii, p. clxxi.

J. W. D.

VIBIUS, see also PANSA, SABINA, TREBONIANUS.

VICA POTA, a goddess, whose shrine lay on the Vclia (Livy 2. 7. 12). Though it existed in his time, her functions were unknown, some explaining her as Victory (q.v.; *uincere, potiri*; Cicero, *Leg.* 2. 28), some as goddess of food and drink (*uictus, potus*; Arnobius, *Adv. Nat.* 3. 25).

H. J. R.

VICARIUS. During the first two centuries A.D. *vicarius* meant a substitute for an absent or deceased provincial governor. In the third century *vicarii* were equestrian procurators who were specially appointed by the emperor to administer provinces in place of the regular senatorial governors. When Diocletian divided the Empire into dioceses, each was entrusted to a *vicarius* with the exception of Italy, which had two *vicarii*. (See DIOECESIS.)

H. M. D. P.

VICESIMA HEREDITATUM, see FINANCE, ROMAN, para 4.

VICOMAGISTRI were presidents of sub-districts (*vici*) in town or city wards (*regiones*), known to have existed in Rome and her colonies under the Republic (*CIL* vi. 2221), and charged with the upkeep of local cults and the presidency of religious festivals. Examples also occur in Italian communities at Delos (*BCH* xxxvi. 154 ff.). These men were free-born, but of low social standing, and their organization could be used politically. It was in fact misused and quashed in 64 B.C. (Cic. *Pis.* 4. 9), revived in 58, to Cicero's disgust (*Red. Sen.* 13. 33; *Sest.* 15. 34; 25. 55), and perhaps again abolished by Caesar (Suet. *Iul.* 42. 3). As revived by Augustus in 7 B.C. (Dio Cass. 54. 2: *CIL* vi. 343, 2222) and earlier (op. cit. 449, 452), the *vicomagistri* furnish an example of his subtle transformation of Republican institutions. They were connected with his creation of Fourteen Regions (see REGIO) and each *vici* elected four. Their cult of the *lares compitales* now included the *lares Augusti* and *genius* of the emperor (*ILS* 3612-21, Rome; *ILS* 3611, Naples; *ILS* 3622, Verona). Municipal duties included assistance with the *census* (Suet. *Aug.* 40) and fire-fighting until A.D. 6. Under Hadrian two *curatores*, a *denuntiator*, and four *magistri* went to each *vici*, all

now freedmen and acting under the *praefectus vigilum* (*CIL* vi. 975). In Pliny's day (*HN* 3. 9. 13) there were 1060 for the 265 *vici* of Rome, while in the fourth century there were 48 to each *regio*, excepting one of 49, making 673 in all.

I. A. R.

VICTIMARIUS. At a Roman sacrifice, the officiant did not, at least normally and in the classical epoch, kill the victim himself; this was done by a *victimarius* or sacred slaughterman. These formed a *collegium* in Imperial times, attendant (*CIL* vi. 971) on the emperor, priests, and magistrates.

H. J. R.

VICTORIA, the Roman equivalent of Nike (q.v.). There is no evidence that she is anything more, mentions of an early cult of Victory being referable to Vacuna or Vica Pota (qq.v.; Dion. Hal. *Ant. Rom.* 1. 15. 1; Asconius, *Pis.*, p. 13. 15 Clark). She is associated in cult with Jupiter (Victor), as in the *acta Arualium*, p. cxviii Henzen, oftener with Mars, as *ibid.*, p. clxv, also with other deities. She was worshipped by the army, as was natural (Domaszewski, *Rel. des röm. Heeres* (Westd. Zeit. 1895), pp. 4 ff.), and hence is given surnames associating her with particular legions and more commonly still with emperors (list in Roscher, vi. 299; cf. J. Gagé, *Rev. Arch.*, 5th Ser., xxxii (1930), 1 ff., *Rev. Hist.* clxxi (1933), 1 ff.). Her temple on the Palatine dates from 294 B.C., see Platner-Ashby, p. 570. Her most famous monument was perhaps her altar in the senate-house, put there at the beginning of the Empire, removed under Constantius, replaced by the pagan party in Rome, removed again by Gratian in 382, replaced for a short time by Eugenius and perhaps once more by Stilicho, and finally vanishing with the other vestiges of pagan cult (Ambrosius, *Epp.* 17; 18; 57. 6, cf. Paulinus, *Vit. Ambros.* 26; Symmachus, *Relat.* 3; Claudian, 28. 597).

See Latte in Roscher, s.v.

H. J. R.

VICTORIATUS, see COINAGE, ROMAN, paras. 5 and 7.

VICTORINUS (1), GAIUS MARIUS (4th c. A.D.), was the author of philosophical (Neoplatonic), rhetorical, and grammatical works. His reputation was such that a statue in his honour was set up in the forum Traianum. After becoming a Christian, he wrote theological treatises. Most of his *Ars grammatica* (ed. Keil, *Gramm. Lat.* vi. 3-184) has been ousted in our manuscripts by the *De metris* of Aphthonius (q.v.). His translations of Plato, Aristotle, and Porphyrius are lost, as is his commentary on Cicero's *Topica*; but his *explanations* of the *De inventione* of Cicero are preserved (ed. Halm, *Rhet. Lat. Min.* 155-304). His Christian writings (in Migne *PL* viii) included commentaries on some Pauline epistles, *De trinitate contra Arium*, *De óποοοις recipiendo*, and possibly a work against the Manichaeans.

Cf. Teuffel, § 408; Schanz-Hosius, §§ 828-31 a.

J. F. M.

VICTORINUS (2), MAXIMUS, grammarian of unknown date, author of a *De ratione metrorum* (ed. Keil, *Gramm. Lat.* vi. 216-28). Certain other treatises: *Ars Victorini*, *De metris*, *De finalibus metrorum* (ed. Keil, *Gramm. Lat.* 6. 187-205; 206-215; 229-224) are attributed in manuscripts to an unspecified 'Victorinus'.

Cf. Teuffel, § 408. 4-5; Schanz-Hosius, § 829.

J. F. M.

VI(C)TORIUS MARCELLUS, orator, to whom Quintilian dedicated his *Institutes* as a manual for Marcellus' son and for his own boy, of whom, however, he was bereaved before his work was half completed (*Inst.* 1, *prooem.* 6; 6, *prooem.* 1-16). Statius addresses *Silvae*, bk. 4, to him (*prooem.* 1).

J. W. D.

VICUS was the smallest agglomeration of buildings forming a recognized unit, either a country village or a ward of a town. The former were subordinate to the

pagus in which they were situated, the latter directly to the municipal authority. *Vici* could also exist on private or imperial estates withdrawn from the municipal system, where they depended upon the local landlord or imperial procurator. They were administered by *magistri* or *aediles* elected by the villagers. Priestly officials, *dicatores*, are also known. *Vici* in towns, too, had their *vicomagistri* (q.v.). Those of Rome, revived by Augustus, had charge of the street shrines, and for a while of the fire-brigade. A *vicius* could be a *praefectura* (q.v.) but was normally subordinate to an intermediate authority.

For bibliography see under *MUNICIPIUM* (REPUBLIC).

A. N. S.-W.

VIENNA, town in Gallia Narbonensis, modern *Vienne*; capital of the Allobroges. Perhaps created *colonia Latina* by M. Antonius (43 B.C.); given probably by Gaius the title of *colonia civium Romanorum*. In the third century A.D. it possessed *ius Italicum*. In 69 it narrowly escaped destruction from Vitellius' army, encouraged by its jealous neighbour Lugdunum. A large straggling town with Augustan *enceinte* is partially preserved. Its most notable surviving building is the temple of Rome and Augustus, enlarged and rededicated by Tiberius. Like Lugdunum, it was an important seat of early Christianity.

GIL. xii, p. 217; Grenier, *Manuel* i. 323-8.

C. E. S.

VIGILES (νυκτοφύλακες). Except for the existence of *triumviri nocturni*, about whose function little is known, the city of Rome under the late Republic possessed neither fire brigade nor police force. After the fire of 23 B.C. Augustus established a fire brigade of 600 slaves commanded at first by the *aediles* but after 7 B.C. (when Rome was divided into 14 *regiones* and 265 *vici*, each with four *vicomagistri*) by the *vicomagistri*. After another serious fire (A.D. 6) Augustus effected a lasting reorganization. He created a corps of 7,000 *Vigiles*, all freedmen, who were organized in seven cohorts, each consisting of seven centuries, and each commanded by a tribune. Over the whole body was set a *Praefectus Vigilum*, who was appointed directly by the emperor; he was an *eques* and ranked below the *Praefectus Annonae* and *Praefectus Praetorio* (Dio Cass. 55. 26; Suet. *Aug.* 30). From Trajan's time he was assisted by a Sub-Prefect. To his original duties were added later those of a judge, and he presided over trials for incendiarism and petty larceny (*Digest* 1. 15. 3); in the third century A.D. the office, like that of *Praefectus Praetorio*, was held by eminent jurists.

Each cohort of *Vigiles* was responsible for two *regiones* of the city. The troops were quartered at first in private houses (Dio Cass. 57. 19. 6; cf. Suet. *Tib.* 37), but later had sub-stations, *excubitoria*, one in each *regio*. They were occasionally called on in emergencies to perform military duties, e.g. in A.D. 31, at the time of the arrest of Sejanus, when the loyalty of the praetorians was uncertain (Dio Cass. 58. 9-13), and in A.D. 69. In such emergencies they normally came, with their prefect, under the command of the *Praefectus Urbi*.

P. K. Baillie Reynolds, *The Vigiles of Imperial Rome* (1926).

J. P. B.

VIGINTISEXVIRI. This collective denomination—the reason of which is not quite clear—embraces twenty-six Roman civil magistratus minores who had no special official titles, being indicated only by their functions and number (*duoviri*, *tresviri*, *quattuorviri*). Some of them were endowed with particular juridical competence. Thus the *decemviri stlitibus iudicandis* were a special tribunal for lawsuits on freedom; from the time of Augustus they presided over the several sections of the centumviral College (see *CENTUMVIRI*). Another group were the four *praefecti (iure dicundo) Capuam Cumas*, exercising jurisdiction as delegates of the *praetor urbanus* in ten Campanian towns. The remainder had administrative functions:

the *tresviri (triumviri) monetales* (more precise title: *tresviri aere argento auro flando feriundo*), the masters of the mint; the *quattuorviri viis in urbe purgandis*, and the *duoviri viis extra urbem purgandis*, who provided for the maintenance of the streets in Rome and in the environs respectively; and finally the *tresviri capitales* responsible for prisons (*carceris custodia*) and executions. In their capacity as guardians of nocturnal peace they were also called *tresviri nocturni*. Under Augustus the number of these magistratus was reduced to twenty, six of them (four *praefecti Capuam Cumas* and *duoviri viis extra urbem purgandis*) having been abolished. Hence their new collective name: *vigintiviri*. One of these magistratus was, as it seems, a necessary preliminary to the quaestorship.

A. B.

VIGINTIVIRI, see *VIGINTISEXVIRI*.

VILICUS, see *COLONUS*.

VILLA was the Latin name for a rural dwelling associated with agriculture. The traditional Italian farm of this kind is described in detail by Varro (*Rust.* 1. 11-13) and Vitruvius (6. 6. 1) as a courtyard edifice comprising house, stables, and workshops, run by slave labour for the benefit of an urban proprietor. Such farms, however, were always matched by those of smallholders and yeomanry, and Campanian examples of both kinds have been studied (R. Carrington, *JRS* xxi. 110 f.) and may be compared with Istrian farms of the same type (Gnirs, *JÖAI* xviii (1915) Beiblatt 101). See *AGRICULTURE*. The residential villa, or country seat of the well-to-do, is a later development of the second century B.C., wherein are seen the first relations of architectural design to landscape or vistas and the development of large courtyard houses or seaside palaces.

In the provinces the development of country houses is primarily of the Imperial age, our knowledge of Republican examples being negligible. Local types of house undoubtedly existed, though understanding of their development is very uneven as between provinces. In Syria the age-old eastern type of courtyard house (*liwan*) existed side by side with smaller flat-roofed dwellings, while in Africa mosaics attest a two-story house based upon a corridor, with larger tower-like rooms at either end. This type of house occurs very widely throughout the north-west provinces on estates of medium size, while larger houses there follow the more Roman courtyard type or the open-fronted style associated with landscape architecture. In Britain and Belgica there were hybrids between large courtyard houses and the open-fronted corridor-house, while native tradition also survived in the so-called basilican house, a barn-like building of nave and aisles. Socially, most of the provincial villas known to us are the dwellings of large landowners or small-holders, and there is little trace of the Italian *latifundia*. In the north-west provinces economic life tended to concentrate in these, to the exclusion of the towns, wherein is to be sought one reason for the rapid disappearance of Roman tradition under the impact of barbarian invasions.

J. A. B.

VILLANOVANS. 'Villanovan' is not an ancient word, and it is only by a convention that it is applied to a particular period and people. It is derived from the

modern name of a small town near Bologna. Here in 1853 was found an early Iron-Age cemetery of cremation. Subsequent excavation has shown Villanova to be only one of many similar cemeteries in the provinces of Bologna, Faenza, Forlì, and Ravenna. The dates are of all stages between 1000 and 500 B.C. Three periods, termed First Benacci, Second Benacci, Arnoaldi, have been defined. The Benacci sites (roughly 1,000 to 700 B.C.) have their equivalent in the contemporary culture of Etruria and Latium. It is therefore inferred that all three regions were occupied by kindred peoples, so that the name of *Northern Villanovans* is given to the Bolognese, while the occupants of Latium and Etruria are called *Southern Villanovans*. Into Etruria, however, had come by the eighth century a new people, the Etruscans (q.v.), and to disentangle their work and products from those of the native Italians has always been a task of great complexity. Bologna has furnished a valuable key, for archaeology has proved conclusively that the Etruscans did not come to Bologna before c. 500 B.C. Consequently everything Bolognese before 500 is likely to be definitely Villanovan and not Etruscan. Similarly, everything in Latium and Etruria which resembles the Bolognese must be Villanovan. Presumably the Villanovans represent the Q-branch of the Italic peoples; they can be distinguished from their neolithic predecessors as well as from the P-branches of the Italics by their custom of cremation of the dead (cf. s.v. UMBRIANS). Like the people of the Terremare (q.v.) they came in as invaders from north of the Alps, and they are regarded by Pigorini's school as direct descendants of the Terramaricoli. This theory is unprovable. Most recent writers prefer to regard the Villanovans as newcomers, representing an invasion of about the eleventh century. A large body of the immigrants settled permanently round Bologna, the rest crossed the Apennines. In Etruria they formed the core of a State presently to be ruled by Etruscans; in Latium they were the forefathers of the Latins. They appear as a vigorous, inventive, hard-working people. Their earliest settlements, in the Etrurian district of Tolfa and Allumiere and in the Alban hills, only slightly antedate the first graves in the prehistoric cemetery of the Forum at Rome. It must be noted, however, that mingled with the cremation-graves in the Forum are inhumation-graves of equal antiquity, which may reasonably be attributed to the Sabines (cf. the literary tradition of the founding of Rome). Models of the dwelling-houses of these first Romans occur in some graves. They were round huts, built of wattle and daub, and roofed with carved beams. The Rome not only of Romulus and Numa but of several centuries later must have consisted mainly of such huts. Traces of similar buildings have been found also at Bologna. But the dwellers in these huts were already finished craftsmen. Their workmanship can best be studied at Bologna, because that region was wholly free from any Mediterranean influences. The First Benacci period there is remarkable for its fine bronzework (weapons, armlets, fibulae, horse-gear, and decorated belts); the second for its masterpieces in hammered vessels. Similar work is found in Etruria, which raises the question of priority. At Bologna there is no trace of oriental commerce, but the frequent amber and certain foreign swords indicate the use of transalpine trade-routes. In the Arnoaldi period (700-500 B.C.) there are some indications of trade with the Etruscans, but even the Etruscan foundation of the neighbouring Felsina (500 B.C.) had little effect on the native Villanovan culture, which was only destroyed in the fourth century by the Gauls.

VILLIUS, LUCIUS, as tribune of the plebs, in 180 B.C. carried a law (*Lex Villia annalis*) determining the interval which must elapse between tenure of one office and candidature for a higher one, thereby establishing a *certus ordo magistratum*, the terms of which (with slight modifications by Sulla) remained in force until the early Imperial age.

VINDEX, GAIUS JULIUS, of regal Aquitanian family, son of a Roman senator (who had presumably been elected by Claudius), rebelled against Nero (early spring, A.D. 68) when legate of Gallia Lugdunensis, for unknown reasons. He sought to inveigle other provincial governors, vainly, except Sulpicius Galba (q.v. 1), whose claims to the throne he promised to support. Masses of native Gauls, the notables, and their clients joined Vindex. The city of Vienna in Narbonensis declared for him, but the Roman veteran colony of Lugdunum refused to admit him. In the meantime, Verginius Rufus (q.v. 6) mustered the army of Germania Superior and marched to crush the rising. Vindex was defeated and killed in a great battle at Vesontio.

Fluss, *PW*, s.v. 'Julius (534)'.

R. S.

VINDICATIO was the action by which a quiritary owner (see **DOMINIUM**), if deprived of the possession of an object, demanded its restitution from the actual possessor. The term signified in the early Roman process the formal assertions of the right of ownership made by both the parties. The plaintiff in *rei vindicatio* had to prove that he had acquired ownership according to the principles of *ius civile*, and if he had acquired it from another person, that the latter's title was equally valid, which might be difficult to prove. These difficulties could be avoided by proving that he possessed the object at issue in conditions which sufficed for *usucapio* (see **DOMINIUM**, **POSSESSIO**). In this case he could make use of another action, called *Publiciana*. The defendant, when condemned, had to restore the object together with its increments; the possessor *mala fide* was more severely treated (see **POSSESSIO**). In the formulary process, however, the winning plaintiff was compelled to content himself with the value of the vindicated object, if the defendant refused to return it; the value was fixed according to the estimate made by the plaintiff under oath.

A. B.

VINDOBONA, now *Vienna* on the Danube, was originally inhabited by a Celtic population. It was the camp, first of *ala I Flavia Domitiana Britannica civium Romanorum*, later of Legio XIII Gemina, which began building a stone fortress completed by Legio XIV Gemina. (The chronology of the building activities and troop movements remains disputed: according to Polaschek, op. cit. infra, 6 ff., Legio XIII Gemina came to Vindobona after A.D. 96, and started converting the cavalry camp into a legionary fortress between 98 and 107; it was relieved by Legio XIV Gemina, which continued building till 114 or earlier when transferred to Carnuntum, its place being taken by Legio X Gemina P.F.). Vindobona, which became a *municipium* under Caracalla, was also a *statio* of the *classis Histrica* (Not. Dign. Occ. xxxiv. 28). Though not the equal of Carnuntum, Vindobona was an important fortress, especially in the Marcomannic Wars, during which it was apparently destroyed, though it was rebuilt again. M. Aurelius died there. In 395 part of the camp was burnt down, and later (perhaps c. 406) Vindobona was abandoned by the Romans.

A. v. Domaszewski in *Geschichte der Stadt Wien* i (1897), 37 ff.; F. Kenner, ibid. 42-159; E. Nowotny, *Mitteilungen des Vereines für Geschichte der Stadt Wien* iv (1923), 5-22; E. Polaschek, ibid. xv (1925), 1-14. A guide to Vindobona by Polaschek is said to be in preparation. F. A. W. S.

VINDONISSA, modern *Windisch*, Switzerland, a prehistoric site on the lower Aar, occupied c. A.D. 12 by Legio XIII, which was replaced in 45-6 by Legio XXI Rapax, whose violent behaviour to the Helvetii in 69 induced Vespasian to send it elsewhere. Its place was taken by Legio XI Claudia Pia Fidelis, until c. 100 when it was realized that Vindonissa was too far from any theatre of war. A considerable civil population remained for whom the military fortress was reconstructed c. 260 under pressure of Alamannic attacks. The fortress and the *forum* of the *canabae* have been partially excavated. It was an important centre of lamp manufacture.

VINEA, see SIEGECRAFT, ROMAN.

VINICIANUS, ANNIUS, son of Vinicianus who conspired in A.D. 42, and son-in-law of Corbulo, was legate of Legio V Macedonica in 63 when he was not yet quaestor. In 65 he escorted Tiridates to Rome. He gave his name to a plot against Nero at Beneventum (66).

A. M.

VINICIUS (1), MARCUS (*cos. suff.* 19 B.C.), a *novus homo* from Cales in Campania, is first mentioned as legate of Augustus in Gaul (25 B.C.). In Illyricum (13, perhaps as proconsul) he and Agrippa began the *Bellum Pannonicum* terminated by Tiberius (12-9). Vinicius is next (and last) heard of in A.D. 1 or 2 as commander of the Rhine army. The accephalous elogium from Tuseulum, recording operations against Transdanubian peoples (*ILS* 8965) is now generally attributed to Vinicius, but the details and dating of that campaign are uncertain (14-13, 10, and c. 1 B.C. have been suggested). The historian Velleius Paterculus enjoyed the patronage of the Vinicii, dedicating his work to the grandson, M. Vinicius.

VINICIUS (2), PUBLIUS (*cos.* A.D. 2), Augustan orator and declaimer; an admirer of Ovid who combined originality with good taste (*Sen. Controv.* 7. 5. 11, 10. 4. 25).

VINICIUS (3), LUCIUS (*cos. suff.* 5 B.C.), Augustan orator and declaimer; famous for his quick wit (*Sen. Controv.* 2. 5. 20).

VIPSANIUS, see AGRIPPA (3).

VIRGA, see APEX.

VIRGIL (PUBLIUS VERGILIUS MÄRO; 70-19 B.C.), poet. Several versions of the 'Life' of Virgil have come down to us, attributed to Donatus and others, and based on a Life by Suetonius; they contain many legendary details, but the following facts appear to be well established. Virgil (the spelling with *i* is traditional in English, though inscriptions prove *Vergilius* as the Latin form) was born on the Ides (15th) of October, 70 B.C., at Andes, a *pagus* in the neighbourhood of Mantua. The locality of Andes has been much disputed, but it is traditionally identified with the modern Pietole. His *nomen* and *cognomen* have been thought to imply Celtic or Etruscan origin, but the evidence is slight. His father was a man of humble birth, a potter according to some, or a courier in the employment of one Magius, whose daughter Magia he married. He seems to have acquired land and to have made money by bee-keeping.

2. Virgil's education began at Cremona, and there on his fifteenth birthday, 15 Oct. 55, he assumed the *toga civis*; tradition said that Lucretius (q.v.) died on the same day. From Cremona he went to Milan for a short time and then to Rome, where he learned rhetoric under prominent teachers and also medicine and astronomy,

but ultimately abandoned these pursuits and the writing of verses for the sake of studying philosophy in the school of Siro, the Epicurean (*Catal.* 5). Virgil's youthful poems must be assigned to this Roman period, when he was under the influence of the Alexandrian school, and had probably formed friendships with Cornelius Gallus, Asinius Pollio, and Alfenus Varus. It is possible, too, that at this time he conceived the idea of writing an epic.

3. In 42 the lands round Cremona and Mantua were distributed to the veterans of the Civil Wars, and *Ecl.* ix, in which Menalcas is clearly Virgil, shows that he lost his estate. If Tityrus in *Ecl.* i is also Virgil, it may be that he recovered it by an appeal to Octavian through his powerful friends, but the identification is uncertain. In Virgil's first published work, the *Eclogues* or *Bucolics*, poems are dedicated to each of his three friends. Asconius states that these poems were begun when Virgil was 28 (42 B.C.) and finished in three years. This tallies well with the date of the quarrel over his lands, and also with the certain date of *Ecl.* iv, which is dedicated to Pollio in his consulship (40 B.C.). The tenth *Eclogue*, dedicated to Gallus, must, however, be placed as late as 37 B.C.

4. By this time Virgil was fully established in the friendship of Maecenas and had become intimate with Horace, who in *Sat.* 1. 5. tells how Virgil with Varius and Tucca, afterwards his literary executors, joined Maecenas and himself on a journey which they were making in order to negotiate the 'treaty of Tarentum' with Antony in 37. The next seven years of Virgil's life were occupied in the writing of the *Georgics*. The mention of the Portus Julius (2. 161-4), which was completed in 37 B.C., gives the earliest date and the reference to Octavian's campaign in the East (4. 560-2) after Actium, 31-29 B.C., the latest. The poem was written largely in honour of Maecenas, who may have suggested it as a support to the policy of an agricultural revival in Italy, but contains many passages of direct eulogy of Octavian, to whom Virgil recited the poem at Atella after his return from the East in 29. During the latter part of this period Virgil was living at Naples (4. 563-4), and the opening of *Georg.* 3 suggests that he may have paid a visit to Greece (cf. *Hor. Carm.* 1. 3).

5. During the last ten years of his life Virgil was engaged on the composition of the *Aeneid*, living at or near Naples and occasionally in Sicily. Augustus was deeply interested in the work and when absent in Spain in 26 and 25 wrote urging him to send the draft or sections of the poem. Virgil refused, but subsequently recited Books ii, iv, and vi to Augustus and Octavia; this must have been after the death of Marcellus in 23 (see *Aen.* 6. 860-86). In 19 Virgil started with the intention of travelling in Greece and Asia for three years and completing the *Aeneid*, after which he meant to devote himself to philosophy. At Athens, however, he met Augustus and was persuaded to return with him. He fell ill at Megara, and was brought back to Brundisium, where he died on 20 Sept.; his remains were taken to Naples and buried on the road to Puteoli in a tomb with the inscription, attributed to Virgil himself:

Mantua me genuit, Calabri rapuere, tenet nunc
Parthenope; cecini pascuis, rura, duces.

Before he left Italy Virgil had caused Varius, to whom with Tucca he left his writings, to promise to burn the *Aeneid*, if anything should happen to him. Augustus ordered the executors to disregard this wish, and the poem was published in its unfinished state.

6. According to tradition Virgil was tall and firm-set, dark and of a rustic appearance, and suffered from ill-health. His personal modesty won him the nickname of 'Parthenias' at Naples, and, when in Rome, he is said to have avoided all appearances in public. Through the generosity of his benefactors he amassed a considerable fortune.

7. WORKS

(1) *Early Poems*. Fourteen short poems (*Catalepton*) and five longer works, *Culex*, *Ciris*, *Copa*, *Moretum*, and *Aetna*, were traditionally attributed to Virgil in his youth, but in modern times the attribution has in regard to many of them been disputed. These poems and their authorship are discussed separately under the head *Appendix Vergiliana* (q.v.).

(2) *Eclogues* ('*Εκλογαί*', 'Select Poems') or *Bucolics* (*Βουκολικά*, 'Pastorals', a title taken from Theocritus), composed between 42 and 37 B.C. With the exception of iv and vi the *Eclogues* are modelled on the *Idylls* of Theocritus. In general the 'plot' is derived from one or more of the *Idylls*, e.g. iii from *Id.* iv and v, viii from *Id.* i and ii, ix from *Id.* vii. The phraseology is based on that of the *Idylls* imitated, but with frequent additions from other *Idylls*. Sometimes the translation is close (in 8. 58 perhaps a mistranslation), sometimes there is a free paraphrase, sometimes an idea is adopted and worked out independently. The 'amoebean' dialogue is frequently employed and the setting and scenery are for the most part Sicilian. The general influence of the Alexandrian school is seen in the use of 'literary' epithets, and metrically in the frequency of the 'bucolic diaeresis' and the employment of Greek forms of hiatus and line-terminations.

But with this close adherence to Theocritus Virgil has combined an Italian realistic element. Mantua, Cremona, and the river Mincius appear amid Sicilian scenery, and contemporary personages are either disguised as shepherds (e.g. Tityrus in i and Menalcas in ix are probably Virgil himself and Daphnis in v Julius Caesar), or appear in person, Pollio in iii and viii, Gallus in vi and x, Varus in vi and ix (the Varus of vi may be Quintilius and not Alfenus), while the rival poets Bavius and Mevius are mentioned in iii. Moreover, contemporary events are introduced; i and ix are concerned with the evictions round Mantua and with Virgil's appeal to Octavian, v is probably a reference to the deification of Julius Caesar, whose 'star' is referred to again in ix. 47, and iv prophesies the birth of a boy, under whose rule the world will be at peace. (The child has usually been taken to be the expected offspring of Octavian and Scribonia, who proved in fact to be a daughter, but there is much to be said for the recent suggestion (W. W. Tarn, *JRS* 1932, 154) that it was the expected child of Antony and Octavia.) Further, not only is Theocritus imitated, but also Latin writers, and in particular Lucretius in the cosmological passage of vi, which nevertheless is not necessarily to be regarded as Epicurean. In vi, too, there are allusions to the *Ciris*, which some recent critics believe to have been the work of Gallus.

But with all this confusion of Greek and Italian elements, of ideal pastoral with present-day history, the *Eclogues* show much of Virgil's art and charm, and in spite of an occasional jarring note they have a characteristic tone and unity.

(3) *Georgics* ('*Γεωργικά*', 'husbandry'), a poem in four books, dealing with the farmer's life and occupations, written from 36 to 29 B.C. The first book deals with the cultivation of crops, the second with that of fruit-trees, especially of the vine, the third with the farm animals, including horses, and the fourth with bee-keeping.

The *Georgics* are often said to be based on the *Works and Days* of Hesiod, and Virgil himself claims (2. 176) that he is 'singing the song of Ascræ through the towns of Rome', but the relation is much less close than that of the *Eclogues* to the *Idylls* of Theocritus. Two passages in bk. i, the description of the plough (169-75) and the account of the days of the month favourable or unfavourable for work (276-86), are directly imitated from Hesiod, and here and there a phrase or a precept is due to him.

But if Virgil truly owes a debt to Hesiod, it is rather for the main idea of a didactic poem on agriculture, and for the generally pervasive spirit of hard work. In direct imitation Virgil owed almost more to three Alexandrian poets. From Aratus' *Diosemeia* ('Signs of the Sky') he took much of the matter for the discussion of prognostics of the weather (1. 204 ff.), in a section of which (375-87) he closely followed a Latin translation by Varro Atacinus; from the *Phaenomena* come some lines in the description of the *mundus* (1. 244-6). From Eratosthenes comes the description of the zones of the sky (1. 233-51). To Nicander's *Georgica* Virgil may have owed something, and in bk. iv to his *Melissurgica*. In the *Georgics*, too, Virgil begins his imitation of Homer, especially in similes and in the narration of the story of Aristæus (4. 315-558), which according to Servius was substituted for a eulogy of Gallus, after he had fallen into disgrace.

Much of the subject-matter of the *Georgics* is due to the Latin prose-writers on agriculture, Cato and Varro, though it is not easy to point to obvious imitation. Of other Latin authors Virgil now draws upon Ennius, and all the four books are full of reminiscences of Lucretius, to whom he addresses a famous eulogy in 2. 490-2.

Notwithstanding this debt to other writers, the *Georgics* are Virgil's own and many critics have regarded them as his greatest work. There has been much discussion whether they form a practical guide to husbandry, but at least Virgil must have drawn on his own experience on his father's farm. Metre and expression are freer and more mature than in the *Eclogues*, the books are full of observation of animals and of nature, and in many passages there is the characteristic Virgilian pathos and sympathy. The grandeur of the whole conception and many sustained portions of the writing can bear comparison with the *Aeneid*.

(4) *Aeneid*, 'The story of Aeneas', the title, *Αενείς*, being modelled on *Ίλιάς* and *Ὀδύσσεια*. The connexion of the Trojans and Aeneas with Rome first appears in Latin literature in Naevius. As soon as Rome came into contact with Greece, there was a desire to associate the history of Rome with the Greek world, but politically a connexion with the Trojans, the enemies of the Greeks, was more natural than with the Greeks themselves. Aeneas, the son of Anchises and Aphrodite, is the one Trojan hero in the *Iliad* with a future, and a kingdom is prophesied for his descendants (*Il.* 20. 307). The story of his wanderings may have been based on the dissemination at different spots in Greece of the cult of Aphrodite Aeneas (see *AENEAS* 1); this would bring him to Sicily, from whence it was no long step to Cumæ and to Rome.

Virgil adopted this story as the most comprehensive legend of the origins of Rome—that of Romulus was too local and too narrow—but he intended his poem to be much more than the mere narration of an ancient legend. The *Aeneid* is in fact an epic of Rome, the embodiment of its history and greatness in the past (see especially the parade of the Roman heroes in 6. 756 ff. and the scenes on the shield of Aeneas, 8. 626 ff.), and of the prevailing sense of a new era inaugurated by Augustus. It is a mistake to regard the *Aeneid* as an allegory—Aeneas is not a mere puppet-reproduction of Augustus—but the new hope is never absent.

The *Aeneid* may be said to be based on Homer. The first six books, which relate Aeneas' wanderings, are modelled on the first half of the *Odyssey*, culminating in a similar way in a visit to the lower world, and adopting in ii and iii the device of a personal narrative by the hero, whereas the last six, which tell the story of the war with the Rutulians, are modelled on the *Iliad*. In detail, too, there are many echoes of Homer in the phraseology and particularly in the similes. Other Greek writers are also laid under contribution, Apollonius Rhodius' description

of the love of Jason and Medea assisting in the composition of iv. In the *Aeneid*, too, Virgil embodies far more frequently than in the earlier poems the phrases and thoughts of his Latin predecessors. Lucretius is still imitated, and now the older writers find their place, especially Ennius, and occasionally Naevius, Pacuvius, and Lucilius. This embodiment of the work of his predecessors is not to be regarded as 'plagiarism', but rather as a compliment to those whose words are enshrined. The *Aeneid* commemorates the literature as well as the history of Rome.

The books of the *Aeneid* were not written by Virgil in the order in which they now stand, and it is not difficult to discover inconsistencies of narrative between them. The general plan of the structure of the poem seems to be that the even-numbered books are more thrilling and dramatic, the odd quieter and lower in tone. On the whole, the poem fails as a story, partly perhaps through its length and the magnitude of the conception, partly because of the inevitable artificiality of the 'learned' epic as opposed to the straightforward simplicity of Homer. But it rises from time to time to magnificent heights, and bks. ii, iv, vi, and xii will always stand out as unsurpassed.

The character of Aeneas and his insistent 'piety' have always proved a stumbling-block to modern readers, who feel an instinctive sympathy with his opponent Turnus (as with Hector in the *Iliad*), and with the deserted Dido. But to a Roman reader Aeneas' duty to the gods and to the destiny of Rome would rightly override his personal inclinations, and a closer study of the poem shows a continual development in his character, as his destiny is revealed to him. Book vi, in which he first comes to realize the future greatness of Rome, is the pivot of the poem; from that time he has a new confidence and decision, which raise him to the rank of a hero. Many of the minor characters are finely drawn—Turnus and Dido, Pallas, Mezentius, Nisus, and Euryalus.

In the *Aeneid* Virgil reaches the full command of Latin poetic diction and of the hexameter as its vehicle. The *ars* of the Alexandrians and the genuine Latin *ingenium* are welded into a whole, which alike in its uniformity and its variety stands out as essentially Latin. If the poem as a whole lacks the unity of the *Georgics*, yet in the grandeur of its theme and the perfection of its execution it must be looked on as Virgil's greatest work.

8. Virgil's merits were fully acknowledged by his contemporaries (see, e.g., Hor. *Sat.* 1. 10. 44, *Prop.* 2. 34. 65), and he became the inevitable model for all subsequent Latin writers of epic and even influenced the style of prose-writers like Livy. Posterity has acknowledged him as the greatest of Roman poets. His style is that of the 'learned' poet; his mind was stocked with ancient legends and associations and he makes full use of them, often applying the 'local epithet' where it has no immediate significance; his syntax and his phraseology are deeply influenced by his predecessors both Greek and Latin. But his learning never degenerates, as it did with some of his contemporaries, into pedantry or frigidity; he is master of his tools and shapes his work to that delicacy and subtlety of expression which has always been recognized as 'Virgilian'. He attained the full perfection of technique in the writing of hexameters and gave them a smoothness which is never monotonous. His themes in *Georgics* and *Aeneid* were lofty, and he treated them with majesty and dignity and at the same time with a sympathetic insight and feeling which were all his own. It was this quality of tenderness, humanity, and deep religious sentiment, together with the supposed Messianic prophecy of *Eclogue* iv, which caused him to be regarded in the Middle Ages as the herald of Christianity, and led Dante to choose him as his guide in the *Divina Commedia*. A debased form of this reverence looked upon him as a magician, and legends gathered

round his tomb at Naples. He soon became a school text-book and was selected by later writers as the standard of Latin grammar. Modern criticism has revealed difficulties and weaknesses in his work, but has done nothing to dislodge him from his position in the small company of the greatest poets of the world.

VIRIATHUS, a shepherd, led the Lusitanian rebellion against the Romans which Ser. Sulpicius Galba's butcheries had provoked in 150 B.C. The first to utilize guerrilla tactics in the mountains, a form of warfare for which Romans were not prepared, Viriathus also profited by the wars in which Rome was entangled in Africa and in Greece. He beat a series of Roman governors in Spain and mastered nearly all Hispania Ulterior and part of Citerior. In 145 Rome sent out a consul, Q. Fabius Maximus Aemilianus, and two legions. Viriathus lost liberty of movement (144), but the extension of the rebellion to the Celtiberians gave his effort new life, although the two peoples never co-operated effectively. In 143-142 a general, Quintinius (probably the consul Q. Caecilius Metellus Macedonicus), and the consul L. Caecilius Metellus Calvus were defeated. In 141 Viriathus forced the proconsul, Q. Fabius Maximus Servilianus to surrender. A treaty was concluded in which full possession of their territory was recognized to the Lusitanians, and Viriathus was styled an ally and friend of the Roman People. But in 140 the consul Cn. Servilius Caepio induced the Senate to break the pact and renewed the war. Viriathus' army was now exhausted. Viriathus, whose political ability was inferior to his military skill, hoped for a new peace. He sent three friends to Caepio, but they were bribed to murder him. He was killed sleeping and his unorganized State collapsed (139).

The principal source is Appian, *Hisp.* 60 ff. (from Polybius: the beginning of § 66 is hopelessly corrupt). Cf. *Fontes Hispaniae Antiquae* iv (Barcelona 1937); A. VIROCONIUM (*Uriconium*), town in Roman Britain, modern Wroxeter (Shropshire). The site was occupied c. 48-9 (cf. *Antiquaries Journal* xviii, 34) by a fortress of the fourth century and twentieth legions which has not been located. It was succeeded by a town, itself the successor perhaps of a neighbouring hill-fort, the Wrekin, which became the cantonal capital of the Cornovii. This town, built c. 80, had an earth-bank and timber houses, but very ambitious public buildings were intended. They were not completed, and by 150 a less ambitious forum

and basilica was built (cf. *JRS* xiv. 244). Houses were now rebuilt in stone, and a stone town-wall was added enclosing c. 107 aeres. The new basilica was burnt and rebuilt c. 160 and burnt finally c. 300. The town itself seems to have decayed to annihilation. Coins of Carausius with mint-mark BRI have been claimed for Viroconium (= Briconium) (*Num. Chron.*⁵ v. 336).

Summary of old excavations, *Victoria County History, Shropshire*, i. 220-52, later Bushe-Fox, *1st, 2nd, and 3rd Reports*; K. M. Kenyon, *Excavations at Wroxeter*, 1936 and 1937. D. Atkinson, *Report on Excavations at Wroxeter (Viroconium)*, 1923-7 (1942). No full report of forum excavations (Atkinson), summary in Macdonald, *Roman Britain* (1914-28), 89-97. C. E. S.

VIRTUS and **HONOS**, see **HONOS**.

VITELLIUS (1), **AULUS** (A.D. 15-69), emperor in A.D. 69, was a friend of Gaius and Claudius. He was consul in 48, proconsul in Africa and legate there under his brother. In 68 he was sent by Galba to command the legions of Lower Germany. On 2 Jan. 69 he was hailed as emperor by his troops, at the instigation of his legates Caecina Alienus and Fabius Valens, and was immediately recognized by Upper Germany. He obtained the adherence of Gaul, Raetia, and Spain. His expeditionary force to Italy had started before news arrived of Galba's death. Caecina and Valens converged on north Italy and easily overcame Otho (q.v.). Vitellius was still in Germany when he heard of the victory. His march to Rome (May-June) was like that of a conqueror. He posed as the successor of Nero and later adopted the title of *consul perpetuus*. He humiliated the defeated soldiers, and doubled his mistake by not dismissing them. He disbanded only the Praetorians and *cohortes urbanae*. He was incompetent and became notorious for his gluttony. The Eastern legions swore allegiance to him, yet immediately afterwards they hailed Vespasian (q.v.) as their emperor. The Danubian troops, many of whom had fought for Otho, went over to Vespasian and invaded Italy under Antonius Primus. Valens was ill, and Vitellius had to rely on Caecina, who was plotting with the commander of the fleet at Ravenna. Vitellius, with four legions, decided to hold the line of the Po at Cremona and Hostilia. The troops at Hostilia refused to support the treacherous course which Caecina proposed, and retired to Cremona after having arrested their commander. A battle before Cremona, with a demoralized army, was a defeat for the absent Vitellius (Oct. 69). Valens, who had recovered, failed to organize a second army in Gaul. In Germany Civilis (q.v.) rose in arms. The fleet at Misenum abandoned Vitellius. In Rome, Vespasian's brother, Flavius Sabinus (q.v.), had nearly persuaded Vitellius to abdicate, but the mob compelled him to remain. Vitellius had to attack Sabinus in the Capitol, where the temple of Jupiter was burned. Primus arrived and defeated the Vitellians after a desperate resistance. Vitellius was discovered hiding, led through the Forum and cruelly killed (20 Dec. 69).

Sources: Suetonius, *Vitellius*, etc. See further under **GALBA**.

A. M.

VITELLIUS (2), **LUCIUS** (cos. A.D. 34, cos. II 43, cos. III 47), son of P. Vitellius (a Roman knight from Nuceria, procurator of Augustus), was an intimate friend of the Emperor Claudius and the most successful politician of the age: when he died he was honoured with a public funeral and a statue in the Forum bearing the inscription 'pietatis immobilis erga principem' (Suetonius, *Vitellius* 3). Legate of Syria from A.D. 35 to 37, he displayed great vigour, dealing firmly with Parthian affairs, inducing Artabanus to pay homage to Rome and conciliating the Jews: 'regendis prouineis prisca uirtute egit' (Tac. *Ann.* 6. 32). At Rome, however, he earned a different reputation—'exemplar apud posteros adulatorii dedecoris habetur' (ibid.). Claudius chose him for colleague in the censorship (47). Vitellius had a large share in

devising the ruin of Valerius Asiaticus; and, cleverly adopting the cause of Agrippina, he acted as the mouth-piece of a loyal Senate in advocating her marriage to Claudius. He probably died soon after. R. S.

VITICULTURE. The vine and its cultivation were known in Eastern Mediterranean countries as far back as the neolithic period. Minoan Crete had vines in plenty, as had the larger landowners of the periods of Homer and Hesiod. In many parts of Greece, and in Italy after 150 B.C. grapes were a more important crop than corn. Famous wines came from Cos, Cnidos, Thasos, Chios, Lesbos, Rhodes, Ephesus, and Aminea, Berytus and Laodicea, Tarraeo in Spain, several districts of Sicily, the *Falernus mons* in Campania, etc. Plantations in which vines grew side by side with fruit-trees and vegetables were often preferred to those confined to the vine alone, though these became more usual after the Hellenistic age. The plantations were enclosed by walls or fences. The methods of Greco-Roman culture are familiar to us from the recorded practice of Hellenistic Egypt and Roman Italy, which later spread to the Roman provinces.

Many species of vines were known, some being imported. In laying out a vineyard the land was first ploughed and dug over, and provision was made for irrigation. Then the vines were planted into long trenches and bound with bast to reeds or stakes or (as often in Greece and Italy) to trees, and subsequently pruned. The whole vineyard was next dug over and manured, and the soil was loosened (*ablaqueatio*) so as to lead more water to the roots. There followed a second digging, a picking off of young sterile shoots, a third digging, a second picking of shoots. The vines were tied up and a thorough irrigation undertaken before the crop was harvested. The vineyards had to be well guarded against thieves, a precaution as necessary then as it is to-day. In course of time new vines had to be planted to replace those that had died. An Italian model vineyard of c. 66 acres described by Cato needed 2 oxen, 3 asses, and many implements, with a slave overseer, his wife, and 16 slaves to work it.

States took a great interest in viticulture. A law of Thasos dating from the fourth century B.C. protected native growers by forbidding the import of foreign, and regulating dealings in home-produced wines. Rome seems to have put restrictions on viticulture in certain areas outside Italy with a similar view. Ptolemaic Egypt introduced heavy duties on wine imports, together with State control of the culture of vines in the Nile country by imposing a special tax, the *apomoirā*.

See **AGRICULTURE**. For the Thasian wine-law see *BCH* xlv (1921), 46. S. Loeschke, *Denkmäler vom Weinbau aus der Zeit der Römerherrschaft an Mosel, Saar und Ruwer* (1934); P. Remark, 'Der Weinbau im Römerreich' (*Tusculum Schriften* 13-15; 1927).

VITIUM, in augury, see **AUSPICIUM**.

VITRASIIUS, see **POMPONIIUS** (6).

VITRUVIUS POLLIO, a Roman architect and military engineer under Augustus. He built a basilica at Fanum; but his fame rests chiefly on a treatise, *De architectura*, on architecture and engineering, compiled partly from his own experience, and partly from similar works by Hermogenes (q.v.) and other noted architects, mostly Greeks. His outlook is essentially Hellenistic, and there is a marked absence of reference to important buildings of Augustus' reign. *De architectura*, the only work of its kind which has survived, is divided into ten books. Book i treats of town-planning, architecture in general, and of the qualifications proper in an architect; ii of building-materials; iii and iv of temples and of the 'Orders'; v of other civic buildings; vi of domestic buildings; vii of pavements and decorative plaster-work;

viii of water-supplies; ix of geometry, mensuration, astronomy, etc.; x of machines, civil and military. The information on materials and methods of construction in ii and vii, and on rules of proportion in iii and iv is of great value. Many editions of Vitruvius have been published since 1486. There is a good translation by J. H. Morgan (U.S.A. 1914).

H. W. R.

VOCONIUS ROMANUS, an able orator in Pliny's circle who wrote letters which read as if the Muses were speaking in Latin (*Ep.* 2. 13. 7)—a hint at the propriety of a poetic ingredient in letter-writing.

VOLATERRAE (Etruscan *Velathri*) was the most northern Etruscan lordship. From its formidable position, 1,800 feet above the sea, it commanded a huge area including the sea-port Luna and perhaps Populonia. Important in the eighth century, it is seldom mentioned before Cicero (*Dom.* 30). It was the native town of the Caccina family, and birthplace of Persius. Surviving tracts of ancient wall and remarkable gateways may be assigned very conjecturally to 300 B.C. In the Florence Museum are contents of several important graves of 900–800 B.C. But hundreds of alabaster sarcophagi of 300 and 200 B.C. in the local museum are aesthetically degenerate.

D. R.-MacI.

VOLCACIUS (1) **SEDIGITUS** (fl. c. 100 B.C.) is the author of thirteen senarii, in which ten writers of the *comœdia palliata* are enumerated and characterized by him with great self-confidence. Gellius (15. 24) quotes the verses from V.'s lost work *De poetis*. In his list Cæcilius Statius is first, Plautus second, Naevius third, Licinius fourth, Atilius fifth, Terence sixth, Turpilius seventh, Trabea eighth, Luseius ninth, and Ennius tenth 'causa antiquitatis' (cf. Suet. *Vit. Ter.* 7). These lines are almost all that we have of this eccentric critic of early Roman poetry.

See Bachrens, *FPR* (Teubner, 1886); W. Morel, *FPL* (Teubner, 1927).

A. S.

VOLCACIUS (2) **MOSCHUS**, rhetor, a Greek from Pergamum (Porphyr. ad. Hor. *Epist.* 1. 5. 9) who owed Roman citizenship perhaps to Volcacius Tullus the consul of 33 B.C. (Kiessling, *Hermes* xxvi, 634–5). Exiled after a trial for poisoning, he opened a school at Marselles, where he died about A.D. 25. A speaker of some distinction but too much concerned with tricks of style (Sen. *Controv.* 10 pr. 10, 2. 5. 13; Tac. *Ann.* 4. 43).

C. J. F.

VOLCANUS (**VOLKANUS**, **VULCANUS**), an ancient Italian fire-god, apparently of volcanic fire (this would explain why he is worshipped at Puteoli, near the *zolfatare*, Strabo 5. 246; perhaps also his association with Maia, Gellius 13. 23. 2, 'Maia[m] Volcani', if her name is to be derived from *rt. MAG* and explained as the power which makes something, perhaps crops, increase; cf. also Pliny, *HN* 2. 240, fire comes out of the ground near Mutina 'statis Volcano diebus'), certainly of destructive fire, which explains why his temple should always stand outside a city (Vitruvius 1. 7. 1), on the authority of the Etruscan haruspices. He was worshipped at Rome from the earliest known times, having a flamen (q.v.) and a festival, the Volcanalia, on 23 Aug. (calendars). His shrine, the Volcanal, stood in the Comitium, i.e. outside the Servian walls; a newer one was in the Campus Martius (see for both Platner-Ashby, p. 583 f.). His name is certainly not Latin, the nearest to it in sound being the Cretan *φελγυρός* (for whom see A. B. Cook, *Zeus* ii. 946 ff.), who, however, seems to have no resemblance to him in functions. For Etruscan names suggesting Volcanus see Altheim, *Griechische Götter*, p. 172. It is thus possible, but unproved, that he came in from the eastern Mediterranean, through

Etruria. He seems to have been worshipped principally to avert fires, hence his by-name Mulciber ('qui ignem mulcet'), his title Quietus, and his association with Stata Mater (Dessau, *ILS* 3295, 3306), apparently the goddess who makes fires stand still. On the Volcanalia, when sacrifice was also made to Juturna, the Nymphs, Ops Opifera, and Quirinus, he was given a curious and (at least for Rome), unexampled sacrifice, live fish from the Tiber being flung into a fire (see calendars and Varro, *Ling.* 6. 20, Festus, p. 274, 35 ff. Lindsay). This also can be readily explained as an offering of creatures usually safe from him to induce him to spare those things which at so hot a time of year are particularly liable to be burned. He had a considerable cult at Ostia, where he seems to have been the chief god (J. Carcopino, *Virgile et les origines d'Ostie*, 42 ff.). In classical times he is fully identified with Hephaestus, q.v.

Wissowa in Roscher's *Lexikon*, s.v.; Rose in *JRS* 1933, 46 ff.

H. J. R.

VOLERO, see **PUBLILIUS** (1).

VOLOGESES I, King of Parthia, A.D. 52–c. 80. Much of his reign was spent in wars with Rome and on his eastern frontier. In 54 Vologeses set his brother Tiridates (q.v. 3) on the throne of Armenia (Tac. *Ann.* 13. 6). Cn. Corbulo (q.v.), sent to re-establish Roman influence, was at first successful, Vologeses being occupied on his eastern frontier with a rebellion. Tiridates fled, and a Roman nominee Tigranes (q.v. 4) was crowned. But Vologeses returned to continue the war, and at one time gained an advantageous treaty from Corbulo's colleague Paetus. Finally peace was made and Tiridates did homage to Nero for his throne. Vologeses' later relations with Rome were friendlier; he sought Vespasian's help against the invading Alani (Suet. *Domitian* 2. 2). In his reign Zoroastrianism made great advances, and the books of the Avesta were collected. He founded Volosocerta near Babylon, as a commercial rival to Seleucia.

On the wars with Corbulo see M. Hammond, *Harv. Stud.* xlv (1934); A. Momigliano, *Atti del II° congresso naz. di studi romani* i (1931), 368–75; W. Schur, *Klio* xix (1925), 75–96, and xx (1926), 215–22.

M. S. D.

VOLSCI descended from central Italy in the sixth century B.C. and by 500 had established themselves in the middle Liris valley and regions south-east of the Alban Hills. Chief towns: Sora, Arpinum, Atina, Privernum, Ecetra, Antium, Circeii, Anxur (= Terracina), Velitrae, and possibly Suessa Pometia. Casual mention of Volsci in regal times is untrustworthy, but thereafter they became, and for 200 years remained, a threat which Rome met by signing an alliance with Latins and Hernici c. 493 (see **CASSIUS** 1). The Aequi (q.v.) aided the Volsci. Fifth-century Volscian operations are known only from garbled Roman accounts; but Coriolanus' exploits and defensive Latin colonies at Signia (495), Norba (492), and Ardea (442) imply Volscian successes. In 431, however, the Latin allies defeated the Aequi, then repulsed the Volsci; Latin colonies at Circeii (393), Satricum (385), Setia (382) mark their advance. Volsci opposed Rome in the Latin War, but were defeated by C. Maenius (q.v.). By 304 all Volsci were subject to Rome and so rapid and complete was their romanization that their original civilization can scarcely be discovered. The surviving specimen of their language displays affinities with Umbrian (cf. Festus, p. 204 L.). Their degree of political unity is uncertain. Usually they are represented as a united nation; yet apparently some Volscian cities were left to face Rome unaided, e.g. Pometia and Ecetra in the fifth century, Antium and Privernum in the fourth.

Disser. Romische Studien, ed. Drachmann xl. 37–xiv. 102; *Live*, lxxv–s; *Dien. Hal.*, lxx–lxi, 14. *Call.* vi. pass. (Call. lxxv); R. S. Conway, *Italic Dialects* i (1907), 267. For their alleged Etruscan origin see *Serv.* 21 *Ann.* 12. 140; J. Whitnough, *Foundations of Roman Italy* (1937), 320.

F. T. S.

VOLSINII, an Etruscan city; the original site was probably Orvieto. Only after the conquest of this strong fortress and rebellious people in 280 B.C. was the community transported to the Lago di Bolsena (cf. the Roman treatment of the Faliscans). The Romans are said to have looted 2,000 statues from Volsinii, but only one head is now in the museum of Florence. Somewhere near Bolsena, perhaps at Montefiascone, was the Fanum Voltumnac, the shrine of an Etruscan god at which the heads of the Confederation held their meetings.

D. R.-MacI.

VOLTACILIUS PITHOLAUS (? *Plotus*, Reifferscheid), **LUCIUS**, according to Nepos the first freedman to write history, opened a school of rhetoric, 81 B.C. He had as a pupil Pompeius Magnus, whose biography, as well as his father's, he wrote (Suet. *Rhet.* 3).

VOLTUMNA, an Etruscan goddess, at whose shrine the Etruscan federal council met (Livy 4. 23. 5; 25. 7; 61. 2; 5. 17. 6; 6. 2. 2). Nothing more is known of her and the site of the shrine is uncertain (see **VOLSINII**).

See L. R. Taylor, *Local Cults of Etruria* (1923), 230 ff.

VOLUBILIS (Modern *Oubili*), a Moorish agricultural town in the Djebel Zerhoun plain. Phoenician colonists joined with the natives to make it a centre of the oil-trade. Greek bronzes excavated at Volubilis point to its inclusion in the dominions of Juba II. Governed successively by shophets (*suffetes*), shophet-duumvirs, and duumvirs, it was rewarded by Claudius with the rank of *municipium* for its loyalty during Aedemon's rebellion. The beautiful arch of Caracallus and Julia Domna testifies to its prosperity under the Severi.

A. Momigliano, *Claudius* (1934), 66, 114; L. Chatelain, *Le Maroc des romains* (1944), 139-250.

W. N. W.

VOLUMNIUS, **PUBLIUS**, a philosopher who accompanied M. Brutus in his campaign against the triumvirs. He recorded, perhaps in a biography, prodigies which preceded Brutus' last battle (Plut. *Brut.* 48).

VOLUSIUS, see **MAECIANUS**.

VOTIENUS MONTANUS, orator, from Narbo; prosecuted for treason under Tiberius; died in exile, A.D. 27. He condemned the showiness of declamations (Sen. *Controv.* 9. *praef.* 1). His passion for repetitions which did not leave well alone led to his being called 'the Ovid of speakers'.

See *PIR*, V 674.

J. W. D.

VOTING. (1) In Greek city-states most resolutions of the Assembly, as well as elections of magistracies, were decided by show of hands (*χειροτονία*), in some rare cases by acclamation, e.g. in the case of the Spartan ephors. For questions concerning individuals (*ἐπ' ἀνδρῶν*), voting was accomplished by secret ballot (*ψηφίσμα* from *ψηφός* = voting-stone); but already in early times all decrees of people were so called. The same method was used for passing sentences by juries, and voting by sherds was similar (see **OSTRACISM**).

V. E.

(2) At Rome voting took place in the assemblies of the *curiae*, centuries, and tribes. The procedure was roughly the same, especially after the introduction of the ballot in the latter half of the second century B.C. It was generally preceded by a *contio* (q.v.). When the presiding magistrate dissolved this and ordered the voting to begin (*discedere*), non-citizens were summoned to withdraw (*populus summouetur*), and ropes were stretched across the Assembly to divide it into as many enclosures as there were centuries or tribes. According to the formalities of the polling, voters then entered the enclosures, called at first *licium*, then *ovile*, and finally *saepta* (q.v.). Under Augustus a *diribitorium* was constructed on the

Campus Martius for the tellers (*diribitores*). The enclosures were connected with the platform of the magistrate by galleries (*pontes*). In each compartment the votes were taken singly and orally, and officials called *rogatores* marked off the names of the candidates on special tablets (*ferre punctum*). From 139 to 107 B.C. several *leges tabellariae* were enacted to secure secrecy of vote; which had to be written on official tablets (*tabellae*). The formulas, however, did not change: in legislation, *Uti rogas* (V.) and *antiquo* (A.), this negative answer properly meaning: 'I confirm the old state of things'; in jurisdiction *libero* (L.) and *damno* or *condemno* (hence the abbreviated form C.); in elections, *dico* or *facio*. A century named *praerogativa* (q.v.) voted first. The tablets were then thrown into an urn (*cista*) at the exit of each *pons* under the control of guardians (*custodes*), who forwarded it to the *diribitores*. They counted the votes until a relative majority was obtained. A system of group-voting was characteristic: a majority of votes in a century determined the vote of that century, and a majority of the centuries determined the will of the whole Assembly. Voting was allowed only between sunrise and sunset, on days especially appointed in the Calendar.

Mommsen, *Röm. Staatsr.* iii². 397 ff.; G. W. Botsford, *The Roman Assemblies* (1909), 466 ff.

P. T.

VOTIVE OFFERINGS are gifts of a permanent character to supernatural beings (*ἀναθήματα*, later *ἀναθέματα*, as distinct from *δῶρα*, gifts to human beings), thus differing from sacrifices and taxes (tithes and first-fruits are here not included). They have their source in religious feeling and in the worship of divine powers affecting man as benefactors and protectors or the opposite. This dedication is a voluntary act, but it may have been recommended by religious tradition or sometimes ordered by an oracle (e.g. for unbelief, breach of religious custom, blood-guilt; cf. the two statues of the Spartan regent Pausanias dedicated in the Brazen House of Athena). For the gods they may mean an increase of their authority: the gift and its publicity 'magnify' the gods, at the same time intensifying the feeling of connexion and sympathy on both sides. The social and merely economical aspect must also be taken into account, and again the often contagious pride and joy of giving and delight in embellishing sanctuaries, especially national centres.

2. The motives generally are: thanksgiving (e.g. for deliverance from sickness, perils on the sea, and all sorts of calamity), intercession (sometimes accompanied by sacrifice, or taking its place, or reminding the deity of it), or propitiation (each Athenian archon swore to dedicate a golden statue, probably not a portrait of himself, if he broke his oath; cf. corresponding sacrifices from similar motives). The occasions are manifold. States (or monarchs) returned thanks for victory in war and thus commemorated other forms of divine aid (so tripods of gold were sent to Delphi after the battles of Plataeae, Himera, Cumae, Diod. 11. 21). Statues of Victory were common as war-dedications (cf. the Athenian temple inventories, the most famous examples being the Nike of Paionius at Olympia, and the Nike of Samothrace now in the Louvre). The statue of Nemesis at Rhamnus was a memorial of the Persian War, the temple of Athena at Pergamum of the defeat of the Gauls. A crown of honour was dedicated to the Athenian people by 'the Euboeans saved and set free', as Demosthenes informs us (xxiv. 180). The people (alone, or with the Boule) dedicated statues of officials in sacred precincts; later such compliments to the Roman emperors became quite commonplace (at their accession to the throne, on their birthdays, on their visits to the provinces, etc.).

3. We must not forget the many feasts and ceremonies, often annually repeated, which served the State or

private individuals as occasions to show their loyalty or gratitude to the State divinities or national heroes. Many finds of innumerable standardized figures in the earliest strata of ancient shrines may have their origin in such festivals, e.g. miniature reproductions of the cult-image of the temple or other forms of the deity in question (as the votive offerings, to (Artemis) Orthia at Sparta), objects of use, robes (cf. Heceuba's gift to Athena in the *Iliad*), mirrors, weapons, etc., finally the ἀνδριάντες and κόραι of all sizes and different materials (falling into disuse in the 5th c. B.C.). We may especially mention the *peplos* offered at the Panathenaea at Athens. Sacred missions (*θεωπιάι*, see THEOROI) regularly brought with them offerings for dedication, thus supplementing their sacrifices.

4. Private people dedicated on similar principles, for help in disease (cf. the sanctuaries of Aesclepius), in danger and every sort of calamity, for good luck and further aid, often accompanying the offering with a prayer and sacrifice for further success. Victories in games and contests of other kinds (cf. the legendary glorified, the offering of the prize becoming traditional and often compulsory (cf. the many statues of athletes, and the Charioteer at Delphi). We may add as appropriate occasions of offering: every great moment or crisis of human life, birth, puberty (e.g. the offering of one's hair), marriage, election to an office, acquittal in court, etc. We only need to look through the well-turned dedicatory poems of bk. vi of the *Anthology* or the treasure-lists of Athens (the treasures of Athena, Artemis Brauronia, or Aesclepius), Delos, Delphi to have an impression of the endless varieties of motive; dedication of slaves, chiefly as a form of emancipation, is also to be noted. The holy precincts thus in course of time were filled with gifts; they became real museums. Treasure-houses were built, and in the inner chambers of the temples (the *opisthodomoi*) their always increasing treasures were kept, but still these overflowed. The clearing-up did not mean destroying, since the ex-votos were commonly tabu and accordingly much can still be found by archaeologists within the sacred enclosures.

5. As for the meaning of these ex-votos, and the objects dedicated, they might be of direct use to the god. In myth or history many temples are recorded as being due to the gratitude of heroes, monarchs, cities (Danaus, Heracles, Theseus; the temple of Apollo at Bassae commemorates deliverance from pestilence). We may add altars (often with inscriptions), colonnades, idols, garments for the idols, etc. The throne of Xerxes, the manger of Mardonius, and other trophies were offered to the gods; cf. also the many statues of the Apollo or Kouros type. But pious people dedicated also what had been useful to themselves, thanks to the benevolence of a god or the gods; artisans their tools, etc. (also specimens of their skill and their gains), a shipowner an image of his ship (cf. Catullus 4; Agamemnon dedicated his rudder to Hera at Samos), a courtesan her mirror—in general things well used or now useless, or but once used (so a cauldron used for the bride's bath before marriage) and for ever to be remembered. Acts, blessed by the gods (birth, victory, etc.) were also thus immortalized, and a representation of a sacrifice offered to the god was as good as the sacrifice itself. We easily imagine how important an impulse was in this way given to art (e.g. sculpture) and even to poetry. The historians drew facts from the inscriptions employed, and the makers of legend a fresh start for their imagination (cf. the Luidian

temple-chronicle). The homage thus paid to the gods is also a reliable barometer as to the curve of religious feeling in antiquity (as to-day in the Catholic Church). The parallelism with the offerings to the dead is noteworthy.

E. Reisch, *Griechische Weihgeschenke* (1890). The chief work is W. H. D. Rouse, *Greek Votive Offerings* (1902). S. E.

VOTUM. Greeks and Romans alike made promises to gods that, if this or that favour was granted, they would do this or that act in return, and felt under an obligation to do as they had promised. Nevertheless, the practical and juridical character of Roman religion, as distinct from Greek, is seen in the Roman public use of vows, *vota*, public or private, which oblige either of the two parties engaged in the act to keep the bargain if the god (or gods) is willing, and even in the formulae of many private vows: *u(otum) s(olvit) l(ibens) m(erito)* and in the phrases *voti reus*, *voti damnatus*. The reciprocity involves the State (or the private individual) taking the initiative. In the name of the State the magistrate undertakes to offer to the god or the gods sacrifices, games, the building of a temple, the dedication of an altar, a share of the booty, or some other thing if the god on his side will give his assistance in winning the war, averting the famine or pestilence, achieving some success, etc. The publicity of such vows was compulsory. The vows made by the State were in most cases extraordinary, but vows were also made regularly for a definite period, e.g. the annually renewed *vota* of the higher magistrates for the welfare of the State (on 1 January, before the first regular sitting of the Senate) and the *vota* at the termination of the *lustrum*. The periodicity of public *vota* may originate in the terms defined for the magistrates. Such vows found their direct continuation under the Empire in the *vota pro salute imperatoris* (for the emperor and his family, since 30 B.C., the periodicity becoming regular *vota quinquennialia, decennialia*, etc.). Vows for the safe return of the emperor (from expeditions or war), for his health, his reign, for the delivery of the empress, etc. were customary. The text of the *votum* was regularly fixed in the presence of the pontifices, and the document went into the archives. As modalities of the *votum* we have to consider the devotion of the enemy's army (see *DEVOTIO*) and the evocation of the gods of a besieged city (see *EVOCATIO*). Good examples of private vows are Verg. *Aen.* 5. 235 (Cloanthus vows a bull if he wins the boat-race) and Hor. *Carm.* 1. 5.

VULCA, see VIII.

VULCI, unknown in classical literature, was one of the wealthiest Etruscan cities, situated on the Fiora, half-way between Monte Argentario and Tarquinii. The immense cemeteries were ruthlessly sacked by avaricious owners in the mid-nineteenth century, and no records published. Most of what was saved from 20,000 graves found its way eventually to the Louvre and British Museum. This miscellaneous loot consists principally of Greek painted vases and gold ornaments. Unique, except for similar finds from Caere, are the enormous red jars of the seventh century in the Louvre (Campana collection).

G. Dennis, *Cities and Cemeteries of Etruria*; S. Gsell, *Fouilles de Vulci* (1891). D. R. Maccl.

VULSO, see MANLIUS (5).

WALL OF ANTONINUS, a Roman frontier-wall, 37 miles long, running from Bridgeness on the Forth to Old Kilpatrick on the Clyde, built for Antoninus Pius (S.H.A. *Pius*, 5. 4) in A.D. 142 by Q. Lollius (q.v. 4) Urbicus. The wall was of turf, standing upon a cobbled foundation 14 feet wide and systematically built (*JRS* xi. 1 f.) in long sectors by Legions II, VI, and XX, who marked their work by inscribed slabs (*CIL* vii. 1088, 1121, 1122, 1126, 1130-3a, 1135-8, 1140-2). Twenty feet or more in front of the wall lay a ditch, approaching 40 feet wide and not less than 12 feet deep. Forts occur at Carriden, Kinneil, Invercraven, Mumrills (6½ acres), Falkirk, Rough Castle (1 acre), Seabegs, *Castleary* (3½ acres), Westerwood (2 acres), Croy Hill (1½ acres), Bar Hill (3 acres), Auchendavy (3 acres), Kirkintilloch, Cadder (2 acres), *Balmuildy* (4 acres), New Kilpatrick (3½ acres), Castlehill (1½ acres), Duntocher, Old Kilpatrick (4 acres), those italicized having stone walls. Minor structures are signalling-platforms, occurring in pairs at high points, and a guard-post for the passage of the northward road at Watling Lodge, near Falkirk. Thus, the Antonine Wall is structurally an advance upon Hadrian's Turf Wall (see WALL OF HADRIAN) in its economy of material and rubble foundation, allowing better drainage, while its garrison was distributed in small close-spaced forts instead of large forts and mile-castles. Beyond the wall outpost-forts of the north road were held as far as Strathearn on the east, while on the west a road led towards Dumbarton, to a fortified port as yet unknown. Posts on the flanks are also still undiscovered.

History. Excavation of the forts reveals three periods of occupation, between A.D. 142 and the close of the century. Epigraphy discloses campaigning in the north under Julius Verus in 155-8 (*Eph. Epigr.* ix. 1163, 1230, and 1108, Brough), and this is taken to be the opening of the second period of occupation, though literature also records disturbances in Britain in 162 (S.H.A. *Marcus*, 8. 7), which were suppressed by Calpurnius Agricola (q.v.), not to mention those before the campaigning of 184, when the overthrow of a frontier-wall is mentioned (Dio Cass. 71. 16) and not reflected in the archaeology of Hadrian's Wall. The final abandonment of the wall is represented by an orderly evacuation, in complete contrast with the violent attack upon Hadrian's Wall in 197. This is shown to have followed upon a short occupation.

Sir G. Macdonald, *The Roman Wall in Scotland* (1934).

I. A. R.

WALL OF AURELIAN, the City Wall of Rome, constructed by Aurelian in A.D. 271-5 in anticipation of a sudden barbarian inroad (S.H.A. *Aurel.* 21. 9; 39. 2; *Aurel. Vict. Caes.* 35; *Ioh. Malalas, Chron.* xii. p. 299), was completed by Probus (Zosim. 1. 49). The original wall was some 20 feet high excluding the wide-set battlements. It extended for 12 miles, with 381 rectangular towers, at an interval of c. 100 feet, except on the long river-walls. The wall was usually solid but occasionally galleried and sometimes treated as a revetment-wall. It frequently embodied earlier structures, such as the retaining-wall of the Horti Acilianii (*muco torto*), the *castra praetoria*, private houses and tenements, the so-called *amphitheatrum castrense*, the *domus Lateranorum*, and the pyramid-tomb of Cestius. It surrounded the Fourteen Regions, enclosing, however, a relatively small part of *Transiberim*. The gates, mostly named from the principal roads, were *Portae Flaminiae*, *Pincianae*, *Salariae*, *Nomentanae*, *'Chiusa'*, *Tiburтина*, *Praenestina-Labicana*, *Asinaria*, *Metrobia*, *Latina*, *Appia*, *Ostiensis*,

Portuensis, *Aurelia-Pancraziana*, *Septimiana*, *Aurelia-Sancti Petri*. All were flanked by simple semicircular towers, those italicized having twin portals originally. There were also at least six postern-gates. The wall was thus designed to repel a raid rather than stand siege. The wall was doubled in height by adding a gallery, while gates were remodelled and fitted with vantage-courts, by Maxentius (A.D. 306-12), who also began a ditch. Wall, and especially gates, were repaired by Stilicho in 401-3 (*CIL* vi. 1188-90; *Claud. VI Cons. Hon.* 529). Later repairs occurred under Valentinian III, probably after the earthquake of 442, and under Theodoric in 507-11. Belisarius, in preparation for the siege of 536, refurbished the wall and dug a large ditch in front of it.

I. A. Richmond, *The City Wall of Imperial Rome* (1930).

I. A. R.

WALL OF HADRIAN, a frontier-wall of Roman Britain, running for 80 Roman miles from Wallsend-on-Tyne to Bowness-on-Solway. Erected in A.D. 122-8, it was first designed to start at *Pons Aelius*, Newcastle-upon-Tyne, the eastern 45 miles being in stone (10 feet thick and some 15 feet high, excluding battlements), and the western 31 miles in turf (20 feet thick at the base and some 12 feet high). Twenty feet in front of the wall ran a V-shaped ditch (27 feet wide and 15 feet deep). Patrols lay in attached fortlets or mile-castles, with towered gates to north, at every 1620 yards, and in intermediate turrets (20 feet square) at every 540 yards. As work progressed, changes came. The Stone Wall was changed to 7½ feet in width, and extended 4 miles eastwards, to Wallsend, and 4 miles westward (replacing the Turf Wall) to Banks. Garrison forts were also built, at Wallsend, Newcastle, *Benwell*, *Rudchester*, *Halton*, *Chesters*, *Housteads*, *Carvoran*, *Birdoswald*, *Castlesteads*, *Stanwix*, *Burgh-by-Sands*, and *Bowness* (those italicized being of standard pattern for a *cohors milliaria* or an *ala quingenaria*). The rest probably held *cohortes quingenariae* and were soon augmented by *Carraburgh* and *Greatchesters*. Forts and turrets continued down the Cumberland coast to Moresby; outpost-forts existed at Birrens, Netherby, and Bewcastle.

Behind the wall, enclosing all forts but *Carvoran* on the Stanegate (see below), ran a boundary-ditch (20 feet wide, 10 feet deep, and 8 feet across the flat bottom) with upcast disposed in two equidistant turf-kerbed mounds, 100 feet apart from crest to crest. A patrol-track ran along the south side of the ditch, reached by causeways at the mile-castles. Public passages pierced both mounds at the forts and crossed the ditch on a causeway faced in stone and barred by a non-defensive gate. Lateral communication was first supplied by branches from the Stanegate, the pre-Hadrianic road from Corbridge to Carlisle. Later, the Military Way, between the boundary-ditch and wall, connected forts and mile-castles.

History. The Turf Wall was entirely replaced in stone during the second century, and the boundary-ditch was slighted. But relations between the Wall of Antoninus (q.v.) and Hadrian's Wall are obscure. The garrison was depleted by Albinus in A.D. 196-7, and on his defeat the wall was savagely overthrown, to be restored by Severus in 200-5. In place of the Antonine Wall, a forward zone was now held by outpost-forts at Risingham, High Rochester, Bewcastle, and Netherby, a system which kept peace until the defeat of Allectus in 297 invited another inroad, followed by the restoration of Constantius I. Under Constans in 343 and Julian in

360 the forward zone suffered, and was abandoned after attacks by Picts, Scots, and Saxons in 367-9, which again overwhelmed the wall. Finally, the wall was evacuated by Magnus Maximus (383-8), who left the frontier in the care of Lowland *foederati*.

I. A. R.

WALL OF SERVIUS, the city-wall of Republican Rome, traditionally assigned to King Servius Tullius, actually belongs to 378 B.C. It is of Grotta Oscura tufa, built in headers and stretchers, 4.50 m. thick and at least 8.50 m. high, retaining an earth bank or terrace, and is comparable with the contemporary wall of Pompeii II (see FORTIFICATIONS). The masons' marks, with Hellenistic affinities, suggest Greek contractors. The wall enclosed an irregular area dictated by contours, embracing the Quirinal, Viminal, Oppian, Caelian, Aventine, and fortified Capitoline hills. There is, however, room for difference of opinion (cf. von Gerkan, *Röm. Mitt.* xlv, 1931, 153-88) as to the course between the last two points, while the time-space relation of the Palatine fortification to the wall is another crux. Gates are well-known by name, hardly by structure. In the second century B.C. the wall was heightened to some 50 feet (cf. Pompeii III), and was also supplied with casemates for *ballistae*, covering approaches to the gates. During the first century B.C. neglect and encroachment made the course hard to find by the time of Augustus.

The original work of Servius is represented by the *agger*, which, revetted by the Republican Wall just described, crosses the neck of land between Quirinal and Oppian. It is a typical promontory defence, as at Ardea, and covered tombs of the sixth century B.C. in Villa Spithoever. It is later than such works as the *murus terreus Carinarum*, which, if defensive, would mark an independent Oppian circuit. The rest of the fortification, as at Ardea, would depend upon scarped cliffs, 'ex omni parte arduis praeruptisque montibus', as Cicero observed (*Rep.* 2. 6. 11).

G. Sæflund, *Le mura di Roma repubblicana* (1932). I. A. R.

WAR, ART OF (GREEK). Homer was commonly credited by ancient readers with having intended to provide instruction in the art of war. But the attempt to deduce some kind of theory from military practice does not seem properly to have begun till the latter half of the fifth century, when the Sophists applied their abstract methods to this subject among others. Of the text-books derived from this movement there are only preserved the small treatise of Xenophon on the duties of a cavalry officer and an extract dealing with siege-warfare from a comprehensive text-book by Aeneas Tacticus. The other technical writers on the subject date from the Roman period. Of contemporary historians Thucydides, Xenophon, and Polybius in their different ways show appreciation of the art of war as a factor in history.

2. The Homeric battles cannot be reduced to technical terms. Sometimes they consist of duels between chieftains, taking place in front of masses of imperfectly armed retainers; at others the Greeks and Trojans meet in ranks of infantry, called phalanxes, and ranged closely shoulder to shoulder. Chariots are normally used to convey chieftains into or out of the fighting-line.

3. In Tyrtæus the references to warfare are too full of Homeric echoes to give independent evidence on archaic warfare. The chief source of information before the Peloponnesian War is Herodotus. From him it appears that Greek warfare till his day was based on the hoplite (q.v.). Campaigning was mostly confined to the period of the year from March to October, the only season when

(in the absence of military roads) it was easy to move bodies of heavy troops. Wars were usually limited to the border struggles of neighbouring States; the invader's objective was to destroy the corn and fruit-trees of the enemy and so compel them to offer battle or capitulate. There was no science of manœuvring before or during action, the only tactical device being the ambush. When hoplites met on level ground the deciding factor was usually weight of numbers. The troops were massed in ranks reckoned as the depth of so many shields. The side which first broke under pressure was defeated. The victors set up a trophy: the vanquished asked for a truce to bury their dead. Light-armed troops were quite unorganized; cavalry also were few, and were not used with any special effect.

4. The Peloponnesian War revealed the absurdity of annual raids on the enemy's corn-lands. The Athenians by retiring into their fortified area and importing their food-supplies were able to ignore the Spartan invasions. Hence the Spartans were forced at last to adopt the method of creating a permanent fortified base at Decelea. Also the constant fighting in various kinds of terrain showed up the lack of adaptability of the hoplites and the advantages of the occasional use of light-armed troops. The development of the peltast (q.v.) in the early fourth century provided a more mobile unit, which did not cost so much to maintain all the year round.

5. The hoplite battle was first revolutionized by Epaminondas (q.v.). It had been a convention to put the best troops on the right of the line, but Epaminondas placed a massed body on the left to crush the enemy's right in a slanting advance, and by this element of surprise he broke the Spartan front at Leuctra. This manœuvre was only a more intelligent use of an old Boeotian device, but out of it Philip and Alexander, by means of the Macedonian phalanx (q.v.), developed the method of attacking with part of their front, while the rest held back. For the purpose of delivering the main thrust Alexander used the excellent cavalry which Thessaly and Macedon provided, and exploited the charge from the flank. The further step of holding part of one's forces in reserve to use at a later point in the action is not found before the battle of Arbela. The other special innovation in Alexander's warfare is the pressing of pursuit, by which the enemy was prevented from reforming.

6. After Alexander there were no drastic changes. The main evolution consists in the further modification of the phalanx. Also a few special varieties of warfare added to the complexity of fighting: heavy-armed cavalry and elephants (q.v.) were first known from oriental sources, but were soon used throughout the Hellenistic world. Generally war became more and more an activity for professionals and was too complex for the ordinary citizen; but as it became more specialized, it also became more stereotyped. Alexander's attack in its fresh vigour was never twice the same, but the Hellenistic generals' methods were quite fixed when the Romans met them on Greek soil.

Ancient text-books: Xenophon, *Hipparchicus*; Aeneas Tacticus. Later technical writers are not of great value. Modern discussions: J. Kromayer and G. Veith, *Heerenzen und Kriegführung der Griechen und Römer* (1928). Hoplite war: G. B. Grundy, *Thucydides and His Age* (1911). Hellenistic warfare: W. W. Tarn, *Hellenistic Military and Naval Developments* (1930). H. W. P.

WAR, ART OF (ROMAN). The earliest Roman battle order was probably the phalanx (see preceding article.) In the fourth century (after the Gallic invasions or during the Samnite Wars) this was replaced by the manipular system, a type of warfare of which an essential feature was open-order fighting. This innovation was accompanied by the adoption of *pilum* and *gladius* as the national weapons, the effective use of which required space for free movement. In this system the legion was

drawn up in three lines of maniples with intervals equal to the frontage of each unit between the maniples, and with a distance of varying depth between each line, the units in the rear lines covering off the intervals in the line in front of them. The plan of battle was at first schematic. After preliminary skirmishing by light-armed troops and cavalry stationed on the flanks of the legions, the front line (*hastati*) on coming into range hurled their *pila* and, if successful, advanced and decided the issue by hand-to-hand fighting with the *gladius*; if unsuccessful, they retired through the gaps in the second line, and their place was taken by the *principes*. Finally a stand might be made with closed ranks at the third line (*triarii*), which at first retained the *hasta*.

2. During the Punic Wars much practical experience was acquired. Each line of maniples became more independent of the others, and experiments were made with a larger unit, the cohort, which after Marius permanently superseded the maniple. The fullest development was reached under Caesar. The *triplex acies* was no longer rigidly adhered to (e.g. *BGall.* 3. 24. 1), but dispositions varied with topographical conditions. The possibilities of flank attacks or of holding troops in reserve for the decisive onslaught were frequently exploited, while archers and slingers were increasingly employed in country unsuited to heavy infantry. Roman warfare was thus emancipated from stereotyped theories. Its success depended partly on the general's ability but mainly on the discipline of the soldiers.

3. During the first two centuries A.D. tactics for the most part followed the Caesarian model. But with the increasing efficiency of the auxiliary cavalry and light infantry a greater variety of manœuvres resulted. The legions still normally sustained the brunt of attack and defence, but the auxiliaries not infrequently played a decisive part (e.g. *Tac. Hist.* 2. 25; 2. 41; 5. 18; *Agr.* 35). Later the Roman army gradually lost its national character and its ability to give effect to the Roman art of war.

4. Another feature of Roman warfare was camp construction. Even on short campaigns a camp with ditch and rampart was laid out as a base for attack and a safe retreat in the event of defeat (see *CAMPS*). During the Republic these camps were usually temporary, but in the scheme of frontier defence gradually perfected in the Principate permanent garrisons for legions and *auxilia* were established (see *LIMES*).

5. Two methods of advance were commonly adopted. If attack was not expected, the army moved in one long column with a vanguard of scouts and cavalry, which also protected the flanks and rear (Josephus *Bj.* 3. 6. 2). If danger was anticipated, a formation easily convertible into an *acies* was adopted (*agmen quadratum*, *Tac. Ann.* 1. 51).

6. Despite the lack of maps, converging movements involving long marches and careful synchronization were increasingly attempted and sometimes succeeded. On the whole Roman strategy aimed at the destruction of the enemy in pitched battle rather than at a war of attrition.

J. Kromayer and G. Veith, *Heerwesen und Kriegsführung der Griechen und Römer* (1928); H. Delbrück, *Geschichte der Kriegskunst* (1920); T. Rice Holmes, *Caesar's Conquest of Gaul* (1913); F. E. Adcock, *The Roman Art of War under the Republic* (U.S.A. 1940). H. M. D. P.

WAR, RULES OF. These, like other international law, depended on custom and showed a constant conflict between the higher standard of the best public opinion and harsher measures permitted by usage, while passion and expediency frequently caused the most fundamental rules to be violated. Thus, the temptation to profit from a surprise at times led to the opening of hostilities without a declaration of war. Probably the law most generally

observed was that of the sanctity of heralds, for heralds were essential to communications between belligerents. Nor did Greeks frequently refuse a defeated army a truce for burying its dead, for the request of such a truce meant an admission of defeat and usually was followed by retreat. Beyond this there were few restraints except humanitarian considerations and the universal condemnation of excessive harshness. Plundering and the destruction of crops and property were legitimate, and were carried on both by regular armies and fleets, and by informal raiding-parties and privateers, and even the sanctity of temples was not always respected. Prisoners, if not protected by special terms of surrender, were at the mercy of their captors, who could execute them or sell them into slavery. The warfare of the Hellenistic Age was somewhat more humane, though with the wars of Rome and Philip V deterioration began once more. Roman warfare at its worst was extremely cruel and sometimes went to the length of killing all living things, even animals, in cities taken by storm, but it was often tempered by mercy. Though surrender (*deditio*) gave full power to the captors, it was unusual to use extreme measures against a city that surrendered and appealed to the *fides* of Rome. The protection of the rules of war was not extended to pirates and not always to barbarians.

C. Phillipson, *The International Law and Custom of Ancient Greece and Rome* (1911), chs. xxii-xxviii; M. Rostovtzeff, *The Social and Economic History of the Hellenistic World* (1941), 140-3, 192-204, 603-10, 1258-9. J. A. O. L.

WARS, SACRED, see *SACRED WARS*.

WATER, according to the Ionian philosopher, Thales, was the primal element, the origin of all things; Hesiod thought likewise, speaking not of water but of the mythical Oceanus; similarly the Orphic theogony of Hellanicus placed water at the beginning of the world. In all purificatory rites water (as well as fire) is exceedingly important. The new-born child, the bride and bridegroom, also the mourner and the combatant (i.e. those who have come into contact with death or the dead), have to be washed or bathed; likewise the *mystai* (cf. *MYSTERIES*). Water washed away all uncleanness and (according to Euripides) all sins; running water or water from a spring is particularly pure, likewise sea-water. It was fertilizing to nature and even gave new life to man. To the dead it was a usual gift (together with milk, wine, honey, and oil, cf. the vases on the graves with pierced bottoms, the *lutrophoroi*). Water (and fire) are traditional in all sorts of magic. The Orphics knew the water of Memory as well as of Forgetfulness in the other world, and we hear also of mantic water (cf. *SPRINGS*).

S. Eitrem, *Opferritus und Voropfer der Griechen und Römer* (1915), ch. 2; M. Nink, 'Die Bedeutung des Wassers im Kult und Leben der Alten' (*Philol. Suppl.* xiv. ii, 1921). S. E.

WEAVING. The weaving of cloth for ordinary household use in Greece and Rome was usually done at home. The more elaborate forms of weaving were left to professional craftsmen, and the best specimens of their work, often imported from Persia, Egypt, and Phoenicia, seem by the descriptions in literature to have been equal to the finest modern tapestry. These were all made by hand on an upright loom (*ιστός, tela*) differing very little in principle from that used by Penelope in the *Odyssey*. Its operation was as follows.

The framework was simple: two upright posts joined at the top by a transverse beam (*ζυγόν, jugum*). To this beam were fastened the threads of the warp (*πηρίον, stamina*) with weights attached at the bottom to make them hang straight. These threads were then divided into two groups by means of two horizontal rods (*καρόνες, arundines*) so that the shuttle (*κερκίς, radius*) might pass alternately over and under them. The warp was

much stouter than the weft thread, which was placed on a bobbin (*πηγήν, panus*) revolving on a cane and delivering the thread through a hole in the front of the shuttle. After the shuttle had passed to and fro several times the weft was driven upwards by a comb (*κρέις, pecten*) the teeth of which were inserted between the warp threads. For weaving in its simplest form this was all that was necessary; when a pattern was required a system of leashes and heddles, such as we have now, was used and worked by hand. In early times the web began at the top and the weaver worked standing; but some time in the last century B.C. the Egyptian fashion of sitting and starting at the bottom was introduced in Rome.

F. A. W.

WEIGHING-INSTRUMENTS. The balance (*σταθμός, libra, bilanz*) of two pans at equal distances from the point of suspension is an invention of primitive times; it is a frequent symbol in Minoan tablets, and Homer is familiar with its use, which persisted through antiquity. The steelyard, in which the rod is unequally divided, the object to be weighed being suspended from the short arm against a sliding weight on the longer, does not appear before Roman times (*statera*: originally *statera campana*, from an alleged Campanian origin); but from its greater convenience it became the most popular form of balance. Examples in museums show great variety; several scales and as many suspension-points may be combined; the pans may be replaced by hooks or by receptacles for liquids. *Trutina* is a pan-balance for large masses; *momentana* and *moneta* are for small objects, or coins.

F. N. P.

WEIGHTS. Weights of the Greek Bronze Age are usually flattened cylinders of stone or metal, incised circles on the upper surface indicating the denomination. Other forms are the duck and bull's head, the slingstone of haematite, and from Cnossos comes a flattened stone pyramid, the weight of a light talent (29,000 gm.) or of a standard copper ingot. Several standards appear to have been current, extant Minoan weights having been related to the Egyptian, Babylonian, and Phoenician systems.

The typical weight of historic Greece is a square plaque of lead with a badge, and sometimes the denomination and the name of the issuing city, on the top in relief. The principal types on Attic weights, which are widespread outside Attica, are the tortoise, amphora, and dolphin. There were many other forms, as caprice or local custom dictated. Roman weights show less variety, the common form being a spheroid of stone or metal, with flattened top and bottom; the denomination is generally expressed in punctured characters on the top.

Several weight standards were used in Greece; the principal were the Aeginetic, traditionally associated with Pheidon of Argos, and the Euboic, introduced by Solon into Attica. The Attic-Euboic in later times tended to oust the Aeginetic. The historical origin of these standards is disputed; the Greeks held that they were based on natural units, e.g. in the Attic-Euboic system on the barley-corn, of which twelve went to the obol. Extant weights often show considerable variations from the norm. The theoretical Greek table is:

	Attic-Euboic standard	Aeginetic standard
The obol, or metal spit	0.72 gm.	1.05 gm.
The drachm, bundle of six spits	4.31 "	6.30 "
The mina, 100 drachmae	431.00 "	630.00 "
The talent, 60 minae	3686 lb.	3780 kg.

The talent represented a man's load. The Attic-Euboic mina weighed almost a pound avoirdupois.

The Roman system was based upon the pound, *libra*, of 327.45 grammes = 0.721 of the pound avoirdupois, which was divided into 12 ounces, *unciae*. The names and symbols of the subdivisions are:

<i>libra</i> or <i>as</i>	1 pound	
<i>denum</i>	11 oz.	S
<i>dextans</i>	10 "	S
<i>dodrans</i>	9 "	S
<i>bes</i>	8 "	S
<i>septunx</i>	7 "	S
<i>semis</i>	6 "	S
<i>quincunx</i>	5 "	S
<i>triens</i>	4 "	S
<i>quadrans</i>	3 "	S
<i>sexans</i>	2 "	S
<i>sestuncia</i>	1½ "	S
<i>uncia</i>	1 "	S
<i>semuncia</i>	½ "	S
<i>sicilius</i>	¼ "	S
<i>sexula</i>	⅙ "	S
<i>semisextula</i>	⅓ "	S
<i>scripulum</i>	⅛ "	S

WIND-GODS were worshipped both by the Greeks and the Romans. Their ruler, Aeolus, might shut them up in a sack (Homer), but they were also regarded as well-defined personalities (so especially Boreas and Zephyrus). Originally they were represented as horses (the swift-footed horses of Achilles are the offspring of Zephyrus and one of the Harpies), later as anthropomorphic, often winged (under Oriental influence). The earth-born (volcanic) Oriental Typhon retained his serpent's feet. Homer speaks of four winds (later also the traditional number), Hesiod names three as children of Astraeus (the Starry Man) and Eos (the Dawn). The winds were regarded as fertilizing or impregnating, and astrologers assigned them to the planet Jupiter; they were also regarded as destructive, and their cult had a corresponding character (a black lamb is sacrificed to the 'typhos' according to Aristophanes, *Ran.* 847-8). The Athenians were especially interested in Boreas, for whom they organized a state-cult because he destroyed the Persian fleet. (Dedication to the winds at Pergamum, *Ath. Mitt.* xxxv. 547.) Even magic practices were employed in order to conciliate the winds (cf. the 'wind-lullers' at Corinth, Hesych., s.v.).

In Italy the name of the north wind (*aquilo*) still reminds us of the idea of the wind as a mighty bird. Here the west wind, Favonius (Zephyrus), was the favourite. The Romans had a temple of the *Tempestates* (near to the Porta Capena) from the third century B.C. In Imperial times the winds were often represented on sarcophagi.

Steuding, art. 'Windgötter', in Roscher; F. Cumont, *Rev. Arch.* VI Sér. xiii (1939), 26 ff.
S. E.

WINE. Both in Greece and in Italy wine was very cheap, and formed part of a slave's daily ration. At Athens the average price for the common sort was two-pence a gallon, at Rome sixpence. The process of wine-making in both countries was as follows. The grapes were gathered, trodden, and then pressed. Some of the juice (*γλεύκος, mustum*), was used at once and drunk unfermented; some was boiled down into jelly (*defrutum*) and used later for enriching poor wine. The rest of the must was poured into jars, *dolia*, and left to ferment for nine days. The jars were then closed and once a month opened for examination and treatment until the wine was fit for use. The common wines were drunk from the jar; the choicer kinds were drawn off and put into bottles (*amphorae*) which were then sealed, labelled, and stored in *apothecae*, usually at the top of the house to catch the heat from the bath-furnace.

The simplest classification of wines is by colour, of which the Greeks recognized three sorts, the Romans four. There was white wine (λευκός, *albus*); brown wine (κυρρός, *fulvus*); and red wine (έρυθρός, μέλας) subdivided by the Romans into light red—*sanguineus*, and dark red (*niger*). As for locality we need only consider here the wines of Greece and Italy. Of the Greek wines the best were those made at Chios, the Thasian, Lemnian, and Coan coming next. Of the Italian the Setine, grown on the hills near the Pomptine marshes, came first; then in order the Caecuban, Falernian, and Alban. The best of the Greek wines were light and dry (λεπτός, αὐστηρός); the Italian had more body and were sweeter, especially the *vinum dulce* and the raisin wine (*passum*). The Greek vintages reached maturity in seven years; many Italian wines required twenty.

WOMEN, POSITION OF. In the course of ancient history the social and economic position of women passed through many phases, and it is necessary to distinguish six periods: Early Greece, the fifth century at Athens, Hellenistic Greece, Republican Rome, Imperial Rome, Christian Rome. The changes were sometimes due to the difference between European and Asiatic ideas of women, sometimes to the effect on family life of long-continued foreign wars, sometimes to the influence of an ascetic religion. Only a brief summary can be given here, and it must be understood that in every period there were many exceptions to the general rule.

2. In the society pictured in the Homeric poems, and especially in the *Odyssey*, women held an honoured place. In the households of Odysseus, Menelaus, and Alcinoüs the wives, Penelope, Helen, and Arete, take their full share in the governing of the home and are treated with all due respect. This comparative equality of the sexes was in later ages always retained at Sparta, but in Ionia during the seventh century B.C. an idea became prevalent, perhaps due to Asiatic influence, that women were inferior beings. The early satirists, Simonides and Hipponax, vented their spleen on the female sex, and to them 'Women are the greatest evil that God ever created'.

3. After 500 B.C. the Athenians adopted Ionian ideas of womanhood, and the whole structure of Athenian social life was arranged for men's sole benefit. No education was thought necessary for girls, a marriage was arranged for them as soon as possible, and after that the less that was heard or seen of them the better. The Athenian house was small, dark, and uncomfortable; but women spent most of their time indoors, for nearly all forms of outdoor recreation were closed against them.

4. The conquests of Alexander swept away many Greek prejudices and enlarged the social as well as the political horizon. The ideas that all men but Greeks were barbarians and that all females were inferior to males were both seen to be false. Macedonian women had always been more independent than their Athenian sisters, and in the dynasties established by Alexander's successors there were a number of women as energetic, as ambitious, and as unscrupulous as any man. Their influence spread downwards, and in Alexandria and Antioch, the two great cities of the Hellenistic world, women had their full share of the pleasures of life. The Alexandrian poets always had a female audience in mind, and the fifteenth idyll of Theocritus will show how different an Alexandrian household was from an Athenian.

5. The Roman matron from the first enjoyed a higher status than was customary at Athens, but it was as a wife and a mother that she was held in esteem. As a woman

she passed by law at marriage from her father's control into that of her husband and remained *in manu* until his death. The Roman family was governed by the will of the *paterfamilias* by right of *patria potestas*, and the only restrictions were those imposed by custom and religion. During the long series of foreign wars in which Rome was engaged during the third and second centuries B.C. women in their husband's absence controlled the home, and finally the form of marriage by *usus* gave them independence (*see* MARRIAGE, LAW OF). Under the later Republic women received at least an elementary education; they met their husband's guests at dinner, and they were free to attend most outdoor entertainments.

6. In the last century B.C. and under the early emperors many Roman women of high position abused their freedom. Ladies like Sempronia, Clodia, and the two Julias rivalled men in looseness of life, and although Augustus tried to mend matters by his social legislation he met with no great success, as may be seen from Juvenal's Sixth Satire. But in Italy as a whole the old Roman traditions generally remained in honour.

7. With the rise of Christianity in Rome women were put back into a position of relative subservience. A century after Juvenal, Tertullian writes to his 'beloved sisters': 'You are the gateway of the devil, you are the unsealer of the forbidden tree, you are the first rebel against the divine law.' The finances of the early Christian Church owed much to the liberality of wealthy women converts, but both St. Augustine and St. Jerome were convinced that woman was the weaker vessel; and the Church followed their lead.

Companion Gr. Stud., 610 ff.; *Comp. Lat. Stud.*, 185 ff.; A. W. Gomme, *Essays in Greek History and Literature*, ch. 5; Friedländer, i, ch. 5. F. A. W.

WORSHIP, HOUSEHOLD. A Greek householder might have a particularly close association with some god or hero (as Ariston king of Sparta with Astrabacus, *Hdt.* 6. 69. 3; Pindar with Alemcon, *Pyth.* 8. 56 ff., and with the Mother of the Gods, *Pyth.* 3. 77 ff.: for private *sacra* cf. Theopomp. ap. Porph. *Abst.* 2. 16), but this was exceptional, and no part of domestic cult proper. The centre of the latter seems to have been the hearth, respectful treatment of which is recommended as early as Hesiod, *Op.* 733-4. At the ordinary family meals it was customary to begin by offering a little of the food, probably to Hestia (q.v.; Theophrastus in Porph. *Abst.* 2. 20). Before drinking wine, which formed a regular part of the meal, a little was poured on the floor to the Good Daimon, i.e. the luck of the house, and a little drunk neat, thus establishing a communion with him (cf. W. W. Tarn, *JHS* xlviii (1928), 210 ff.; Athenaeus, 692 ff.; *Ar. Eq.* 85 (with schol.), 106). After a more formal dinner, when the tables were cleared and the drinking-bout (*symposium*) began, it was customary, at all events in Athens, to offer three libations, to Zeus, the heroes, and Zeus Soter (Aeschylus, fr. 55 Nauck; see further Cook, *Zeus* ii. 1123, note 7). Of these, Zeus Soter is not the great Zeus, but rather a domestic deity, see H. Sjövall, *Zeus im altgr. Hauskult* (Diss. Lund, 1931), 85 ff.; see the whole dissertation for various domestic deities called Zeus, including Zeus Ktésios (pp. 53 ff.), who is hardly more than a deified store-jar in origin; cf. Cook, p. 1092 ff. A householder also made private celebrations of recognized public festivals (Nock, *Harv. Theol. Rev.* xxix (1936), 85, n. 105; cf. *SIG* 695, 86 ff.).

For Rome cf. CHILDREN, LARES, PENATES, VESTA. The cult was essentially the same as the Greek, though there were marked differences in detail; the objects of worship were the hearth (Vesta), the *numina* of the store-cupboard (Penates), and the Lar Familiaris; but there might be added to the *lararium*, or domestic chapel, at all events in classical times, almost any deity the householder fancied, as is shown by the figures represented in the Pompeian

lararia (see Boyce in *Am. Ac. Rome* xiv, and add S.H.A. *Alex. Sev.* 29. 2). Cf. *Hor. Sat.* 2. 2. 123 ff. for a domestic cult of Ceres. See also MEALS, SACRED; VESTA.

There is no treatise on the subject as a whole. The handbooks of private antiquities are inadequate here. Some useful works are cited above; add M. P. Nilsson in *Symb. Philol. Danielsson* (Uppsala, 1932), 218 ff.

WRESTLING. To the Greeks wrestling was both a science and an art. Victory alone was not sufficient; the winner must win gracefully and according to the precepts of the schools. Wrestling was one of the sports in which

women were allowed by some States to take part, competing even against men. There were separate rules for men and boys, and the different movements, grips, and throws were taught on a progressive system; text-books were used, and fragments of one such manual have recently been found on an Egyptian papyrus. The two principal styles were upright wrestling, in which the object was to throw one's opponent to the ground, three falls being necessary for victory; and ground wrestling, in which the struggle was continued until one of the combatants yielded.

F. A. W.

X

XANTHIPPE, see SOCRATES.

XANTHIPPIUS (1), husband of Cleisthenes' niece Agariste and father of Pericles. As a political ally of the Alcmaeonids (q.v.), he probably brought Miltiades (q.v.) to trial in 493 B.C., and he secured his condemnation in 490-489. He was ostracized in 484, but was recalled in the general amnesty before Xerxes' invasion. Elected general for 479 he commanded the Athenian contingent at Mycale and had a large share in this victory. In 478, after a winter siege, he captured Sestos and had the Persian governor and his children massacred.

J. Kirchner, *Prosopographia Attica* ii. 152 f., no. 11169; J. Carcopino, *L'Ostracisme athénien* (1935), 148 f., and passim, II. Willrich, *Perikles* (1936), 62 ff.

XANTHIPPIUS (2), a Spartan mercenary captain, helped Carthage against Regulus (q.v.). He reorganized the Carthaginian army and annihilated the Roman expeditionary force, making brilliant use of the Carthaginian elephants and cavalry to outflank and mow down the Romans (255 B.C.). After this victory he left Carthage. The story that he was treacherously killed on his homeward journey may be rejected. Perhaps he is the same Xanthippus who later served Ptolemy Evergetes.

H. H. S.

XANTHUS (1), poet of Magna Graecia or Sicily in seventh century B.C., mentioned by Stesichorus (*Ath.* 12. 513 a), who is said to have drawn on his *Oresteia* for his own (*ibid.*). He said that Electra was originally called Laodice, but had her name changed by the Argives because she remained unmarried (*Ael. VH* 4. 26).

J. M. Edmonds, *Lyra Graeca* (Loeb), ii. 12-13. C. M. B.

XANTHUS (2), son of Candaules, a Lydian, born 'about the capture of Sardis' (*Suidas*), described a drought in Artaxerxes' reign (464-424 B.C.) and is coupled with Hellenicus and Damastes as 'coming down to Thucydides' time' (*Dion. Hal. Thuc.* 5). But Ephorus thought he 'gave a starting-point' to Herodotus (*Ath.* 12. 515 d). The authenticity of his *Λυδιακά* (4 books) was disputed by Artemon, but there was a summary by Menippus (*Diog. Laert.* 6. 101). Eratosthenes and *Dion. Hal.* used him and Nicolas of Damascus copiously. He wrote also *Μαυιακά* and a *Life of Empedocles*. In Ionic dialect and simple graphic style he recorded romances, folk-tales, and popular customs; quoted a Lydian king-list, and discussed geological and botanical questions.

FHG i. 36-44; iv. 628-9; *FGH* ii. 60 (*Nic. Dam.*); L. Pearson, *Early Ionian Historians* (1939), ch. iii. J. L. M.

XENAGORAS (fl. c. 90 B.C.), a Greek, wrote *Χρονολογίες* (Chronologies) of Greek (and Italian?) towns, and *Περὶ*

17709.

XENARCHUS (1), Sicilian mime-writer (see MIMUS) of the late fifth century B.C., son of Sophron (q.v.).

Arist. Poet. 1447^b3; Kaibel, *CGF*, p. 182.

XENARCHUS (2), Middle Comedy poet, of considerable frankness and liveliness; 8 titles survive, mainly from daily life. *Fr.* 1, parody of tragic style; *fr.* 7, illegal watering of fish; *fr.* 14, happy cicalas, their wives have no voice.

FCG iii. 614 ff.; *CAF* ii. 467 ff.

XENOCLES (1), son of the elder Carcinus (q.v. 1), is said (*Aelian VH* 2. 8) to have defeated Euripides in 415 B.C. with a group of plays consisting of *Oedipus*, *Lycæon*, *Bacchae*, and *Athamas* (satyrie). His *Lycymnius* was parodied by Aristophanes (*Nub.* 1264-5), and there are contemptuous references to him in *Ar. Thesm.* 169, *Ran.* 86. Epithets applied to him (*μυχαροδιδίης*, *δωδεκα-μύχωνος*) may refer to a fondness for strange mechanical devices (*TGF*, p. 770).

(2) Son of the younger Carcinus (q.v. 2), wrote tragedies in the fourth century B.C. (*schol. Ar. Ran.* 86).

A. W. P.-C.

XENOCRATES (1) of Chalcedon, son of Agathenor, disciple of Plato and head of the Academy from 339 to 314 B.C. He is presented to us as a man of impressive personality, with a combination of austere dignity and kindness which exercised a great influence on all who came in contact with him. He was generally respected in Athens and was employed by the citizens as ambassador to Antipater in 322 B.C.

His philosophical contributions, so far as we can reconstruct them from the scanty evidence, were less impressive. He seems, in general, to have attempted to reproduce Plato's thought in a stereotyped and formalized system, though on one or two points he probably preserved the correct tradition of interpretation as against Aristotle. He also interested himself in giving a systematic account of the nature of the gods and daemons and their relations to the heavenly bodies, in a way which foreshadowed the fantasies of later Neoplatonism. From the titles of his works we may conjecture that his chief interest lay in moral questions, but rather in the direction of teaching a practical morality than of ethical analysis, a line which his immediate successors in the Academy appear to have followed.

History of Ancient Philosophy: Zeller, 2. 1^a, 1010-12; *Compendium* (Engl. Transl. 4. 5-11); R. Heine, *Xenocrates* (1892). G. C. F.

XENOCRATES (2) of Aphrodisias, physician of the time of Nero and the Flavians (54-96). Works: *Περὶ τῆς ἀπὸ τοῦ διπλώτου καὶ τῶν ἑξῶν ἀφελείας*, full of superstitious means of treatment, borrowed largely from previous works such as *Ps.-Democritus' Ἀπορρώματα*, a

lexicon of gems (frs. ed. M. Wellmann in *Quellen u. Studien zur Geschichte der Naturwissenschaften u. der Medizin*, 1935); *Περὶ τῆς τῶν ἐνὶ ὄρωσι τροφῆς*; *On the healing properties of plants*; *On the names of plants*; *On the meaning of the flight of birds*.

FRS. ed. J. L. Ideler in *Physici et Medici Graeci Minores* (1841), i. 121. W. D. R.

XENON, a friend often mentioned in Cicero's *Letters*: not to be identified with Zeno of Sidon, also mentioned by Cicero.

See Zeller, *Phil. d. Griechen* iii. 1^a. 385.

XENOPHANES of Colophon left Ionia at the age of twenty-five, probably on the Persian conquest in 545 B.C., and lived an exile's life for at least sixty-seven years, at some time in Zanele and Catana, and latterly perhaps at the court of Hieron of Syracuse. He is said to have written epic verses on the Foundation of Colophon and the Colonization of Elea, but extant fragments are either from his *Satires* (*Σάλλοι*) in hexameters (including those traditionally attributed to a philosophic poem) or from elegiac occasional pieces.

An accomplished and original writer in the tradition of Tyrtaeus and Solon, X. became the poet in Magna Graecia of the Ionian intellectual enlightenment. In ruthless criticism of Homer and Hesiod he denies that the gods act dishonourably or have human shape or understanding; there is a single supreme Deity who, without stirring, sways the universe through thought. His physical theories, based on keen, though perhaps not independent, observation, show the same rejection of traditional myth. In his elegies he turns his criticism to society, denouncing the accepted canons of ἀρετή (athletic and military prowess) as of less social value than intellectual achievement. Throughout he claims for his views not truth but probability and propriety. Neither septic nor mystic, he is more a searching and constructive critic of convention than a systematic thinker, and he is falsely claimed as the founder of the Eleatic school. But as the first philosophic theologian he exercised a lasting influence on religious thought.

Diels, *Vorsokr.* i. 113-39; Diehl, *Anthologia Lyrica Graeca* i. 1. 64-76; Burnet, *Early Greek Philosophy*, 112-29; C. M. Bowra, *Early Greek Elegists* (1938), 106-35; W. Jaeger, *The Theology of the Early Greek Philosophers* (1947), ch. iii. A. H. C.

XENOPHON (1), c. 430 (not 440 or earlier, as supposed prior to W. Mitford, *History of Greece* iv. 292 f.) to c. 354 B.C. (not 360, as Stesielides ap. Diog. Laert. 2. 56), son of Gryllus of the Athenian deme Erechia, a man of means. He became a disciple of Socrates, but does not claim to have known him intimately. Probably he served in the Athenian cavalry. In 401, on the invitation of the Theban Proxenus, and despite the warning of Socrates (*Anab.* 3. 1. 5), he joined the expedition of Cyrus against Artaxerxes, unaware of its true objective. After the murder of the generals he was chosen to succeed Proxenus as general, and, according to his own account, gradually won paramount influence with the army. With Chirisophus the Spartan he led the army to Trapezus, which was reached early in 400. Subsequently he took service under the Thracian prince Scuthes. Early in 399 he handed over the Cyrean troops to Thibron the Spartan general. When he married Philesia is unknown, but in 394 his sons, Gryllus and Diodorus, were old enough to be educated at Sparta (Plut. *Ages.* 20, Dinarchus ap. D.L. 2. 54). He was apparently still in Asia when he heard that he was banished (*An.* 7. 8. 57; cf. D.L. 2. 51, a confused statement). The specific charge is unknown, but doubtless *laconism* and friendship with Cyrus were alleged against him. He probably served under Thibron's successor Dercylidas (from 399 autumn; cf. *Hell.* 3. 2. 7), certainly under Agesilaus (from 396), of whom he became a close friend and admirer. In 394 he accompanied the king to Greece and saw, possibly fought in, the battle of Coronea,

though not as commander of the Cyreians. He then went to Sparta, where he was joined by his wife and sons. He was presented by the Spartan government with an estate at Scillus, near Olympia, and lived there as a country gentleman. When the Eleans recovered Scillus from Sparta (probably 371) he lost the estate and migrated to Corinth. The decree of exile was rescinded, probably in 369, when Athens concluded an alliance with Sparta (*Hell.* 6. 5. 49; 7. 1). X. sent his sons to Athens to serve in the cavalry and was probably there himself occasionally. He died at Corinth (Demetrius Magnes ap. D.L. 56).

2. WORKS

(1) *Anabasis* (Κύρου ἀνάβασις), an account of the expedition under Cyrus the Younger of the Greek mercenaries and of their subsequent adventures (401-399), now, but not originally, in seven books. X. first published his *Anabasis* under the pseudonym Themistogenes of Syracuse (*Hell.* 3. 1. 2; Plut. *De glor. Ath.* 345), but whether that work included all seven books or only i-iv is uncertain. In v-vii Xenophon represents his conduct and judgement as almost invariably correct, and may be answering detractors. Though finished long after the events narrated (5. 3. 7), the *Anabasis* shows remarkable freshness.

(2) *Hellenica* (Ἑλληνικά), a history from the close of Thucydides (411) to the battle of Mantinea (362), in seven books. It consists of two separate works, (a) to the close of the Peloponnesian War (2. 3. 9 or 10), in imitation of Thuc., with an appendix on the Thirty (to ii end); (b) the rest in a different manner, still unfinished in 358 (6. 5. 37). The theory that there is another break at 3. 5. 1 is discredited. In (b) there are serious omissions, and X. shows bias in favour of Sparta and against Thebes, and there is cheap moralizing; but it contains some notable speeches (6. 5. 38; 7. 1. 2). The *Hellenica* was overrated by the Atticists.

(3) *Cyropædia* (Κύρου παιδεία), an idealized biography of Cyrus the Elder, in eight books, the most highly finished of X.'s works, but too long, monotonous, and repetitive. The education of Cyrus, which accounts for his subsequent success, is based on principles that X. ascribes elsewhere to Socrates. X. makes Cyrus the embodiment of his own notions of the good ruler (cf. Cicero, *QFr.* 1. 1. 23). The descriptions of battles are vivid, and there is much instruction for military commanders in the form of concrete examples. There are many romantic touches, especially 6. 5; 7. 3, which influenced later Greek romance writers. Bk. 8. 8 is a palinode, showing how all went to pieces after Cyrus' death; it is inconsistent in details with the main work and its genuineness is disputed, but the language suggests X.

(4) *Polity of the Lacedaemonians* (Λακεδαιμονίων πολιτεία), a laudatory account, cursory and unequal, of Spartan institutions. They are due to Lyeurgus, to whom X. attributes ideas of his own. Ch. 14 is a palinode prompted by disgust at the conduct of Spartan harmosts, probably added in 378.

(5) *Agésilas* (Ἀγχιλαός), an eulogium of King Agesilaus, written apparently just after his death (360). Despite free use of rhetorical embellishments in the manner of Gorgias, it betrays signs of haste. Substantial parts are repeated with stylistic changes from *Hell.* 3. 4. 2 f.; 4. 2 f. It is now generally thought genuine, but some question Ch. 11, a summary.

(6) *Memorabilia* (Ἀπομνημονεύματα), memoirs of Socrates in four books. They consist of (1) a defence of Socrates (1. 1-2), shown by Cobet to be a reply to the Sophist Polyerates; (2) anecdotes illustrating the defence point by point (to end of bk. 1); (3) a miscellany originally written at different times, of which some parts form a series of conversations connected in subject. At the opening of seventeen of these X. states, or at least implies,

that he had heard them; but this is of no historical value. X. draws on Plato and other Socratics, and attributes to Socrates many of his own ideas. His credibility as a witness to the historical Socrates is much debated. The belief that large portions are interpolations is discarded.

(7) *Apology* (*Ἀπολογία Σωκράτους*), designed to show why Socrates did not defend himself better. The writer professes to record what he heard from Hermogenes. Some parts occur in the *Memorabilia* with little difference; 18 is in *Symp.* 4. 41; 14 may owe something to Plato, *Ap.* 21 a; 23 to *Crito* 44 b; 27 = Gorgias, *Palamedes* 1. It is an inferior production, but the language favours the view that it is by X.

(8) *Oeconomicus* (*Οἰκονομικός*), a discussion on estate management between Socrates and Critobulus. The first third is a preamble to an account by Socrates of a conversation between himself and Ischomachus, a landowner. The sentiments are entirely X.'s, reflecting his life at Scillus. Though disfigured by platitudes, the work has charm.

(9) *Symposium* (*Συμπόσιον*), a pleasant record of an imaginary drinking-party in the house of Callias, celebrating the success of Autolycus at the Panathenaic festival in 422 (Athenaeus 5. 216; 11. 504), with Socrates among the guests. There are notable anachronisms, and X., then aged about 8, states that he was present. There is much light banter, but the address of Socrates to Callias (8. 6 f.) is serious.

(10) *Hieron* (*Ἱέρων*), a conversation between the elder H. of Syracuse and Simonides of Ceos, who visited Syracuse in 476. The theme is double: (a) is the private citizen or the despot the happier? (b) how must a despot rule to win the affection of his people? There is little attempt at characterization; from ch. 8 Simonides is the mouthpiece of X. It is generally thought that X. was prompted by some event, probably the accession of Dionysius II (367), and by a political, or even personal, motive; more likely he is merely discussing problems that interested the Socratics.

(11) *Hipparchicus* (*Ἱππάρχικος*), on the duties of a cavalry commander, addressed to one about to hold the position, with suggestions for improvement of the cavalry. It falls into two parts: (a) *Memoranda* (1-3. 1); (b) proposals for putting these into practice. (a) resembles *Mem.* 3. 3.

(12) *On Horsemanship*. (*Περὶ ἵππικῆς*), an authoritative and well-constructed manual, supplementary to 11 (12. 14). It is the oldest complete treatise existing on the subject.

(13) *Ways and Means* (*Περὶ πόρων*), suggestions for improving Athenian finances. It supports a peace, such as was advocated by Eubulus, and is to be dated 355-354. Style, language, and matter prove it to be genuine.

(14) *Cynegeticus* (*Κυνηγετικός*), a hortatory treatise on hunting, especially of the hare. To the technical part (2-11) is prefixed a rhetorical proem, enumerating the disciples of Chiron. After 11 comes an epilogue in praise of hunting, and then a bewildering attack on the sophists, who 'do no good to anyone'. The genuineness of this medley, in whole or in part, especially that of the proem, is much debated. Nothing in 2-11 is inconsistent with X.: 12 contains passages similar to his acknowledged writings, and opinions expressed in 13 resemble his. Of those who accept the work most think that it was written before X. left Athens in 401.

The *Polity of the Athenians* (*Ἀθηναίων Πολιτεία*) is proved by language and contents not to be by X.; it was written by an Athenian oligarch, probably when X. was a child.

3. Xenophon is not a great, but a meritorious and versatile, author. He can write in a style suitable to every prose form, can depict a scene and draw a character. He is an amateur philosopher, historian, and economist, but a master of military, especially of cavalry, tactics. His

works show a persistent moral and pedagogic tendency: he has at hand a cheap remedy for moral, social, and economic evils. His thoughts, repeated again and again, are commonplace, and he is often tedious. He is a great borrower from other writers: had we more of the Socratic works, especially those of Antisthenes, his borrowings would be even more apparent. His style is habitually simple, but sometimes he uses the devices of rhetoric. The vocabulary is multifarious, containing colloquial, dialectic, and poetic elements.

4. As a man, despite his sentimentousness and self-satisfaction, he deserves respect, even admiration, for his wide sympathies and interests, for his courage and comradeship, and for his simple piety. See also HISTORIOGRAPHY, GREEK, para. 4.

XENOPHON (2), author of a Greek novel called the *Ephesiaca* or *Anthia and Habrocomes* (Τὰ κατὰ Ἀνθίαν καὶ Ἀβροκόμην Ἐφεσιακά), is known, on the authority of Suidas, as Xenophon of Ephesus; but he may have been associated with Ephesus only because of the title of his book and to distinguish him from Xenophon of Cyprus, author of the *Cyprica* or *Cinyra*, *Myrrha*, and *Adonis*, and Xenophon of Antioch, author of the *Babyloniaca*, neither extant. X.'s topographical description of Ephesus, which is untrue of his own period, is largely derived from literary sources. His precise date is uncertain, but it was after Trajan's reign and probably before A.D. 263, when the temple of Artemis at Ephesus was destroyed by the Goths. Suidas, who mentions other works now lost, says that the *Ephesiaca* comprised ten books; since only five are extant, modern critics often assume that they represent an abridgement, thereby excusing the disjointedness of the narrative. Whether full or abridged, it is the weakest of the extant novels. The usual themes are exploited, but the presentation is uninspired and unskilful and suggests that the author, or his abridger, was almost illiterate. The simplicity of thought and expression lacks the charm that may be felt in Chariton (q.v.) and serves only to expose the poverty of the material.

Picard, *Épique et Roman* (1928). See also on the next page.

XERXES I (*Khshaiarsha*), son of Darius and Atossa, king of Persia 485-465 B.C. He inherited from his father the task of punishing the Greeks for their participation in the Ionian revolt. Securing the co-operation of Carthage, and promises of support from several Greek States, he prepared a great fleet and army, bridged the Hellespont, and dug a canal through the Athos peninsula. In the spring of 480 his forces set out. At first they met with success; the fleet was victorious at Artemisium, the army forced Thermopylae, Attica was laid waste, and the Greeks forced back to their last line of defence, the Isthmus of Corinth. But at Salamis Themistocles with the Greek fleet won a victory which decided the future of Greece. His supplies from Asia cut off, Xerxes was forced to retreat; Mardonius, whom he left in command,

was defeated at Plataea, and a final Persian failure at Mycale encouraged the defection of the Greeks of Asia Minor.

Of Xerxes' subsequent career little is known. In his reign the circumnavigation of Africa was attempted. A violent and intolerant ruler, he attempted to instal the sole cult of Ahura Mazda. He built extensively at Persepolis, Ecbatana, etc. But the Empire, though still vast in extent and resources, was weakened by court intrigues, in one of which he was murdered.

XUTHUS (*Ξούθος*), see CREUSA (1), ION.

Z

ZAGREUS, see DIONYSUS, ORPHISM, PERSEPHONE.

ZALEUCUS, the lawgiver of Italian Locri. As his laws are said to have been the first Greek codification, he probably lived c. 650 B.C. His legislation was notorious for its severity. The older tradition (4th c.) seems to have preserved some good material, e.g. his use of the *lex talionis* ('eye for eye') and prescription of exact penalties for each crime. Like other Greek lawgivers, he also issued sumptuary laws. Zaleucus was famous, too, as a conciliator of social factions; the constitution of Locri, however, remained extremely aristocratic. His laws were accepted by many cities of Italy and Sicily. The later tradition about him (especially in Diodorus) is mostly legendary.

F. E. Adcock, *Cambr. Hist. Journ.* ii (1927); M. Mühl, *Klio*, Beiheft xxli (1929). V. E.

ZALMOXIS (*Salmoxis*) (*Σάλμοξις*, *Σάλμοξις*), the deity of the Getae (Hdt. 4. 94-6). He seems to have been a god of the dead, for the Getae are said to 'make immortal' a man every four years, by throwing him upon spear-points, after charging him with messages for the other world. Plato (*Chrm.* 156 d) speaks of certain 'physicians of Zalmoxis' and their doctrines; this seems his own invention. Other authors (see commentators *ad locc.*) add nothing but a conjecture of Mnaseas (in Photius, s.v. *Σάμολξις* [*sic*]) that he was the same as Kronos (q.v.).

Cf. A. D. Nock, *CR* xl (1926), 184 ff.

H. J. R.

ZAMA was the name of more than one town in North Africa. One (*colonia Zamensis*) was at Sidi Abd el Djedidi, 31 miles north-west of Kairouan. Farther west lay Zama Maior (perhaps modern Jama) and Zama Regia (now fixed through two inscriptions at Ksar Toual Zouameul, rather than 4½ miles farther west at Seba Biar: see *Rev. Arch.* xx (1942-3), 178-9); some scholars believe that these two Zamas should be identified with each other. Zama Regia in the Numidian kingdom was besieged unsuccessfully by Metellus during the Jugurthine War (109 B.C.); later it was Juba's capital, and after capture by T. Sextius (41 B.C.) it was temporarily destroyed. It became a *municipium* c. 29 B.C. and a colony under Hadrian. Zama is best known as the traditional site of Hannibal's defeat by Scipio Africanus in 202, an identification which rests on no better authority than Nepos. The battle was almost certainly not fought there, although Hannibal camped at western Zama before advancing still farther west to the actual battlefield which Polybius calls Margaron (otherwise unknown) and Livy Naraggara (Sidi Youssef); it probably lay

between Naraggara and western Zama in a plain Draael-Metnan, south-west of Sicca Veneria (El Kef).

See T. Rice Holmes, *The Roman Republic* iii (1923), 536; H. H. Scullard, *Scipio Africanus in the Second Punic War* (1930), 310. For the *municipium*, M. Grant, *From Imperium to Auctoritas* (1946), 182. H. H. S.

ZANCLE = MESSANA (q.v.)

ZELA, an ancient town of Pontus, with a considerable and fertile territory, and a large slave population attached to a Persian temple. Here Mithridates VI defeated Triarius in 67, and Caesar Pharnaces II (q.v.) in 47. Originally under the rule of priests, it received municipal status from Pompey. It became a temple State again under Antony, but at some later date (probably A.D. 64) became a city again. Under the Roman Empire it lay off the main-road system and fell into insignificance.

F. Cumont, *Studia Pontica* ii (1906), 188-94; iii (1910), 233-56; J. A. R. Munro, *JHS* xxi (1901), 52 ff.; Jones, *Eastern Cities*.

T. R. S. B.

ZENO (*Ζήνων*) (1) of Elea, pupil and friend of Parmenides, was born, according to Plato, c. 490 B.C. (*Prm.* 127 b). He wrote probably a single book in Attic prose, supporting Parmenides' monism by drawing contradictory conclusions from the premisses of its opponents; whence Aristotle calls him the inventor of dialectic. Some of his arguments survive; those concerning motion are (in summary):

- (a) Before a moving body can reach the end of a line, it must reach the mid-point, before this the mid-point again, and so on. Therefore it can never start at all.
- (b) Achilles can never overtake the tortoise since, when he reaches its starting-point, the tortoise is a little farther on, and so *ad infinitum*.
- (c) The flying arrow is always opposite a length of ground equal to itself, and is therefore at every given moment at rest.
- (d) Suppose two groups of equal units moving in a race-course with equal speed in opposite directions alongside a stationary group of similar units; then a unit of one moving group will in a given time pass twice as many units of the other as a unit of this will pass of the stationary group. Since the speeds and distances traversed are equal, the given time is therefore equal to half itself.

Of these arguments the first pair apparently presupposes (and thus refutes) the hypothesis that being is infinitely divisible, the second pair the hypothesis that it is composed of indivisible magnitudes. Zeno's other

important surviving arguments show that, if being is many, it must be both infinitely small and infinitely great, and both limited and unlimited in number. See also MATHEMATICS.

Diels, *Vorles.* i. 247-58; Burnet, *Early Greek Philosophy*, 310-20; W. D. Ross, *Aristotle's Physics* (1936), xi-xii, 71-85, 479-80, 655-6; H. D. P. Lee, *Zeno of Elea* (1936). A. H. C.

ZENO (2) (335-263 B.C.), son of Mnaseas of Citium (Cyprus), probably of Phoenician race, founder of the Stoic school. He came to Athens in 313 and attended the lectures of Polemon, head of the Academy, and of the Megarian philosopher Diodorus ὁ Κρόνος, but was converted to Cynicism by Crates of Thebes. His earlier writings, especially his *πολιτεία*, are said to have been entirely Cynic in outlook. Later he turned to Socratic philosophy through study of the works of Antisthenes, and finally developed his own system. He taught in the Stoa Poikile, a public hall in Athens, from which the name of his school is derived, and soon acquired a large audience, though he tried to keep out the general public and wanted to teach real philosophers only. He became a friend of King Antigonos Gonatas and was invited to stay with him at his court at Pella, but declined and sent his disciple Persaeus instead.

Unlike most of the Socratics he created a complete philosophical system, consisting of logic and theory of knowledge (λογικόν), physics (φυσικόν and θεολογικόν), and ethics (ἠθικόν). In physics he admittedly followed Heraclitus, but was also strongly influenced by Aristotelian philosophy. In logic and theory of knowledge he was influenced by Antisthenes and Diodorus, the Megaric. His ethical doctrine gave great comfort to many during the troubled times of the successors of Alexander. According to this doctrine the only real good is virtue, the only real evil moral weakness. Everything else, including poverty, death, pain, is indifferent. Since nobody can deprive the wise man of his virtue he is always in possession of the only real good and therefore happy.

H. von Arnim, *SVF* i (1921), 3-72; Diogenes Laertius 7, 1-160; M. Pohlenz, 'Zeno and Chrysipp', *Nachricht. Götting. Gesellsch.*, Fachgruppe I, N.F. II, no. 9. K. von F.

ZENO (3) of Tarsus, Stoic, successor of Chrysippus as head of the school in 204 B.C. He left behind him few books but many disciples.

Testimonia in von Arnim, *SVF* III. 209. See Zeller, *Phil. d. Griechen* III. 1^a. 45-6.

ZENO (4) of Rhodes (early 2nd c. B.C.), wrote a history of Rhodes from the beginnings to his own times, which Polybius used (with Antisthenes), although he criticized his patriotic exaggeration (Polyb. 16. 14); his tradition may also appear in Diodorus.

Flg III. 174.

ZENO (5) of Sidon (b. c. 150 B.C.), Epicurean, pupil of Apollodorus and probably head of the school between him and Phaedrus. Cicero heard him lecture in Athens in 79-78. Philodemus' *Περὶ παρηγορίας* was a selection from Z., and his *Περὶ σημείων* borrows lectures by Z. He is probably the source of part of Cic. *Nat. D.* 1.

See Zeller, *Phil. d. Griechen* III. 1^a. 384-6. W. D. R.

ZENO (6) of Sidon, Stoic, pupil of Diodorus Cronus (Diog. Laert. 38. 16).

See Zeller, *Phil. d. Griechen* III. 1^a. 49.

ZENO, see also under APOLLONIUS (3).

ZENOBIA (Septimia), or in Aramaic *Bat Zabai*, the second wife of Odaenathus (q.v.). She was probably responsible for the murder of her husband and his son by a previous marriage; at any rate she thereupon

secured the power for herself in the name of her infant son Vaballathus (q.v.). Gallienus sent Heraclianus against her, but he was defeated, and Zenobia, having secured Syria, in A.D. 269 conquered Egypt, and next year overran Asia Minor except Bithynia. Aurelian at first acquiesced, granting to Vaballathus the same position as his father, but when in 271 Zenobia, not content with this partial recognition, proclaimed her son Augustus, he marched against her. His general Probus conquered Egypt; he himself reoccupied Asia Minor with little resistance, defeated Zabdas, Zenobia's general, at Antioch and again at Emesa, and finally captured Palmyra and the queen herself and her son. Having been exhibited at Aurelian's triumph she was granted a pension and a villa at Tibur. Zenobia is highly praised for her beauty, intelligence, and virtue, but was evidently a ruthless and unscrupulous woman. She sacrificed to her personal ambition the fortune of her native city, which Odaenathus had by his loyalty to the empire preserved. See also AURELIANUS.

J. G. Février, *Histoire de Palmyre* (1931), 103-41. A. H. M. J.

ZENODOTUS, author, between 200 B.C. and A.D. 90, of a treatise *Περὶ ἰσομέτρων σχημάτων*. Several propositions from it are preserved in the commentary of Theon of Alexandria on Bk. 1 of Ptolemy's *Syntaxis*. He was followed closely in his treatment of the subject by Pappus, whose treatment is, however, more complete. His style is not unlike that of Euclid and Archimedes. W. D. R.

ZENODOTUS of Ephesus (b. c. 325 B.C.), pupil of Philetas, became the first head of the Library at Alexandria (c. 284) and undertook the classification of the Greek epic and lyric poets, some of whom he edited.

WORKS

(1) Lexicography: *Homeric Glossary* (Γλῶσσαι), which often relied on guesswork to give the meaning of difficult words, but opened the way for the scholarly study of language; *Λέξεις ἑθνικάι*, a compilation of foreign expressions. (2) Editions (διορθώσεις). His recension of the *Iliad* and *Odyssey*, in which for the first time the poems were divided into twenty-four books, represented the first scientific attempt to get back to the original Homeric text by the collation of several manuscripts. He marked lines of the genuineness of which he felt doubt with an *obelus* (see SCHOLARSHIP, GREEK, para. 3), and altered the text by the transposition or telescoping of verses, by the introduction of new readings, and sometimes even by the insertion of new lines. But the extremely subjective nature of his criteria made him sometimes rash in emendation. He produced also recensions of Hesiod, *Theog.*, Anacreon, Pindar (*POxy.* v. 841).

H. Düntzer, *De Zenodoti studiis Homericis* (1843); K. Lehrs, *De Aristarchi studiis Homericis* (1882); A. Römer, *Über die Homerrezension der Zenodoti* (1886); D. B. Monro, *Homer's Odyssey*, Appendix (1901); G. M. Bolling, *External Evidence for Interpolation in Homer* (1925). J. F. L.

ZENON, see ZENO, and also APOLLONIUS (3).

ZEPHYRUS, god of the West Wind, sometimes said to be husband of Iris (rainy wind and rainbow), as Alcaeus, fr. 8 Diehl; a subordinate figure in a few legends, as that of Hyacinthus (q.v.). His parents are Eos and Astraeus (Hesiod, *Theog.* 379). Cf. WIND-GODS.

ZETES, see CALAÏS.

ZETHUS, see AMPHION.

ZEUGITAI in the original sense were owners of a ζεύγος or pair of oxen. At Athens they constituted the third census-class, with an estimated revenue of 200-300 medimnoi of corn, or the equivalent in other produce

or money. By the constitution of Solon (q.v.) they were full citizens, except that they were eligible only to the minor magistracies. From the time of Cleisthenes (q.v.), they could be elected *stratēgoi*, and in 457 they became eligible for the archonship. The majority of farmers and craftsmen of Athens belonged to this class; and these formed the bulk of the infantry in war-time, each man providing his own arms (see HOPLITES). A. W. G.

ZEUGMA (mod. *Bâlkis*), on the right bank of the Euphrates at its chief crossing, between Europus and Samosata. Twin colonies Seleuceia and Apamea were founded by Seleucus I at this point, which came to be known by the generic name Zeugma ('junction'); it superseded an earlier Zeugma near Thapsacus. Originally in Commagene, Zeugma was added to the province of Syria in A.D. 58. As a frontier post and a meeting-place of trade-routes from East and West across the Parthian Empire, it became extremely prosperous. Justinian fortified it against the Sassanids, but in 639 it fell to the Arabs. M. S. D.

ZEUS is the only Greek god whose Indo-European origin can be proved with certainty. He is found as 'Father', which attribute is very common in Greek too, among the Romans, Indians, and Illyrians (Jupiter, Dyaus pita, Deipatyros); the name of the German god Ziu (cf. Tuesday) is akin. The word signifies 'sky', and according to a general opinion the bright sky; yet this is of no importance to primitive man, and the cults prove that Zeus is the weather-god, i.e. the sky as the sphere of atmospheric phenomena, thunder, rain, etc. Mountain peaks give weather signs, and Zeus is enthroned on them; Olympus is a pre-Greek word signifying 'mountain'; and among other peoples also the thunder-god became the supreme god. The epithet 'Father' is generally understood according to the Homeric phrase 'Father of gods and men'. But Zeus created neither gods nor men and it is unbelievable that in Indo-European times a nobility traced its descent from Zeus—this is probably due to the heroic Mycenaean age; again, the divine children of Zeus, Athena, Artemis, Apollo, Ares, Dionysus, include pre-Greek and immigrant gods. Consequently 'Father' is to be taken in the sense of *pater familias*, protector and ruler of the family. This implies a moral notion, the maintenance of customary laws; and these, e.g. the respect for suppliants and guest-friends (Zeus Hikesios, Xenios), were always bound up with Zeus. This explains why Zeus was the god of the courtyard and the household (Zeus Herkeios, Ktesios). The Greek State being founded on the family, Zeus was, as Homer shows, the protector of the king and his rights. The Mycenaean age formed the supreme god and the State of the gods after the model of its mighty kings and knights. Zeus is surrounded by recalcitrant vassals who sometimes show him respect, sometimes mock him. He rules according to power rather than according to righteousness, and has innumerable loves and children.

Homer impressed this Zeus upon the Greek mind. In the historical age, although kingship was abolished, Zeus was not dethroned. Zeus became the highest civic god, often with the epithet Polieus and together with Athena Polias, the old Mycenaean palace goddess and protectress of the king. As protector of political freedom he was called Soter, Eleutherios, and festivals were instituted in his honour. He had little to do with other concerns of the people—agriculture, war, crafts, etc. It was never forgotten that Zeus was the protector of law and morals. Hesiod invokes him as such in his cry for justice and places Dike at his side. The loftiest conception of Zeus is found in Aeschylus, who enhances his righteousness and overwhelming power. In the classical age Zeus was very prominent in art and literature, but among the people he receded into the background, being either the

weather-god of the rustics or the high civic god who received more respect than attention. In the Hellenistic age his name was very freely given to the chief deity of any non-Greek tribe or region. Cosmological ideas were not in any large measure attached to Zeus; Stoic philosophy, however, identified him with its highest principle, fire, which at the same time is the reason which pervades and animates the universe. This idea is expressed very beautifully in the hymn by Cleanthes (q.v.).

Certain myths are important, among them the most peculiar Cretan myth of the birth of Zeus, according to which the child was hidden in a cave in order that Kronos might not swallow it up, and nourished by animals, and the Curetes danced around it. The Cretans told also that Zeus was dead and buried. This is certainly a Minoan conception, the spirit of vegetation, as born and dying annually. Zeus dethroned Kronos and together with the Olympian gods fought against the Titans and imprisoned them. The Titans are believed to be pre-Greek gods but the evidence is slight. The myth is perhaps modelled on the cosmological myth according to which Kronos dethroned his father Uranus. These myths are mixed up with the folk-tale motives.

A. B. Cook, *Zeus* (1914-40); M. P. Nilsson in *ARIW* xxxv (1938), 156 ff.; *Gesch. d. griech. Rel.* i. 364 and 483 (the Titans).

M. P. N.

ZEUXIADES, see under SILANION.

ZEUXIS, painter, of Heraelea in Lucania, pupil of Neseus of Thasos or Damophilus of Himera. Pliny dates him 397 B.C., and rejects 424. Quintilian dates both him and Parrhasius in the time of the Peloponnesian War. In Plato's *Protagoras* (dramatic date about 430) he is young and a new-comer in Athens. His rose-wreathed Eros is mentioned in Ar. *Ach.* 991-2 (425). He painted Alcmena for Acragas before 406, and Archelaus' palace between 413 and 399. He 'entered the door opened by Apollodorus and stole his art'; he added the use of high-lights to shading, and Lucian praises in the Centaur family (an instance of the unusual subjects which Zeuxis preferred) the subtle gradation of colour from the human to the animal body of the female Centaur; his grapes were said to have deceived the birds. His figures lacked the *ēthos* of Polygnotus, although his Penelope was morality itself, and his Helen, for Croton, an ideal picture compiled from several models; *pāthos* rather than *ēthos* distinguished the Autoboreas with Titan look and wild hair, and the Menelaus drenched in tears. He also painted monochromes on white, and *figlina opera* (clay plaques).

Overbeck, 1077, 1121, 1647-91; Pfuhl, 739; O. Brendel, *JDAI* 1932, 191. T. B. L. W.

ZMYRNA or **Smyrna** (= Myrrha), a lost poem by Helvius Cinna (q.v. 4), dealt in Alexandrian fashion and under the influence of Parthenios, with the unnatural passion of Myrrha for her father Cinyras. It was elaborated through nine years (Catull. 95; Quint. *Inst.* 10. 4. 4; Serv. ad Verg. *Ecl.* 9. 35). Martial (10. 21. 3-4) banters a literary contemporary for preferring to Virgil this recondite and obscure work. J. W. D.

ZOÏLUS (Ζωῖλος) of Amphipolis (4th c. B.C.), the cynic philosopher, pupil of Polycrates and teacher of Anaximenes, is described by Suidas as *ρήτωρ καὶ φιλόσοφος*, by Aelian, *VH* 11. 10, as *κύων ῥητορικὸς* and *ψογερός*. He was notorious for the bitterness of his attacks on Isocrates, Plato, and especially Homer.

WORKS.

(1) *Against Isocrates*. (2) *Against Plato*, favourably mentioned by Dion. Hal. *Pomp.* 1. (3) *Against Homer* (*Kaθ' Ὁμήρου* or *Κατὰ τῆς Ὁμήρου ποιήσεως* or perhaps *Ὁμηρομάστιξ*, which became the author's nickname).

This work was chiefly devoted to severe, though often captious, criticism of the poet's invention, of the credibility of incidents (e.g. *Il.* 23. 100), and of the characters (e.g. *Il.* 1. 50). (4) *Censure of Homer* (*Ψόγος Ὁμήρου*), probably a declamation. (5) *Panegyric on the People of Tenedos*. (6) *On Figures*, a technical rhetorical treatise; his definition *σχῆμά ἐστιν ἕτερον μὲν προσποιεῖσθαι ἕτερον δὲ λέγειν* is criticized by Quintilian (9. 1. 14). He was the first to use *σχῆμα* in this technical sense. (7) *On Amphipolis*. (8) A history of Greece from the Theogony to the death of Philip of Macedonia.

FGH ii. A. 71; U. Friedländer, *De Zoilo aliisque Homeri obrectatoribus* (1895). J. F. L.

ZONAS of Sardis (fl. 90 B.C.) was a distinguished orator, and the author of some excellent epigrams in the *Greek Anthology*; the finest is a lovely epitaph asking Charon to help the little dead boy who cannot walk very well in his first sandals (*Anth. Pal.* 7. 365). He also bore the name Diodorus, and some epigrams attributed to the other Diodorus may be his. G. H.

ZOOLOGY. Excellent early vase-paintings of animals are scattered over the Greek world with special schools in Cyprus, Boeotia, Chalcis, etc. Marine creatures are particularly well rendered. The name for a painter, *zōgraphos*, suggests attention to animal forms. Much accurate observation is displayed on coins and mosaics, both Greek and Imperial, and on some of them the actual species of small marine invertebrates can be easily recognized.

2. With some effort a classificatory system may be read into the arrangements of animals by habit in *On diet* of the Hippocratic Collection. More scientific are various fragments of the Sicilian school on the structure of animals (see ANATOMY AND PHYSIOLOGY, para. 2). In the true scientific tradition is a work of the Hippocratic Collection (artificially divided under titles *On Generation*, *On the Nature of the Embryo*, and *On Diseases*, Book iv) of about 380 B.C. It sets forth in some detail a doctrine of pangenesis astonishingly like that of Darwin (*Animals and Plants under Domestication*, 1868). To explain heredity it supposes that vessels reach the seed carrying samples from all parts of the body. It contains the first account of a controlled biological experiment. "Take 20 eggs and let them be incubated by hens. Each day, from the second to that of hatching, remove an egg, break it, and examine it. You will find that the nature of the bird can be likened to that of man. The membranes proceed from the umbilical cord, and all that I have said on the subject of the infant you will find in the bird's egg, in which you will be surprised to find an umbilical cord."

3. With almost the sole exception of this able work, ancient zoology begins and ends with Aristotle. Among his positive contributions are:

- (a) Records of the life, breeding, habits, and structure of about 540 species of animals.
- (b) Investigations of the developing chick, which has ever since been the classical embryological subject.
- (c) Accounts of the habits and development of octopuses and squids, in some cases surpassed only in quite modern times.
- (d) Anatomical accounts of the four-chambered stomach of ruminants, of the complex relations of the ducts, vessels, and organs in the mammalian generative system, and of the mammalian character of porpoises, dolphins, and whales, all unsurpassed until the seventeenth century.
- (e) Accounts of exceptional modes of development of fish, among them of a dog-fish the young of which is linked to the womb by a navel cord and placenta much as in a mammal. Nothing has contributed

more to Aristotle's modern scientific reputation than the rediscovery of this phenomenon a century ago.

- (f) Observations on paternal care in fish, verified only in the last century.
- (g) Stress on the heart and vascular system on embryological grounds. He is often quoted as calling the heart 'the first to live and last to die'. The idea is in his works but the phrase is not.
- (h) A permanent addition to the technique of scientific instruction was his introduction of diagrams to explain anatomical relations. Some of his diagrams can be restored from his descriptions.

4. There is no system of classification of animals in Aristotle's works, but from them can fairly be extracted an intelligible scheme which was hardly improved until the time of Cuvier in the early nineteenth century. Aristotle also emphasizes that living things can be arranged in a sort of ladder, the *scala naturae* discussed by naturalists until the mid-nineteenth century. 'Nature proceeds little by little from things lifeless to animal life in such a way that it is impossible to determine the exact line of demarcation, nor on which side thereof an intermediate form should lie. Thus, next after lifeless things in the upward scale comes the plant, and of plants one will differ from another as to its amount of apparent vitality; and, in a word, the whole of plant-kind, while devoid of life compared with an animal, is endowed with life as compared with other corporeal entities. Indeed, there is observed in plants a continuous scale of ascent towards the animal.' (*Hist. An.* 588 b 4 ff.)

5. Aristotle's view on generation is that the material substance is contributed by the female, the male giving the principle of life. The male he compares to the sculptor, the female to the marble. It is, therefore, theoretically unnecessary for conception that anything material should pass from male to female. This view is linked with controversies involving the ideas of 'spontaneous generation' and of 'parthenogenesis' which have lasted ever since and constantly present new facets with advancing knowledge.

6. Aristotle's theory of the actual mechanism of generation is of great historic importance. He specifically rejects pangenesis. He considers that the nutritive material distributed by the blood contains a number of fractions each of which accords to a particular organ and is elaborated for that organ by the vital principle. Before distribution each fraction yields up a minute part to the semen. Because the semen thus contains representatives of every organ—and therefore of every feature—the offspring resembles its father. It resembles its mother because she also contributes to the offspring parts separated off from her blood before distribution, as does the father. In her case, however, these parts are contained in the catamenia (or their equivalents), which, suppressed during pregnancy, provide the material of the body of the offspring. (*Gen. An.* 1. 18-22.)

7. It calls for remark that Aristotle, having thought deeply on heredity, considered only the relation of parent to offspring and not the general principle as extended to descent. This is one of the several points at which he approaches, without crossing, the frontier of evolutionary doctrine. His theory turns up in Lucretius (4. 1229-31) and also in the *Wisdom of Solomon* (7. 2), an Alexandrian Jewish work with Stoic influence approximately contemporary with the beginning of the Christian era. Galen comments on Aristotle's theory (*De sanitate tuenda* 1. 2 and *Nat. Fac.* 1. 6-7). After Aristotle there is no scientific observation of a zoological character. (However, see ANATOMY AND PHYSIOLOGY, para. 12, 18.)

8. The largest collections of animal stories are those of Pliny and Aelian. Much accurate nature-knowledge can be gleaned from general literature, especially Latin.

Roman country gentlemen had their game preserves and aviaries, of which Varro gives details (*Rust.* 3. 49. 13). A mural in the Villa Livia shows a bird-sanctuary. Under the Empire many strange beasts were brought to Rome for the circus. Lions, tigers, elephants both African and Indian, rhinoceroses, bears, bisons, boars, leopards, panthers, hyenas, and crocodiles were in the imperial menageries. These sometimes contained prodigious numbers; Trajan owned 11,000 beasts, Augustus 420 tigers, Nero 400 bears, and Gordian I 300 ostriches. Curiosity accounted for the presence of serpents, camels, hippopotamuses, antelopes, zebras, and giraffes. The first giraffe came to Europe for Commodus about 190, and Gordian I (237) is said to have had 100 of them.

BIBLIOGRAPHY

The Hippocratic work *On Generation* is given in the edition of E. Littré, vol. iii (1851). Practically all the zoological work of Aristotle is in his three works *Historia animalium*, *De partibus animalium*, *De generatione animalium* (see ARISTOTLE). Discussion with bibliography in Charles Singer, *Studies in the History and Method of Science* ii (1921), and *Greek Biology and Greek Medicine* (1922). Representation of animals in ancient art: Imhof-Blumer and O. Keller, *Tier- und Pflanzenbilder auf Münzen und Gemmen des klassischen Altertums* (1889); J. Morin, *Dessins des animaux en Grèce* (1911). Menageries in great detail by G. Loisel, *Histoire des ménageries* (3 vols., 1912). C. S.

ZOPYRUS, writer on physiognomy, known from his judgement on Socrates' appearance.

See Förster, *Scriptores Physiognomonici* i, prol. vii ff.

ZOROASTER (*Ζωροάστρης*), the best-known form of the name of Zarathustra; for others see Bidez-Cumont, i. 36 ff. The Greeks had heard of him as early as the fifth century B.C. (Xanthus of Lydia in Diog. Laert. proem, 2), and mentions of him are common in the Hellenistic period. Apart from an aberrant tradition,

due perhaps to Ctesias (q.v.), which made him a king of Bactria conquered by Ninus and Semiramis (Bidez-Cumont, ii. 41 ff.), a fairly correct idea of his teachings was current in philosophic circles from about the time of Plato, the intermediary being probably Eudoxus of Cnidos. Legendary details of all sorts accumulated about him, some doubtless of Oriental origin, and he was credited with the authorship of an immense number of works (2,000,000 lines or some 10,000,000 words, Hermippus in Pliny, *HN* 30. 4, were ascribed to him), dealing with theology, natural science, astrology, magic, etc., much of their contents being not only spurious but also quite foreign to his real interests and teachings.

J. Bidez and F. Cumont, *Les Mages hellénisés* (1938). H. J. R.

ZOSIMUS (1), a Greek historian, an *advocatus fisci* and a *comes*, under Theodosius II, who wrote six books on 'The decline of Rome', from Augustus to A.D. 410. There is a gap from Probus to the year 303. The work was not finished until after 425. Zosimus used excellent authorities—notably Dexippus and Eunapius—and is not without historical judgement and a sense of style. He is well informed on Eastern affairs—his account of the wars of Aurelian against Palmyra is easily the best that survives—not so well on the West. He is not strong on exact dating and handles many topics too cursorily. One serious defect of Zosimus as a pure historian has its special interest for us. An avowed enemy of the triumphant Christian Church, he never tires of recounting the services rendered to the Empire by the old gods and the disasters that followed their neglect.

Ed. L. Mendelssohn (1887).

H. M.

ZOSIMUS (2), writer on alchemy (q.v.) of the third or fourth century A.D.

APPENDIX I

GENERAL BIBLIOGRAPHY

(Note. This list contains the main bibliographic and encyclopaedic publications used in 1948. For earlier works of similar character see the article SCHOLARSHIP, MODERN. For special bibliographies see the article concerned.)

A. Complete bibliographies, issued shortly after publication of the works (books, articles, reviews) which they register.

1. *Bibliotheca philologica classica* (in progress?), 65 vols., 1873-1941 (for 1938).
This is part of or an appendix to *Bursians Jahresbericht* (see B. 1), and gives titles of works only.
 2. *Revue des revues*, appearing as an appendix at the end of each volume of *Revue de Philologie*, nouvelle [2nd] série, 49 vols., 1877-1925.
Gives mainly abstracts of articles.
 3. J. Marouzeau, *Dix années de bibliographie classique* [1914-24], 2 vols., published 1927 and 1928 by 'Les Belles Lettres', Paris.
Gives titles of books (including reviews) and abstracts of articles.
 4. J. Marouzeau, *L'Année philologique* (in progress), 17 vols. [for 1924-46], published 1928-48 by 'Les Belles Lettres', Paris.
Gives titles of books (including reviews) and abstracts of articles.
- On the relationship of 2-4 with 1 see *Bulletin de l'Association G. Budé*, Suppl. critique x (1939, for 1938), pp. 7-9.

B. Collections of critical reports on main subjects (e.g. grammar, literature, history, archaeology) in systematic order.

1. Complete collection: *Bursians Jahresbericht* (in progress?), 284 vols., 1873-1943.
Full title: *Jahresbericht über die Fortschritte der klassischen Altertumswissenschaft*.
Publisher: (since 1898) O. R. Reisland, Leipzig; (before 1898) Calvary, Berlin.
Main successive editors: Bursian, Iwan Müller, Kroll, Münscher, Thierfelder.
'Generalregister' for volumes i-lxxxvii appeared 1897 (without volume number).
Indexes to reports: vol. cxxxviii (1908), p. 143; vol. clxvi (1914), p. 119; vol. cci (1925), p. 205.
Since 1938 there has been one such index yearly, the last on pp. 3 ff. of the preliminary to vols. cclxxxi-cclxxxiv (1943).
Appendices: (a) *Bibliotheca philologica classica* (above A. 1).
(b) *Biographisches Jahrbuch* (obituaries of classical scholars) at the end of each 'Jahrgang'. Last part vol. cclxxxiv (1943); last survey vol. ccii B (1925).
2. Selective collections:
 - a. *Year's Work in Classical Studies* (in progress), 34 vols., 1906-39.
First editor: W. H. D. Rouse for the Council of the Classical Association.
Last editor before the war of 1939-45: S. G. Owen for the Classical Journals Board.
Present editor: Prof. G. B. A. Fletcher.
 - b. *Bulletin de l'Association Guillaume Budé*, nouvelle série (in progress), 4 numbers, 1946-7. Publishers and editors of the *Bulletin* not named. Contains useful surveys on classical studies in different countries during the 1939-45 war.

C. Collections of comprehensive presentations of main subjects in systematic order.

1. Iwan von Müllers *Handbuch* (in progress), 9 parts with many extensive subdivisions, 1885-1946.
Full title: (1885-1920) *Handbuch der klassischen Altertumswissenschaft*.
(since 1920) *Handbuch der Altertumswissenschaft*.
Publisher: O. Beck, later C. H. Beck, at Nördlingen (Bavaria), later Munich.
(since 1945) Biederstein, Munich.
Successive editors: Iwan von Müller (d. 1917), R. Pöhlmann (d. 1914), Walter Otto (d. 1941).
The first edition, 1885-91 (9 vols.), has now been almost completely superseded by new editions, the latest of which are enormously enlarged. Since 1920 many new subjects concerning especially prehistory and the Ancient East have been added.
2. Gercke-Norden, *Einleitung*, 3rd (partly 4th) ed., 3 vols., 1921-35.
Full title: *Einleitung in die Altertumswissenschaft*.
Publisher: Teubner.
Editors: A. Gercke (d. 1922) and E. Norden (d. 1941).
Vol. i, 3rd ed. (10 subsections), 1921-7, with index.
Vol. ii, 4th ed. (16 subsections), 2 half-vols. with separate indexes, 1932, 1933.
Vol. iii, 3rd ed. (4 subsections), 1932-5 (no index).
The subsections have separate pagination and were on sale separately.
On the scheme of the first edition (3 vols., 1910, 1912) see *Bursians Jahresbericht* ccii B (1925), pp. 183 ff.

D. Collection of articles in alphabetical order.

1. Pauly-Wissowa, *Real-Encyclopädie* (in progress), 33 vols., 1893-1943.
Full title: *Paulys Real-Encyclopädie der classischen Altertumswissenschaft. Neue Bearbeitung.*
Publisher: J. B. Metzler, Stuttgart.
Successive editors: Wissowa, W. Kroll, Mittelhaus. [A. Pauly (d. 1845) began the edition of a similar encyclopaedia at Stuttgart in 1839.]
The work is complete for the words from A to Tyrrhener, except for two-thirds of the letter P.
There are 7 vols. of supplements. There is an index to Suppl. vols. i-v after the article *molaris lapis* (1932).
The published volumes contain more than 50,000 columns of 68 lines each.
On the scheme for the work see *Bursians Jahresbericht* ccxlv (1934), pp. 126-8.
2. *Lübker's Reallexikon*, 8th ed., 1914.
Full title: *Friedrich Lübkers Reallexikon des klassischen Altertums.*
Publisher: Teubner.
Editors: Geffcken and Ziebarth.
The work is very similar to the present dictionary.
The first edition was made by F. Lübker (d. 1867) in 1855, 'für Gymnasien' (secondary schools).

E. General encyclopaedias in alphabetical order with numerous articles on classical subjects.

1. *Enciclopedia italiana*, 37 vols., 1929-39.
2. *Der grosse Brockhaus*, 21 vols., 1928-35.

F. General catalogues of printed books.

1. British Museum, *Catalogue of Printed Books*, 89 vols., 1881-1900; *Supplement*, 6 vols., 1900-7.
2. British Museum, *General Catalogue of Printed Books* (in progress), 41 vols., 1931-47 (A-CONR).

G. Various items.

1. Nairn's *Classical Hand-list*, 2nd ed., 1939, published by B. H. Blackwell, Oxford (excellent selection of important works, with book-prices).
2. *Byzantinische Zeitschrift*, 'Generalregister' for vols. i-xii (1892-1903), 1909 (by P. Marc).
3. *Revue des études grecques*, 'Tables générales' for vols. xxxi-l (1918-37), 1937.
4. *Journal of Hellenic Studies*, Index to vols. xliii-lx (1923-40), 1941.
5. Two modern surveys on results and tasks:
(a) *Mémorial des études latines, offert à J. Marouzeau* = *Revue des études latines*, vol. xxi (1943).
(b) H. Fuchs, 'Rückschau und Ausblick im Arbeitsgebiet der lateinischen Philologie', *Museum Helveticum* iv (1947), pp. 147-98.
6. *Wilamowitz-Bibliographie* (for 1868 to 1929), 1929.

APPENDIX II

BIBLIOGRAPHY OF THE HISTORY OF GREEK AND
LATIN LITERATURE

A. GREEK

1. Period from Homer till about the end of the 5th century B.C. (Thucydides, Democritus, and Hippocrates not yet treated).
Iwan von Müllers *Handbuch*, Abteilung VII: *Geschichte der griechischen Literatur*, 4 vols., by W. Schmid (b. 1859), 1929-46. A volume on the literature of the 4th century B.C., by H. Herter, is in preparation. Meanwhile, for this period see Geffcken, *Griechische Literaturgeschichte*, vol. ii, 1934 (not included in the *Handbuch*).
2. Period from Alexander the Great to Justinian.
Iwan von Müllers *Handbuch*, Abteilung VII: 'Schmid-Stählin', *Geschichte der griechischen Literatur*, 2 vols., by W. Schmid and O. Stählin, 1920, 1924.
For the literature of c. 320-c. 1 B.C. the following work (not included in the *Handbuch*) is still indispensable: Susemihl (1826-1901), *Geschichte der griechischen Literatur in der Alexandrinerzeit*, 2 vols. (c. 1680 pp.), 1891, 1892.
3. Period from Justinian till A.D. 1453.
Iwan von Müllers *Handbuch*, Abteilung IX, 1: Krumbacher (1856-1909), *Geschichte der Byzantinischen Literatur*, 2nd ed. 1897.

B. LATIN

Iwan von Müllers *Handbuch*, Abteilung VIII and IX, 2.

1. Period from the beginning to Hadrian.

'Schanz-Hosius', 2 vols., 1927, 1935 (Martin von Schanz, 1842-1914; obituary in *Bursians Jahresbericht* ccxlix (1935), pp. 50-87).

2. Period from Hadrian to Constantine.
'Schanz', vol. iii, edited by Hosius and G. Krüger, 1922.
3. Period from Constantine to Justinian.
'Schanz', vol. iv, in two parts (the second finished by Hosius and G. Krüger), 1914, 1920.
4. Period from Justinian till the end of the 12th century.
'Manitius', 3 vols., 1911-31 (Max Manitius, born 1858).

APPENDIX III

BIBLIOGRAPHY OF GREEK GRAMMAR

1. 'Kühner-Blass' and 'Kühner-Gerth'.
R. Kühner (1802-78), *Ausführliche Grammatik der griechischen Sprache*, appeared first in 1834-5, with second edition in 1869-71 (the first edition contained also in the title the following words, afterwards omitted: *wissenschaftlich und mit Rücksicht auf den Schulbetrieb ausgearbeitet*). The third edition consists of two parts, each of two volumes: Part I, containing phonology and morphology, by F. Blass (1843-1907: obituary by W. Crönert, *Bursians Jahresb.* cxlv (1910), 1-32, 1890-2; Part II, containing syntax, by B. Gerth, 1898-1904.
2. Schwyzer, *Griechische Grammatik* (in Iwan von Müllers *Handbuch* II. i) (E. Schwyzer, 1874-1943; obituary by A. Debrunner, *Museum Helveticum* i (1944), 1-12).
Vol. i (1939), containing general part, phonology, morphology, word-formation, 842 pp.
Vol. ii, containing syntax and indexes, is being made ready for publication by Professor A. Debrunner (Berne), and is expected to appear in 1949.
Both works are equally indispensable. If we accept J. B. Hofmann's distinction of the 'diachronical' and the '(idio)synchronical' types of grammar (*Lat. Grammar*, 5th ed., 1928, pp. 11 ff.), then Kühner-Blass belongs to the synchronical, Schwyzer to the diachronical. In other words, Kühner-Blass gives grammar as a tool for interpretation of the texts, and especially of the Greek classical texts; Schwyzer uses all sorts of texts from the beginning of Indo-European speech to modern living Greek as sources for the history of innumerable phenomena of Greek language.
3. C. D. Buck, *Introduction to the Study of the Greek Dialects*, 1928.
4. J. D. Denniston, *The Greek Particles*, 1934.
5. 'Buck-Petersen': *A Reverse Index of Greek Nouns and Adjectives*, by C. D. Buck and W. Petersen (d. 1939), 1944.
Next to Liddell and Scott, the most important modern contribution to the study of Greek lexicography.
